Having thus done the two things which are dearest to a critic's heart,—*i.e.* to find fault and to suggest improvements,—we now proceed to the task (which, indeed, is no task, but a pleasure) of giving to our readers some idea of the merits of the work in question, and, more especially, of the merits of the new edition as compared with the old. It would be both an error and a bad compliment to the author to talk of the present treatise as being substantially a new work; yet it is quite true that it is "much enlarged and almost entirely re-written," and we may add, improved in every way. But it is still the same in substance, nor could it have become different save by deterioration. The main idea of the whole is contained in the short second chapter, and consists in the division of all the words of the language into four parts of speech only,—a division, which, by showing at the very outset the essential identity in Japanese of the verb and the adjective, as well as the fact that adverbs and conjunctions are only nouns or verbs in disguise, while the particles, again, are independent words and not mere inflections, gives the student the key to the radical differences subsisting between Japanese and our Aryan forms of speech, and half solves for him, before he has actually encountered them, all later difficulties and apparent contradictions. Such is the value of method, and such the advantage possessed by late students over those whose first steps in Japanese were taken along the truly learned, but truly labyrinthine, paths of Dr. Hoffmann's grammatical work. From this main idea all the rest is naturally evolved. First we have a chapter on nouns (i. e. nouns, pronouns, numerals, and one class of adverbs, which are all really nouns in Japanese); then one on verbs (i. e. what would, in European grammars, be termed verbs and adjectives); next two chapters devoted to uninflected particles; and lastly, one treating of such as are inflected. As instances of the improvements introduced into every chapter, we may mention the extremely minute account of the words and phrases answering to our personal pronouns and the notice of the curious way in which the oblique cases of the English relative are rendered, the list of auxiliary numerals, the theory of the conjugations, the notice of the lengthened archaic poetical forms of many verbs, the interesting account (pp. 93 and 116) of the way in which the conclusive form has disappeared from the colloquial dialect, the fuller discussion of the various uses of the particle *wo*, the minute explanation (which, indeed, every young student would do well to get by heart), given in pp. 131-139, of the particles *ha, mo, ka* and *ya* and of their somewhat intricate grammar, etc. etc. etc., while we also have a clear and concise notice of Japanese prosody, illustrations from the best poets and prosaists scattered broadcast over every page, and, last but not least, the whole presented to us in an orthographical dress, which, by its strict adherence to the original writing, will do the student the practical good turn of teaching him from the beginning how to spell correctly in *kana*, besides putting him on the road towards discovering etymologies.

To this question of etymologies we must presently revert; but here pause for a moment to notice the interesting hypothesis of the existence of an obsolete verb *nu*, 'to be,' started in the foot-note to p. 120. If true, it will clear up more than one obscure point in the structure of the language, and we are therefore glad to be able to draw attention to three facts which go towards confirming it. One is the already mentioned archaic future in *na;* another is (if a vocabulary that we have consulted may be relied on) the nasal termination of the conclusive form of verbs in the dialect of Loochoo, thus *nomoong* (or, as we should now write it, *nomun*), for the classical Japanese *nomu*, 'to drink'; while the third is the termination in *ang* of the negative verbs of the same dialect, thus *nomang*, which, compared with the affirmative form *nomoong*, certainly warrants one in believing that, as Mr. Aston suggests, the negation really resides in the vowel *a*, and not in the syllable *nu*, which we have been accustomed to consider as the negative termination. The objection raised by Mr. Aston himself, viz., the fact that, in so many languages, the letter *n* is an essential part of words implying negation, seems to us to have but little force: for, although Latin, Spanish, German, English, etc., are, from one point of view "many languages," the comparative philologist can only consider them as essentially one, and will carefully guard against allowing their literary and practical importance to mislead him into giving them more than one place in the discussion of a question of this nature.

To conclude by the etymologies, which, to our mind, constitute one of the most important features of the new edition, and which may, we trust, form the nucleus of an independent treatise by the learned author. Mr. Aston, silently renouncing the somewhat hazardous theories once propounded by him before the Asiatic Society, here gives us a piece of most excellent and reliable work. To the mere practical student this portion of the volume will doubtless be of less utility than the subsequent chapters; but the philologist will probably think it more to his purpose than discussions of exceptions to rules of syntax.

For, *within the limits of one family of languages*, verbal resemblances and differences, if only traceable to certain principles, euphonic and otherwise, must always remain the chief test of the nearness of relationship; and what we require before anything approaching to a fruitful comparison can be instituted between the Tartar family and the Aryan and Semitic, is the discovery of the most original form of the languages constituting the said Tartar family,—of a language, in fact, occupying in this part of the world the place that is taken by Sanskrit in the domain of Aryan speech.* It is to this end that such researches as those of Mr. Aston's lead (pp. 26-38), and those only who have some personal knowledge of the extravagances of the Japanese etymologists over which he makes merry, can fully appreciate the difficulties through which he has had to steer his course in order to reach conclusions, which, indeed, when once arrived at, seem perfectly natural and easy. One man, of course, can not do everything; and we should be extremely sorry to see the author whose work we have been discussing renounce the study of the ancient classics in order to devote his attention to local 'patois' containing no literature worthy to be mentioned. But might not some of those, who, from their position as school-teachers, are exiled to distant provinces, where, if they would not vegetate in complete solitude, they must make themselves acquainted with the local dialect, follow the example given by Mr. Dallas, and contribute towards a thorough etymological knowledge of Japanese the results of their investigations?† The more remote the country-side and the more queer-sounding the jargon, so much the more welcome would these results be; and, above all, if any of those whose business relegates them to the island of Yezo would but condescend to go to school with their Aino coolies, great things might be accomplished in the field of Oriental philology, not only through the cross-light which could not fail to be thrown on the Japanese language by the study of that which it has displaced and from which it cannot but have borrowed a considerable number of words, but by the extension of our acquaintance to a tongne over whose general character and relation to the languages of Tartar descent there still hangs a veil of almost total obscurity. These things are not, as some would fain have us believe, mere triflings with time. The science of language stands closer than any other to the science of the human mind, and a due knowledge of the workings of the human mind is, probably, more important than any other knowledge whatsoever.

* Without being quite so bold as those who would have us believe that the Japanese people are indeed none other than the Lost Tribes of Israel, may we suggest the likelihood of the Japanese language being the most original form of the Tartar tongues? In support of this hypothesis there is not only the fact of its antiquity and remarkable unchangedness, but also that of the simplicity of its phonetic structure. Emigrants seem to preserve more faithfully than "the old folks at home" the language of their mother-country,—*e. g.* the Icelanders, who, to this day, keep almost intact the Scandinavian tongue of a thousand years ago, and the New Englanders, who, as well in pronunciation as in the use of particular words, have adhered to the practice of the Old English Puritans from whom they spring. The Parsees offer, we believe, another instance of emigrants retaining archaic linguistic forms.

† The more eminent Japanese literati are fully aware of the importance of the study of provincial dialects. Mabuchi says:—

"*Tahira no miyako ni mo, Adzuma no oho-ki no moto ni mo, mata koko kashiko no nigihaheru tokoro ni mo, furuki koto nado ha nokoranu wo, kata-inaka no koto wo kikeba, ohoku inishihe no koto zo tsutaharitaru..... Sono kotoba ni yokonamareru gotoku naru aru wo mote subete kotonari to omofu koto nakare. Ko wo yoku toki-uru toki ha, inishihe no oho-miya-buri no uta wo shi mo toki-erareru nari.*"

We are sorry to hear that Lieut-Commander Needham, at present in command of H. M. S. *Hart*, has met with a serious accident. The unfortunate gentleman had been dining at the Peak with Commodore Watson last night and was returning in company with Commander Garbett and Dr. Popham. The three gentlemen started running down the hill, when Mr. Needham tripped and fell over the side of the road on to the jagged rocks. Assistance was at once procured and he was conveyed to the Naval Hospital where he now lies in a dangerous condition.—*China Mail.*

Some considerable concessions have been made by the Chinese in the matter of the Chefoo Convention. We hear that orders have been sent from the Central Government, that native vessels, chartered for the conveyance of foreign merchandise on the transit pass,—and which have hitherto had to pay mast dues and a variety of "squeezes,"—will, in future, on passing the Customs barriers, have to pay tonnage dues only.—*Shanghai Courier.*

COUNTRY TRIPS, BY A VICTIM.

Part 2.

"Vain, very vain, my weary search to find
"That bliss which only centres in the mind:
"Why have I stray'd from pleasure and repose?"

Oh! that I had spoken in time! That I had had the courage to decline the companionship of this brawny Bœotian who led me out by delusive hopes of enjoyment only to perish miserably by slow starvation! That I had not permitted that amiable timidity, or timid amiability, which is so marked a feebleness in my character, and which invariably prevents me from refusing the proposals of my friends no matter how they may clash with my own wishes, to stand in the way of a firm, flat-footed protest against any such absurdity as going out into the wildeness and feeding on the locusts and wild honey of the country. Alas! repentance came too late, and the only consolation for my sufferings is the power I have gained of saying, no, should any one ever again invite me to travel in Japanese style.

As may be imagined, I was permitted to carry but the smallest amount of baggage, so that the treacherous thought, that at one time I must confess to having permitted my mind to dwell on, of smuggling in a few comforts to be used in case of emergency, was only allowed to blossom and bear the fruit of fulfilment to the extent of one small pot of Liebig. It is needless to say that the sanctioned whiskey was not forgotten.

It is not my intention to write an itinerary. I am not going to map out a new tour for the especial benefit of that portion of the community who can make princely progresses and fare sumptuously every day of their journey. Though my trip is no imaginary one, and I can, if called upon, give chapter and verse for every statement I may make, I shall refrain from giving any statistical, geographical or sentimental particulars. I simply wish to relate a plain, unvarnished tale of a few incidents that befell me in my mad chase after pleasure. Therefore, let those who love not misery pass me by, for here I mean to sit and tell my woes.

As long as we were on the high road it was bearable. I will not indeed deny that for a day or two there was a certain amount of neutral enjoyment, inasmuch as there was no positive suffering. At least there was change and freedom. If it was hot, our garments were of the fewest and freest. There was that sensation of perfect liberty which can only be attained by the discarding of collar and necktie. No man can be as free as nature made him so long as he is given over to the base servitude of starch and broadcloth, while he who has never known the luxury of airing his beauty unadorned by immaculate stiffened linen, has never walked in the full light of liberty's unclouded sun. Seated in the swiftly-rolling, respect-destroying *jinrikisha*, arrayed only in Japanese summer gown of soft cotton, the free current of Heaven's air—to say nothing of the dust—circulating round my untrammelled form, I could not but favourably contrast my condition with those unhappy mortals who, in the scorchingest of weather, felt themselves doomed to walk the earth in resplendent boots, perfect shirts with head-elevating collars and hand covering cuffs rivalling the snows of Fuji for whiteness. I knew from long experience that when these garments were indued, freedom shrieked louder than when Kosciusko fell, and shrieking fled. Certainly as far as dress is concerned, I fully agree with travelling in Japanese style. There is no trouble in dressing, while undressing is accomplished in the twinkling of an eye. There are no strings with the irritating faculty of forming themselves into the most inextricable of knots at inopportune moments. There are no buttons to come off when the wearer is beyond all feminine human aid. The positions that Japanese houses require one to assume are no longer impossible, while—and this is not the least of the conveniences of native dress—immediate pursuit of the too attentive and omnipresent flea can be undertaken with an almost absolute certainty of his capture, as he cannot shelter himself in the fastnesses and unassailable positions afforded him by our own attire. It is true that it was difficult to make rapid progress in a wind without constantly eliciting the remark from the astonished country people, "Oh my! look there! look there! What a beautiful man, and what a lovely white skin the

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

gentleman has!" My companion said that it was only the ignorant who made such remarks, but I believe he was horribly jealous at the admiration I excited, which certainly could not have been fairly bestowed on him, dressed as he was in faded pink and yellow striped flannel pajamas. For my own part, although I have ever been modestly conscious of my personal attractions, I felt that they had never before met with such appreciation. That which we have always among us we are too apt to despise and a fairly good looking man has no honour in his own community.

But to thoroughly enjoy the luxury of Japanese dress, there must be a body nourished by foreign food inside its ample folds, as I found to my cost before many days elapsed. At present the tea house accomodations were good. The fish was fresh, the soups almost appetizing, the rice well boiled and free from extraneous substances, fruit ripe and plentiful. Fowls too were accommodating, and there was always forthcoming a supply of eggs which had not yet lost their virgin charm of novelty, while on two successive evenings, we had been able to procure the sacrifice of a bird in its adult form, when our souls sighed for meat after the toils of the day. The beer of our youth was also obtainable and went far to make up for any culinary deficiencies. The bitter reproaches of a justly offended stomach had not yet been felt by the rest of the members. Moreover, the accumulated energies of many months of previous comfortable living were supporting me, even as the hybernating bear is able to sustain his forces during his winter's sleep. I was on one occasion weak enough to admit to him who had brought me out on this idiotic expedition—my friend no longer—that it was not bad. "Not bad!" replied he, putting down the picked second leg of the sacrificed fowl, and shovelling down the fifth bowl of rice. "Not bad! I should think not! I knew you'd like it, and you'll like it all the better as you get used to it. First rate *chow*, and much more wholesome than those tinned messes. Here, young woman!" This to the nut-brown, white toothed, buxom waitress who was kneeling all eyes and smiles at the side of her rice box. "Some more rice; jiggyjiggy, that'll do! Yoroshee. Look here, more beer saké arimas, Have got? Then bring more stotsu mottekoy. Hyakoo!" All this in a voice that would not have shamed the monster Polypheme, and given with that air of self complacent, robust enjoyment that is irritating to the last degree to those like myself, whom Providence has endowed with weak amiability tempered with imperfect digestion.

Another great point of annoyance is the unblushing manner in which the Herculean torment, who led me to the slough of misery into which I presently fell, would persist in talking a jargon which he supposed to be Japanese. It can only be described by the term once happily applied to it by our local Punch, the Arimasian dialect. I have devoted many weary hours, to the exclusion of much enjoyment and of far more serviceable pursuits, to the study of the native tongue, and by hard plodding and at great risk of general inpairment of intellect, have succeeded in acquiring therein a certain facility. Especially do I pride myself on the knowledge I possess of select forms of polite address, which with the diamond point of hard application I have suceeded in engraving on the polished tablets of my memory. They may possess the trifling drawback of being very often incomprehensible to the ignorant, with whom one seems mostly to come in contact in the country, while if they are understood by the few intellectual and educated natives whom one may by good fortune meet, they are liable to be responded to by such high flown phraseology as will make the ardent student wish that he had either progressed further in his studies or been content with more modest forms of speech. Still, as far as they go, they are correct, and he, who like myself has by many a long hour's hard study acquired a number of polite words and phrases, will die and make no sign, rather than have recourse to the vulgar, though I must confess generally by the average native, comprehensible, combination of sounds used by my companion, and supposed by him to be Japanese. By myself I can always be impressive and dignified if my meaning be somewhat cloudy, but with this trombone voiced giant I had no chance. If I ordered or attempted to explain anything in quiet and well selected language, he interrupted me, and in his vile gibberish and by aid of expressive pantomime, succeeded in getting what was wanted in about a fourth the time, and with far greater certainty than my polished style could command. There is—I will not disguise it—no conceit like the conceit of the amateur philologist who has acquired a certain knowledge of Japanese, and there is consequently no disgust greater than that which the said amateur feels, when he finds all his hardly acquired learning eclipsed, nay snuffed out, by a companion who has so little respect for superior knowledge as to use the Yokohama dialect in his presence, vauntingly and unashamed. I was disgusted, and I have hated my tormentor ever since.

Then he had no idea of his position, or at any rate had no consideration for mine. He did the most compromising things. He scrambled coppers and apples among the crowd that collected round every tea house where we stopped. He roared out "Ohio" to every coolie and pedlar we met. He chucked girls under the chin, and played antics before the common crowd, taking the laugh that rewarded his fool's tricks as tribute of adoration to his superiority of race. The larger the crowd the better did he seem pleased, and if its component parts were not as the smell of a field—at least of an English field—it was surely as the very incense of praise in his nostrils.

If you are sensitive and would escape keen mental suffering and an acute sense of moral degradation, never go on a country trip with him who sacrifices all sense of dignity to a desire to raise a laugh among the vulgar. Could the man who plays the antics that he thinks amuse the simple villagers, and who cares not how or when he tumbles as long as he can see a grin on their innocent countenances, hear and understand the remarks that such tom-fool pranks elicit, he would surely refrain from being "funny" for the rest of his life. The man that plays mad tricks before a Japanese public; pursues like an ill bred satyr the screaming tea-house nymphs; catches hold of little pocket handkerchiefless children; slaps coolies on the back, and kicks his *jinrikisha* runner, may rest assured that he is bringing himself and all foreign nationalities into hatred, contempt and ridicule. He may be gracious without loss of dignity; amusing without vulgarity; decided without bullying; but if he cannot so comport himself, let him for his own sake and the sake of all foreigners, refrain from going anywhere but to those places in the neighbourhood of Yokohama where the natives are used to the vagaries it pleaseth him to play. In other places he will be looked upon, and rightly, as far below in breeding the lowest coolie for whose applause he tumbles.

Still, as I admit, for the first day or two there was little to grumble at, and forgetful in the dreamful ease of the moment that it might not be always May, that summer roses fade, and that darkest clouds ofttimes obscure the brightest skies, I was weak enough to go into quiet raptures over the delights of a country excursion. Pleasant it was, I admitted, to start off in the early freshness of morning, with all kind of good wishes for a pleasant journey; along the village street, having hasty glimpses of the peaceful people commencing their several daily tasks, pausing from their work a moment as we passed their little shops. Pleasant to be out in the open country on the winding road bordered with the fresh green rice just coming into ear. Pleasant under the sun-flecked avenue of grand old firs, with their welcome shade to the groups of dusty pilgrims, and the laden wayfarers. Pleasant the vignettes between their aged and leaf entwined trunks of the midsummer fields and quiet farms and hamlets nestling in their groves of *sugi* and bamboo, with the background of bold blue hills, in whose cool shadows we were to rest awhile. Pleasant to see the strings of pack horses, with their scarlet trappings, now flashing out in the streaks of sunlight glinting through the branches, or resting in the shadow of some humble hostelrie, while their blue robed, copper legged drivers were standing or lying round, refreshing themselves with a cup of tea and whiff of tiny pipe. Pleasant the mid-day rest and short siesta on the clean mats of a breezy room, while the crickets and cicadas, and all singing, humming and twittering things made a choral accompaniment to the tiny stream that trickled from its bamboo spout into the little pond with the gold fish and pink lotos. Pleasant the arrival at the night's resting place after the sun had gone down, when all the village was hazy with the blue smoke of the evening fires, and the

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

brown roofs told out richly against the yellow twilight sky. Pleasant the warm welcome that greeted our coming, as though we were honoured and expected guests instead of two chance foreign tourists. Pleasant the bath that made one forget all the fatigues of the day, and changed exhaustion into blissful lassitude as we lay on the mats sipping the straw coloured tea and smoking a fragrant cigarette. Pleasant the rest on the quilts that—

No! I must stop. It was nothing of the kind. I was, I confess, foolish enough to gush thus in my diary on the evening of the second day out. I suppose I felt it all at the time, or if I did not, I felt that I ought to feel it. It is the general style in which the traveller endeavours to give utterance to his impressions, and it seemed the proper thing to do. But looking back on that journey, here from my comfortable home I repeat it was nothing of the kind. When I reflect on the best nights spent even in the best of places, under the most favourable conditions, and contrast them with the luxuries that I had left behind, I find that I must retract all that I have said about pleasant episodes, lest I should mislead some unfortunate into believing that there is any pleasure in such a country trip as mine, and cause him to suffer the experiences which I was to endure. Talk of comfort in a Japanese tea-house, when one remembers all the comforts one has wilfully abandoned!

"Comfort? comfort scorned of devils! this is truth the poet sings,
"That a sorrow's crown of sorrow is remembering happier things."

The next day found us at the foot of the mountains, where—but let me breath awhile! Even the memory is painful!

Correspondence

BAD ROADS AND TAXATION IN JAPAN.

To the Editor of the "Japan Weekly Mail."

August 24th, 1877.

Sir,—The subject "bad roads and taxation" appearing to me to have a more important bearing on the future prosperity of this country than almost any other, I must make this my apology for again bringing forward, even in the shape of a letter, opinions or advice to the Japanese which, no doubt, they may have often already received, but to which, if such be the case, it would seem they have so far turned a somewhat deaf ear.

The opinions and advice to which I would now draw their attention are not my own; they are those of another, which I entirely endorse, and although delivered with reference to another country and another people, strike me as being sufficiently applicable (*mutatis mutandis*) to this country and people, as to merit that publicity should be given to them in every way, that may tend to produce an improvement in the existing means of communication from farm land to market town, and a more contented frame of mind in the much tax-begrieved peasant.

Col. Baker in his admirable and truthful work on Turkey, thus briefly refers to the means of communication in that country and the consequent disastrous results:—

"The Government on their side are to blame for not making and keeping up roads of communication by which the produce of land may be brought to market. By neglecting this duty the Porte locks up her wealth and puts the key in her pocket.

"There are hundreds of thousands of acres of the richest land in the world, which might be cultivated with profit if there were good roads of communication, but as it is, all the bulk of the traffic of the country has to be done *by pack-animals instead of wheeled carriages. One horse would drag in a cart as much as four horses could carry*; the consequence is, that food has to be grown to feed three horses instead of one. The horse is useless for purposes of food, and therefore this unnecessary expenditure of labour to provide his keep and to rear him, is sheer loss to the State and people, and may be set down at many millions of pounds. Again the country is not adequately populated per square mile of area, consequently labour is to a certain extent deficient; therefore, if means were taken to reduce the number of horses used for traffic it would also reduce the number of men who are employed to attend to them, and would leave the surplus for the profitable cultivation of the enormous amount of rich but waste lands.

"To give some idea of the loss this must entail upon the country, I will instance my own case. My estate is only eight miles from Salonica, and five years ago the magnificent highway-road to Seres was made, and passes close to the property. The road has never been touched from that day to this, and is now impassable for wheeled carriages. The consequence is that, although I have an excellent market only eight miles off, *I must send all my grain to it on pack-animals, and for that short distance it costs me 6 per cent. on the value of the grain, while with wheeled carriages, and the road in order, the cost would be only 1 per cent. Here is a sheer and unnecessary loss of 5 per cent. on the produce of one farm.* And in this sense, that which is a loss to the producer is indirectly a a proportionate loss to the Government.

"If some of the many millions which were borrowed by Turkey had been spent in making canals and roads of communication, and *keeping them in order*, instead of being squandered on the huge palaces at the capital, the country would have been able to meet her liabilities, and would have had revenue to spare to strengthen her for the war which is probably approaching."

With respect to the tax grievance he says:—"The outcry of oppressive taxation is greatly exaggerated, but that hardships exist in the collection there is no doubt. The reason that the rayah finds the burden of taxation so heavy is almost entirely his own fault, or rather, I should say, the fault of his religion. The Greek Church ordains 180 feast and fast days out of the year, on which the strict Catholic or the lazy man need not work—nearly half the year. Under such circumstances, it is hardly matter of surprise that taxes should press heavily."

I believe this to be in a great measure true of the tax outcry in this country. If the Japanese would only appreciate the value of time, if they would abolish say a half of their *ichi rokus, matsuris*, endless festivals, and joss chin chinnings which I should compute as taking up over 100 days a year (not quite as bad as their brethern of the Greek Church, however), they would not find the load quite so difficult to bear, more work would be done, and the opportunities for a fruitless expenditure of their gains would be considerably diminished. Much work no doubt makes Jack a dull boy, but too much play will not tend to make him thrifty, prudent or clever.

I am, Sir,

Your obedient servant,

HIYAKUSHO TERAKI.

LOSS OF THE MESSAGERIES MARITIMES STEAMER *MEIKONG*.

To the Editor of the "Japan Weekly Mail."

Suez, 1st July, 1877.

Dear Sir,—As I believe the loss of the Messageries Maritimes S.S. *Meikong* will excite considerable interest, I send you a narrative of the event, all the particulars of which can be testified to by myself and others.

We left Point de Galle on Sunday, June 10th, at about 4.30 P.M., and experienced for the first four days much calmer weather than we expected, in consequence of the Captain taking a southerly course to escape the full force of the monsoon. On Sunday, the 17th, we had a stiff breeze all day and were under full sail and steam, expecting to make Cape Gardafui that evening. It was a fine moonlight night. Most of the passengers had turned in, when we were awakened by three severe bumps which brought all from their cabins eager to learn what had happened. Two of the passengers were on deck, and at once knew the cause, having noticed the proximity of the land some minutes before the ship struck. Immediately confusion and terror spread thoughout the ship. The saloon was filled with ladies and children, whose shrieks and cries added to the general dismay. On reaching the deck the steamer was found to be heeling over towards the land, which appeared to be not more than 100 yards from our starboard side,

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

and which the commander informed us was the mainland of Africa. Ahead of us we could see a high prominent headland, whilst on our starboard, we now being broadside on to the shore, we could discern a low lying coast with a white fringe of surf beating angrily upon it. All this while waves broke continuously over the ship, pouring over the awnings and down the hatchways and saloon skylights, which were open. The first action of all on board seemed to be to secure life belts, some of which hung in each cabin. No orders having been heard or instructions given, the passengers were left entirely to themselves to assist one another as best they could, and to support and encourage the ladies and children. After some delay three boats were consecutively lowered, by which a few of the male passengers got away. By the second boat a rope was conveyed to land and made fast. The third alone returned to the ship, full of water, the men being hauled on board by ropes, while of the second boat's crew two sailors unfortunately lost their lives in the surf which was dashing high on the rocky shore. It was at this time the Captain decided to delay the disembarkation of the passengers and crew until daylight. A terribly anxious time was passed by all on board during the four hours which intervened before daybreak. There seemed to be no order of any kind maintained; no means, by casting the lead, or otherwise, were taken to discover the position of the vessel upon the rocks; no signals of distress were exhibited, nor did any of the officers either assure us of our safety or organize means of escape, whilst all parts of the vessel were filled with groups of Chinese servants, stokers, and stewards seemingly bent on taking care of themselves, and securing their own property regardless of the passengers, while even in some instances cabins were ransacked. All that was done in the above-mentioned time was to bring one of the three remaining boats on board from the port to the starboard side. During this time no attempt was made or advice given to save or secure any valuables or cabin luggage, nor were the passengers told to put on other garments than those they stood in, which in many instances consisted only of night clothes. From time to time seas broke violently over the vessel, bumping her on the rocks, and exciting considerable doubts among the passengers as to whether she would remain till the morning. At about 4 a.m. we were made aware, by the shouts of the party on shore, of the lights of a steamer approaching on our port quarter, and the Captain then for the first time sent up rockets and himself held blue lights over the stern. Three guns were also fired, and we had the satisfaction of seeing our signals replied to. At dawn disembarkation commenced with one small boat, which was hauled backwards and forwards through the surf by means of the rope fixed on shore, and thus all were eventually landed in safety. The Captain had in the meantime sent a boat with an officer and crew to communicate with the steamer lying in the offing and making signals, which, however, were not replied to by the *Meikong*. In consequence of the high wind and the sea running at the time, this boat was unable to reach the steamer, the *Glenartney*, and would have been unable to communicate, had not Captain Gulland lowered a boat and so reached them when they were almost exhausted. This boat was unable to return to the *Meikong*, and was ultimately abandoned on shore, the officer and crew returning to the rest of us on board. The passengers, on leaving the *Meikong*, were prevented by the officers from taking with them into the boat even the very smallest packages, such as hand-bags, shawls, clothes, etc., being assured that the baggage would eventually be brought on shore, so that in many instances passengers went to their cabins before leaving and safely packed everything—taking absolutely nothing with them. On reaching the shore we found ourselves intermingling with numbers of the natives—Somalis—all armed with swords and spears, and in some few instances with matchlocks, but to all appearance they were not disposed to be hostile. The English passengers were fully occupied as they landed in making the ladies and children as comfortable as possible under these trying circumstances,—drying clothes, collecting chairs, and rigging up sails as protection from the burning sun; also in keeping at a distance the inquisitive natives. There being no officer on shore to take direction of affairs until the Commissaire arrived, bringing with him a few bags of biscuits drenched with salt water and also a few bottles of wine, nothing was known as to what was to be done. At this time we saw the *Glenartney* steaming off, and we imagined she had left us to our fate, but the first officer and a sailor from that vessel appeared in a few hours in a very exhausted state, having come overland. They brought the welcome news that the *Glenartney* was lying in a small bay, about six miles off on the other side of Cape Gardafui, waiting to take us on board. They urgently requested that the first detachment of passengers should start and make their way to the steamer, in order to inform her Captain that the remainder would shortly follow. This was done, about a dozen leaving at this time. By 2.15 p.m. the crew were all landed, no one being left on board but the Commander, first officer, and a few others, who brought with them all that was saved, viz.: the diplomatic despatches, registered letters, ships papers, instruments, arms, etc. Up to this moment the Captain had not decided on the entire abandonment of the vessel, both he and the Commissaire assuring several passengers that their baggage would be saved. The Captain of the *Glenartney*, who had himself walked over from his ship, stated that he would wait until eight o'clock next morning, and also send a portion of his crew to assist in saving anything possible, which offer, however, at the last moment the Captain of the *Meikong* declined. To prove the practicability of saving the valuable portion of the cabin luggage, it may be here observed that one gentleman, on the promise of reward to one of the crew, obtained his two despatch boxes from his cabin, this being just previous to the Captain's decision to abandon the steamer. Some time before the commander had left the vessel numbers of natives had swam to and were allowed on board, and were observed collecting and throwing overboard anything they could secure. Leaving this magnificent vessel with a very valuable cargo, with mails, passengers' baggages, all abandoned to the crowds of Somalis who now were swarming over it, although lying on a fairly even keel and within a hundred yards of shore and in a comparatively smooth sea, the remainder of the passengers, the officers and the crew commenced their march across the burning desert which separated them from the bay where the *Glenartney* was lying. Owing to the forethought and activity of some of the English passengers, the weakest of the ladies and children were carried by chairs lashed upon oars, which by bribes and promises of money they induced the black stokers to carry, without which aid the ladies must have inevitably perished. Along these ten miles of soft sand, under a scorching sun, with no water, food or means of sustenance, was to be seen a long straggling train of people, in many cases shoeless, hatless, and half clothed, and some in their night dresses only, while the crew who ought to have assisted the weak and failing, carried with them their bundles and packages down to such trumpery as monkeys, parrots, etc. It was a most heart-rending sight to see delicate ladies, some walking in slippers, half dead with thirst and exhaustion, struggling for their very lives to the end of the journey. On our arrival at the bay we found the boats of the *Glenartney* ready to receive and convey us as fast as possible, and thoughtfully supplied with fresh water, which was eagerly swallowed by one and all. There we heard also the sad news of the death by exhaustion of one of our fellow passengers in the first detachment, and also of that of the Commissaire from sun stroke. At length all the others having arrived safely on board, we left the bay at about midnight for Aden, where we arrived at 10 a.m. on the 20th, having in the meantime experienced unexampled kindness and generosity from Captain Gulland and his officers and crew, who not only supplied us with food, but gave clothes to those who were most in need of them, and but for whose gallant and willing help the loss of life among the passengers would undoubtedly have been very great. The passengers were requested to meet at the Messageries Maritimes office at Aden on the 22nd to hear the report of the Captain of the *Meikong* read in reference to the loss of the ship and the abandonment of the baggage. It contained so many statements which were not considered in accordance with facts, that it was not signed by any of the English passengers, who before leaving Aden handed in to the Political Resident a protest which contains the foregoing particulars.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

There are to be added the few following facts :—H. M. troopship *Tamar* passed the Cape on 5.30 p.m. on the afternoon of the 18th, and seeing the French colours and Company's flag which had been left flying half mast high, stood in and signalled for some time, but receiving no reply, and being short of coal proceeded at length on her way. On 20th June in the afternoon, the French troopship *Finnisterre* also passed the same place, but laid to and sent on board the wreck a party of men with strict orders to touch nothing. They found the deck in possession of Somalis who had taken up their quarters there and were feeding on the sheep and other live stock of the *Meikong*. The boarding party easily drove them off, and examined all parts of the ship. One man brought away with him a photograph album out of the saloon, belonging to one of the first class passengers. It is now in his possession and is quite uninjured. From the foregoing I wish to draw attention to the several points of complaint which we make.

By whose mistake or negligence this ship was, on a moonlight night, run on shore at full speed between Cape Gardafui, rising 900 feet from the sea, and a headland some four miles south of it fully 300 feet high, it is for the French authorities to discover. As I have said above, the shore was noticed by passengers on board some minutes before the vessel struck. Why were no signals of distress exhibited until the *Glenartney* was sighted by the party on shore? Why was no lead thrown to discover our positions on the rocks? Had there been deep water either at stem or stern we might have slid from where we struck, and been engulphed at any moment. How was it no attempt was made to prepare to save any thing during the hours we waited for daylight, with twelve officers, including engineers, and a crew of over 150 men, with nearly five hours at their disposal and already possessing a rope communication with the shore? It is almost incredible to believe that nothing was done, and nothing whatever was saved. But on the other hand, passengers were prevented taking with them trifling packages, being informed that their cabin luggage would follow them.

There is little more to add concerning this miserable calamity. That the officers were content to see ladies, young and feeble, toiling over the burning desert, sinking for want of what a little forethought and care would so easily have supplied, is perfectly astounding. So satisfied were the English passengers of the possibility of saving the greater part of their baggage and valuables, that they prevailed on the Political Resident at Aden to offer H.M.S. *Vestal*, then lying at anchor, for the protection of the wreck. This was declined by the French Consul and Messageries Agent as unnecessary, whereas before we left Aden, Arabs had already left to buy up what fell into the hands of the Somalis.

We arrived here to-day by the P. & O. steamer *Zambesi*, all suffering from the effects of exposure to the sun and the most miserable week, spent at Aden, that imagination can conceive. I ought to mention that the number of passengers did not exceed eighty—including all classes and children.

I am, Dear Sir,

Yours faithfully,

A PASSENGER.

We hear that Hu-kwan-yung, the well-known banker of Hangchow, has completed the negotiations with the Hongkong and Shanghai Banking Corporation for the Chinese loan, which was to have been advanced by the Japanese. The amount is five million Hai-kwan taels, or about £1,600,000. It may be mentioned that the loan, unlike the last, is not in silver but in sterling. The rate of interest is ten per cent. per annum. The Customs revenues of Canton, Ningpo, Shanghai, and Hankow are hypothecated as security for the debt.—*Shanghai Courier.*

In reference to the paragraph which appeared in our issue of the 26th July, to the effect that it was rumoured that the Japanese had protested against the negotiations of the last loan to the Chinese Government, we learn that the matter has been amicably settled. The Chinese contractor of the loan, which was to have come before the public on the first of September, has purchased from the Japanese 50,000 piculs of rice for the use of sufferers by the inundation in the province of Fokien. The profit on this transaction will, we supppose, be considered by the Japanese as a sort of equivalent for what might have been got from the loan.—*Shanghai Courier.*

Law Reports.

IN H. B. M.'s COURT AT KANAGAWA.

Before H. S. WILKINSON, Esq., Acting Law Secretary.

Wednesday, August 22nd, 1877.

MESSRS. STILLFRIED & ANDERSEN *v.* D. WELSH.

The plaintiffs in this case, who were represented by Mr Andersen, sought to recover certain bills which had been placed in the hands of the defendant for collection, and monies which had been collected by him. Mr Welsh defended his case in person.

His Honour asked Mr Welsh if he had rendered a statement of accounts to the plaintiffs, and he replied in the negative. He stated that he had been employed by the plaintiffs first of all on a salary, but it was subsequently arranged that he should collect accounts, sell views, etc. on commission. Last month he obtained a situation and applied to the plaintiffs for a settlement, which they promised to give him but had not done so. He had made out a statement from which he believed that Messrs Stillfried and Andersen were indebted to him.

Mr Andersen informed the Court that he was willing to have a settlement but had been unable to get one through the perversity of the defendant, who had collected monies and said that he had not done so. Consequently the plaintiffs were afraid to apply to persons owing them money for fear they should have already paid the defendant. The defendant had informed him that an officer belonging to a British man-of-war had not paid his account; but on application to the officer for payment he produced a receipt showing that he had paid the money to Welsh.

At the suggestion of His Honour both parties ultimately agreed to a adjournment of the case in order to allow them the opportunity of exhanging accounts with each other. His Honour then made the following order.

It is ordered by consent that the defendant within one week from this day deliver to the plaintiff an account of all monies that he has collected for them, and a list of all the invoices received by him from the plaintiff to the amount of which he has not collected, and that he return such invoices not so collected to the plaintiffs and that the plaintiff within the same time deliver to the defendant an account of all commissions due by them to him, and that the further hearing be adjourned until Wednesday, the 19th of September, 1877, at 10 o'clock.

IN THE U. S. CONSULAR-GENERAL COURT.

Before GEN. T. B. VAN BUREN, Consul-General.

Tuesday, August 21st, 1877.

F. V. DICKINS *v.* A. C. DUNN.

The plaintiff claimed the sum of $2,400, retainer's fee.

Mr Dickins opened his case by saying that he had done all he possibly could to settle the affair without bringing in into Court, but had failed. While conducting a case for Mr Dunn in the Tsuki *Saibansho*, some Japanese witnesses were required, but they refused to attend unless the *Saibansho* ordered them. The *Saibansho* refused to do this, and the end of the affair was that it was referred home to America. A great deal of correspondence took place which was carried on by him, Mr Dickins. Eventually all witnesses who were required were summoned to the *Joto Saibansho*, and the case was heard and occupied fifteen sittings, and resulted in favour of Mr Dunn for some $15,000. The petition had been at first for something like $50,000, but on a new petition having to be presented to the *Joto Saibansho*, he Mr Dickins, thought it would be better not to claim such a large amount, and advised Mr Dunn to take off $25,000 which was accordingly done. At the same time he advised that a smaller claim for $700 should not be included in the case for damages, as the two claims would be better separate. When the case was taken into the *Joto Saibansho*, different arrangements were made with regard to his, Mr Dickins, fee, as he could not foresee all which afterwards transpired when he accepted the sum of $500, and it was ultimately agreed that $1,500 should be paid as retainer's fee if the case was successful, and in the event of its failure $800. Mr Dunn did not carry out this arrangement, and so he, Mr Dickins, made out a bill of costs according to the rules of the profession in the English Court, and the sum he now claimed was the amount of that bill. After the demand in the petition being claimed, Mr Dunn admitted that something was due him, Mr Dickins, and as to how much, it was resolved should be settled by an arbitrator. The arbitration, however, fell through on account of Mr Dunn claiming the sum of $700, the amount of the claim which he said ought to have been filed in the petition in the main case heard in the *Joto Saibansho*. This Mr Dickins could not agree to.

Mr Dickins was then sworn and said:—In 1874 Mr Dunn employed me to conduct a case against the Petroleum Company, in which he was plaintiff, demanding $50,000 damages for wrongful dismissal from their service, and 700 odd dollars, a debt alleged to be due from the Company to him. After his first interview, at which I did not understand whether I was retained or not, the Petroleum Company called upon me and wished to engage me. I refused, considering myself in honour bound to Mr Dunn, although they were willing to pay me a good sum down. On the 15th of April, I wrote to Colonel Dunn the following letter: (letter produced and marked A, Mr Dickins reading it, and the substance of the document was objecting to Mr Dunn having drawn out a petition without first consulting Mr Dickins; and also informing Mr Dunn that the other side had been to him requesting him to undertake their case.) In consequence of that letter I was formally

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

retained by Mr Dunn apd the sum agreed upon was $500. In answer to the offer on the part of Mr Dunn I wrote a letter dated April 24th, 1875. (Letter produced and read and marked B, its purport being that he, Mr Dickins, accepted the terms offered and that he declined to undertake the claim for $750.) I then attended the case in the Tsukiji *Saibansho*, three days altogether when the case came to an end through the refusal of the Court to call certain Japanese witnesses who would not come without being summoned. On this point of the summoning of witnesses, I made representations to the Court, had numerous interviews with Mr Dunn and the American minister, conducted a long correspondence with the latter concerning it, and prepared statements and other papers for transmission to the U. S. Government. This ended in the case being again brought on in the *Joto Saibansho*, which had been created in the interval. A new petition was drawn up by me and filed, by which in accordance with my advice, Mr Dunn reduced the claim contained in the original petition drawn up by himself, from $50,000 to $25,000, and omitted by my advice, the claim for $750. Between the petition in the *Joto Saibansho* being settled, filed and heard, numerous conferences took place between Mr Dunn and myself, and his witnesses; and evidence of one witness, after considerable trouble, being procured beforehand. On the 16th of Jan., 1875, in pursuance of negotiation relative to costs, I wrote a letter to Mr Dunn (Letter read and marked C and was to the effect that the terms proposed could not be accepted, and proposing the sum of $1,500 in the event of success and $800 in the event of non-success). The terms of this letter were agreed to by Mr Dunn, both verbally and in writting, and I accordingly conducted the case in the *Joto Saibansho*. The hearing commenced on the 14th of January, 1875, and after many adjournments terminated about the 12th of April, 1875, some 15 sittings having taken place. Judgment was pronounced in favour of Mr Dunn on October 30th, 1875. In the meantime the Court was frequently pressed by me to render judgment. During the trial the charge of incompetency against Mr Dunn was repeated by the oil company and much insisted upon. From this accusation Mr Dunn came out vindicated in every respect, and the charges of disobedience were shown to be as frivolous, and were by judgment of the Court, accepted as being as frivolous as the charge of incompetency. When the judgment had been obtained, I considered it my duty, under the letter of the 16th of January, 1875, to be at an end, and during 1875 and 1876 I pressed Mr Dunn for payment at least of my disbursements. I also pressed him for payment of, or security for, my costs, and I mentioned the consignment of his judgment, with which I would be contented as security. Not a faithing was paid me. (Letter produced read and marked D certifying, that within two days, if some arrangement was not arrived at, he, Mr Dickins would sue Mr Dunn. A bill of costs was included in the letter). The statements contained in the bill of costs are true, and its items are reasonable and fair, according to the practice of the profession in Yokohama. In answer to that letter, I received one from Mr Dunn dated 30th of September, 1876 (letter produced, read and marked E The contents were objecting to the bill of costs; and with regard to the disbursements of Mr Dickins Mr Dunn would pay as soon as possible). I then wrote another letter to Mr Dunn. (Letter produced and marked F, proposing to submit the account to some gentleman). Nothing came of the correspondence, my offer being refused both verbally and in writing. (Letter, dated October 6, 1876, from Mr Dunn, produced and read and marked G, acknowledging that the offer to refer the matter to a countryman of his was fair and honourable. A letter was also read dated July 1876, and another without any date, marked H and I respectively). In consequence of the correspondence between Mr Dunn and myself, it was determined that the matter should be submitted to the arbitration of Mr Boissonade. I had previously commenced this action in this Court against Mr Dunn. When the agreement to arbitrate was made, the Court made an order to that effect. On the 12th of January, 1877, I received a letter from Mr Dunn with a copy of my bill of costs. (Letter read, marked K, stating that Mr Dunn was anxious to have the matter settled by arbitration.) An agreement of arbitration was then drawn up submitting to Mr Boissonade my claim against Mr Dunn. To this agreement additions were added by both parties, which I propose to produce in evidence (Agreement of arbitration read, put in and marked L.) The arbitration fell through owing to Mr Dunn's demand that the arbitrator should arbitrate upon a counter claim put forward by Mr Dunn, demanding payment from me of the sum of $750 odd dollars, and denying me any remuneration whatever, on the ground that I had forfeited my right to it by not tacking on his claim of 750 odd dollars in his claim for wrongful dismission. The bill of costs put in is that upon which I sue.

Recess till 1.30 p.m.

On the Court resuming its sitting this afternoon Mr Dunn cross-examined Mr Dickins.

Mr Dickins:—I furnished documents to Mr Bingham. There were letters to Mr Mitchell and to several others. The reason I sent Mr Hall to copy the correspondence at your house was because you had them altogether.

This concluded the plaintiff's case.

Ambrose C. Dunn was them sworn and said:

May it please your honor I have made a brief of this which I wish to read. I the defendant commenced action by filing my petition through the Consul in Yokohama, against the Japanese Petroleum Company on the 24th of March, 1874, as per documents 1 and 2. (Letter produced dated March 28th, 1874, to the U. S. Consul, marked 1. The purport was that Mr Dunn intended to take action against the Petrolenm Company.) I call particular attention to the items $556.50 and $200, being my own funds disbursed in 1873, or thereabouts for the said Oil Company, as stated in exhibit (1). I received a letter from Mr Dickins, 18th April, (plaintiff's exhibit A). I have never disputed employing the plaintiff as my attorney in the prosecution of my claim against the Oil Company. I employed him on the 23rd of April 1874, but I deny employing him in September 1874 as set forth in the petition.

Mr Dickins remarked that he wished to amend that part of the petition, which was done.

Defendant then read a letter in which he had offered Mr Dickins the sum of five hundred dollars and five per cent interest on the $750. Mr Dickins's answer was then read accepting the proposal with the exception of conducting the case for 750 odd dollars.

Defendant continued:—Mr Dickins' agreed to accept the $500. By a miscarriage of justice my case was thrown out of the Tsukiji *Saibansho*, at which time plaintiff had obtained all my papers and then refused to carry on the case in the *Joto Saibansho*. On my demanding them, Mr Dickins refused to deliver me the papers unless I paid him $500 for the making of a new agreement. To save time and expense I was forced to make a new agreement (plaintiff's exhibit C.) My petition to the Tsukiji *Saibansho* had been prepared by myself. Mr Dickins had not prepared a single paper at that time or given any legal advice whatever. The only work done by Mr Dickins was to attend two days at Tsukiji and the writing of a short letter to the Minister in regard to my case. So the plaintiff really did nothing; and refused to carry on the case unless I paid him $500 or made a new agreement. By the new contract plaintiff binds himself to a final issue in the *Joto Saibansho*, and not until the final issue was plaintiff entitled to demand payment for his services; and on my refusing to pay until the final issue, Mr Dickins decided to retire fron the case and instituted a suit against me in the U. S. Consular Court. The case against the Petroleum Company is still pending. On the 30th of October 1875, judgment was rendered in my favour for about $20,000, including interest. The Company then appealed, and on December 26th 1876, a final dicision confirmed the first decision less $1,000 house rent. Then it was sent to the Tôkiô *Saibansho* to be executed. Then I was notified on the 11th of June last to appear before the Tôkiô *Saibansho*, for the purpose of enquiring into the individual responsibility of the shareholders in the Company, and there the matter rests. Mr Dickins left the case in October after the decision of the *Joto Saibansho*. I not only represented my case myself in the *Joto Saibansho*, but also in the *Daishin-In* on account of Mr Dickins leaving the case.

Witness produced the copy of a letter written by him to Mr Dickins on January 18th, 1875 and several other documents bearing upon the statement that Mr Dickins had retired from the case. Mr Dickins' letters to defendant were to the effect that he could not dance attendance at the Japanese Court without seeing a glimpse of some compensation, as every day he left his office was a loss of from $50 to $75; and complaining of defendant writing as if he were the injured party instead of him, Mr. Dickins. The Bill of costs was then read.

His Honour asked Mr Dickins why it was that he claimed more than the $1,500, to which he replied that it was on account of Mr Dunn not complying with that agreement.

Defendant then read the following statement which was got up on purpose to present to the arbitrator, and the marks of the exhibits which are defendant's own and not His Honour's.

1st.—I, the defendant, commenced action by filing my petition through the U. S. Consul at Yokohama on the 24th day of March, 1874, in the *Shihosho*, Tokio, *vs.* the Japanese Oil Company as per enclosures marked Nos. 1 and 2.

2nd.—Attention is particularly called to the items 556 50, and 200 Mexican dollars, being defendant's own funds disbursed by him in 1873, or thereabouts, for the said Oil Company as stated in bill or petition as per enclosures marked No. 2, amounting to the sum of 756.50 Mexican dollars, without interest, and by the filing of said bill or petition, it brought forth enclosure marked No. 3 from the plaintiff, Mr. Dickins, bearing date April 18th, 1874.

3rd—Defendant has never disputed the employing of plaintiff as his attorney in the prosecution of his claim *v.* the Japanese, Oil Company before the *Shishosho*, on the 23rd day of April, 1874. But defendant does deny employing him during the month of September, 1874, as set forth by plaintiff in his sworn petition before the U. S. Consul-General as per enclosure marked A. By reference to enclosure marked B, of date April 23rd, 1874, to the plaintiff, it will be seen defendant submitted his proposition for plaintiff's employment and by enclosure marked C, bearing date April 24, 1874, will be found plaintiff's answer accepting defendant's proposition for 500 dollars fee to conduct defendant's case to a final issue in the *Shihosho*, but refusing defendant's offer of 5 per cent. on the aforesaid sum of 756.70 Mexican dollars, as it really required no legal proceedings, as per enclosure marked B. These documents, or agreement B and C, defendant considered equally binding on plaintiff and detendant, and by the express terms of said enclosures B and C, nothing can be more clear, than that plaintiff faithfully bound himself, and did undertake the carrying on of defandant's case before the *Shihosho* to a final issue, and upon said final issue plaintiff was to receive 500 dollars.

4th.—By a miscarriage of justice, defendant's suit on the 2nd day of trial was thrown out of the Tsukiji *Saibansho*,—a court of the *Shihosho*;—at which time plaintiff obtained possession of all defendant's papers, &c., in the case, and he, thereby, took advantage of the situation by breaking his agreements as per enclosure B and C, and emphatically refused to conduct the defendant's case in the *Joto Saibansho*, *Shihosho*, which court was the first to try the defendant's cause, as the Tsukiji *Saibansho*, *Shihosho*, had refused a trial, all of this in violation of plaintiff's solemn agreement aforesaid with defendant. And on demand of defendant the plaintiff refused to deliver up to defendant said papers, etc., that defendant might forward them through the U. S. Consul to the

Digitized by Google
UNIVERSITY OF CALIFORNIA

Joto Saibansho, Shihosho, unless defendant paid the plaintiff 500 dollars, or the making of a new agreement. With these remarkable proceedings on the part of the plaintiff, defendant consulted a friend, and after said consultation, it appeared defendant would have to proceed against plaintiff in the English Court, to recover his papers &c., that were illegally held by the plaintiff. And defendant, to save himself time and expense, after an elapse of a few days was forced to the making of a new agreement as per enclosure marked D, bearing date January 16th, 1875.

5.—Defendant's petition before the Tsukiji *Saibansho* had been prepared by defendant's himself, and forwarded through the United States Consul at Yokohama, to the said Tsukiji *Saibansho*, as per enclosure marked 1 and 2. The plaintiff had not prepared a single paper in defendant's case at that time, or given defendant any legal advice whatever, see enclosure marked No. 3, received from plaintiff after defendant had filed his petition. The only work plaintiff did under the agreement as per enclosures B, and C, before the Court or elsewhere, was part of two days attendance on the trial in said Tsukiji *Saibansho*, a short interview with the U. S. Minister, this interview being part of said two days attendance at said Court, and the writing of a short letter to the U. S. Minister in regard to defendant's case in the Tsukiji *Saibansho*. So the plaintiff really did nothing but to break off his agreement with defendant, and refuse to further carry on defendant's case, without defendant pays him 500 dollars for doing almost nothing, or make a new agreement as per enclosure D.

6.—Now in regard to said new forced agreement of the plaintiff with the defendant as per enclosure marked D, and defendant's answer, see enclosure marked E, said plaintiff sets to work again and binds himself to conduct proceedings in defendant's behalf in the *Shihosho* to a final issue, and here take notice in all of plainti's and defendant's agreements made, see enclosures B, C, and Dfplaintiff is to prosecute defendant's case to a final issue in the *Shihosho*. There is no particular Court of the *Shihosho* named in said agreements, and nothing is more clear but that plaintiff was bound to prosecute defendants's case in any and all Courts of the *Shihosho*, until finally settled, and not until that final issue was plaintiff entitled to demand from defendant payment for services. And by the refusal of plaintiff's demands by the defendant as pay for services, as not being in conformity with the plaintiff's and defendant's agreement, he the plaintiff retired from the case, and instituted suits against the defendant, in the U.S. Consular General Court, as per enclosures marked A, C and H, when defendant was summoned, and a day fixed for the trial. This said new agreement, see enclosure marked D. And, mark you, plaintiff also ignores, violates and neglects to carry out, and the plaintiff point-blank refuses to conduct further proceedings in defendant's behalf, and, too, mark you, whilst defendant's case is still pending in the *Shihosho*, and the plaintiff actually withdraws from defendant's case, see plaintiff's notices to defendant, as per enclosures marked F, I, and K, thereby placing defendant's case in great jeopardy, and leaving defendant to prosecute his own case to a final issue before the *Shihosho*. But before said notice of plaintiff's withdrawal from defendant's case, the plaintiff's neglect of defendant's interests was such that defendant was compelled repeatedly to seek the advice and assistance of the U. S. Minister to aid defendant in the prosecution of his cause before the various courts of the *Shihosho*, for the reason it was impossible to get the plaintiff to advise with or come to Tôkiô, in defendants interest. Some proofs of this will be found marked "Miscellaneous Papers," showing that defendant was prosecuting his own case before the courts previous to the withdrawal of the plaintiff from defendant's case.

7.—Attention is further called to other extraordinary and remarkable demands of the plaintiff and his persistence in ignoring his new forced agreement of enclosure marked D, using plaintiff's words "before devoting further time to defendants interest, &c."

8.—The plaintiff complains in many of his letters, (as per enclosures accompanying this answer) and in his sworn petition as per enclosure A, of the great length of time taken in defendant's case, and of the serious loss plaintiff sustained in devoting time to defendant's case. The defendant admits the great length of time taken. We, plaintiff and defendant, could not forsee how it would be possible that much time could be taken over so plain a case, the defendant denies, however, that plaintiff sustained any considerable loss in devoting time to defendant's case, to the detriment of other business coming into plaintiff's hands. Defendant cites the honourable arbitrator, to the records of the case in the hands of Judge Numa, who presided at the hearing of the case, to the *fact* that plaintiff did from time to time, *ask* and receive, the adjournment of the court from day to day and even week to week, in order that plaintiff might attend to other business in Yokohama and elsewhere. This frequent adjournment was against the earnest protest of the defendent, and oft times of the judge of the court. The defendant complains that he suffered much loss of time, as well as great expense from the hands of plaintiff by said delays.

9.—The plaintiff claims he acted as Counsel for defendant from September 1874, to June 1876, and claims as fees, disbursements, etc, the sum of $2,490, as per his bill of costs, see exhibit marked W The defendant states the trial commenced on the 14th of January 1875, and terminated on the 12th of April 1875,—15 days only being occupied in the trial. Judgment was delivered by the *Joto Saibansho, Shihosho*, on the 30th day of October 1875, (not the 29th as plaintiff states) this being on or about five months after the hearing of the case. Now between the time of the court concluding the hearing, and the rendering of the said judgment, the plaintiff did nothing in the case, the plaintiff was not even present at the rendering of the judgement of the *Joto Saibansho*, in defendant's case, defendant had to appear and receive the judgment, which judgment was appealed against by the said Oil Company, to the *Daishi-In, Shihosho*, and from the 30th day of October 1875, the delivering the judgment, by the *Joto Saibansho*, up to this present time plaintiff has done nothing but make one visit to Tôkiô, calling on the U. S. Minister, and the writing of a short petition to the Tôkiô *Saibansho*.

In regard to another of plaintiff's extraordinary demands, in his claim for $2,490, as per exhibit W., I have only to say it is perfectly absurd and ridiculous, and at variance with his agreements, see enclosures B. C. and D.

10.—Enclosures marked R H.S N.G.O.P. and No 4 defendant submits as important evidence bearing on the case, as they speak for themselves.

11.—Defendant particularly calls the honourable arbitrator's special attention to the receipts amounting to $756.50 (referred to in article 1 of this answer) which with interest to date will amount to over $1.200, this money was paid out of defendant's own private funds, for material, &c., for the use and by the order of said Oil Company. These said receipts are still held by the plaintiff. On defendant filing his claim and petition through the U. S. Consul to the Tsukiji *Shihosho*, see enclosures marked B. C. No. 1 and 2. This claim $756.50 was included, and it was also included in the claim forwarded by the U. S. Consul before the *Joto Saibansho*. But in the commencement of the case before the *Joto Saibansho*, the plaintiff asked the Court's permission to strike out the 756.50 Mexican dollars from defendant's claim, in doing so, plaintff stated he desired to make a separate action for the said 756.50 Mexican dollars, which the Court allowed the plaintiff to strike out. This defendant complained of to plaintiff at the time, as the Court had made no objections whatever to the claim as it stood. The plaintiff has taken no steps whatever to recover this $756.50 with interest, up to the present time, although defendant at various times, before the delivery of the *Joto Saibansho's* decision in defendant's favour, as rendered October 30th, 1875, requested plaintiff to do so. The defendant refers the honourable arbitrator to his Honour Judge Numa, who presided at the hearing of defendant's case in the *Shihosho*, to the fact that if the plaintiff had not withdrawn this claim, judgment would have been rendered on it on October 30th, 1875, by the *Joto Saibansho*. This is a heavy loss to defendent, by the plaintiffs withdrawal of said claim.

Defendant therefore prays, in view of all facts set forth in this case, that instead of defendant being in debt so the plaintiff, plaintiff is clearly and strictly indebted to the defendant, and the defendant prays that your Honour may award to him such relief as the nature of the case requires.

Mr Dickins then summed up his case, and explained that the $1,500 included the $500 first arranged about. He had no doubt but that Mr Dunn did not know what trouble he had been put to. He dwelt upon the circumstances relating to the hearing of the case in the *Joto Saibansho*, and stated that Mr Dunn was evidently under the impression that he (Mr Dickins) had to wait until the case was appealed or taken through all the various courts, even to the sueing of the various members of the Company. It was not necessary for him to go to Tôkiô on all occasions, and he did not see why he should kick up his heels in dancing attendance upon the Japanese unless he was properly remunerated. He had offered to take up the case again providing the defendant paid what money had already been disbursed by him, Mr Dickins, and on his giving security for the amount of his fee. From a business point of view it would have been a piece of absurdity on his part to continue paying money out of own pocket The reason why he wished the $750 not being included in the main claim, was, because from his experience of Japanese Courts, he was under the impression that the Japanese would take advantage of the smaller claim, give judgment for that and leave them out in the cold with regard to the larger sum. He did not wish to push Mr Dunn for immediate payment, except for what money he had already paid away, and would be content with security for any further amount the Court should award him.

The defendant asked the Court for permission to have the case adjourned until the return of Mr Bingham and Mr Boissonade.

His Honour declined to grant the request, and said he would reserve judgment.

Friday, August, 24th, 1877.

JUDGMENT.

The plaintiff, an attorney and counsellor of this Court, brings this action to recover of the defendant the sum of $2,490 and interest at 12 per cent. per annum from the 28th September, 1876, on account of legal services rendered and disbursements made in and about the prosecution, in certain Japanese Courts, of a cause in which the present defendant was plaintiff and the Japanese Petroleum Company were defendants.

The answer sets up that plaintiff was employed upon an express agreement at an amount stated to conduct the cause referred to in the Japanese Court until the final disposition, but that he has withdrawn from the cause and the same remains pending and unsettled. It also claims that defendant is entitled to no compensation for the reason that he withdrew from the petition in the Japanese Court a claim of some 756 dollars, which it is asserted was a good and valid claim.

The evidence shows that the defendant employed the plaintiff on the 23rd of April, 1874, to attend to his cause against the Japanese in Tsukiji *Saibansho*, Tôkiô, and agreed to pay him for his services the sum of $500 and disbursements, on the final settlement of the cause in that Court, whether in favour of Mr Dunn or against him.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

After hearings on three different occasions the cause came to an end in the Tsukiji *Saibansho* by reason of the Court refusing to order the attendance of Japanese witnesses required by Mr Dunn, and whose evidence therefore could not be obtained. About the time of this occurrance the *Joto Saibansho*, a new Court of the *Shihosho*, was created, and the plaintiff was advised that said new Court was the proper one in which to prosecute Mr Dunn's action. Accordingly a new petition was prepared and filed in the *Joto Saibansho* and a new contract entered into in January 1875 between plaintiff and Mr Dunn, by which the former was to receive for his services in conducting the case to a successful termination in said *Joto Saibansho*, the sum of $1,500. In case the recovery, however, should be for a small sum or nothing at all, Mr Dickins was to receive the sum of $800. In either case his disbursements were to be repaid to him independently of the above sums. The former contract for services in the Tsukiji *Saibansho* was merged in this one of the 16th of January, 1875.

The evidence shows that Mr Dickins took immediate steps through the U. S. Consulate and the U. S. Legation and finally succeeded in securing a settlement of the question of the duty of Japanese Courts to summons Japanese witnesses when required by either party. How it is possible that a doubt as to such duty should have ever arisen in the breast of a Judicial officer, it is difficult to conceive. In the *Joto Saibansho* Mr Dunn's cause dragged its slow length along, but finally through the strenuous exertions of Mr Dickins, Mr Dunn and the U. S. Consul, judgment was rendered therein on the 30th of October, 1875, in favour of Mr Dunn, for $20,000. Mr Dunn then believed himself very near the realization of the amount due him, but alas, for such hopes! About that time another new Court, the *Daishin-In*, was erected, and to this the Japanese Petroleum Company appealed.

After a year's delay, during which Mr Dunn, through the U. S. Consul-General, and by his own personal appeals, urged upon the Appeal Court the justice of his claim, the *Daishin-In* confirmed the judgment of the *Joto Saibansho*, striking out the sum of $1,000, and making the amount of the judgment $19,000.

This judgment was sent to the Tôkiô *Saibansho* to be executed, and this latter Court, although the contract with Mr Dunn is signed by the individual members of the Petroleum Oil Company, is hearing at long intervals explanations and denials on the part of these members of their personal liability, and Mr Dunn is now beginning to fear he is as far from his dues as before he brought his action.

After the judgment referred to had been rendered in the *Joto Saibansho*, Mr Dickins applied to his client to be paid the sum of $1,500 and disbursements in accordance with the contract of January 16th, 1875. This was refused on the ground that the amount was not due until the final termination of the cause in the Appeal Court. I am of the opinion that the fair construction of the contract of the 16th January, 1875, is that the amount therein guaranteed to Mr Dickins was to be due when judgment should have been rendered in the *Joto Saibansho*. That he should conduct appeal proceedings under that agreement, it is clear was never contemplated by either party, from the fact that the *Daishin-In*, or Appeal Court, was not in existence at the time of making the contract, and was not in fact created until after judgment was rendered in the *Joto Saibansho*.

On the other hand, I am of the opinion that the plaintiff in this cause cannot repudiate the contract of January 1875 and sue upon the *quantum meruit*, because the defendant puts a construction upon the contract not warranted by law and claims that the amount mentioned in it is not yet due. The contract being a legal one, the services provided for having been performed, the amount agreed to be paid for those services was due and could have been sued for immediately after the judgment was rendered into the *Joto Saibansho*.

It is therefore adjudged and decreed that the plaintiff recover of the defendant the sum of $1,500 for services and $260 for disbursements, making the sum of $1,760, with interest at the rate of ten per cent. per annum from the 30th of October 1875, and costs of suit.

IN THE JUDICIAL COURT AT KANAGAWA.

Before Mr. ASAINA KANSUI, Vice-President.

Friday, August 24th, 1877.

G. W. MILLER *v.* NAKAYAMA GONJIRO and ANOTHER.

The plaintiff claimed the sum of $500 damages sustained by the defendants not fulfilling a contract to supply lighters to ballast the steamer *Duna*.

From the plaintiff's statement it appears that the defendants are lighter agents, doing business at the English hatoba. On the morning of the 6th July, plaintiff paid to defendants the sum of $17.50, being payment in full and in advance for lighters to carry one hundred tons of ballast from Oota to the M. B. S. *Duna*. He agreed, further, to pay for any detention that might occur when the lighters were loaded, as the M. B. Company usually paid the highest price for work done quickly. Expense was no object and the defendants were aware of this and it was with malicious intent to deprive him of the work of the Company that defendants did not carry out their agreement to put the ballast on board the *Duna*. When the $17.50 were paid, it was with the understanding that the lighters would proceed to Oota immediately. Plaintiff engaged coolies and ballast on the morning of the 6th, and they remained idle all that day, waiting for lighters to go to Oota. On the following day defendants promised faithfully that the lighters should go to Oota, and coolies were again hired, but no lighters went. The next day plaintiff went to seewhy it was the contract was not fulfilled, and told them the *Duna* was hourly expected from Shinagawa. They again promised as on the previous occasions, with the same result. This was on a Saturday, and on that evening the *Duna* arrived and plaintiff had no boats ready with ballast to send alongside owing to the deception of the defendants, and the result was the *Duna* had to take in cargo, as she could not wait for ballast and had to proceed an her voyage without any. A responsible person in the M. B. Company guaranteed that lighters should be engaged to ballast the *Duna* and the *Kunamoto Maru*. These lighters were obtained from the defendants and the person referred to is ready to pay for them on the settlement of this action, according to the decision of the Court. Plaintiff said that for the loss sustained to his reputation as stevedore, and the actual loss sustained through not completing his engagement to supply the *Duna* with ballast, he claimed $500, though he ought to have assessed the damage at $1000, as he had lost the patronage of the Company The defendants had not only broken their contract with him, but had used every possible means to prevent other boats being engaged.

As the plaintiff had more evidence to produce, the case was adjourned till the 30th instant at 10 a.m.

THE PLEASURES OF SOCIETY.

(Saturday Review.)

The proper treatment of pleasures is a subject which might fitly engage the attention of our educational reformers. Of the 950 boys who are supposed to be learning something at Eton, a large proportion will after the age of twenty spend their whole time in devising fresh amusements for themselves and their friends. New schools have been built there, and the rising generation has the advantage, denied to the last, of studying chemistry, geology, and botany. We feel certain that, if it were properly represented to the authorities, they would constitute a new department of science, and add to their programme dinner-giving, the reception of guests at breakfasts in the playing-fields, pigeon-shooting, and supper parties twice a week at Skindle's. The boys would in this way be prepared for their real duties in life, and would feel that they had not lost the ten years previous to their entrance into society. It is the inventor of new pleasures who obtains the gratitude of the world. No one cares for a permanent benefit. The man who should discover a remedy against death would not be made half as much of as the man who should enable his fellow-creatures to drink as much wine as they liked without getting drunk. The largest testimonials are given to the purveyors of amusement. There is no comparison between a master of foxhounds and the originator of the postal system. The end of existence is leisure; but when leisure has been obtained, or when it is a birthright, it becomes a very troublesome thing. It appears to be most troublesome in London, and any suggestion as to how the hours may be spent with the least weariness is eagerly welcomed. This year a fresh pleasure would excite more than ordinary gratitude. Prince's has died a natural death, the Orleans Club is too far off, London is very hot, rather dull, and rather poor. The number of people willing to be entertained is larger than the demand for them, and the result is that rooms and staircases are most disagreeably crowded. The season may therefore be recommended to the notice of those excellent women who wish to leave the position in which they were born and create for their families a fresh visiting-list. If there is any crossing-sweeper with sufficient savings who knows a hall-porter who is on terms of intimacy with the members of his club, the thing may be done at once, and half the duchesses in London will be at the *cotillon*. Who shall say we are a proud nation? Money must first be found, and the acquaintances will follow. People come to town to go out, and if the big house is closed they will rush anywhere sooner than stay at home. If a woman were to issue cards for the inspection of her husband's toothbrushes or her own receipted bills, hundreds of guests would flock to the sight, and say how interesting it was, and how good it was of the hostess to show her pretty things. When a man buys a dinner-service in these days, the tradesman sends off a huge card emblazoned with coronets requesting his customers before a given day to come and look at it. The success of this kind of entertainment is dependent on the curiosity of women, which will lead them anywhere. As their conversation consists solely of personal comments, it is a matter of real importance to them to meet Midhat Pasha, or General Grant, or a new beauty. The next day in their broken English they will give an account of these distinguished persons to those of their friends who preferred remaining at home to swelling the ranks of the mob which collects after dinner in some house which can only hold with comfort the guests that have dined there. The hostess cannot plead ignorance as to the feelings of those who have availed themselves of her invitation. She may hear on the top of the stairs the remarks, uttered with perfect frankness, by the descending guests. The cabin ladder which leads to the ground floor is quite blocked up, and they have time to assure their friends in an audible voice that, had they known what a mob it was going to be, nothing would have induced them to come; that the atmosphere was that of a public bath, and that they should not be in the least surprised if the recent catastrophe at Bath were to be surpassed. The wisest are those who drive to the house, see the surging crowd, and then prudently drive home again. The entertainment has its merit—namely, cheapness. Indeed, if the lost cloaks could be decently disposed of, a party might be made to pay its own expenses.

Invitations in London, and invitations in the country have one notable difference. The civility in the first case is on the side of the entertainer, in the second on the side of the entertained. To leave your own occupations, to break through your own habits, to accept the hours and the cooking and the friends of others for three or four days, is no light matter. The guests may be unsympathetic, the weather bad, the anticipation of discomfort only equalled by the reality, and the day of departure the only happy one. The "rest"

deavouring to co-operate with the Commander-in-Chief of the Turkish Army.

WAR FEELING IN GREECE.

Demonstrations in favour of war are being made at Athens.

THE MEETING OF THE EMPERORS AT ISCHEL.

The interview between the Emperors of Austria and Germany at Ischel is considered to have testified that these countries are at one accord on the present question.

London, 10th August, 1877.

THE WAR IN TURKEY IN EUROPE.

According to an official Turkish despatch, Russian Troops unsuccessfully attacked Lovatz, being defeated and compelled to fall back.

ENGLAND'S POLICY.

In both Houses of Parliament motions on the Eastern Question have been withdrawn as being injurious to public interests. The policy of the Government continues to be one of non-intervention if the Eastern Question remains unaffected by the progress of the war.

ARRIVAL OF THE ENGLISH MAIL.

TELEGRAMS.

(*Straits Times Extra.*)

London, July 30.—A letter from the Sheik-Ul-Islam is being read in the Mosques, enjoining all Mussulmans to abstain from hostile actions towards the Christian populations.

The Austro-Hungarian Government has decided to partially mobilise.

London, July 22.—The troop-ships *Crocodile, Malabar* and *Euphrates* have been ordered to be got ready for sea on Wednesday.

The Russians have left Nicopolis to besiege Widdin. They have taken Kassanlik and are advancing on Philippopolis. The Sultan of Turkey has called out all capable of bearing arms in the province of Adrianople.

Osman Pacha's army has repulsed the Russian attack on Plevna, with heavy loss on the part of the Russians.

The Grand Duke Alexander is besieging Rustchuk. The Turkish camp at Yenisaghra has been captured. A Russian official account states that the Russians have occupied the Schipka Pass, and that the Turks have retreated in disorder.

A despatch from Ahmed Mucktar Pasha, from Kars, dated the 19th instant, states that the Russians had attacked his right wing, but were defeated with heavy loss and compelled to fall back.

London, July 23.—The *Euphrates* sails on Thursday with 1,500 men. Four other troopships follow with a large number, destined for Malta and Gibraltar, and, it is believed, eventually for Gallipoli. The London papers generally approve of the steps taken by the Government.

A Russian official despatch states that the Russians, after severe fighting, have occupied Lovatz [a small town in Bulgaria about twenty miles south of Plevna]. Severe fighting, with heavy loss to the Russians, preceded the taking of the Schipka Pass. The Russians in the Dobrubdscha are marching to beseige Silistria. 18,000 men of Suleiman Pasha's army are marching toward Jamboli [close to Yenisaghra, on the southern slope of the Balkans, which the Russians occupied a few days since, and about fifty miles due north of Adrianople].

The Russians have left Kurukdara, and are concentrating on Zaim.

London, July 24.—Lord Derby in the House of Lords and Sir Stafford Northcote in the House of Commons have said, that the Mediterranean garrisons being below their full complement, in the present disturbed and uncertain condition of Europe, it was deemed desirable to strengthen them by 3,000 men. This was the sole foundation for the newspaper reports on the subject.

After severe fighting the Russian troops at Zaim appear to have fallen back upon Gumri.

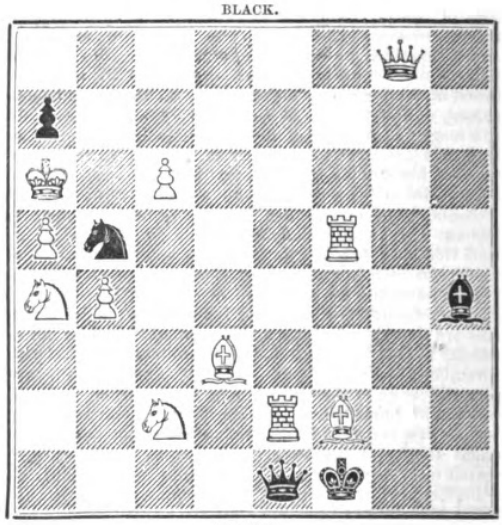
The Russians are supplying arms to the Bulgarians. The *Morning Post* publishes a statement from the leading newspaper specials certifying to the atrocities committed by the Russians in Bulgaria upon the Muhammedan population.

London, July 24.—Mehemet Ali and Suleiman Pasha have assumed their respective new commands. The Turks are more active. There have been heavy skirmishes in the vicinity of Silistria, Varna, and Schumla. The Russians have invested Rustchuk. The traffic is interrupted on the railway between Adrianople and Philippopolis.

There are vague rumours of a Russo-Italian alliance. The Russian press allege that if the squadron [? the British ironclad squadron] enters the Dardanelles, it will encounter the Italian squadron. The Montenegrins are again besieging Nicksics.

London, July 25.—An official despatch to the Turkish representatives abroad accuses the Russians of burning villages, and of wholesale massacres of the Mahomedans in Bulgaria. The Russian defeat at Plevna is confirmed. The Russian have fortified the Schipka Pass, and are strongly entrenched at Eskisaghra. Suleiman Pasha has arrived at Adrianople with 20,000 men. A Court-martial has been ordered to be held on Abdul Kerim and Redif Pasha. The Montenegrins are capturing the forts in the Duga Pass.

A Russian official report states that an insurrectionary movement is extending in the province of Ter [a province on the north of the Caucasus mountains]. The Russians at Daghestan have been reinforced.



Ceylon, July 26.—The accounts in latest Indian papers (20th July,) shew that neither in Bombay nor in Madras has the famine appreciably abated, while the prospects of rain and crops are not all that could be desired. By the latest accounts, rice exports from Burmah seemed to have ceased, while supplies were limited and prices high in Calcutta. Prices in the local market are fluctuating, but the tendency is upwards, and that tendency we fear will increase. Indeed the doubt seems to be whether enough rice can be obtained to feed coolies on estates, and we admired the foresight of a planter, who told us he had arranged to cultivate extensively a large species of cabbage which had proved a god-send on a previous season of scarcity.

PROBLEM.

Swatow Brown		,,	None.
Daitong		,,	$3.90
Japan Rice		,,	$2.10 to $2.40
Kerosene Oil		,,	$2.60

Kerosene Oil.—The market is temporarily affected by forced sales, but stocks are by no means large. The quotation is now $2.60 to $2.80.

EXPORTS.

Silk.—At the beginning of the week a decline of about $20 per picul was established on Hanks, and in consequence a considerable business has been done since. Oshius have attracted but little attention. In Filatures several transactions are reported at quotations.

Settlements are 550 bales of Hanks, 15 bales of Oshius, and 50 bales of Filatures.

Arrivals are 350 bales. Stocks are reduced to 500 bales.

The total export to date since 1st of July is 2,110 bales, against 7,350 bales last year.

		In London at 4s. 0d. per lb.	*In Lyons at f. 5.05 per kilo.*
Hanks, Best No. 1 & 2	$490 to 510	17/9 to 18/5	49.00 to 51.00
,, Good No. 2	$460 to 480	16/9 to 17/5	46.50 to 48.00
,, Good all round No. 2½	$440 to 455	16/1 to 16/7	44.50 to 46.00
,, Medium No. 3	$410 to 430	15/1 to 15/9	42.00 to 43.50
,, Common to inferior No. 4 & 5	$380 to 400	14/1 to 14/9	39.00 to 41.00
Oshius, Good... (Nominal)	$480 to 500	17/5 to 18/1	48.00 to 50.00
Kakeda, best ... (,,)	$570 to 590	20/5 to 21/1	56.50 to 58.50
Hamatski	$400 to 430	14/9 to 15/9	41.00 to 43.50
Filature Silk	$560 to 650	20/1 to 23/1	56.00 to 64.00

Tea.—The week's business affords small matter to comment upon. Settlements amount to 1,770 piculs, and stocks are almost excessive, though it is now reported that further supplies will be greatly restricted until the tone of the market improves. The quality of most parcels offering is far below that at a corresponding period last season.

Common	$ 8.00 to $11.00	Fine	$23.00 to $27.00
Good Common	$12.00 to $14.00	Finest	$28.00 to $32.00
Medium	$15.00 to $17.00	Choice	$34.00 nominal.
Good Medium	$18.00 to $21.00	Choicest	—

EXCHANGE AND BULLION.

Exchange.—During the past week there has been a moderate demand for Bank Bills, with but little Private Paper offering, and the general tendency of rates has been downwards.

Rates close as follows:—

Sterling—Bank 6 months' sight	3s. 11 5/8d. at	¾	
,, Bank Bills on demand	3s. 10 3/4d. at	⅞	
,, Private 6 months' sight	4s. 0d.

Silk for France	95 bales.
England	109 ,,
Italy...	19 ,,
Total	223 bales.

Treasure for Hongkong $71,000.00
,, London $54,400.00

Per Steam-ship *Nagoya Maru* for Shanghai and ports:—
Treasure $330,724.12
,, ... Yen 1,728,000.00

Per Steam-ship *Hiroshima Maru* from Shanghai and ports.—
Treasure $175,534.00

REPORTS.

The *Ta-lee* reports: Left Takao on the 3rd August; on the 4th instant experienced a strong northerly gale, increasing in violence with falling barometer and a heavy N. E. swell. On the 5th instant (the vessel being than under close reefed topsails and fore topmast staysail), owing to the quantity of water she shipped from time to time, it was decided to scud before the gale; while executing this manœuvre she shipped some heavy seas, one over the taffrail smashing in the after cabin door and filling the cabin, besides making its way down to the store locker and damaging some provisions; hen coops and other deck gear being also washed overboard. The gale was at its height on the 6th (the lowest barometer being 28.66), and by the evening of that day had moderated, the glass rising steadily. During the storm the vessel had run out of her course some 200 miles to the southward, the wind veering from north to north-west. The position of the vessel after the gale was Latitude 23.11 N., and Longitude 121 E. Thence experienced strong southerly winds to Omai Saki; afterwards light variable winds and calms to port, making the passage in 15 days. There were no vessels loading either at Takao or Taiwan-foo for Yokohama when the *Ta-lee* left.

The *Mary Jane* reports: Left Kobe on the 16th inst., at 9 a.m. Experienced light westerly winds until the 17th inst, thence fresh and strong westerly winds to port. Arrived 20th August, at 6 30 p.m.

The *Burmese* reports: Left Hongkong on the 16th of August; experienced light Southerly winds and fine weather throughout the passage.

NOTICE TO MARINERS.

No. 72.

China Sea.

FOOCHOW DISTRICT.

PIHQUAN HARBOUR ROCK.

NOTICE is hereby given that Captain Williams of Messrs. Butterfield and Swire's steamer the "Chefoo" observed, on the 24th May last, a rock on which a heavy sea at ¾ flood was breaking in mid channel at the entrance to Pihquan Harbour. The islet off the south end of Chinquan Island bore from the rock W. by N.; and Pingfoong Rock Point, to the west of Pingfoong Island, bore N. by E. magnetic. This information has been received from Mr. W. Handyside Tapp, H. B. M.'s Registrar of Shipping.

By Order of the Inspector General of Customs.

DAVID M. HENDERSON,
Engineer-in-Chief.

Imperial Maritime Customs,
Engineers' Office,

INSURE YOUR HEALTH

BY TAKING

HOCKIN'S

IMPROVED SEIDLITZ POWDER.

IT differs from the Seidlitz Powders usually sold in having all the ingredients in one bottle, is quite tasteless, and may be taken by persons of all ages as a *Cooling Beverage*, *Mild Aperient* or *Brisk Purgative* according to dose. Its extensive use during nearly HALF A CENTURY proves its valuable qualities as a Purgative Saline, and the fact that the powder retains its qualities for any number of years renders it a most reliable and efficient Domestic Medicine. It will be found invaluable to Families, Travellers, or Emigrants, as a preventive or remedy in all cases of **Sickness, Headache, Bilious Attacks, Fevers,** and the other ordinary **ailments** of life.

Agents—

BOMBAY, MESSRS. TREACHER & Co.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded.* This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omissonto renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

BIRTH.

On Saturday, 1st September, at No. 4, Yamato Yashiki, Tôkiô, the wife of ROBERT J. BEADON, Esq., Barrister-at-Law, of a son.

Notes of the Week.

There has been but little news from the South during the past week. No fighting of any consequence is reported, and although it is stated that the remnant of the Satsuma forces are entirely surrounded, the final effort to crush them appears to be delayed. Nothing is mentioned about Saigo or Kirino and those who are said to have escaped with them; but that there is a prospect of serious fighting still to come before the final blow is struck is evident from the preparations that go on. A thousand policemen have been telegraphed for, while twenty pieces of cannon and three thousand Snider rifles have been despatched with all speed from Osaka. Tosa still seems much disturbed, judging from the disquieting rumours that have appeared during the last few days in the native papers, but nothing certain is known of what is transpiring. The more hot-headed of the youth of that province, enraged by the arrest of some of their leaders, appear to wish to rush to extremes, but it is to be hoped that they will allow themselves to be controlled by men of cooler judgment. Major General Saigo arrived on Thursday from the South by the *Tokio Maru*, and immediately proceeded to an interview with the Emperor, to whom he explained the condition of affairs in the South. His Excellency Mori Arinori, the Japanese Minister to Peking, also had an audience with His Majesty on the 29th ultimo, previous to his departure for China. He left by the *Hiroshima Maru* on the 29th ultimo, accompanied by his wife.

The last steamer to America, the *Oceanic*, took away the United States Consul General at this port, General Van Buren, who has gone home on six months leave of absence. In view of the changes which are always to be looked for on the incoming of a new President, General Van Buren's return cannot unfortunately be counted upon as certain. In spite, however, of reports to the contrary, no successor has yet been appointed, nor can we ascertain that any steps have been taken to that end. General Van Buren has so fulfilled the duties of his office during the three years that he has resided here, that it is the wish of all--always excepting those "loafers" of whom he was the sworn foe, and who found their powers of mischief considerably checked by his vigorous treatment—that he should return to the position which he has hitherto filled in so worthy and satisfactory a manner.

The Fourth Promenade Concert at the Bluff Gardens last night was fairly well attended, although not to the same extent as the first and second of the series. The programme was entirely performed by the band of the *Tennessee*, kindly lent for the occasion by Captain Young and the officers of the vessel. The playing throughout was good, one or two of the selections being particularly well rendered. Three fire balloons of large size were successfully sent up, remaining visible for a long distance. The night was very dark, but the threatened rain passed off, and the weather was calm and cool.

We have received the twenty-fourth report of the Directors the Hongkong and Shanghai Banking Corporation laid before the shareholders at the Half-yearly General Meeting, and it is encouraging to see that the late prosperous condition of the Bank continues. The Directors again recommend the payment of one pound sterling per share and placing to the credit of Reserve Fund $150,000, which will then stand at $650,000.

From the American papers received by the Pacific Mail Steamship *City of Tokio*, we learn that the terrible scenes of violence that accompanied the Railroad strike in the United States have for the most part ceased, and that quiet is gradually being restored. When we published our last sketch of those fearful riots, the reign of terror had been inaugurated at Chicago, and fighting was going on between the military and the mob. It was then reported that the former had opened fire on the crowd with grape and canister, but the latest advices contradict this account, and state that the cannon were fired loaded only with powder. Owing to the effective measures taken by the authorities and the strong force of military and mounted police sent against the rioters, the mob was unable to gather in overwhelming force, and although much mischief was done and more threatened, the turbulent element was held in check. Not, however, without serious loss of life. Many attempts at incendiarism were made, and the "Plug-uglies" endeavoured to fire the freight-cars and depôt of the Chicago, Burlington and Quincy R.R. An attack was also made on the stock yards, but two volleys, of about a hundred rounds each, fired into the mob by military and police, seem to have created a most wholesome fear on the part of the roughs, who dispersed leaving nineteen dead, and taking with them a large number of wounded, some of them it is supposed mortally. A few of the police suffered severely but no deaths are reported among them. Although no women were killed, they

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

took an active part in the fight, firing on the soldiers from the inside of houses, and showing great good will in hurling mud, stones and invectives whenever they had a chance. Great disatisfaction was expressed at the orders given, from humane feeling, by the mayor, to avoid killing and to fire blanks. His orders were evidently disobeyed—no doubt very properly—for the mob was growing in strength and ferocity under the impression that the military would not proceed to extremities. The United States troops gave fair warning that if called upon to fire they would do so with the best aim and direst effect possible, and by their action they in all probability shortened the conflict, and dispersed the mob before it was able to gather sufficient force to carry out its mischievous designs. On the 27th July business was resumed, and the city quiet, though the military occupied different sections of the city, and the citizens were keeping up their protective organizations.

Similar scenes were enacted in St. Louis, where a battery of Gatling guns was brought out against the crowd and $12,000 subscribed by citizens for the purchase of arms. Three fourths of the manufactories in the city were closed by the working men's party, the original strike of the railroad men being quite lost sight of in the magnitude of the movement Fortunately the military preparations awed the mob into quiet, and though there were not wanting the usual attacks on trains, stone throwing and individual assaults, no serious conflict occurred. In almost all towns of importance throughout the States similar riots occurred, in some cases attended by loss of life, but the latest accounts state that although there is still much uneasy feeling, and the military are ready for immediate action should they again be required, comparative quiet has been restored. Traffic generally has been resumed on all the lines, and the great strike is considered to be virtually at an end. Henry Ward Beecher, it seems, expressed some opinions obnoxious to the working classes, or certain expressions that he had used when speaking on the labour question were misunderstood by them, for it is stated that he was mobbed near his residence in Brooklyn, and on his delivery of an address in his church, explaining his views, he had to be guarded by thirty policemen.

The feeling of discontent has spread to the mining regions of Pennsylvania. At Scranton a terrible fight took place between the miners and the Vigilance Committee, resulting in a number of deaths, while at other towns there was much disturbance. In fact, it seems as though a wave of lawlessness had swept over the whole country. Even Wall Street does not seem to have escaped the fighting fever, for we read that Mr. Jay Gould having betrayed a combination to put up the price of Lake Shore Stock in which a Mr. Selover was interested, the latter caught Mr. Gould in Exchange Place, and after hitting him several times over the head, picked him up and threw him up down an area, a distance of eight feet. Fortunately Mr. Gould only received a few bruises, but there was considerable excitement on the Stock Exchange for some time. Selover is a big powerful man, and Gould puny and weak. There is great indignation on Wall Street, and the *Sun* calls for Selover's arrest and imprisonment in the Tombs.

And now the cost of all this rioting has to be estimated and the bills met, and heavy enough they will be. Mr. David. A. Welles, according to the New York *World*, thinks that it is within the mark to say that the strike and riots have cost the country twenty millions of dollars. In Pittsburg alone the loss of property amounts to eight millions. These estimates include loss of earnings of men who went on the strike, of the men who were forced on the strike, and of those who were, by it indirectly, kept idle; also the cost of quelling the riots and the actual loss of property. This sum is equivalent to a total failure of the tobacco crop throughout the country. There are somewhat about two hundred and fifty thousand railroad employés in the United States, and at a convention held at Columbus, Ohio, on the 27th July, it was proposed that all railroad men throughout the land should contribute from thirty-five to fifty cents a month each, in order to pay the citizens of Pittsburg their losses by the fires caused by the rioting of those who were not strikers. The proposition was submitted for signature, but it does not appear to be a very rapid means of indemnification. Now, also, will come the question of fixing the responsibility and inflicting due punishment on the leaders of the riots. Although the actual perpetrators of the mischief are doubtless other than the strikers, the latter, as the *World* very justly points out, managed the strike like fools. If they had good cause, which is not for a moment admitted, they disgraced it by their mismanagement. They caused the public the greatest loss and inconvenience and thus from the first alienated all public sympathy. Whatever chance they may have had of having their complaints listened to, they have by their own acts forfeited all right to consideration, and instead of bettering their condition, they must for he future submit to such terms as their employers may choose to dictate.

We are glad to learn from the San Francisco *Bulletin* that the prompt and courageous measures taken by the authorities and citizens to repress the "hoodlum" element of that city, in its natural desire to murder, burn and pillage generally, under pretext of an anti-Chinese movement, has been thoroughly successful. When the *City of Tokio* arrived there on the 28th July, it was expected that some advantage would be taken of the landing of the Chinese passengers to commence a riot. Every precaution was accordingly taken, and the Chinese were landed and escorted to their destination by strong armed bodies of police and squads of Committee-men. The mob seems to have been thoroughly cowed and the "hoodlums" were conspicuous by their absence. The hard-worked Committee-men were relieved at night by militia, but although quiet was apparently restored, vigilance was not in the least degree relaxed. But in spite of all caution, two Chinese dwellings were sacked, and the perpetrators managed to escape before the mounted guard could arrive. An attempt at incendiarism was also made. The "hoodlums," with that cowardice which distinguishes them, have taken to attacking individual Committee-men if they can catch them alone, but in most cases the roughs have got the worst of it. San Francisco is proud, and justly so, of the prompt and powerful organization of which her citizens show themselves capable in such threatening times. Whilst she numbers among her population some of the most dangerous elements to be found in any city in the world, there is no city more capable of successfully coping with them and rendering their deviltries comparatively harmless. In a day and a half a perfect organization of 7,000 men was formed, divided off into companies and regiments, well armed and perfectly disciplined, and had the need been shown, these numbers could have been increased to 50,000. This organization was perfectly prepared to use the most severe measures that might be necessary for the suppression of the riotous element, and it is owing to this unanimity of action, and determination at any cost to maintain law and order, that the frightful scenes of Chicago and Pittsburg were not enacted on a more terrible scale in San Francisco.

Some time ago we mentioned the extraordinarily rapid growth of the raw meat trade between America and England. There is always in England an extremely strong prejudice against the introduction of any article of food which is comparatively cheap, and consequently—supposed to be—nasty. It was with great trouble that this prejudice was overcome with regard to American beef, and only the extreme care taken with the shipments, and the general excellent quality of the meat, procured for it the consumption it has deservedly attained. We regret to find from a statement in the *New York World* that a quantity of beef and mutton has been recently sent which is of anything but first rate quality. No greater mistake than this can possibly be made. If the British public find that there is a falling off in the shipments, and have reason to suspect that inferior or diseased meat is finding its way into their markets, the whole trade will be ruined as quickly as it arose. All classes have welcomed the admission of a good and cheap supply of meat, but the quality must be kept up to the standard first commenced, and be like Cæsar's wife. There are not wanting plenty of dealers in England, who have suffered from the introduction of American meat, who stand ready to fan the least breath of suspicion that the imported

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

meat is inferior and uneatable, and, in their own interests, the American dealers should take every care that they do not give the shadow of an excuse for complaint. The following is the paragraph to which we have referred :—

The Erie Railway brought in 100 cattle and 163 horses yesterday for shipment direct to England, and the steamers *Othello* and *Greece* took out for Hull and for London 285 cattle and 450 sheep. It it alleged, by those who ought to know, that the cattle to be sent out to-day or to-morrow will not do much credit to this country, and that no American shipper should send such cattle to any foreign country—least of all to England. Experts say that a worse lot has not been seen in the stock-yards here for years. None of them can be called good, two-thirds are thin in flesh, many are too old for beef cattle and some are infested with what is known as the Texas cattle tick, an insect about twice the size of a full-grown Colorado beetle, which buries itself in the skin of the bullock. The shippers engaged in exporting native cattle of good quality to Great Britain are alarmed, as they well may be, at this performance.

It is plain enough that the trade in beef with England may become an important industry. The chief obstacle it has had to contend with is the prejudice of the British consumer. That prejudce has very much abated on account chiefly of the care American exporters have taken to send only good beef and to deliver it in good condition. But the trade is still in such a tickish state that the sending of a lot of downright bad cattle from this country to England may give it a serious blow, and revive and intensify the prejudice which American dealers have been at such pains to overcome. If the facts of the case are as they are stated to us to be, it behoves those dealers to do what they can to stop a shipment which threatens so much injury to them, and to what may become a trade of extreme importance to this country.

From the "Japan Mail Daily Advertiser."

Monday, 27th.

There was a shock of earthquake at 3.45 this morning which lasted for an exceedingly long time, though it was fortunately not severe.

The German brig *Carl Ludwig*, from Foochow for Australia, put into harbour yesterday afternoon with damaged rudder, etc., and will have to undergo repairs here.

The British barque *Maitland* and the schooner *Otsego* returned to the anchorage on Saturday evening last from Powhattan Bay, where they had both been hove down for repairs.

The German brig *Oceanus* left this port for Hakodate on Friday last, the 24th instant, but put back on Saturday afternoon, having carried away her fore-topsail yard in the slings during the gale on the previous day. When the spar is made good she will proceed on her voyage.'

When the German barque *Christine* left Newcastle, N. S. W. on the 9th of July, the British barque *Parmenio* was loading for this port, and was expected to leave on the 12th July.

From the *Chôya Shimbun.*

It is rumoured, that though no great agitation has of late prevailed in Tosa, a report has been received at the Branch *Saibansho* at Tokushima, that the *samurai* of Nakamura in the Hata district of that province (Tosa) are showing symptoms of disaffection.

On the 30th instant three hundred and fifty newly enlisted policemen are to be despatched to Kobe by the *Hiroshima Maru.*

From the *Hôchi Shimbun.*

Of the 690 prisoners in the jail of the Kiushiu Special *Saibansho* at Nagasaki, 100 have been acquitted and sent to Kumamoto *Kencho*, and must probably, therefore, have been men of Higo. The judgment on the remaining prisoners will soon be delivered, but it is expected that most of them will be acquitted. Those who are sentenced to hard labour will be sent to the northern provinces.

Tuesday, 28th.

From the *Mainichi Shimbun.*

Major General Saigo arrived at Osaka on the 20th instant.

The powder magazine of the Kumamoto garrison exploded on the 13th instant, and some persons were injured. The cause of the explosion is not yet known.

From the *Nichi Nichi Shimbun.*

On the 24th instant the head-quarters of H. I H. Arisugawa-no-Miya were removed from Miyazaki, in Hiuga, to Hososhima in the same province.

From the *Akébono Shimbun.*

Three hundred policemen will shortly be sent to Kôchi *ken* (Tosa.) The statement made by the *Chôya Shimbun* to the effect that three hundred policemen would be despatched to Kobe on the 30th instant, is very likely a mistake, as probably Tosa was meant.

The Kiôto *Fu* has recalled all the policemen of that *fu* who have been sent to the province of Tambo and South Yamashiro. On the 21st instant 100 of the former and 50 of the latter returned to Kiôto

Of the eleven men who were arrested in Tosa and sent to Tôkiô a few days ago, Midzuno and Ikezoi were two prominent members of the *Kiosan-sha.* The rest belonged to the *Risshisha*, among whom Kataoka, Tani, Ikeda and Iwasaki are prominent members. They are said to have been arrested in consequence of the confessions of Muramatsu and Fuji (who interviewed Kirino in Kiushiu) and are now being examined in Tôkiô.

From the *Hochi Shimbun*

A telegram despatched by Colonel Ozawa at 7 p.m. on the 24th instant, announces that Saigo and Kirino, with over three hundred of their picked men, having broken through the lines of the Imperialists, crossed the Mafuri-gawa, and stationed themselves among the wild hills to the west of that river. Their intention seems to be to push into either Higo or Bungo, and such being the case, troops have been sent into those provinces to oppose them.

Wednesday, 29th.

Advices from Shanghai dated the 17th instant, state that the British Gunboat *Frolic* came into collision with a merchant vessel, and has gone ashore at the mouth of the Yangtsze.

The *Osaka Nippo* says that the Satsuma rebels made in all paper money to the value of 240,000 *yen*, of which they actually issued 140,000 *yen* worth, but the balance of 100,000 *yen* was left on their hands useless. The *Nippo* then goes on to relate one instance of the way in which this issue was forced on the people. A merchant sold goods to the rebel army amounting to 500 *yen*, for which he was paid with the Satsuma paper, but declined to receive it as being strange to him, and asked to be paid instead in Okurasho *satsu.* The rebel officers at once got angry, and significantly tapping their swords admonished the merchant that it would be advisable not to cast any doubts on the genuineness of their paper money. The merchant finding remonstrance dangerous and unavailing, accepted the *satsu* offered him, but immediately proceeded to invest them in dried fish held by another merchant. The latter objected to receive the rebels *satsu*, whereupon the would-be purchaser laid a complaint at the rebel head-quarters. The fish merchant was summoned to appear, and after receiving a severe reproof was ordered to accept the *satsu* offered to him—an order he dare not refuse to obey. By such means the paper money issued by the rebels was forced into circulation.

From the *Mainichi Shimbun.*

There being every prospect of a good harvest this year, the price of rice has already greatly declined.

From the *Nichi Nichi Shimbun.*

The Kubiki district of the province of Etchigo was visited by a severe hail storm on the 22nd instant. Hailstones fell varying in weight from about an ounce to nearly half a pound.

According to returns furnished by the Bureau of Police, there have been 13,710 criminals sentenced to hard labour from the beginning of the 1st year of Meiji (1868) to the end of the 9th year of Meiji (1876). Of these convicts 1,287 died in prison, and 10,836 have been discharged on the completion of their sentence.

From the *Chôya Shimbun.*

A telegram despatched by Tomioka, Vice Governor of Kumamoto *ken*, at 3.30 p.m. on the 27th instant, announces that the rebels have fled from Gomoyama and Nasu, and are now on their way toward Hitoyoshi. The Imperialists are in pursuit of them.

Three Satsuma rebels who had made their way to Okino-shima on the coast of Shikoku, in the province of Iyo, were recently arrested by the police of Ehime *ken.*

Thursday, 30th.

The *Tokio Maru* brought back 700 troops, 130 of whom are badly wounded. Dr. Dönitz, of Kobe, was in special charge of these wounded men.

The *Chôya Shimbun* says that a telegram received on the night of the 27th instant states that a violent storm had raged at Kumamoto all that day, which had caused much damage. From other sources we hear of bad weather generally in Kiushiu. The northern province of Ugo has also suffered from the same cause.

From the *Nichi Nichi Shimbun.*

Kataoka and other prominent men who were arrested and brought from Tosa to Tôkiô on the 23rd instant, were at first imprisoned in the jail of the Bureau of Police, but yesterday they were removed to the *Daishin-In* where they will be tried by Judge Tamano.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

His Excellency Sanjo Saneyoshi entertained the *Sangi* and other high officials at Hamagoten on the 27th instant.

On the 15th instant all the garrison troops at Uwajima in Iyo, and Takashima in Awa, were suddenly ordered to the town of Kochi in Tosa. The populace were at a loss to understand the reason of this movement, until it was known that Kataoka and others had been arrested.

From the *Chôya Shimbun.*

Of the newly enlisted police forces, 1,062 were informed on the 28th instant that they could return to their respective homes.

From the *Osaka Nippo.*

The population of Osaka in January, 1877, was :—

Males	275,368
Females	280,197
Total	555,565

Friday, 31*st.*

The *Nichi Nichi* says that great changes are being made in the *Kunaisho* (Department of Imperial Household). Many of the higher officials have already been dismissed, and the services of a number of the lower officials are to be dispensed with.

From the *Hôchi Shimbun.*

The Governor of Kumamoto *ken* has notified the people under his jurisdiction, that the rebels having been put to flight in Hiuga may seek refuge in Kumamoto *ken*. If any refugees should be discovered information should at once be given to the police, and any persons wilfully refraining to give such information, or who are discovered harbouring rebels, will be punished according to law.

A telegram is said to have been received from the seat of war yesterday at 11 a.m., requesting that one thousand policemen might be sent South immediately.

From the *Chôya Shimbun.*

On the 29th instant another detachment of the newly enlisted police, 1,400 in number, were disbanded.

From the *Nichi Nichi Shimbun.*

A telegram despatched by Police Inspector Murata from Owake, Bungo, at 3.15 p.m. on the 29th instant, announces that the rebels are surrounded by the Imperialists at Mikado and Kishino in Hiuga.

Great reform will, it is reported, be made in the system of the local Government of Kochi *ken* (Tosa).

From the *Osaka Nippô.*

The female band of Satsuma, consisting of the wives of the rebels who destroyed the residences of the Government officials at Kagoshima, have not been seen for a long time, but have lately been discovered in the Ijuin district of Satsuma. They are now in a condition of great distress, and wanting the necessaries of life have become pale and emaciated. If they would voluntarily confess all that they did previous to the arrival of the Mikado's special Envoy, Yanagiwara, they would be supplied with food; but they insist that they will receive no aid from the Government, but will remain in their present distressed condition until their husbands return victorious.

A traveller who arrived at Osaka a few days ago, says that Iwamura, the Governor of Kagoshima *ken*, has gone to the branch office of the *Kencho* at Miyazaki.

Saturday, 1*st.*

We are requested to state that the Sunday morning services in the Union Church, which have been discontinued for several weeks, will be resumed to-morrow. The Revd. J. L. Amerman, Pastor, will preach.

The U.S.S. *Monocacy* arrived in port this morning at 4 o'clock. She left Nagasaki on Tuesday, the 28th, and Kobe on Thursday, the 30th ultimo, at 2 p.m. and had fine weather throughout the passage. The U.S.S. *Kearsage* was lying at Nagasaki when the *Monocacy* sailed. When the *Monocacy* left Kobe the M. B. Co.'s steamer *Akitsushima Maru* was loading for this port, and was expected to leave some time during the night of the 30th. H. M. S. *Egeria* was lying at Kobe.

From the *Hôchi Shimbun.*

It has been decided that Yokosuka shall be one of the stations for the Imperial Navy.

H. E. Ogi, the Minister of Justice, attends at the trial of the eleven *samurai* of Tosa who are now undergoing examination at the *Daishin-In.*

ROADS.

HARDLY any need of this country more imperatively demands attention than that of more frequent and improved means of inland communication between the different parts of the Empire. Canals, railways and roads can alone supply this need. The nature of the country forbids the development of a canal system to any useful extent, and renders the construction of railways so difficult and expensive that any considerable extension of them is for the present, and for a long time to come, out of the question. We should, however, make an exception in favour of a continuation of the line from Osaka to Kiôto to the southern end of Lake Biwa, the reasons for which extension have been so fully and clearly set forth in the Report of Mr. Vicars Boyle, C.S.I., late Engineer-in-Chief of the Railway Department, that it is wholly unnecessary we should repeat, or, in view of their entire sufficiency, add to them.

Common roads are, however, of comparatively easy construction, and neither require a great outlay to make them, nor entail heavy expenses in their maintenance. It is true the attention of this Government has been directed to this question, and some efforts have been made to construct new and improve old roads. But a very great deal remains to be done. Possibly the broken nature of the country will render the employment of pack-horses necessary to some extent for a long time to come, but there are vast tracts over which waggon roads could be easily constructed, and these would assist materially in reducing both the expense and the time of transport of goods and produce. The materials for road making are almost everywhere abundant; in the plains the beds of the numerous rapid rivers afford an inexaustible supply of gravel and shingle, and in the mountainous districts a hard volcanic rock is almost everywhere within easy reach. Labour is cheap, and if money were spent in the improvement of the means of communication, it would be far more profitably employed than in building monstrous architectural eye-sores in Tôkiô, and providing an expensive educational staff for the training of scores of engineers, who, when their course is over, will find themselves in the position of frozen out gardeners with no work to do. The Japanese, too, are clever at earthwork of all kinds, and with a little instruction in levelling and surveying would be fully capable of making all necessary roads without foreign assistance. An important detail must not be lost sight of. The bridges are almost everywhere of slight construction, and are generally washed away at least once a year by some one of the sudden inundations to which the rivers of Japan are subject. This ought not to be, but the remedy, perhaps, is not so easy a one as at first sight it might seem to be. Such a river as that at Odawara, for instance, would give an expert bridgemaker some trouble to throw a bridge across at a moderate expense. But few of the rivers are deep, and the modern system of replacing heavy and expensive stone supports by iron cylinders filled in with concrete, appears especially adapted to them. Bridges so constructed with iron or wooden ways ought not to be very expensive, as the cylinders, in most cases, would not require to be of large diameter. Indeed, a sort of composite pillar of a sufficient number of strong iron pipes well bound together, might in many cases be found to afford the requisite strength, and

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

might in numerous instances be placed close enough to allow of the use of wooden ways.

It is hardly necessary to enlarge upon the utility of good roads. Cost of production is only capable of diminution within somewhat wide limits, but the cost of transport, as the economic history of the last century well shows, is capable of an almost indefinite decrease. It is a kind of tax, more or less uncertain in its amount, laid by distance upon all produce or merchandise, and it is a tax of the most oppressive and wasteful nature in that it precedes distribution, and prices are accordingly heightened by the interest on it from about the moment the article or product is ready for consumption. Nor is the cost of transport the money freight alone. There are the risks covered or not by insurance, and the delay to be taken into account, and where roads are bad or few, probably the loss thus caused much exceeds the mere carriage. There can be no doubt that the tea and silk trades, if assisted by an amelioration in the existing road system, are capable of an almost indefinite development to the advantage of the Japanese certainly, of foreigners in the long run probably, and there can be equally little doubt that the high addition the present ineffectual and costly mode of inland transport involves to the Yokohama prices of imported goods, is a serious hindrance to any further increase of the import trade. The remarks contained in a letter published in our last issue referring to this subject and signed "HIYAKUSHO TERAKI" are well worthy of perusal, and we entirely concur with our correspondent's views as there expressed.

THE WRECK OF THE *MEIKONG*.

IN the issue of last week we published a letter addressed to us by a well known Yokohama resident, who was one of the passengers by the ill-fated steamer *Meikong*. The account of the circumstances attending the wreck was not entirely favourable to the officers and crew of the vessel, but we did not consider it within our province to express any opinion on this point. We therefore published the letter without comment.

Since then, however, our attention has been called to another letter, which has appeared in the *Echo du Japon*, also written by a passenger, and a very old and respected resident of Yokohama. Under the initials "E. P." his identity will be readily guessed at. In justice, therefore, to the officers of the *Meikong*, and to the reputation of the *Messageries Maritimes*, we give elsewhere a full translation of the letter. The difference in the two accounts is strangely marked, and must naturally excite some comment. It is but fair to draw attention to the reasons given by "E. P." for acts which "A Passenger" most strongly condemns as resulting from sheer carelessness, neglect or indifference. The mistaking of a valley covered with saline efflorescence and glittering sand, shining under a brilliant moon, for smooth water, is perfectly comprehensible, especially when the promontories that rise on either side are so similar in shape as to be readily mistaken for each other. It is quite possible to understand how at first it was hoped that the baggage might be saved. After the principal duty of landing the passengers in safety had, however, been accomplished, it was found that five out of the six boats were smashed and useless. It was then clearly out of the question to risk the last boat in an endeavour to save baggage and personal property, when it might be required for the far more important work of conveying the news of the disaster to some point whence aid could be sent to the shipwrecked people. In addition to these particulars we publish an extract from the *Semaphore de Marseille* containing portion of the evidence given by Captain GULLAND on his arrival at Port Said, in which he bears high testimony to the conduct of Captain FOACHE and the officers of the *Meikong* in their successful efforts to save the passengers and crew.

The *Semaphore* also states that the Messageries Company, wishing to be informed of the exact situation of the *Meikong*, with a view to taking all measures possible for salvage of the cargo, gave orders to the Captain of the *Dupleix* to proceed at once to Gardafui. The Minister of Marine, with the same intention, also telegraphed similar instructions to the Captain of the despatch vessel *Surcouf*, which had just arrived at Aden. Just as these vessels were preparing to start for the scene of the disaster, the Messageries steamer *Ava* arrived, whose Captain stated that he had visited the wreck, and that it would be useless for them to proceed thither as there was no longer a chance of effecting any salvage. When the *Ava* passed, the stern of the *Meikong* had broken off and entirely disappeared, while the bow, which still held to the rocks, was breaking up and being gradually washed away.

Between our correspondent's account and those we today publish, it will be seen that there are certain serious discrepancies. Of these we can offer no explanation, but we are bound, in simple fairness, to lay both statements before our readers. We are too far removed from the scene of the wreck to be able to express any decided opinion as to the causes which led to it, or the circumstances attending it.

It will be noticed that "E. P." remarks that such disasters must continually occur until the erection of a lighthouse renders them unlikely. It is singular that this should be followed by the news, which was brought by last mail, of the wreck of the B. I. S. N. Co.'s Steamer *Cashmere* off Cape Gardafui,—it is supposed on the same spot where the *Meikong* was wrecked—which unfortunately appears to have been attended with great loss of life. With regard to the *Meikong*, we see that the English papers estimate the value of her cargo at one million sterling, but in all probability this is largely exaggerated.

It will perhaps be remembered that about a year ago a man who lived just below Sannomiye Station, suspecting the fidelity of his wife, made a visit to a house in the village just above the old race course and brutally murdered a man he found there. We have just heard that the murderer was beheaded in the jail on Thursday morning, and it may be worth while to note that the sentence was carried out in accordance with the new law, that is, on the strength of the evidence only, the prisoner refusing to confess his guilt.—*Hiogo News.*

About 5 o'clock on the afternoon of Tuesday last, considerable excitement was caused by the water in the harbour being influenced to some extent, apparently by a tidal wave, or some such phenomenon. At about 4.45 the water in the creek at Sagaramatsu was observed to be ebbing with much more rapidity than is ever met with here, and very shortly afterwards it commenced running in again, and in a very short time the tide was entering the creek with sluice-like rapidity, carrying with it sampans and dambies, which were evidently unaccustomed to such tidal activity. In the harbour the various ships at anchor were rapidly swinging about in different directions, as the force of the tide caught them. Sampan owners were making the best of their way to the shore evidently being dissatisfied with the look of things afloat. The tide continued to ebb and flow at periods of from 15 to 30 minutes, more or less until seven o'clock. The natives predicted a typhoon as the result of this freak of nature, but beyond a few heavy showers of rain the night pass over quietly.—*Nagasaki Rising Sun.*

SPIRIT OF THE JAPANESE PRESS.

The Views of Kido.

(From the "Kômin Shinshi," 22nd August.)

The public are well aware how much the Nation owes to the ability of Kido, the late *Naikaku Komon* (Adviser of the Mikado). Through the courtesy of a correspondent we have received certain documents, which were laid by him before the *Daijô-Daijin* and the *U-daijin*, in which he expresses his opinions regarding the position of the country. There is also a letter addressed by him to the *Chokunin* (officials holding direct appointments from the Throne) of Chôshiu, the great Statesman's native province.

We intend to publish a review of these documents in order that the people may fully appreciate how anxious Kido was to promote the welfare of his country. The documents above referred to were written by him during last December. Although it may not appear exactly becoming in a journal to publish that which was written so many months back, we deem it our duty to lay their contents before the public, as they throw much light upon the evils of the present administration.

Kido used repeatedly to say that it was yet far too early to attempt any reform of the land tax, or the capitalization of the pensions of the *Kwazoku* and *Shizoku*. The Government, however, was of a different opinion.

A Chinese writer has said that "when Government measures do not meet the requirements of the times, they should be reformed again and again until they do." On such a principle our present Government seems to be acting, but the ancient sage did not mean that it would be wise to issue a law in the morning and repeal the same in the evening.

The memorial addressed by Kido to the two *Daijin* was to the following effect:—

Firstly, that the annual expenditure of the various Government Departments should be dimished, in order that the taxation of of the people might be reduced.

Secondly, that local expenditure should be controlled by the local authorities, and not, as now, by the Government officials. It is well-known that each district has its own peculiar customs and privileges, which can only be properly understood by the local officials, who should have the power of so conducting local matters as to suit them to the special wants of the district under their jurisdiction.

Thirdly, that laws should not always be considered as necessary because they appear to be good in themselves, but that such laws as meet the requirements of the people should meet with first consideration.

Fouthly, that as the Government is now all under one head, no district should be allowed to enjoy special privileges owing to any superior power that it may be supposed to possess, as thus other districts, which are debarred from the enjoyment of such privileges, are unjustly treated.

Fifthly, that whereas since the demand for peoples' rights and liberties has made itself heard, the country has become divided into two parties, Conservative and Progressive, the Government professed to be the upholder of the former, whilst all its actions favour the policy of the latter. To the proper solution of these points the Government must give its most earnest consideration.

The letter addressed by Kido to his friends was to the following effect:—

"I have laid before the *Daijin* a memorial respecting the affairs of our country, but can not tell how it will be received. What I have to request of you is that you will coöperate with me in promoting the welfare of the Nation. Men who are swayed by patriotic motives should not retain their offices merely for the sake of the emoluments attached to them. If they cannot discharge the duties entrusted to them according to their conscience, they should at once resign their positions. For my own part I intend to resign my post, to return to my native province and teach the people there the true road to civilisation. He who would assist others must deny himself. I therefore trust that you will work with me, selling your houses and unnecessary property, and endeavouring to act independently.

"As I have held high positions under Government for a number of years, I am possessed of abundant means, and if any of you need assistance from me, I shall be most willing to grant you whatever you may require.

"Though we return to our native province, it will be necessary for time to time to come to Tôkiô and not remain in ignorance of what is transpiring around us in the world. I am now building a new house which will be available for our meeting in Tôkiô.

"There is another important point which I am desirous of bringing to your notice, and that is, that you will guard yourselves against indulging in any feelings of personal enmity. This has caused some of our friend to break the laws of the country and to turn criminal by opposing the authority of the Government. Such action is decidedly wrong.

"But when I say that I shall return home I do not mean that I shall entirely withdraw from all active participation in the affairs of my country, and trouble myself no more concerning them. When I see that matters are going wrong, I shall come forward and entreat the Governmement to change its mode of action."

We can only express our high admiration for the above documents. While Kido lived he was the pillar of our country, and never lost sight of the welfare of the people. There can be no question of greater importance than the reduction of the taxation, and of the Government expenditure. The Imperial decree, issued on the 3rd of January last, was, we imagine, founded upon this memorial of Kido.

Some people accuse Kido of duplicity, but judging from his acts he was a faithful patriot, and we regret his untimely death. There are, however, one or two points of Kido's conduct upon which we are in the dark. He was in office at the reform of the land-tax, and the capitalization of the pensions of the Nobility and Gentry. Now, if his views were entirely against the action of the Government in these matters, why did he not uphold them, and if after repeatedly urging them upon the administration, he found that it would not act in accordance with his representations, why did he not resign his post?

Again, in his letter he speaks as though he intended immediately to resign his position. Yet this letter was written in December last, and he was still in office when death removed him in June following. It is true that he may have tendered his resignation, and that the Government refused to accept it, but we have never heard that such was actually the case. Had he but lived these things would doubtless have been made clear to us. Now we can only regret his untimely death.

The Arrest of the Tosa Samurai.

("Hôchi Shimbun," 28th August.)

On the 23rd of this month, eleven *samurai* of Tosa, including Kataoka Kenkichi, who presented the *Risshisha* Memorial, were arrested in Kochi *ken* and brought to Tôkiô. Though we are not yet made acquainted with the reasons of their arrest, the public generally suppose that it is in consequence of their having taken advantage of the Government being engaged in suppressing the Kiushiu rebellion to address a memorial to the Throne claiming various reforms. Others assert that it is owing to Fuji and Muramatsu having had secret communication with the Satsuma party on behalf of the members of the *Risshisha* and *Seikensha*. Some again maintain that their arrest is only owing to suspicion on the part of the Government of some meditated disturbances in Tosa.

We ourselves cannot undertake to decide which of the above suppositions is correct, though we cannot but deem the last one the most improbable. Neither do we know if all those arrested are members of the *Risshisha*. If Kataoka and the rest have been arrested for presenting the memorial, as some say, we think they can scarcely regret their arrest, or be sorry for the action when led to it.

When the Satsuma *samurai* flew to arms, the young and hot headed Tosa *samurai* wished also to oppose armed resistance to the action of the Government. The leading men of the Province, including Itagaki, finally persuaded them to act otherwise, and prevented them from making an outbreak. Agitation, however, still prevailed, and it was eventually decided to draw up a memorial stating the grievances of the disaffected, and to lay it before the Throne. Some of the members of the society urged that though a memorial were drawn up its acceptance was doubtful, in fact that it was most likely to meet with rejection. Moreover, the very act of drawing up a memorial in such disturbed times would be certain to bring the memorialists under the suspicion of the Government, and arrest and disgrace would be sure to follow. The prominent members of the *Risshisha*, however, opposed these views, and said that although there was no intention of resorting to arms, it was necessary to act in accordance with reason and quietly petition the Government, and if arrest followed such action, at least there would be no disgrace. Besides, if owing to fear of imprisonment, unreasonable and violent measures were resorted to, such deplorable result would be the utter ruin of a just cause. There was thus no other course but do draw out and present a memorial, being prepared before-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

hand to suffer the hardships of imprisonment. This argument quieted the violent members among the *samurai*, and as we know they acted upon the advice.

Under such circumstances, we believe that though such men as Kataoka and Hayashi are to-day under arrest, they will in no way be sorry for their share in the action that has brought it about. Some people say that if the Tosa *samurai* had foreseen this disgrace they would have joined issue with Satsuma, but this we think is unjust. If from fear of probable hardship, they had so acted, it could not be called true bravery. It shows true courage that they dared all the foreseen consequences of their act, in order to do what they considered right.

Possibly it would have been better if the leading men of Tosa could have quieted the more turbulent spirits without agreeing to draw up the memorial, but looking at it from any point this action was far wiser than that taken by the *samurai* of Satsuma.

REVIEW.

Popular Progress in England.*

Few of us who enjoy the inestimable previlege of saying and publishing in safety almost whatever our experience or our reflections may suggest to us on matters of public or philosophic interest, care to inquire how we have attained what is still a most exceptional position among the nations of the earth. Yet the privilege is a recent one, and our grandfathers were familiar with a state of things under which it was dangerous to be suspected of having, and still more to be accused of uttering, an opinion on politics, religion or philosophy not in accordance with the sentiments of the Government of the day. Our liberty is so common a part of our life, that we find it difficult to conceive a social system as possible without it, and are careless to inquire into the history of what seems not even an inseparable accident but a portion of the essence of modern existence. We offer, therefore, a hearty welcome to such a work as the painstaking compilation before us, which carrying us back to the past, shows what difficulties had to be surmounted and prejudices to be vanquished, what dangers had to be affronted and what patient perseverance displayed, ere the precious heritage of liberty—not like mercy dropped from heaven, but won by the blood and brains of their forefathers—was awarded to the people of England. The two centuries of English political life of which Mr. Routledge's work summarizes the history, are the most eventful in our annals, and never has the world witnessed so noble a stuggle as that which, after thrusting out the Stuarts with their silly tyranny, triumphed over the bigoted opposition of an aristocratic oligarchy, and towards the close of the Georgian era prepared the way for the full freedom of political speech and action which we who live under Queen Victoria are so fortunate as to enjoy. As we read the stirring tale, we come to know how precious a thing our hard won heritage is; and while we are inspired with gratitude to those great ones of the past whose anguish has bought our ease, we feel a new resolution breathed into us to transmit it uninjured to our posterity. The reaction that followed upon the excessive social harshness of the Puritan Commonwealth, culminated, with the Restoration of Charles II in 1660, in the explicit recognition of the principle of Divine Right which exalted the Sovereign into a god and debased the people into his slaves. As a natural sequel whoever, was of a different religion from that of the Head of the Church, was decreed unfit to hold any position of trust, and accordingly by the Corporation Act passed in 1661, none but Anglican communicants could become members of a Corporation, while by the Test Act of 1673 (though this enactment, it should be remembered, was principally aimed at the Duke of York, afterwards James II) none but members of the Church of England could hold any public office whatever. The Parliamentary Test Act, passed some five years later, kept all but English churchmen out of the Houses of Parliament, and these enactments, sounding so strangely in our ears in these days, were in force within living memory. But exclusion from serving their country was not deemed a sufficient punishment for those who dared to differ in opinion from the Head of the State, and the Act of Uniformity which upon the 24th August 1662,—just one hundred years after the massacre of St. Bartholomew—drove two thousand clergymen from their benefices, with the aid of the celetrated Conventicle and Five Mile Acts practically made independence of opinion a punishable offence. But the spirit of liberty, though cowed was not dead, and in 1679 the Habeas Corpus Act assured the person of the citizen against the tyranny of the King or of the Law. During the reign of James II, the celebrated trial of the Seven Bishops assured the freedom of juries from royal interference, and despite the morose despotism of the narrow minded bigot who occupied the throne, the cause of liberty made notable and continuous progress. The Bill of Rights at the beginning of the reign of William III established the Protestant succession and the right of free speech in Parliament, and declared all taxation to be unlawful not consented to by the representatives of the people, thus putting into the hands of the latter a weapon which has been of infinite service to the popular cause.

During the reigns of the first two Georges, the progress of liberty was slow but sure. The Divine Right principle had been silently abandoned at the Revolution of 1688, and the foundations were laid of that form of parliamentary Government which has lasted with little modification to the present day, and which seems well adopted to the national mind and temper. The third George wished to be a sort of Hanoverian Stuart, and appears to have entertained an honest belief in the divinity with which he sought to hedge his kingship. But the people of England would have none of this, and instinctively recognised and refused to accept whatever savoured of tyranny, or tended to destroy the grand principles established by the Revolution of 1688. The exponents of public opinion were various, chiefly pamphleteers, often not men of any great personal worth but nearly always of considerable talent, with a keen eye for the ridiculous and sufficiently earnest in the cause which lent a weight to their writings that their position in the social scale could not have procured for their productions, to dare and suffer the pains and penalties of harsh laws and the frowns of a prejudiced and violent judiciary. The Press which had tasted freedom under the politically tolerant and wise rule of the Commonwealth, had been gagged when the Stuarts, amid the false enthusiasm of the people, re-ascended the throne of England,—a throne which no member of that dynasty has adorned by a single regal virtue. During the reigns of William and Anne it began again to lift up its powerful voice, and by the ministers of the first two Georges was, as far as possible, bought and bribed to serve the purposes of the Government. Shortly after the accession of George III a different policy was adopted. It was not so much sought to silence the expression of public opinion by a refutation of popular theories by paid hack writers, but the terrors of the law were called to the assistance of the Government, and a series of prosecutions for seditions publications and libels was commenced, covering a period of nearly sixty years, beginning with the trial of the notorious John Wilkes and ending with the celebrated three trials of the poor seller of old books, William Hone. Mr. Routledge's treatment of this part of his theme is highly satisfactory. He has brought together a mass of very curious facts extracted from many sources not easy of access to the general public, and his minute and accurate narrative will be read with profit and interest by all who care to inform themselves upon a subject than which none ought to be more attractive to Englishmen—the origin and growth of our modern liberty of speech and opinion.

Up to a few years before the French Revolution the newspaper press had but little influence. Indeed it was only when the great French war began that journalism commenced seriously to develop itself. "Every town" says Mr. Routledge "of any importance then began to feel the absolute need of a newspaper that it could call its own, and when any great event took place the local office was besieged often for hours with anxious and expectant people, who clutched their coveted sixpenny paper with much the same feeling that a different class of persons clutched the charity soup from a soup kitchen." The *Times* began its existence as the *Daily Universal Register* in 1785, a few years before the outbreak of the French revolution, and became the *Times* in the year preceding that tremen-

dous event. About the same epoch the *Morning Post*, the *Courier*, the *Sun*, and others of the leading political journals of the metropolis were established. Of existing provincial papers some date much further back than those we have referred to, *Sanders News Letter* to 1688, the *Leeds Mercury* to 1718, the *Freeman's Journal* to 1763, and the *Belfast News Letter* to 1773. The difficulties under which the newspaper press had to labour for many years are admirably set forth by Mr. Routledge, and as we read his account we are struck with wonder both at the extreme folly displayed by its opponents, and at the untiring perseverance on the part of its advocates and supporters which finally vanquished all opposition, but not until so recently as the year 1861, which witnessed the repeal of the paper duty in the teeth of the bitter opposition of the late Lord Derby.

The prosecution of Wilkes was in all respects a singular one. He was owner of the '*North Briton*,' of which the celebrated author of Roderick Random was editor. The paper was established in 1762 in imitation of one called the '*Briton*' which the unpopular Bute had just set afoot. Bute was hated in England, and his name John Bute was contemptuously turned into the sobriquet of Bootjack. In his 45th number Wilkes intimated that the King's speech contained what was not true. There was nothing to show that he meant to charge the King with deliberate falsehood. He was nevertheless prosecuted for libel and in the first place arrested under a General Warrant under which his papers were also seized. On a writ of Habeas Corpus he was released by Sir Charles Pratt, afterwards Lord Camden, on the ground of privilege as a member of Parliament. He then left the country and was outlawed, returned and was found guilty of libel by Lord Mansfield. He was expelled the House, re-elected five times and at last re-admitted, thus showing how a single man with pluck and perseverance and the right on his side could win a victory—a victory not for himself alone, but for the whole people of England—against the united power of the King, the Ministers, the Houses of Parliament and the chief officers of the Law.

We have no space left to say more than a few words with regard to the famous trials of William Hone. The disorganisation of society that occurred after the close of the French war by the victory of Waterloo, seems to have thrown the Government into a panic. In 1817 the Habeas Corpus Act was suspended. Cobbett, whose '*Two-penny Trash*' had in 1816 a weekly sale of 50,000 copies, had started for America the moment he heard the Act was likely to be suspended. Petitions for reform were declared to be malignant libels. Spies and informers were set to work and soon created ten times as much sedition as they discovered. There can be little doubt but that the Spafields Riot, for participation in which a poor silly sailor, John Cashman, was hung, was got up by paid spies anxious to prove their zeal. The Government seemed afraid of the slightest expression of opinion, and after Cobbett's departure looked about for an excuse to close the mouth of his supporter and representative, William Hone. This they found in certain political squibs in the form of parodies, chiefly on portions of the Prayer Book. Some parts of these are given by Mr. Routledge, and there can be no denying either their wit or their bad taste. But to say that they were blasphemous was absurd, and the Government advocate felt himself compelled to admit that they were not political in their tendencies, which, however, they undoubtedly were, and were intended to be. The idea, probably, was that by charging him with a blasphemous rather than a mere political offence, the sympathies of the jury would be enlisted against the shabby Ludgate Hill bookseller. But abandoning the only ground they could safely fight upon, the prosecution found themselves confronted by a man who unexpectedly turned out to be more than a match for Bench and Bar in the arena they had selected. The reports of the second and third trials before that coarse bully Lord Ellenborough are still well worth perusal as an exhibition of wit, fertility of resource, curious learning, power of apt illustration, and comparison and keen logic, before which the silly twaddle of the ordinary advocate could not stand for a moment. The prosecutions ended, as every one knows, in an ignominious and ridiculous failure, and in the deep and bitter disappointment of the Chief Justice, the memory of which never left him to the end of his days.

Throughout his work Mr. Routledge intersperses valuable and just remarks upon the events he narrates. His observations are characterised by great good sense, and we have been especially struck by the absence of prejudice, by the desire to be fair and impartial, and by the earnestness conspicuous in his pages. We can confidently recommend the book as worthy of a place on the shelves of every Englishman who is a lover of his country and a student of its history.

COUNTRY TRIPS, BY A VICTIM.

"What gat ye to your dinner, Lord Randal my son?
"What gat ye to your dinner my handsome young man?
"I gat eels boiled in broo; mother, make my bed soon,
"For I'm weary wi' hunting, and fain wald lie down.

"O I fear you are poisoned, Lord Randal, my son!
"O I fear you are poisoned my handsome young man!
"O yes I am poisoned; mother, make my bed soon,
"For I'm sick at my heart, and I fain wald lie down!

I have tried many of the means of locomotion which the ingenuity of man has invented or adopted to save the wear and tear of his own legs. I have made one of sixteen in an omnibus on a warm wet day, supporting on my knees a young person with a basket, and an old and heavy person with vicious heels and an umbrella on my feet. I have been alone on the knife board of the same vehicle in a cold east wind without the refuge of a great coat. I have been an unhappy component fraction of the freight of a Third Avenue Street car when the thermometer marked 103° in the shade, and I have been whirled along in solitary magnificence in a sleigh in Montreal when the mercury in any thermometer of moderate capacity refused to sink any lower in its tube. I have flown down snow slopes on, and very often off, a '*tabogon*' (how it's spelt I have not the remotest idea) in the back woods in mid winter, and I have bumped and bounded down the steep streets of Quebec in a "*caléche*" in mid summer. The miseries of a six days trans-continental journey by Pacific Railroad have been revealed to me by too frequent experience, while the un-nameable horrors of a two hours passage from Folkestone to Boulogne have all been visited on my vagabond frame. I have ridden on elephants (in the Regent's Park Gardens), and descended in diving bells (at the Polytechnic). I have bumped for many a weary mile on the accommodating buck-board of the Adirondacks, and have bestridden the unaccommodating mule in the sand hills of Alabama, and the swamps of Mississippi. The former bounced me off into the mud, and the latter, after hanging me between two trees, finally shied me into a deep and dirty creek. These were all severe experiences, especially as the buck-board ridden in various experimental positions for a period of three days had no cushion, and the mule, straddled for a fortnight,—less the time I was occupied in picking myself up in different parts of the country—had no saddle, an old sack, to which by a piece of rope were attached odd stirrups, supplying its place upon a backbone as developed as an Alpine chain—and as hard. Still my broken places mended and I grew again after a time.

My present journey was to widen my experience; to show me that the Inquisition did not exhaust the ingenuity of torture; that it was possible under the guise of pleasure seeking to come across a form of locomotion in which all the tortures the devilish capability of man ever invented were combined in one frightful form. The rack, the bed of spikes, the wooden horse, the falling from great heights on to hard substances, flaying alive, were all endured at one and the same time, intensified by minor inflictions peculiar to the country we traversed. There is too much of me worn away to be renewed; too many portions of my frame broken to admit of thorough repair. "Good times" for me are ended; my knees can ne'er be bended, nor my broken places mended till I reach the shadowy shore; this form once lithe and slender, and this epidermis tender, the doctor's art can render smooth and supple, nevermore!

Yes! the next morning found us at the foot of the mountains, with passes and roads, steep and rocky, to be traversed before we reached that mythical land where we

were to be once more cool, and sleep under a blanket amid the sweltering heats of August. Blessings, alas, may be too dearly bought, and it is a moot question whether it be not better to die in one's own bed frying but well nourished and complete, than to exist on a mat frozen and fasting, and in a singlarly defective condition. I unhesitatingly pronounce in favour of the former state of things.

But let me begin with a minute account of a day's experience of travel in Japanese style. I had for the entire night formed the camping ground of armies of the most fearless and sanguinary fleas. The worst kind of atrocities had been committed on my prostrate and defenceless form. It was as though I had been invaded by countless hordes of Cossacks and Bashi-Bazouks, and given over utterly to the savage will of my conquerors. These swarming and resistless foes were aided by irregular flying squadrons of mosquitos, who made stealthy attacks through holes in the mosquito net. It well deserved its name, this net, for it was so constructed that while any number of these bloodthirsty fiends could find their way in, not one could discover a place of exit. If I lay quiet, I felt that I was gradually becoming a mere shell, and that the next morning would find me like the ghostly husk of a chrysalis that one often sees adhering to bushes, long after the solid body has departed. If I moved there was a sound as of the rushing of many wings, and in the visions of the night I fancied myself some honey laden flower around which bees were swarming, and sucking my nutritious juices. All this was the more irritating as my companion slept, and snored, and gurgled, and grunted in blissful unconsciousness and undisturbed repose; and I take it that there is no greater trial to the most Christian temper than to be compelled to lie awake, a prey to extreme discomfort, and listen to the slumbers, both loud and deep, of the selfish monster who has wrought the misery.

When towards morning through utter exhaustion I had sunk into temporary forgetfulness of my wrongs, did my burly friend awake and proceed to call and roar at me like a thousand Bashan bulls, and though I would have given untold sums to be permitted to slumber again, in his selfish strength he langhed my entreaties to scorn, telling me that we had so many *ri* to go, and that we must start at once if we would reach our appointed resting place before night fall. In vain I urged that I wanted no other than the present: that I was perfectly happy where I was. There was nothing for it but to obey, as my mosquito net, smelling horribly of mildewed sleep, was pulled down, and my quilt snatched from under me. That I did not then there make an end of this multiplier of my woes I can only account for by my remembering in time his superior size and strength. My will was good enough to annihilate him on the spot. Getting up I had a sensation as of having under gone punishment on the rack the day before. A feeling that my joints must creak audibly as I moved. A wish that someone would order me out to instant execution. An unaccountably dissipated feeling about the eyes, and a towzly condition of hair never under any circumstances before attained. An indisposition to converse on any subject, and a desire to do nothing but yawn painfully and tearfully, as one doeth on whom the blighting influence of a coming cold hath fallen. An irresistible wish to sit down, and a tendency of the mind to revert to all the most gloomy probabilities of life. A scarcely containable hatred of the companion who was flying here and there, singing "Long live the merry merry heart that laughs by night and day, —Toodle loo, loo, loo, no matter what some folks say," stopping occasionally to tell me to "Look sharp," or to ask me to admire the beauty of the morning, with the eternal refrain, "Nothing like going in the country and doing as the Japs do. "No coolies! no bother! aren't you glad you came and don't you feel better already?"

Doing as the Japs do! This meant going to a marvellously ill favoured corner of the house—that is, more ill favoured than the rest of it, for none of the apartments were over pervaded with the small of myrrh, aloes and cassia—and there dipping my fingers into an extremely shallow copper bowl of limited circumference, and smearing my countenance with a very small and damp blue rag, beguile my insulted body into an idea that it had been refreshed by an early wash. Doing as Japs do! This was to partake of a tiny cup of bitter tea, and eat what were said to be salted plums, but which looked and tasted like balls of pink blotting paper that had been lying for some months in bad red cabbage pickle. To have, what was by courtesy supposed to be, breakfast, to wit: one saucer with a very flabby fish cooked some days before. One bowl of warm salt water with a fish's eye and tail—extreme tip—and three shreds of ginger floating in it; one plate with a section of something brown with little holes in it, like a magnified piece of coltsfoot rock, very soft, very cold, and *very* nasty; a slice of *raw* egg plant, a dozen beans coated with a sweet sticky substance like damp toffee, and a little heap of singularly offensive vegetable matter, like cold boiled turnip tops, or neglected saurkraut. Of course cold rice ad libitum. And this is what a weak European stomach was supposed to be able to receive at five o'clock on a warm summer morning, and what my base beguiler told me I ought to be truly thankful for, himself receiving it all in perfect faith, and having consumed, asking loudly for more. For my own part it was no good. I could not eat the viands put before me. In spite of the unfeeling mockings of the human ostrich, whose companionship I loathed more each hour, every attempt of mine to swallow the smallest mouthful, brought on such spasms of the larynx, and such loudly expressed objections on the part of my insulted interior, that I was compelled to solace (?) myself with two eggs, boiled as hard as Japanese alone can boil them, and a glass of cold water which tasted as though it had been dipped out of a globe containing gold fish. I construed all this into one of the emergencies which demanded whiskey, and acted accordingly to the extent of one *saké* cup full. Then my hard headed friend, although he inveighed bitterly against all such indulgence, "the worst thing you can take, and will have no effect when you really want it," quite cheerfully did violence to his feelings and joined me to the extent of about three times my dose. Haven't you always found it so with such people? They are constantly bullying you for doing things, which they seem to take to remarkably kindly when they have a chance afforded them. I have known those who professed to hate champagne, but took freely, and with no apparent deadly effects, whatever of that precious comforter their neighbours liked to supply them with. I once saw a man, who always maintained that he who eat *paté de fois gras* was guilty indirectly of as great cruelty as those who afflict the unhappy goose with acute liver complaint, and deserved the punishments righteously meted out to vivisectionists, eat half a pie at a tiffin. And thus it was with the omniverous creature to whose dreadful power I had given myself over.

We were not to walk; for which I was devoutly thankful, in my fasting condition. We were to go a certain distance, about six hours journey, in *Kagos*, for which I was anything but thankful after the first half hour. How can I describe riding in this vehicle of torture to those who have never felt its awful effects. I fear me words are powerless.

For the first quarter of an hour it was all very well. I had arranged myself in orthodox style, which is very much like trying to sit *á la Turc* on the hard bottom of a small English clothes-basket. I felt a kind of pleasant torpor falling upon me, and lulled by the motion and grunts of the bearers, I mentally patted myself, and cried Ha! ha! and thought fondly that I should be able to make up the rest of which I had been robbed the previous night.

I am going to sleep, but not all over at once. No I am going to sleep by installments. My left foot seems to have suddenly increased in size and weight, and feels as though it were siezed with a violent attack of elephantiasis. I move it hastly, and laugh hysterically at the sensation which pervades my leg, like five hundred Pulvermacher electric chains, while from my bearers I elicit remonstrances against fidgitiness, having in my hasty movement nearly upset the *kago* off their shoulders. In a few minutes a precisely similar complaint attacks my right foot, while I am at the same moment made aware of certain spinal prominences which never, to my knowledge, before existed in my frame. Then I feel that I am rapidly becoming bald by the friction of the top of my head against the pole, while now and then, to vary my trials,

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

a few loose hairs catch in some crevice of the wicker work and are pulled out with a jerk in a specially irritating way. There is from some unexplained cause, great abrasion of the skin on my elbows; and after all this has gone on for some time, I am suddenly siezed with what seems to be the most frightful lumbago, in that mysterious region known as the small of the back. If I move to relieve the pain in one part, I immediately bring on a new and more violent one in another. If I remain doubled up I am racked with cramps like Caliban. If I hang my legs over the sides, I interfere with those belonging to the bearers, and cut my calves horribly against the sides of the tray that supports my suffering body. Every inequality of the wicker work—and it is composed of nothing but inequalities—assumes supernatural sharpness and prominence. Every abraded and aching place of my frame—and where is it not abraded and aching—comes in contact with hurtful and offending crooks and knobs. I think of all the holy and blessed martyrs who have suffered before me. In my agony I use language that would have scandalised anyone of those saintly characters. I think of Kit in the embrace of the Scavenger's daughter; I think of the wretched Chinese criminls in cages much too small for them; I think I am one of the Davenport brothers tied up by a master hand and unable to free myself, and return to consciousness with a start and a nod which goes near to dislocate my neck.

And for hours does this go on. At certain resting places, I am approached by hideous old women who bring me horrible tea, which I don't want, which I cannot drink, and for which I have to pay. I know what would be the cost of getting out and endeavouring to straighten myself, and having straightened myself I know that I should never dare get in again. Thus then I suffer and remain where I am.

In the mean time do not suppose that my companion had undergone what I have attempted to describe. Not at all. At the first symptoms of inconvenience, which came on about five minutes after we started, he hopped out, and fortified by the piculs of rice he had managed to consume, left the *kago* bearers far behind. I caught occasional glimpses of him striding up a steep hill or dancing down a valley. Every now and then was wafted to me on the morning breeze a whiff from the blackest of pipes and strongest of tobacco, which made me thankful that he was no nearer, for much uneasinesse of bodie is oftimes wroughte by ye smelle of a strong pipe on an emptie stomack. Occasionally too, borne on the wings of the winds, came snatches of "Long live the merry merry," and sundry "Ri fol lols" and "Tooral-li-days" which showed me that my misery had no saddening effect on this selfish warbler and when at midday I was tilted out, fainting with inanition, with many groans and shrieks of anguish and anathemas on *Kagos* and travelling generally, upon the mats of our halting place for our mid-day meal, I was greeted with "Oh, I say how late you are. You should have walked as I did and got an appetite! Here tabaro! Hyakoo! You'll have a treat to-day, for they've got some capital raw fish, and you won't get that every day in the hills I can tell you!"

I devoutly hoped not.

The S. S. *Washi* has had a rather bad time of it, to judge by the following report. She reports:—Left Haiphong on Friday 10th at noon, weather cloudy, at 1 p.m. barometer began to fall, it then standing at 29.48, and at 5 p.m. 29.30. At 6 p.m. it was blowing a hard gale from the northward, vessel making bad weather. At 8 p.m. barometer stood at 29.32, but weather much worse; shipped a heavy sea, which carried away engine-room skylight, and starboard life boat. At 7 a.m. on Saturday the barometer indicated 29.08 (lowest reading), wind blowing in fearful and heavy gusts; shipped some very heavy water, carrying away everything moveable on deck. At 10.55 a.m. lost port life boat, barometer rising rapidly at 6 p.m. put back for Haiphong to repair damages, arriving at the Bar at 3.40 p.m. on Sunday the 12th.—*China Mail.*

It is said that the cargo of the steamer *Meikong* consisted mainly of new season tea and of silk, and is valued at a million pounds. Many jewellers at Lyons who sent precious stones to Paris will sustain heavy losses by the wreck of the vessel.—*China Mail.*

THE WRECK OF THE *MEIKONG*.

ACCOUNT BY A PASSENGER.

I send you a few hastily written particulars of the wreck of the *Meikong*. The results of the inquiry which has been instituted here will be made known without delay, and will inform you more precisely, than my letter, of the causes of the disaster and the circumstances attending it.

The Messageries Maritimes Steam-ship *Meikong*, Captain Foache, left Hongkong for Marseilles on the 26th May. Cape Gardafui should thus be reached on the night of the 17th or 18th of June. On the afternoon and evening of the 17th the condition of the atmosphere had prevented land from being sighted. It was a moonlight night, when about midnight a slight shock announced to the passengers, who were for the most part asleep, that the vessel had struck on a sand bank. The engines were reversed, but the impetus of the vessel and a strong swell carried her forward, and grated her over successive reefs of coral. Owing to the heavy stern swell, the *Meikong* became unmanageable, and was in a few minutes stranded on a coral reef, broadside to the shore, which at a distance about 150 *metres* from the starboard side happily showed an easy landing place. The larboard side was fully exposed to the sea, which from time to time swept over the decks even to the *passerelle*. At the first shock a large number of passengers, men, women and children, rushed upon the bridge; but the rolling of the vessel became so violent, and the sea swept the decks so frequently, that orders were given by the Captain for every one to go below. This order being executed, he descended to give to the passengers his personal assurance that everyone of them should be landed safe and sound, whereupon calm succeeded to a state of confusion of which I have not endeavoured to give a description.

The first care of the Captain, when he saw that his vessel was irretrievably lost, was to establish a communication with the shore. One of the officers getting into a boat with some of the crew, succeeded in mooring a rope to some rocks on the shore. In carrying this into effect two sailors were drowned, but it served its purpose of constituting a means of communication between the *Meikong* and the shore. Some of the passengers were then ordered to land, but on the return of the boat to the vessel after safely landing its freight, the officer in charge stated that the darkness and the force of the breakers rendered the landing extremely dangerous. The moon had gone down; it was one o'clock in the morning, and as the ship was in no immediate peril the Captain decided to postpone all further attempts at landing until daybreak. Three long hours passed in weary waiting. The passengers availed themselves of the delay to change their garments and make certain preparations, while the crew busied themselves in getting together such matters as might be necessary for the shelter which we should have to trust to when we got on shore.

About three in the morning, an incident occurred which gave us new hope. The lights of a passing steamer were discerned, whereupon the *Meikong* let off rockets, burned, blue lights and fired two guns, to which signals the steamer replied.

Towards half-past four the landing recommenced. By mid-day, all the passengers to the number of eighty, of whom eleven were women and twelve children, and the whole of the crew numbering about a hundred and twenty men, were safe on shore without loss of life. There were, however, some wounded. It was not possible to land unhurt amidst the breakers on the coral reefs. A large number who had forgotten or lost their shoes and slippers, had their feet cruelly lacerated.

The Captain had, at daylight, sent some trusty men on board the vessel we had signalled, who on their return brought the information that the steamer was the *Glenartney*, Captain Gulland, from Hankow to London with a cargo of tea. It was arranged that the *Glenartney* should pass round Cape Gardafui, on the south of which we had stranded, and anchor at the north end of the Cape, where she would be sheltered from the wind. There it was promised she should wait for us until the next day, and take on board all the passengers and crew. About eleven o'clock, three men of the crew of the *Glenartney*

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

arrived at our landing place. Imagine a triangle of which the summit is the point of Gardafui, and whose base is a line joining the point B where the *Glenartney* is anchored with the point C where the *Meikong* is stranded. These three sailors had followed this line B C, which lay through said hills almost utterly devoid of vegetation. They estimated the distance to be about nine miles, and had been walking for over two hours. They offered their services as guides, and one of them accompanied by some of passengers set off almost immediately to acquaint the Captain of the *Glenartney* with our situation.

When the Captain of the *Meikong*, who was the last man to leave his vessel, came on shore at noon, the following was the state of affairs on shore. Out of six boats, only one remained in a serviceable condition, all the others had been sunk and smashed. It was therefore impossible to reach the *Glenartney* by sea, or to bring on shore any baggage or provisions from the *Meikong*, as another attempt to go on board and return might destroy our last boat. Captain Foache therefore gave orders to save all the baggage possible, and proceeded to where we were camping. Almost at the same moment Captain Gulland arrived from the opposite direction. This excellent man, impatient to know what had become of us, had nobly come himself to make inquiries. The two commanders approached and shook hands. They held a short consultation, and immediately after the order was given to proceed to the shore off which the *Glenartney* was anchored.

It was then the opinion of nearly all the passengers of different nationalities, as it is now, that no other course could have been adopted. There was really nothing else to be done. There we were, nearly two hundred persons, camped on a desolate shore without shelter from a burning sun, and with no garments but those which covered us. Our only provisions were a little biscuit soaked with sea water, and two or three breakers of fresh water. Under such conditions we must soon have been decimated by heat, starvation and thirst.

A constantly increasing crowd of natives flocked from the interior—the handsome black race of Somalis—armed with lances, javelins, swords and shields. Already they numbered from five to six hundred. They had shown no signs of hostility, but they refused to render us any assistance, and we could see by their attitude that they looked upon this fine vessel as their lawful spoil. A great number of them had already swum off, their swords between their teeth, and had clambered on board. We could see them occupied with their work of pillage. They made their plunder up into bales, which they then threw into the sea and pushed on shore. It was fully evident that any attempt to interfere with their pillaging might cause some act of violence to be committed, and that every soul of us might be murdered; for although we had some arms we did not possess a single cartridge.

Litters were hastily put together in which to carry the women, children, and the sick, and we set off about an hour after mid-day. The time occupied in transit, from the moment of leaving the shore to our arrival at boats of the *Glenartney*, was about four hours.

At eight o'clock in the evening, when every one was safely on board the *Glenartney*, Captain Foache called over the roll of passengers and crew. Four, alas! did not answer, namely, two sailors drowned at the first landing, the Purser, Monsieur Henry, and a Calcutta passenger, Monsieur Arathon. The two last had fallen during the march and died of sunstroke. I can no more record the particulars of that march across the desert, over a dazzling sand, under a searching African sky, than I can relate the scenes which occurred on board during the first hours of the disaster. Those who were barefoot suffered most. It was, indeed, a hard trial, which the women sustained with dignity and courage.

When I arrived on board the *Glenartney* the scene which met my eyes offered a striking contrast to those which I had witnessed but a few hours previously. The sea was without a ripple. Against a sky of marvellous depth of blue stood out the yellow masses of the rocks of Gardafui. The moon was rising on the horizon; while all the children, safely refuged on board, slumbered peacefully. Our minds took in the delicious calm with which Nature surrounded us. At half past ten the *Glenartney* resumed her course to Aden, where we arrived on the 20th June. We have remained here four days to restore our strength, and do the best we could to furnish ourselves with clothes. The P. and O. steamer *Zambesi*, from Bombay, is expected to-night, by which we expect to proceed to Suez. No illness of any serious nature has appeared among the passengers or crew of the *Meikong* since our arrival here.

This was, in two words, the cause of the disaster. Two neighbouring promontories, which are in a fog hardly distinguishable from one another, are separated by a valley over which the sea formerly flowed. At the present day the bottom of this valley is covered with saline deposits and very white sand, which when shining under the rays of the moon have all the appearance of a sheet of water. Of these two promontories the first upon our route was the false, the second the true Gardafui. The Captain of the *Meikong* mistook the one for the other, and whilst he imagined he was rounding the Cape, he was actually running on shore between the two promontories.

The same error has already proved fatal to many navigators, and will probably take place from time to time until the erection of a light-house shall rendered it impossible. In conclusion, all on board, English, German, Dutch, and French have united, during the enquiry that has been instituted here, in giving the most favourable testimony to the conduct of Captain Foache."

(Extract from the "Semaphore de Marseille.")

When advising our readers of the loss of the French Messageries Steamer *Meikong* with the homeward India and China mails, we informed them that the passengers and crew had been rescued by the English steamer *Glenartney*, which landed them at Aden. From Aden the passengers were carried to Suez by the P. & O. steamer *Zambesi*, and travelling from thence by rail to Alexandria, are presumed to have left that port by the M.M. steamer *Said*, due in Marseilles on Monday the 9th instant.

From a report made by Captain Gulland of the steamship *Glenartney* on his arrival at Port Said, which has come to hand, we have been enabled to glean the following particulars of the above-mentioned disaster.

The *Meikong* took the ground in the vicinity of Cape Guardafui at midnight on the 17th of June, and so unfortunately as to leave no doubt within a few minutes as to her ultimate total loss. For the last two days she had been sailing in company with the *Glenartney*. On the night of the 17th it was blowing fresh, with a heavy sea and strong current, and very dark overhead. The shore surrounding Guardafui being flat and always difficult to distinguish was at the time completely invisible. When the *Meikong* struck, the *Glenartney* was within a short distance, and the Captain of the letter vessel declares that it was only at that moment that he made out his own actual position. Observing what had happened he immediately bore down on the *Meikong* to render assistance, but Captain Foache of the *Meikong* sent word to him not to come in too close, as it would be running great risk, and that the *Meikong* being aground in shallow water there was no immediate danger for those on board. He requested him at the same time to proceed to the northward under the shelter of the Cape and from there render assistance.

Captain Gulland of the *Glenartney*, taking the same view as Captain Foache, steamed a few miles to the north, anchoring under Cape Guardafui, and was only separated from the *Meikong* by the breadth of the headland. Even this, however, proved a most dreary distance.

In the meantime on board the *Meikong* every effort was made to ensure the safe landing of passengers and crew by means of the boats, each person being previously supplied with a life belt—a most wise precautions according to Captain Gulland's statement—the surf being so heavy as to render the landing by boat most dangerous, and many casualties might otherwise have occurred.

Owing to the active and devoted exertions of Captain Foache and officers, every soul on board, with the exception of two of the crew, was saved, but there remained before reaching the *Glenartney* anchored on the other side of the Cape, a dreary twelve miles of burning sand to cross under a tropical African sun.

Captain Gulland of the *Glenartney* and his chief officer heroically walked the whole distance to meet the unfortunate castaways and assist them as guides.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

During the journey over, Monsieur Henry, purser of the *Meikong*, who from the moment of the disaster had been unwearied in his exertions for the welfare of all and had been greatly prostrated by the heat, was seized with delirium and died in the arms of Captain Gulland, who was seeking to shelter him from the burning rays of the sun. One other, a passenger of about 70, also succumbed to the great heat.

On arriving at their destination all the passengers quickly embarked on board the *Glenartney*. Captain Foache, who was the last to leave his ship the *Meikong*, was also the last to reach the *Glenartney*, leaving only behind him what was in the power of no man to save. The Government despatches and registered letters were, according to Captain Gulland's statement, saved and brought to Aden. As to the remaining cargo, etc., even supposing it to have been possible it would have been madness, in the face of the hostile attitude of hundreds of Arab pillagers, to have attempted to save it. They had made no secret of their sinister intentions, and were busy with their plunder almost before the ship was abandoned. Great credit is due to Captain Foache and his officers for their behaviour through the whole of this (doubly so to them) most distressing catastrophe. But the shipwrecked of the *Meikong* owe an everlasting debt of gratitude to Captain Gulland and his chief officer Mr. Gasson, who on their errand of mercy did not hesitate to cross twice through twelve or fifteen miles of desert to relieve their anxiety and afford them substantial help.

Captain Gulland, though on a voyage with new season's teas and therefore with everything depending on making a quick passage, did not hesitate to place himself unreservedly at the disposal of Captain Foache, and would accept no remuneration for the conveyance to Aden of the 250 unfortunate survivors of the *Meikong*.

PUBLIC DINNER TO GENERAL VAN BUREN.

Nearly one hundred gentlemen, mostly residents of Yokohama and Tôkiô, assembled at the Grand Hotel on Monday evening, the 27th August, on the occasion of a farewell dinner to General T. B. Van Buren, United States Consul-General, previous to his departure for American on leave of absence.

The chair was taken by J. J. Keswick, Esq., Consul General for Portugal, who had the guest of the evening on his right. Among those present were the Governor of Kanagawa, several members of the Diplomatic and Consular services, Captain Young, U.S.N., Captain Buller, C.B., R.N., and others.

The dinner itself was all that could be wished, and the proceedings throughout the evening were enlivened by the band of the *Tennessee*, which was in attendance and played through a long and well selected programme.

At the conclusion of the dinner the Chairman rose to propose the first toast of the evening, that of—"Our Monarchs and Chief Magistrates," and shortly afterwards gave the second toast on the list—"The Diplomatic Corps," which was acknowledged by Baron Rosen, Secretary of the Russian Legation, who regretted being unable to do justice to it, owing to his want of sufficient knowledge of the English language, but expressed his thanks on behalf of the Diplomatic Corps, which he said would no doubt have been better represented on the occasion, had not so many Chiefs of Legation been out of town.

Mr. Brooke then rose to propose the next toast, viz. "The Governor of Kanagawa, and said:—

I have been requested to propose the health of a gentleman whose popularity in this community would ensure for the toast a cordial reception. Mr. Nomura Yasushi had formerly distinguished himself in the field, and had been promoted by his Government to the high civil office he held as *Gon Rei* of this *ken*. Those whose official relations brought them immediately in contact with that gentleman, concurred in attributing to him urbanity of manners, assiduity in the discharge of his duties, and a clear comprehension of what was required of him. The position he occupied demanded much industry and superior ability. Kanagawa *ken* was large and populous, and, above all, the *Gon Rei* had to deal with the often troublesome and exacting demands of resident foreigners of all nationalities. The watchful eyes of the local press, perhaps rather disposed to be censorious than otherwise upon official conduct, were upon Mr. Yasushi, and the very fact of his having well-nigh escaped hostile criticism was in itself the best justification of the Government in selecting him for his arduous and responsible position, and truly demonstrated that he was "the right man in the right place" (cheers). Since Yokohama had been deprived of the services of a Municipal Director, the community could only look to the Governor to attend to municipal wants. There was a large field for exertion open. Nobody would assert that there was nothing to be done in the way of lighting, paving, and draining the streets. Many public works were urgently required, and the public had a right to expect that the Government, which received excessive ground rents, would pay especial heed to these requirements. If, in the future, there were any shortcomings in municipal works, upon Mr. Nomura Yasushi the blame would not fail to fall; whilst, on the other hand, a vigorous and intelligent administration of municipal affairs would entitle him to the grateful approbation of the community (cheers).

Mr. Nomura Yasushi replied through Mr. Osborne as follows:—

I thank you, gentlemen, for the kind and cordial manner in which you have drunk my health. I can only say I wish that I deserved half of the amiable things Mr. Brooke has said of me. There are many of those present this evening whom I have had the honour of thanking thus on other occasions, when there was no alloy to the pleasure of the evening. To-night there is one drawback to my perfect enjoyment—the fact that we are about to lose from amongst us (let us hope only for a while) the presence of General Van Buren, in whom I have ever found a good friend and zealous officer, ready always to do his utmost towards smoothing away difficulties, and towards making our official intercourse as agreeable as possible. As, however, the privilege of proposing the health of the guest of the evening has fallen into abler hands than mine, I will not trespass further on that gentleman's ground, but content myself with allowing him to express what I know to be the sentiments of all of us, and with wishing General Van Buren a speedy return. For your courtesy to me I thank you again most warmly (cheers).

The Chairman, who now rose to propose the next toast on on the list, being the principal one of the evening, spoke as follows:—

Gentlemen,—The toast which I have now the honour to propose is one which, by your presence here this evening you signify will receive at your hands a most enthusiastic reception. Gentlemen, it is the toast of this evening,—the health of our guest General Van Buren (loud cheers). We are met together to-night to pay a compliment to an old friend, an old resident among us, who is about to take his departure to his own land, and we would not have him go from our midst without some expression of the regard which we feel towards him (hear). The name of General Van Buren is a household word in this mixed community of ours, and brings to mind pleasant suggestion of the kindly gentleman, and his genial humour, of which we have had such agreeable experience. Whether we consider General Van Buren as performing the duties of his office at the Consular Board, as dispensing justice from the Bench, or in his social character, we shall be satisfied in our reminiscences of him, and declare him to have been in all these relations one meriting our respect and esteem, and of whom we truly feel that "take him all in all, we ne'er may look upon his like again" (cheers). But, gentlemen, it is too much to expect that we are going to give General Van Buren simply unqualified praise; that we are figuratively going to pat him on the back, and say that he is a paragon of perfection; that we are going to pay him the very questionable compliment of saying that he has been all things to all men. Oh, no! far from it. We will tell our guest that we have had differences of opinion with him; that in many things we consider our opinion was better than his; that we were right and he was wrong. But even if we do so, what is the result? It is this—that we feel that we respect him the more, for when did man ever fully respect the man that always agreed with him? or when did a manly, straightforward, independent, decided disagreement with us, ever fail to astonish us into respect (hear). In discussions at the Consular Board, and in questions affecting the community's interests we have had his assistance, or his opposition, and we can earnestly say that whatever view of a question he has adopted, he has maintained it nobly and conscientiously, and we know that whatever his hand has found to do, he has done with his might (cheers). It is unnecessary that I should detain you longer upon a theme eloquent in itself, but in the beginning of these remarks I said that we had met together to give a testimony of our regard to General Van Buren. It is, however, more than that. We wish the expressions of this evening to be a pleasant recollection to him for ever; a pleasant testimony to his family of their sire's worth; an acceptable record to his countrymen of his value, and an invitation to his enemies, if he have any, that they should remember the "quality of mercy," be kindly and forbear (hear, hear). And now, General Van Buren, on behalf of this company I bid you God speed. Whether you retire to the enjoyment of a well earned repose, or still to devote your mature knowledge and experience to your country, or only for a holiday before re-appearing among us, may you always remember our expressions towards you this evening, and may they, throughout your life, be a pleasant episode to cast your thoughts back upon. We, one and all, bid you a hearty farwell. (Loud and continued cheering).

The applause was renewed as General Van Buren rose to reply, and when he at length obtained a hearing he said:—

Mr. Chairman and Gentlemen,—It is in the experience of each of us that there are occasions when language seems utterly inadequate to express real emotion; my heart is throbbing at this moment to pour out the feelings of gratitude which your kind words,

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Mr. Chairman, and your generous response, my friends, have kindled. But, alas! my tongue refuses its office, and the words that come to me seem cold and formal,—I can only thank you with my whole heart. I give you thanks for this warm,—this generous greeting. When I came among you some three years ago, I was received with that same kindness and courtesy that have followed me ever since. In striving to worthily perform the varied and important duties of my position, I have on almost every occasion been cheered and encouraged by your sympathy and approval, and in the few instances in which some of you have differed from me in opinion, you have never assailed my motives, or questioned my good faith. Nay more, when my character has been assailed by anonymous writers through the columns of newspapers at a distance, you have hastened to express your indignation at the outrage, and your confidence in me as a citizen and a magistrate (hear). In these modern days there appear to be two species or classes of privileged libellers whom the law refuses to touch; one is the exalted official who ventilates his envy, jealousy, and hatred through reports to his government, and the other is the nameless assassin who sends his poisonous shafts through the columns of a prostituted press. To both of these I have been a victim. In the former when I occupied a position more conspicuous than that I fill at present; and then my neighbours and townsmen at home,—those who knew me well, and knew I was incapable of dishonourable acts, and the people of my State, without distinction of creed or party, took up arms in my defence, and indignantly scouted the base accusation of the functionary whose vanity and malice had made him a shameless libeller, and in the course of time my government rejected his charges, and restored me to its confidence and esteem; and now, when certain newspapers in the United States, are loaning their columns to anonymous scribblers, hired to blacken and defame my character, you, my friends, without distinction of race or nationality who have known me for the past three years,—to whom my public and private life is an open book, have rallied to my support, and condemned in no uncertain language the efforts of my enemies (cheers). And now, as I am about to sail away from you into the dim mysteries of the future, hoping soon to return, but with the myriad uncertainties of life and circumstances surrounding my steps, you gather here,—this distinguished,—this enthusiastic assemblage, to express to me in glowing words your friendly regard, and to bid me God speed. It seems but a tame acknowledgement for all this to say I thank you, and yet what language can I use. Are not those homely words after all, laden as they are with the heart's deepest emotions, more eloquent in their simple earnestness than the most elaborate embroidery of speech. I am conscious of having striven to do my duty faithfully and to deserve your good opinion. That I have succeeded, as your presence here warrants me in believing, will be to me always a most grateful reflection. I shall leave you with deep regret, and did I think my departure final this would be a most unhappy moment (hear, hear.). But my hope is to return, and to take again by the hand the kind friends who now gather to bid me good-bye. Great changes, my friends, have taken place since I landed on these shores. In this small community of ours some whose bright faces we loved to look upon have gone to their long rest, others have journeyd to far away shores and are mingling in other scenes. A period of commercial depression has succeeded to the active glowing prosperity of the olden times, and now lawn tennis seems to absorb the surplus energies of the settlement. We are left without a municipal director; the Bund bears the appearance of being in a chronic state of typhoon; sheep pasture on the race course, while growls are heard from the rival race clubs. Punch goes into the country, and on his return endeavors to inoculate the community with the dyspepsia he had contracted by the undue use of fresh air, unusual exercise, and plain food. The volunteers that were to have protected us from the dread ravages of men in arms, have vanished like the morning dew, yet we are safe, and a sense of peaceful dulness and security pervades the settlement. To take a wider view, important events have taken place in the Empire within the time referred to. The native public press, although controlled by restrictive laws, has increased in numbers, circulation, and power; and its influence upon the future of this country can only be estimated by those who have reflected upon what the same agent has accomplished in other lands. Courts have to some extent been remodelled, and systems of jurisprudence and of legal practice have been projected, which, when completed, will tend to the administration of justice, by the methods and as it is to be hoped, with the results to which we have been accustomed in our own countries. The progress of these improvements must necessarily be slow; nations do not change their habits of thought and mode of procedure in a day. I am certain, however, that each of us—whatever his views, prejudices, or opinions—gives to this Government his warmest sympathies in its undertakings, and will greet with joy every step of progress made, and every degree of prosperity realized by the people of Japan. Civil war has of late raged within the Empire, but fortunately so remote from us that its horrors have not intruded on our daily lives, and but its echoes have reached us as from far distant shores. We are told that its end is near; and let us hope that with returning peace the Government, in the exercise of its greatly increased and well deserved strength, may use it with that wise discretion that should ever accompany such great responsibilities; and that the education of the people, which languished under the stern necessities of war, shall again receive the attention its importance demands. From other lands also come to us the news of dread conflicts, the extent and issues of which no man can foretell. All Europe seems trembling on the verge of a war such as the world has never seen. May Heaven avert such an awful calamity! may it so be ordered that whatever is evil in this conflict may be brought to naught; may the right speedily triumph, and the bright angel of peace be swift winged in her flight over all lands. (Cheers). But I fear I am exceeding the limits of a post-prandial talk. To inflict a speech upon you at this time would be but a poor return for your exceeding kindness. (Cries of "go on"). Before taking my seat, however, I must be permitted to tender to my colleagues, one and all, my acknowledgements for their unvarying courtesy. Our intercourse, official and personal, has been marred by no misunderstanding, but, on the contrary, we have worked together in most cases in the greatest harmony; and when differing in opinion we have done so without resentment or ill will. To all the Japanese officials, also, with whom I have been brought into contact, and especially to that most worthy and estimable gentleman the Governor of Kanagawa, whose health you have just drunk, I must express my obligations for constant and unwearied kindness. In fact, Mr. Chairman, from all classes and conditions of persons in this country I have met nothing but kind and considerate treatment, of which I desire to express my deep appreciation. It is for this reason, Sir, among a thousand others, that I entertain a most affectionate interest for the people in Japan, and a sincere desire for their welfare and lasting happiness. I have said I expected to return to this country. I go for a while to my own land, in which, perhaps, greater changes are annually taking place than in any other part of the world,—for our restless and energetic people are constantly at work, wresting precious metals from the earth; turning the desert into a garden; opening new lines of internal traffic; struggling with new problems of government, and striving by new methods, and in new ways, to work out for themselves and their children a future of success and prosperity. I trust when I do come again among you I may find matters greatly improved, with trade revived, confidence restored, and every business element working in harmony. I trust, my friends, I shall find each one of you highly prosperous, not, in the words of a distinguished citizen, by having "done ze public in ze eye," (laughter and cries of "Beato,") but, to quote the same authority, "by doing very much the businesses who make vat you call, the prosperities." (Laughter). Again, my friends, thanks, a thousand thanks, and farewell,—

"Farewell, a word that hath been and must be,
A sound that makes us linger; yet,—Farewell."

(Loud cheering).

The toast of "Our Armies and Navies" was next proposed by Mr. Dickins, who alluded to the fact of his having served in the English Navy with one of the gallant officers who would reply to the toast. Mr. Dickins referred to the dependence we had to place on our respective Armies and Navies, and concluded with some complimentary remarks concerning the guest of the evening. Captain Young U.S.N. and Captain Buller, C. B., R.N. replied to the above toast.

Mr. J. G. Walsh then proposed the toast of "Our Consuls," coupling it with the names of Mr. Brennwald and Mr. Russell Robertson. The former gentleman stated his inability to do justice to the toast on account of his limited knowledge of English, but could safely leave the reply to his colleague, Mr. Russell Robertson.

Mr. Russell Robertson replied as follows:—

Mr. Chairmen, Mr. Walsh and Gentlemen,—I beg in the name of the Consuls to thank you for uniting so kindly in drinking our healths, and I gladly take advantage of the occasion that is thus afforded me to bear testimony to the cordial relations that at present exist between the Consuls and the community generally. To say, gentlemen, that we endeavour to do our duty is simply to say that which can be equally well said of every one here present, but duties can be performed with a good grace, and with an ill grace. It is not to be expected that a Consul can make a drawing room of his office, but what he can do is to import drawing rooms manners into it, (hear) and discharge his duties with patience, good temper, and that amount of skill and experience which each of us brings to bear in a greater or less degree. It is this that the Consuls claim to do, and further, in their intercourse amongst themselves as colleagues, in their intercourse with their fellow countrymen, and with the officials and people of Japan, never to forget that the interests, the honour, and good name of their respective countries are committed to their safe keeping (cheers). I am desired by my colleagues, and indeed I require no prompting to do so, to express our sense of the loss we are about to sustain in the approaching departure of our esteemed friend and colleague (hear, hear). It is very generally known, and our honoured guest has indeed referred to it himself, that General Van Buren has been made the object in the United States of virulent personal attacks directed against his private character. These attacks have, I believe, taken the shape of anonymous writings in newspapers. I have not perused these personally, in the first place because they have never been before me in any way, and in the second place because curiosity has not prompted me to seek out that which vilifies my friend (applause). I have, however, a very general idea of their tenor, and all I have to say in respect to them is this, that if to endeavour to appear happy and light hearted in business and out of business; if to accept and respond to the generous hospitality for which Yokohama is proverbial; if to shake by the hand, and at times, to break bread with those whose social intercourse with us is in a measure restricted by reason of those unwritten laws which govern the movements of society in all parts of the world; if, gentlemen, to do all this constitutes a crime, then is my conduct equally criminal with that of General Van Buren, equally is my good name open to be aspersed and equally with him am I unworthy to hold

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

the commission with which my Queen has honoured me. (Loud cheers). I utter these words, gentlemen, not prompted by feelings of idle sentiment, nor with any desire to have it recorded in print to-morrow that on the occasion of the farewell dinner to our guest, the British Consul said this and that of his colleague the American Consul-General. I speak, gentlemen, not so much as a colleague but as a friend and a fellow citizen of the General's at this port; and as one who, if his own good name ever comes to be assailed with as little reason as there has been in the case of our guest, may, I trust, not be wanting in a friend, who in the interests of truth, friendship and justice, will come forward and defend my fair name, as I have endeavoured, I fear but unworthily and with but a poor show of eloquence, to defend that of my friend General Van Buren (loud cheers).

Dr. Latham followed by proposing "The Bench and the Bar", which was humorously replied to by Mr. Kirkwood. Mr. Stevens proposed "The Press", which Mr. House acknowledged, and the toast of "The Ladies" was proposed by Captain Buller and responded to by Paymaster Whitehead, U. S. N. These concluded all the toast on the list, but before the company separated several other toasts were proposed and appropriately replied to, concluding with that of the health of Chairman. It was midnight before all was concluded, when, at the instigation of the Chairman, several of those present carried Genl. Van Buren out of the room, amidst vociferous cheers.

Correspondence.

MR. ASTON'S GRAMMAR.

To the Editor of the "Japan Weekly Mail."

Sir.—I venture to dissent from one or two of the assertions made in the interesting review of Mr. Aston's Grammar contained in your last week's issue. As regards the first of the three points on which your Reviewer finds fault with the author, he has plainly mistaken Mr. Aston's views. He says:—

"He (*i.e.* Mr. Aston) regards such words as *takami*, *hayami*, etc., as being in all cases abstract nouns *and nothing more*"—(the italics are mine)—and your Reviewer proceeds to point out the undoubted fact, the explanation of which he admits puzzles him, that such nouns have sometimes the sense of 'on account of'—the abstract quality, whatever it may be. Now I submit that Mr. Aston has both impliedly and expressly taken pains to guard against such words being regarded 'as being in all cases abstract nouns and nothing more': impliedly, by the very fact of his placing such nouns under the heading '*Roots of verbs*'; instead of in the class of abstract nouns derived from adjectives; and expressly, by remarking that:

"In the old literature these nouns still retain enough of their original force as verbal roots to take before them the particle *wo*, etc."

In this fact, prominently mentioned by Mr. Aston and overlooked by your Reviewer, of their retention of their original verbal force, is to be found the explanation of the meaning 'on account of' which in some cases is found to attach to them. For in Japanese, as in other languages, the causal relation, instead of being formally expressed, is often left to be implied from the turn of expression. In the phrase:—"The wind being fair, we set sail" the causal relation is as clearly indicated as in the more formal expression 'on account of the wind being fair we set sail."

Again, if he will turn to p. 169 of the grammar, your Reviewer will find that the mediæval future in *nzuru* has not been passed over; the vocalization of the *n* into *u* having been sufficiently treated of on p. 35.

But the reply to such strictures would doubtless come more fitly from Mr. Aston himself, and even had your Reviewer's few unfavourable animadversions been much severer than they are, no outsider need have felt called on to take up the cudgels on behalf of an author so capable of conducting his own defence. Nor indeed, has that been my object in writing to you. The foregoing observations are merely incidental, and by way of prelude to my main cause of quarrel with your Reviewer; which is not on account of any of the points on which he finds fault with Mr. Aston, but on account of one on which he expresses a qualified approval. In a foot-note to p. 120 of his grammar, Mr. Aston starts one of the most daring and revolutionary theories that could well be propounded by a scientific philologist; nothing less in fact than the genesis of several Japanese prepositions from an obsolete verb *nu*, to be. Now the very novelty of such a speculation ought to have put a Reviewer on his guard, and made him specially exacting in his scrutiny of the facts adduced in evidence. The objections that readily present themselves against it are obvious and manifold; the facts that seem to speak for it are few and of doubtful interpretation; and even when they are interpreted in the way required, the difficulties raised by the hypothesis, are at least as numerous as those which it seems to explain. Such facts as Mr. Aston adduces he is careful to accompany with the interpretation necessary to exhibit their bearing on his hypothesis. Had any other facts of the same nature been known to him, it is to be presumed he would have stated them and pointed out in the same careful manner their evidential significance. But how does your Reviewer deal with the hypothesis? He avers that if true it will clear up more than one obscure point in the structure of the language, and he draws attention to three facts which, he says, go towards confirming it; but what the obscure points are to which he alludes, or in what manner the new facts he adduces have any bearing upon the question of the existence or otherwise of an absolute verb *nu*, to be, he entirely omits to indicate.

Now great allowance must no doubt be made for the brevity necessarily imposed on the Reviewer of such a work as Mr. Aston's grammar in the columns of a weekly journal. But I submit that if any notice at all was to be taken of the startling speculation which the author so unobtrusively propounds in a foot-note, and more especially if that notice implied even a qualified agreement, it would have been well to be a little more explicit as to the connection between the hypothesis and the facts which are supposed to lend it support. Perhaps your Reviewer may yet be induced to favour us with a fuller statement of his views on this interesting point? For if the hypothesis in question be true, its consequences will reach over a much wider field than the clearing up of obscure points in the structure of the Japanese language. They would affect the drift of one current of philological enquiry over the whole realm of human speech.

I am, Sir,
Yours truly,
SHOSEI.

Law Reports.

IN H. B. M.'s COURT AT YEDO.

Before H. S. Wilkinson, Esq., *Acting Law Secretary.*

Wednesday, August 29th, 1877.

Tôkiô *Fu vs.* Blockley.

His Honour delivered judgment in this case yesterday as follows:—

Judgment.

In this case the plaintiff, the *Chiji* of the Tôkiô *Fu*, sues the defendant for three years' rent of ground held by the defendant as assignee of a lease in perpetuity granted by the plaintiff's predecessor in office, and for a penalty at the rate of two per cent. a month during the time such rent has remained unpaid. The allegations of the petitions are:—

1.—The plaintiff is the *Chiji* or Chief Municipal authority of the City of Tôkiô, which City was formerly known as Yedo.

2.—The *Chiji* of the Tôkiô *Fu* by deed, of which a copy is hereto annexed, sold to Wilhelm Patow his heirs and assigns, the lease in perpetuity of the lot of land known as No 17 in the Foreign Settlement, Tôkiô, subject to the conditions in the said Title Deed set forth.

3.—Afterwards all the estate of the said Wilhelm Patow in the said lease vested in the defendant by assignment as and for her separate estate.

4.—The defendant is now the assignee in possession of a portion only, to wit of 302.22 *tsubo* of the said lot or land.

5.—The annual ground rent payable to the plaintiff under the said Title Deed in respect of the said 302.22 *tsubo* computes to *yen* $113\frac{333}{1000}$.

6.—The said Wilhelm Patow, by acceptance of the said Title Deed for himself and his assigns, covenanted with the *Chiji* of Tôkiô *Fu*, to pay him the said annual rent in advance on the 1st day of July in every year; and it is a condition of the said Title Deed that in case of non-payment of rent the authorities shall be entitled to a judgement for the amount found due; and also to a penalty of two per cent. per month on the said amount.

7.—The ground rent upon the said 302.22 *tsubo* is due and unpaid for one year commencing on the 1st July 1873, and for one year commencing on the 1st July 1874, and for one year commencing on the 1st July 1875.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

8.—The said ground rent became due and payable by the defendant *dum sola* and subsequent to the passing of the Married Woman's Property Act of 1870.

The prayer of the petition is:—

1.—That the defendant may be decreed to pay to the plaintiff the sum of 113$\frac{333}{1000}$ *yen*, together with a penalty for non-payment thereof at the rate of 2 per cent. per month from the 1st July, 1873, to the date of judgment.

2.—That the defendant may be decreed to pay to the plaintiff the sum of 113$\frac{333}{1000}$ *yen*, together with a penalty for non payment thereof at the rate of 2 per cent. per month from the 1st July, 1874, to the date of judgment.

3.—That the defendant may be decreed to pay to the plaintiff the sum of 113$\frac{333}{1000}$ *yen*, together with a penalty for non-p yment thereof at the rate of 2 per cent. per month from the 1st July, 1875, to the date of judgment; and

4.—For further relief.

To this petition the defendant puts in the following answer:—

1.—She denies that she is indebted to the plaintiff in the three sums of 113$\frac{333}{1000}$ *yen* or any other sum or sums.

2.—She admits that the document referred to in the second paragraph of the petition (and the copy of which as put in by the plaintiff is admited) was issued on behalf of the Japanese Government to Wilhelm Patow his heirs and assigns, and that all the interest of the said Wilhelm Patow was transferred to her and became her separate estate.

3.—She alleges that she occupied the land in question in virtue of a contract which is contained, not only in the said document, but in the said document, and in the treaties agreements and conventions between the Government of Japan and Great Britain, and other foreign powers relative to the settlement of foreigners in Japan, and in certain land regulations and conditions therein referred to.

4.—She alleges that the said contract has been violated by the plaintiff in respect that more than three-fourths of the foreign residents of Yedo have been permitted to reside outside of the limits there prescribed, whereby she as the occupier of No. 17, Tsukiji, Yedo, has suffered great loss; that judgment with costs may be given against the plaintiff (and for further relief).

5.—She admits that she has not paid ground-rent in respect of No. 17, Tsukiji, since July, 1873.

The defendant has also filed a petition by way of counter-claim in which she alleges:—

1.—That on the 20th November, 1867, the Japanese Government entered into an arrangement with the Foreign Ministers relative to the settlement of foreigners at Yedo.

That it was thereby agreed that foreigners should only be allowed to hire houses and reside within the limits coloured red on a plan thereto annexed, and should only be allowed to lease land for building purposes within the limits coloured blue on the said plan.

That on the 4th May, 1870, a further arrangement was entered into between the Japanese Government of the one part and the Foreign Representatives of the other part, and it was thereby agreed that foreigners should only be allowed to hire houses and reside within the limits defined by a red line on the plan thereto annexed, and should only be allowed to lease land and build houses within certain limits defined by a blue line on the said plan.

That the said further arrangement entered into as aforesaid, provided for the sale of the lease of the said land to foreigners and the conditions were therein referred to and thereto annexed.

That on the 2nd day of June, 1870, the leases of certain lots of land within the prescribed limits were sold in pursuance of the said further arrangement, and subject to the terms thereof, and subject to the conditions of sale thereto annexed, duly put up for sale by public auction.

That lot No 17, now in the possession of the plaintiff, was duly sold to Wilhelm Patow for the sum of six hundred and six Mexican dollars ($606), and the said sum of six hundred and six Mexican dollars ($606) was duly paid as the purchase money for the same.

That the plaintiff is now in the possession of the said lot.

That since the purchase of the lease of the said lot of land, No. 17, buildings and premises have been erected, and improvement effected on the said lot to the value of eight thousand dollars ($8,000).

That now and for the last four years the greater part of the foreigners from time to time resident in Yedo have not resided or hired house within the limits defined by a red line on the plans above referred to, but have, on the contrary, hired houses and business premises, and resided without the limits so defined by the said red line, and that the plaintiff is and has been fully aware of and has permitted the same.

That the chief inducement to the defendant to purchase the interest of the said Wilhelm Patow in the said lot was the condition in the said arrangements mentioned that foreigners should only be allowed to hire houses and reside within the limits defined by a red line as aforesaid.

That owing to such breach by the defendant of the conditions and agreements under which the said lot was sold and purchased at the said sale by auction, the plaintiff feels herself much aggrieved and has sustained considerable loss and damage thereby, and claims in respect thereof the sum of five thousand dollars ($5,000).

This petition concludes with a prayer that the defendant in the counter-claim (the plaintiff in the original action) may be ordered to pay to her the sum of $5,000 and the costs of the suit, and for further relief.

To this counter-claim the plaintiff in the original action demurs, assigning, as matter of law, want of privity, and further that this Court has no jurisdiction to entertain the counter-claim. The case is to be tried on this record and on certain admissions made by Counsel on both sides which will be afterwards more particularly referred to, and it is agreed that the question of the amount of the damages to Mrs Blockley—if entered upon at all—be considered at an adjourned hearing after the other questions have been decided.

The lease upon which the petition is founded is in the following words:

FOREIGN SETTLEMENT, TŌKIŌ.

LOT NO. 17.

In consideration of the sum of 2,366.75 *Bus*, the payment whereof is hereby acknowledged, the undersigned, Sugura Tokei Shosanfugi acting on behalf of the Japanese Government hereby leases in perpetuity to Mr Patow, North German subject, his heirs and assigns, the lot of land numbered and described in the official plan of the foreign settlement at Tōkiō, as No. 17 and contained 391.20 *tsubos* more or less on the following condition.

First,—That the said Mr Patow, his heirs, or assigns shall pay in advance on the 1st day of July in each year the sum of 586.75 *bus* as rent, being at the rate of one *bu* and a half per *tsubo*, as provided by Article III of the Arrangement concluded between the Japanese Government and the Foreign Representatives on the fourth day of May, one thousand eight hundred and seventy.

Second,—That the said Mr. Patow, his heirs, or assigns, shall pay annually to his Consular authority such charge for the maintenance of a Police force in the said settlement, not exceeding half a *bu* per *tsubo*, as shall be determined in the manner provided by Article VI. of the aforesaid Arrangement.

Third,—That every transfer of the said Lot. No. 17, or any portion thereof shall be made to no other person than a subject or citizen of a Power having a treaty with Japan, and shall be executed before the Consular authorities of the parties concerned and shall be registered by the local Japanese authorities.

For non-performance of any of the aforesaid conditions proceedings may be instituted against the said Mr Patow, his heirs or assigns, before his or their Consular authorities; and in case of non-payment of rent the Japanese authorities shall be entitled to a judgment for the amount found due, and also to a penalty of two per cent. per month on the said amount, and to the costs of suit, and the judgment shall bear the same rate of interest by way of penalty until paid.

Done in duplicate, one copy being given to the lessee and the other being filed by the Japanese authorities, this 1st day of July in the year one thousand eight hundred and seventy.

SUGIURA TOKEI SHOSANFUGI.

There is a counterpart in the Japanese language written on the same paper. This Japanese counterpart is by the officer of the Japanese Government whose name appears in the English version; it is sealed with the seal of the Tōkiō *Fu*. The English version has the half seal of the Tōkiō *Fu* on it, and the lease may therefore be considered as a deed poll.

On this lease two questions arise.

1.—Is the plaintiff entitled to recover from the defendant rent for the premises, and, if so, how much?

2.—If the plaintiff is entitled to recover from the defendant rent for the premises, is he entitled to recover the penalty of two per cent. a month or any part of it, and, if so, for what period?

As to the rent, liability of the defendant can scarcely be said to be seriously contested. In order that the documents hereafter referred to Counsel argued that the plaintiff could not recover, on the Title Deed alone for want of compliance with the 4th Section of the Statute of Frauds. But I am of opinion that that section does not apply, but that the first section does apply and that the provisions of that section have been complied with. But however that may be the tenancy is admitted. And although it is not stated in express terms that the defendant has been in occupation during the whole time for which rent is claimed, there is sufficient in the pleadings from which this may be inferred. The correctness of the amount of the yearly rent claimed in the petition is not disputed. And if the whole of the defendant's counter-claim were granted, it would be no bar to the plaintiff's right to recover the rent. There is nothing alleged in the defendant's answer which could be construed into an allegation of any failure of a condition precedent to the plaintiff's right to recover. The claim set up by the defendant is by way of counter-claim, and if the whole of that claim were granted, the plaintiff is nevertheless entitled to have the amount of the rent allowed. If it had been sought to set up such claim of the defendant as a bar to the plaintiff's right to recover, I am satisfied that such an attempt must have failed. The defendant was in actual possession of the land, and continued moreover in actual possession of it up to the time of the commencement of the action, and under such circumstances the tenant in the absence of any express stipulation on the subject cannot set up the landlord's breach of contract as a defence to his claim for rent, but must proceed by way of cross action. This doctrine is approved of in Hart *v.* Windsor, 13 L. J. Exch 129, and any other doctrine would lead to the inconvenient consequence that by proving a breach of contract on the part of the landlord, the tenant might retain the land rent free. The answer to the first question must therefore be that (subject to a set off of any sum that might be found due on the counter-claim) the plaintiff is entitled to recover from the defendant the sum of 340 *yen* for rent of the premises from the 1st of July, 1873, to the 30th of June, 1876.

The question of the penalty of two per cent., however, depends upon different considerations. I have directed it to be re-argued, but it has been agreed that judgment should in the meantime be delivered on the other points. The next question to be now considered is

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

therefore the defendant's counter claim. As bearing upon this counter-claim copies are admitted of the following documents:

1.—Treaty between Great Britain and Japan dated 26th August, 1858, as set forth in a Book entitled "Treaties and Conventions, etc.", and the following documents also set forth in the same book, namely:—

2.—London Protocol, dated 6th June, 1862

3.—Convention of 29th December, 1866.

4.—Arrangement for establishmen Foreign Settlements at Hiogo and Osaka, dated 16th May, 1867.

5.—Arrangement for settlement of Foreigners at Yedo, dated 26th November, 1867.

6.—Further Arrangement relative to the Foreign Settlement at Yedo, dated 4th May, 1870.

7.—Conditions of public sale of the leases of land.

8.—Form of title deed for Foreign Settlement, Yedo.

It is also admitted:

1.—That the plaintiff stands for the Japanese authority or authorities referred to in the title deed and above documents.

2.—That a large proportion of the foreigners in Yedo have, during the past four years, as a matter of fact, resided out of the foreign concession at Yedo, although this has not been rendered necessary by want of accommodation inside the concession; and this with the knowledge of the plaintiff. Upon this counter-claim two questions are raised,

1.—What is the agreement which the Japanese Government has entered into with respect to the residence of foreigners in Yedo as contained in the documents before mentioned?

2.—Is the defendant entitled to sue upon that agreement or to set it up by way of answer?

Counsel referred to certain facts as supporting his contention but he did not show how they supported it. We are therefore left to conjecture what way these facts might be supposed to favour his views. He argued that in accordance with the maxim *expressio unius est exclusio alterius* the mere fact of fixing limits at all was in favour of his contention. But it seems to me that to state this proposition is to refute it. The proposition is this, that the Japanese Government by promising to allow foreigners to live within certain limits, impliedly promised not to allow foreigners to live outside those limits. This contains a palpable fallacy. The implication is that the Japanese Government did not promise to allow foreigners to live outside those limits, but this is a very different implication from that contended for. He then referred to the historical fact which appears clearly on the documents admitted, that until the limited permission was given no foreigner could reside in any part of Yedo. But how this supports his contention I am at a loss to discover. The only construction I can put upon it is totally opposed to this conclusion. It would appear to me that such a conclusion could only have been supported on the grouud that the object of the treaties and arrangements was to impose restrictions upon foreigners, while the fact alluded to shows that the object was to confer privileges upon them.

What is the position of the Japanese Government in view of this historical fact? It appears to me that, before entering into the Treaties of 1858 and subsequent years, the Japanese Government, like every other Government, had full power to allow any foreigners it chose to live within any part of its dominions. It did not choose to do so, but allowed only a Dutch settlement at Nagasaki. By the Treaties it conceded to the subjects of the Treaty Powers the right to live in certain definite places, and by the same Treaties it agreed separately with each of the Powers, that if at any future time other concessions were given to one Power the same should be enjoyed by each of the others. So far there is nothing whatever to indicate tha the Japanese Government had abdicated its right to allow foreigners to live in any city, port, or place outside cities, ports, or places named in the Treaties—all it had agreed to was that, if the subjects of one nation were allowed to live elsewhere the subjects of all other nations having Treaties containing the "most favoured nation clause" should enjoy the same privileges. This view is confirmed by the provisions of the London protocol of 1862, which are sufficient to show that the opening of new ports and cities was considered a privilege to be gained for foreigners from the Japanese Government, and in no way, either there or anywhere else that I know of, is the keeping of them closed looked upon as a right which foreigners had acquired. And as the Government, after the conclusion of the Treaties, retained the right to allow foreigners to live in other cities, ports or places than those named in the Treaties, so it appears to me that after making the Arrangement for the Settlement of Foreigners at Yedo, and after fixing, in concert with the Foreign Representatives, the limits for the foreigners' settlement, it still retained the right to allow foreigners to live outside those limits, subject only to the condition it has imposed on itself by the most favoured nation clause. We are asked to imply that it had surrendered that right. But I have failed to find any ground whatever for such an implication. There seems to me no more reason for coming to the conclusion that the Japanese Government, by agreeing to allow foreigners to live within certain limits within which they could not before have lived, had surrendered the right to allow them to live outside those limits, than there is for the conclusion that, by agreeing to allow foreigners to live at certain ports and cities at which they could not before have lived, it had surrendered the right to allow them to live at other ports and cities. Counsel then referred to what he assumed to be a fact, that at the present day (except in Yedo) no foreigner is permitted or does live outside the concession in the other ports of Japan open to foreigners. But this fact is not admitted, nor is it to be deduced in any way from the documents put in, and I may add that, if I were allowed to make use of my own knowledge, I do not know it be true. It does not appear to me that it would support the conclusion for which Counsel contended, but it is not necessary to take it into consideration.

Counsel then referred to the concluding paragraph of Article II of the Arrangement of May 4th, 1870. That paragraph is:—

"Where all the ground within the blue line shall have been occupied by foreigners, the settlement shall be extended to the canal marked D.D.D. on the annexed plan."

Counsel contended that this paragraph, coupled with the general tenour of the other documents put in, plainly indicated that the settlement was not to be extended until all the ground assigned for the use of foreigners was occupied by them. Counsel was not specific as to whether this indicated that the Japanese Government had promised that it should not be extended, or only an intention on the part of the Government that it should not be extended. So far as a promise is concerned, I have already spoken as to the general tenour of the documents. Let us consider the paragraph. It is to be observed that the ground there spoken of as being within the blue line is thus referred to in the arrangement of November 25th, 1867:—

"Moreover as the Japanese Government are willing that foreigners of those nations having treaties with Japan should enjoy at Yedo the same facilities for leasing ground and building houses that are secured to them by Treaty at the ports, the Japanese Government are prepared to lease to foreigners for building purposes that portion of the land on the same plan which is coloured blue."

Here the leasing of the land in question is spoken of as a facility given to foreigners, and, as I have already said, I can find no implication from the giving of a facility not previously enjoyed, that the grantor has bound himself to give no more facilities.

But, perhaps, Counsel only meant to say that the paragraph and the general tenour of the documents indicated intention on the part of the Japanese Government, and it may be an intention, too, on the part of the Foreign Representatives. But if so, what legal obligation has the Japanese Government come under in respect of such intention? An expression of intention to be gleaned from the tenour of documents or from a particular phrase in one of them, without any promise expressed or implied to adhere to that intention, creates no legal obligation to adhere to it.

The learned Counsel also alluded to the fact that Mrs Blockley's occupation of the ground was a matter of bargain and sale, that a consideration was paid for the purchase of the lease and for the use of the land. In order to consider the bearing of this fact, it may be well to look at some of the particulars of the Arrangement. We find in the Arrangement of the 26th of November, 1867, a provision for leasing of two sorts. Foreigners were to be at liberty to rent houses from Japanese subjects, and there was to be a settlement, the ground of which was to be let by the Japanese Government, and it is in this settlement that the land now in question is situated. But we find from the further Arrangement of the 4th of May, 1870, that the sale of the leases of this latter ground was not to take place until the 2nd of June, 1870, so that, until June, 1870, foreigners living in Tsukiji were living in houses hired from Japanese subjects. So far we have come to the conclusion that the Japanese Government had entered into no undertaking in favour of these leases, that other foreigners should be prevented from hiring houses outside of Tsukiji. Does the circumstance that the Japanese Government leased the ground make any difference, or is there anything special in the arrangement for the leasing of this land which would create any obligation in favour of the lessees of this land, that the lessees of houses elsewhere in Tsukiji did not enjoy? Counsel has referred to no express provisions in the Arrangement concerning this land, which would create on the part of the Japanese Government any greater obligation towards the holders of it than towards the other residents in Tsukiji. I have alluded to the words by which the Arrangement concerning this land is introduced, that foreigners

"Might enjoy the same facilities for leasing ground and building houses that are secured to them by treaty at the ports,"

And I have stated the inference I should draw from them. Is there anything, therefore, in the circumstance that the Japanese are the immediate landlords to create such an obligation as is here contended for in favor of their tenants? I conceive there is not. It is difficult to find an exact parallel in ordinary life. But we may suppose the case of a private individual who had a park, warren or chase on which no houses have hitherto been built, and he enters into an agreement with the inhabitants of a neighbouring town to lay out part of it in villa sites, and puts these sites up for sale to them. Would any covenant or promise be implied in a bare lease or grant of those sites that the landlord would allow no other buildings in their neighbourhood? The present case is different but the difference is not in favour of the lessee. What we should here have to imply would be that the Japanese Government had, by making a grant or lease of land to which it had an absolute right, covenanted or promised with respect to the disposal of land in which it had only the right of eminent domain, and it appears to me too clear for argument that no such covenant or promise is to be inferred. Whether we look, then, at the Japanese Government in the light of ordinary landlords or in the light of a Japanese Government letting a part of the public domain, it seems to me that it cannot be considered to have made any such covenant or promise as is contended for.

And this brings us to the next question,—Is the Defendant, even if the agreement is such as she contends for, entitled to sue upon it or set it up in this Court?

Having arrrived at the conclusion at which I have arrived in regard to the construction of the agreement, it is not necessary to consider this question. But I may say that it appears to me that an agreement by a Government to allow or not to allow

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

foreigners to reside on ground over which that Government has only the rights of eminent domain is unquestionably an act of state, and the cases are clear that such an act of state of a foreign Government is not to be adjudicated upon in an English Court.

The counter-claim being disallowed, it follows that the plaintiff is entitled to recover from the defendant the sum of $340, and it is adjudged that it be paid within ten days from this date. There will be no costs, as the plaintiff has disclaimed them.

I ought to say something of the delay which has taken place in delivering judgment. The questions here decided do not appear to me to present any great difficulty in principle; but they had been decided differently in the United States Consular Court at Yokohama,—a Court whose decisions, although not binding on this Court, are entitled to every respect,—and some time has been taken by me to consider whether I may not be mistaken in my conclusions. But the greatest delay has arisen upon the question of the penalty of 2 per cent., which was scarcely touched upon at bar, and which has been reserved for further arguments.

IN H. B. M.'s COURT AT KANAGAWA.

Before RUSSELL ROBERTSON, Esq., Consul.

Tuesday, August 28th, 1877.

Suriman, the Malay, was brought up on the remanded charge of of stabbing one Ketchill.

A medical certificate was produced, certifying that the complainant was unable to attend.

His Honour remanded the prisoner till to-day at 4.15 p.m., when the examination will take place at the General Hospital.

J. Cloony and Thomas Dooly were charged with being drunk and incapable.

The charge against both was fully substantiated, but His Honour ordered them to be released from custody in consideration of their having been locked up for two days.

Thursday, August 30th, 1877.

Suriman, a Malay seaman of the P. & O. Str. *Sunda*, was brought up on the remanded charge of stabbing one of his fellow-seaman named Ketchill.

Owing to the indisposition of the complainant, the examination had to take place at the General Hospital.

Ketchill, warned to speak the truth, said: I remember Sunday, the 12th instant. I was on shore on that day. I was not in company with the prisoner. I returned on board at 6 p.m. I did not see the prisoner. I attended to the awnings. I was thirsty and had pumped some water to drink. While pumping this water I got a stab in the back. The accused stabbed me. I turned round and saw him. I fell down and saw accused running away. I had had no quarrel with him. I went on shore by myself and returned by myself. I don't know why I was stabbed. I cannot make it out. I cannot account for the Chief Officer stating that I had been fighting with the prisoner during the day. I have had no quarrel with any one on board the *Sunda*. I neither drink nor smoke, and live quietly, have no enemies, and have been on the *Sunda* a year and a half. I am a Lascar. There was nobody else near me when I was stabbed. I called out "Serang! Serang! I am a dead man" The stabbing occurred at ten minutes to 9 o'clock. Probably it was in consequence of my cries to the Serang that the mate came to where I was. I had by this time been put on a box in the forecastle. The doctor came at 10 o'clock. I cannot explain how accused came to stab me. I never had a quarrel with any one before. There was a lamp close by the pump, and it was shining enough for me to identify the prisoner after I had fallen as the person who had stabbed me. It was a dark night; there was no moon. Accused has been a year and a half on board the ship. All this time we have been friends on the whole: there has been no disagreeableness between us; we have shared and shared alike in food and in other allowances. I am paralysed and cannot eat anything and am likely to die here, and never return to Java. I only went on deck to get a drink: it was very hot. After that I would have gone down below. Accused said nothing after he had stabbed me, but ran away. I did not know that accused had afterwards left in a boat. I fell down after being stabbed, and was helpless. I cannot give any reason for this affair. I went on shore after him and returned after him. I cannot say whether accused was drunk or mad. When I returned on board at 6 p.m. I saw the assistant quartermaster. I spoke to nobody. I did nothing. When I returned it was raining. Nobody told me that accused had stabbed me. I saw the knife in the hands of accused after I fell down. It was bright enough for me to see the prisoner, and bright enough for me to see the knife. I received one stab in the back.

The prisoner declined to examine the witness, but denied having stabbed him, and asked for the knife to be produced. He was then sworn, and adhered to his statement that he had not stabbed Ketchill.

The prisoner was then committed for trial.

IN THE JUDICIAL COURT AT KANAGAWA.

Before Mr. ASAINA KANSUI, Vice-President.

Monday, August 27th, 1877.

ABDEL KADER *v.* HASEGAWA HIKOTARO.

The plaintiff claimed the sum of 200 *yen*, money held in trust by defendant, who did not attend the Court to-day.

It appears from the evidence, that the plaintiff resides in Tôkiô. For the last twelve years he has been acquainted with the defendant and often transacted business with him and his father, who was formerly Mayor of a village near Yokohama. From time to time plaintiff who was on the most intimate terms with defendant, deposited with him certain sums of money, giving him the right to use them free of interest, on the understanding that the money was to be returned when plaintiff wanted it. By October, 1874, plaintiff had deposited with defendant as much as 200 yen, and received a document, signed and sealed, from the defendant acknowledging having received that amount. On the 25th of January this year, plaintiff had four documents stolen from him, and amongst them was the receipt for 200 yen. On account of this, plaintiff went to defendant and informed him of his loss and requested him to give another receipt. This defendant agreed to do, but said that owing to changes having taken place in the business, he was not in possession of his seal. Plaintiff requested him to give a document acknowledging the debt, and to seal it with his thumb nail. This was done; and plaintiff at the same time informed defendant that he should require the money at the end of sixty days. Shortly after that, plaintiff was taken ill, and before he became convalescent defendant called upon him and gave him a proper receipt for the money, with his seal attached. Plaintiff noticed that the seal was a red one, while on the former occasion it was black, and he mentioned this circumstance to defendant, who said it was of no consequence, but if plaintiff liked he would put some thirty cent stamps upon it, which would make it all the more valuable. Plaintiff agreed to this, not thinking that defendant was designing to injure him. He afterwards applied for the money, taking a Japanese as witness. Defendant on that occasion acknowledged the debt, but pleaded inability to pay.

The witness referred to was then examined by the Court, and substantiated plaintiff's statement concerning defendant having acknowledged the debt in his presence.

His Honour remarked that, as the defendant was not present, it would be as well for plaintiff to leave his documents and they could then be shown to defendant if he called. If he did not call, judgment would be given in favour of plaintiff.

Tuesday, August 28th, 1877.

H. GRAUERT *v.* MIYAZAKI HAMPEI.

The plaintiff's claim is for $2,800 damages for the non-fulfilment of a contract, under which the German barque *Madagascar* was chartered to proceed to Hakodate with a general cargo.

The first hearing took place on the 26th of last month, when the case was adjourned for the production of a native named Saburo and and some others, whose evidence was alleged to be of the greatest importance, as they were actually the principals in the transaction, while the defendant was only an agent.

On the Court assembling this morning, Saburo was examined at length.

At the conclusion of the examination of the witness, Mr Grauert informed His Honour that there was not a greater liar in Yokohama than the person who had been giving evidence; and that he had called personally on plaintiff for the purpose of inducing him to take the case out of the Court.

His Honour said that he would adjourn the case, and in the meantime Mr Grauert could collect what testimony he was able to rebut the assertions of the last witness, who would, also, be subjected to a much more rigid examination than had taken place to-day.

The case was then adjourned, at the request of Mr Grauert, for a fortnight.

Thursday, August 30th, 1877.

G. MILLER *vs.* NAKAYAMA GONJIRO AND ANOTHER.

The plaintiff's claim is for $500 damages through breach of a contract on the part of the defendants. The first hearing took place on 24th instant.

On the case being resumed to-day, the plaintiff produced some documents showing his engagement with the Mitsu Bishi Company. A Japanese witness was also examined on behalf of the plaintiff, but he really knew nothing of the case, and eventually it turned out that he was not the right man. After some time, during which the plaintiff and his interpreter, the Court and its interpreter, become mixed up in a web of misunderstandings, it was arranged that two other witnesses should be called on behalf of the plaintiff. Another person was also required, but as no one knew his name it was thought there wou'd be some difficulty in producing him.

Several witnesses were examined for the defence. Their evidence was to the effect that at 6 o'clock on the evening of the 7th, they got an order to go to O-ota to load ballast. They went. One boat was loaded with 13 tons of ballast, when Mrs Miller came on the scene and informed them that the ballast was not required. In consequence of this the other boats did not load. Next morning, they went to plaintiff and received the same answer to their enquiries as they had received the night before, viz. that the ballast was not required. They then claimed that they were entitled to some consideration for having loaded the boat, but did not get any and

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

had to pay for getting the boat emptied. Mr Miller explained that when Mrs Miller went to O-ota, only about 2½ tons of ballast were in the boat said to have contained thirteen tons, and that it was then too late as the *Duna* was going away early the next day.

Plaintiff's interpreter was then examined.

J. McGregor, was called and said that on the 6th of July he heard plaintiff and defendant making a bargain about some ballast for the *Duna*. This was about 10 o'clock, and defendant agreed to send one boat at once and five more boats at one o'clock. The amount to be paid was to be 17½ cents per ton; and if the boats were detained at night, double that amount was to be paid. Miller then went and engaged twenty odd coolies to load the lighters when they arrived at one o'clock. Witness was at O-ota till three o'clock, and the boats had not arrived up to that time. The following day witness was there and still no boats came. On Saturday afternoon Miller bought some ballast from a Chinaman, but the *Duna* went away without the full compliment of ballast, and the captain was very angry. Miller paid the defendant $17.50 in advance.

The case was then adjourned till Sept. 3rd.

REUTER'S TELEGRAMS.

INTELLIGENCE FROM THE SEAT OF WAR.

LONDON, August 29th, 1877.

Official despatches do not confirm the capture of Schipka by the Turkish forces.

The Servian Government has resolved to afford military coöperation with the Russian forces in Bulgaria.

LONDON, August 28th, 1877.

Telegrams received report the capture of Schipka by Suleiman Pasha.

THE WAR IN TURKEY IN ASIA.

Ahmed Mukhtar Pasha telegraphs that he attacked the Russian Forces at the heights of Kaziltepe,* gaining a brilliant victory and routing the enemy after severe fighting.

[* ? Name of place correctly given.]

LONDON, August 27th, 1877.

The Blue Book on the Yunnan Affair contains the apology of the Emperor of China and Sir Thomas Wade's report on the Chefoo Agreement.

INTELLIGENCE FROM THE SEAT OF WAR.

Russian Official Despatches report the repulse of some of the Turkish Forces with enormous losses. Fighting, however, was still being carried on.

Despatches report that Mehemet Pasha repulsed fourteen battalions of Russian troops at Eskidjuma (Query Eskishumar).

The Russians are maintaining their ground at Schipka.

(*From the China Mail.*)

London, 19th August, 1877.

According to official Turkish despatches a detachment of the garrison at Rustchuk has repulsed a detachment of Russian troops at that place.

Turkish forces have been landed in the Dobruja [?] [Dobrudscha—ED. C. M.]

The Russians are advancing against Mugins, but have been repulsed on the Osman Bazar Road.

Dervish Pasha has carried the advanced Russian positions near Batoum.

Suleiman Pasha has arrived at Elena, North of the Balkans.

Salonica has been placed in a state of siege.

London, 16th August, 1877.

Telegrams from the seat of war announce that the Russian troops have evacuated Kustendje.

Lord Beaconsfield and Lord Derby will both remain in town this autumn.

London, 17th August, 1877.

The Commander-in-chief of the Turkish Army is marching to join his forces to those of Suleiman Pasha whose cavalry is now beyond [i.e. crossed] the Balkans.

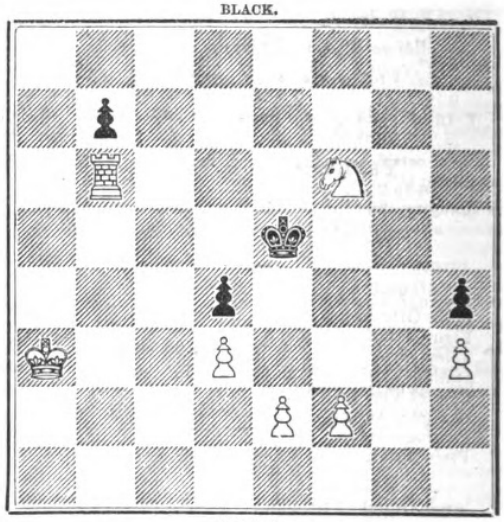
London, 15th August, 1877.

Parliament has been prorogued. The speech declares that our foreign relations are friendly, and that we will maintain an attitude of strict neutrality as long as British interests are unaffected, but if these are assailed or endangered, the help of Parliament is relied on to vindicate and maintain them.

According to despatches from newspaper special correspondents, the Turkish troops have massacred and burnt from 12,000 to 15,000 Christians in Roumelia.

London, 14th August, 1877.

Latest advices from the seat of war announce that Suleiman Pasha, having reinforced his troops, has taken the offensive against the Russians, and has already crossed the Balkans.



Much sickness prevails among the Russian troops in Bulgaria and the Dobrudscha.

NOTICE TO MARINERS.

No. 72.

China Sea.

FOOCHOW DISTRICT.

PIHQUAN HARBOUR ROCK.

NOTICE is hereby given that Captain Williams of Messrs. Butterfield and Swire's steamer the "Chefoo" observed, on the 24th May last, a rock on which a heavy sea at ¾ flood was breaking in mid channel at the entrance to Pihquan Harbour. The islet off the south end of Chinquan Island bore from the rock W. by N.; and Pingfoong Rock Point, to the west of Pingfoong Island, bore N. by E. magnetic. This information has been received from Mr. W. Handyside Tapp, H. B. M.'s Registrar of Shipping.

By Order of the Inspector General of Customs.

DAVID M. HENDERSON,
Engineer-in-Chief.

Imperial Maritime Customs,
Engineers' Office,
Shanghai, 25th June, 1877. J. 28, 6 ins.

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabrics & Yarns.—At the biginning of the week a fair business in some articles was done, but the market closes quietly, and in some instances prices are nominal. *Yarns:*—In 16/24 and 28/32 low and medium qualities moderate sales are reported at former prices; 16/24 water-twist are saleable, but only at very low rates; in 38/42 there is nothing doing. For *Shirtings* there is almost no enquiry and prices are nominal. *T. Cloths* and *Drills* are neglected. *Velvets* are in demand, and *Turkey Reds* saleable to a moderate extent.

Grey Shirtings:—						White Shirtings:—	
7 lbs.	38½ yds.	39 in.	per pce.	$1.40 to $1.75		60 to 64 reed 40 yds. 35 in.	per pce. 2.20 to 2.40
8 lbs.	38½ yds.	44 in.	,,	1.80 to 2.20		Turkey Reds 24 yds. 30 in. 2—3 lb.	per lb. 0.67½ to 0.85
8 lbs. 4 to 8½ lbs.	38½ ,,	39 in.	,,	1.55 to 2.32½		Black Velvets	7.25 to 8.35
9 lbs.	38½ ,,	44 in.	,,	2.00 to 2.60		English Drills 14/15 lbs.	40 yds, 30 in. 2.45 to 2.70
T. Cloth 7lbs.	24 ,,	32 in.	,,	1.40 to 1.60		Taffachelass	12 yds, 48 in. 2.00 to 2.35
,, 6lbs.	24 ,,	32 in.	,,	1.10 to 1.25			

Yarns.—

No 16 to 24	per picul	$28.50 to 31.50	No. 38 to 42 per picul $35.00 to 39.00
No. 28 to 32	per picul	$32.25 to 34.75	Reverse Twist 16-24 —

Woollens.—*Mousselines de Laine* are quieter, as buyers are as yet unwilling to give way to the higher prices asked for. Other articles are without change, and the general tone of the market is dull and unsatisfactory.

Plain Orleans	40—42 yds.	32 in.	5.60 to 7.00		Figured Mousselines de Laine	30 yds.	30 in. 0.25 to 0.28½
Figured Orleans	29—30 yds.	31 in.	4.25 to 5.25		Multicolored ,,	30 yds.	30 in. 0.28 to 0.37½
Shimagoro	30 yds.	30 in.	3.75 to 5.25		Cloth, all wool plain or fancy	48 in. to 52 in.	0.80 to 1.20
Italian Cloth	—30 yds.	32 in.	0.25 to 0.32		Presidents	54 in. to 56 in.	0.60 to 0.65
Camlet Cords	29—30 yds.	32 in.	5.75 to 6.00		Pilots	54 in. to 56 in.	0.45 to 0.55
Camlets Asstd.	56—58 yds.	31 in.	—		Union	54 in. to 56 in.	0.60 to 0.75
Lastings, Japan	22—30 yds.	32 in.	12.00 to 13.00		Blankets, scarlet & green	6 to 8 lbs.	per lb 0.40 to 0.46
Plain Mousselines de Laine	—30 yds.	30 in	0.17 to 0.18				

Sugars.—There has been little or nothing doing during the past week, and quotations are nominally unchanged. Stocks consist of about 85,000 piculs.

Sugar:—Takao in bag	(nom.)	per picul	$4.80 to $4.90		China No. 4 Kook-fah	per picul	$7.40 to $7.70
,, in basket	,,	,,	$4.70 to $4.80		,, No. 5 Kong-fun	,,	$6.50 to $7.40
Taiwanfoo in bag		,,	$4.70 to $4.75		,, No. 6 E-pak	,,	$5.70 to $6.10
do. in basket		,,	$4.60 to $4.65		Swatow Brown	,,	None.
China No 1 Ping-fah		,,	None		Daitong	,,	$3.90
,, No. 2 Ching-pak		,,	$8.40 to $8.70		Japan Rice	,,	$2.10 to $2.40
,, No. 3 Ke-pak		,,	$7.80 to $8.20		Kerosene Oil	,,	$3.25

Kerosene Oil.—Timid holders having cleared out thir stocks, the market has become buoyant, and prices have advanced from $2.45, at which sales were reported on the 28th ultimo, to $3.25, at which latter figure the market is firm to-day.

EXPORTS.

Silk.—The following was our report by the American mail on the 30th ultimo.

The business done during the past fortnight has been very considerable. Till within a day or two dealers were selling freely at current rates, notwithstanding the almost daily fall in prices. The bad results of holding too long which they experienced on a former occasion, and also the opportunity which offered of replacing their sales at lower rates up country, induced them to dispose of their stock, but for the last two days it has been difficult to close with the native dealers at the quotations given, and business has been restricted in consequence. Yet the news from Europe is of so depressing a nature that a further considerable decline in rates must take place. The chief demand has been for Hanks; the prices asked for Oshius affording generally little inducement to operate. A few Filatures have been sold at quotations. Arrivals amount to about 1,100 bales, and considerable parcels of *old* and coarse *new* Silk having gone into native consumption, stocks are reduced to about 900 bales, in all.

Settlements are 1,100 bales of Hanks, and 150 other sorts, making a total of 1,250 bales. Total export from 1st of July to date is 2,654 bales, against 7,350 bales for same period last year.

		In London at 4s. 0d. per lb.	*In Lyons at f. 5.05 per kilo.*
Hanks, Best No. 1 & 2	$480 to 500	17/5 to 18/1	48.00 to 50.00
,, Good No. 2	$460 to 470	16/9 to 17/1	46.50 to 47.50
,, Good all round No. 2½	$430 to 450	15/9 to 16/5	43.50 to 45.50
,, Medium No. 3	$400 to 420	14/9 to 15/5	41.00 to 43.00
,, Common to inferior No. 4 & 5	$370 to 390	13/9 to 14/5	38.00 to 40.00
Oshius, Good to medium	$430 to 480	15/9 to 17/5	43.50 to 48.00
Kakeda, best (Nominal)	$570 to 590	20/5 to 21/1	56.50 to 58.50
Hamatski Common to medium,	$400 to 420	14/9 to 15/5	41.00 to 43.00
Filature Silk	$560 to 650	20/1 to 23/1	56.00 to 64.00

The American mail took away 48 bales, and since then business has been very limited, holders being generally very firm in their demands, but yet, in a few instances, a reduction of $10 to $15 on above quotations has been obtained. A few bales of Nihonmatsu Filature are reported to have been sold at $730.

Per Steam-ship *Hiroshima Maru* for Shanghai and ports.—

Treasure	$64,121.60

REPORTS.

The *Undine* reports: Left Sydney July 11th, had light and variable winds and fine weather to the equator, which was crossed on the 31st July in long. 166.35 E.; thence light winds and calms to 17° N., and light N.E. trades. Made Sulphur and St. Augustino Islands on the 21st July, and from there had light, moderate and variable winds to port, arriving 25th August at 6 p.m.

The Steam ship *Oceanic* left Hongkong on the 22nd at 3.30 p.m. Had fine weather and light N.E. winds to Turnabout Island, succeeded by a strong gale from the N.W. with very heavy N.E sea. On 26th passed Yoko Sima; weather moderating with heavy sea from S.E.; thence to port fair pleasant weather and light variable winds. On the 23rd passed S. S. *Belgic* off the Brothers.

The Steam-ship *City of Tokio* reports: Sailed from San Francisco on the 8th August, at noon. Had moderate weather, with much fog and rain, until 9.30 a.m. August 25. Hove to, head to S. and E., to avoid centre of typhoon, approaching from S. W. At this time, strong gale from S. E. At 1 p.m. gale had increased to hurricane force, from S. E. to S. S. E. with furious cross and pyramidal sea and tremendous rollers from S. and W. At 7 p.m. wind hauling to S. W. and moderating to 10 force; wind baffling from S. E. to S. S. W. in gusts, force 7. Barometer 29 degrees, 30 minutes. August 26th, at 3 a.m., shift of typhoon to W. N. W. which continued of hurricane force, until 7.30 a.m. Barometer 29° 75. Then heavy N.W. gale until 1 p.m. Barometer 29°.96. At this time, wind and sea had moderated to smart gale. Kept ship on her course, and made sail. Thence to port moderate weather, and variable winds.

The *Tai-Lee* reports:—Left Hakodate on the 26th of August. When to the eastward of Tsugar Strait on the morning of the 27th at 4 a.m, encountered a gale from the S.E. which lasted to 10 a.m., and lulling for two hours then blew as hard from the N.E. The barometer fell to 28.90, and a heavy cross sea was running. The gale moderated at sunset, and from that time to arrival in port had moderate variable winds and calms, arriving at the anchorage at 11.30 p.m 31st August.

INSURANCE.

LONDON ASSURANCE CORPORATION.

INCORPORATED BY ROYAL CHARTER, A.D. 1720.

THE undersigned Agents beg to announce that this Corporation having already reduced their PREMIA FOR YOKOHAMA last year, they continue to charge the following Rates:—

Godowns, First-Class.....	12 Months...	1½	per Cent.
" "	6 " ...	1	"
" "	3 " ...	½	"
" "	1 " ...	⅓	"
" "	10 Days.....	1/20	"

They now Charge, viz:—

Dwelling Houses in the Settlement	First-Class P. A	2½	per Cent.
	Second-Class "	3	"
Dwelling Houses on the Bluff.....	First-Class P. A.	1½	per Cent
	Second-Class "	2	"

GUTSCHOW & Co.,
Agents.

Yokohama, December 16, 1871.

Yangtze Insurance Association of Shanghai.

PAID-UP CAPITAL, TLS. 600,000

POLICES granted on MARINE RISKS, to all parts of the world at Current Rates.

From this date a return of THIRTY-THREE and ONE-THIRD per cent. (33⅓ per cent.) will be allowed on the premia of all LOCAL RISKS accepted by this Association.

NO POLICY FEES CHARGED.

WALSH, HALL & Co.,
Agents.

Yokohama, February 9, 1874. tf.

Guardian Fire and Life Assurance Company.

LONDON.

ESTABLISHED 1821.

Total Invested Funds.....£3,000,000
Total Annual Income.....£ 400,000

THE Undersigned having been appointed Agents at Yokohama are prepared to Issue Polices AGAINST FIRE, on the usual Terms.

Concurrent Insurances require endorsement on the Policies of this Company only when specially called for by the Agents.

SMITH, BAKER & Co.

Yokohama, October 27, 1873.

INSURANCE.

UNION INSURANCE SOCIETY OF CANTON.

THE undersigned having been appointed Agents for the above, are prepared to accept

MARINE RISKS,

AT CURRENT RATES.

ADAMSON, BELL & Co.

Yokohama, July 22, 1875.

La Compagnie Lyonnaise d'Assurances Maritimes. (Limited.)

Incorporated with le Lloyd Francais and la Compagnie Francaise d'Assurances Maritimes.

Aggregate Capital, Fcs. 17,000,000.

THE undersigned have been appointed Agents for the above Company, and are prepared to accept MARINE RISKS to all parts of the world, at current rates.

No Policy Fees charged.

HECHT, LILIENTHAL & Co.

Yokohama, July 1st, 1871.

Hamburg-Magdeburg Fire Insurance Company of Hamburg.

THE undersigned having been appointed Agents for the above-named Company, are prepared to issue POLICIES AGAINST FIRE at current rates.

SIBER & BRENNWALD,
Agents.

Yokohama, 5th February, 1877. 1m.

Transatlantische Feuer Versicherungs Actien Gesellschaft in Hamburg.

ESTABLISHED 1871.

Capital: One Million Prussian Thalers.

THE COMPANY, having made arrangements of the participation in each risk, with eight Re-Insurance Companies representing an aggregate Capital of SIX MILLION PRUSSIAN THALERS, is thereby enabled to offer ample security.

POLICIES AGAINST FIRE,

the extent of $45,000 in ONE RISK, issued at current rates.

L. KNIFFLER & Co.
Agents.

Yokohama, July 16, 1872.

W. CRAWFORD & CO.,

57, CARTER LANE, SAINT PAUL'S,
LONDON, E.C.,

Beg to state that they are open for any Commercial Transactions, as to Consignments, for Granting Drafts, and Presenting Commercial Bills for Acceptance and Payment. For Buying English Goods at a very small Commission and Forwarding Goods to any place in England or the Continent.

WE beg to draw your attention to a very important English Invention we have on hand, viz.:

WOOLLEN BLANKETS

OR

COVERINGS,

OF ALL SIZES COMBINED WITH AN

AIR PILLOW.

It will be found most necessary and useful for Military Men, Travellers, Invalids, for use in the Hospitals, &c., &c., possessing amongst others the following advantages:—

It is the finest substitute for a Bed.

The Pillow can be raised or lowered at any time with the greatest ease.

It will pack up in a very small compass, and can be carried about without any inconvenience.

Price from 15s. to 35s. each.

When ordering the above article, please remit the amount of your order to

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omisson to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

BIRTH.

On the 6th September, at No. 100, Bluff, the wife of Captain JAMES DRUMMOND, of the *Kumamoto Maru*, of a son.

On the 7th September, at No. 98, Bluff, Mrs. J. CARST, of a son.

Notes of the Week.

The news of the past week from the seat of war in the South must have satisfied the most ardent lover of the sensational, who could scarcely in his wildest dreams have been prepared for the announcement that a body of the Satsuma forces had made their reappearance at Kagoshima and successfully obtained possession of the city.

As to the manner in which this manœuvre has been accomplished we cannot yet give full and reliable details, but it seems more than probable that Saigo and the forces under his personal leadership have never been engaged until lately with the Imperialists, but have been quietly lying hidden in some mountain stronghold, where they could watch the progress of events and be ready to take advantage of any carelessness of their antagonists resulting from the over confidence wrought by their apparent success. It is said that the insurgent forces which were gradually driven into a corner of Hiuga, abandoning stronghold after stronghold with scarcely a blow being struck, and finally surrendering in a body—as it is now stated—without any final struggle, were mere decoy ducks. That they had instructions to act in this manner, leading the Imperialists to suppose that they were following Saigo's real army, and that in forcing their surrender they were crushing out the war. Be that as it may, Saigo or Kirino—it is doubtful which,—suddenly appeared at Yokogawa in Osumi, where a terrible battle was fought resulting in total defeat with great slaughter of the Imperialists under General Miyoshi. It is also rumoured that two of the principal Imperial Generals were killed and another seriously wounded. The Satsuma troops then marched on Kagoshima, which in spite of the presence of the fleet, seems to have been left nearly undefended. Some fighting took place and Kagoshima is once more in possession of its former masters. On the entry of the insurgents the greatest panic prevailed, the Governor and other officials managing to get on board the *Takachiwo Maru* and escape to Nagasaki. It was at first reported that this bold dash was performed by only about three hundred men, but the numbers have already mounted up to as many thousands, and there can be little doubt that Saigo and Kirino are both at the head of formidable bodies. It is also rumoured that a large amount of money, some thousands of stands of arms, several Gatling guns, abundance of ammunition and Government stores of all kinds have fallen into the hands of the victors. This may very probably be the case as Kagoshima was the head-quarters of the Government and so sudden was the attack that there was no time to remove anything. Whether the insurgents will be able to hold their position for any length of time cannot be foreseen, as their strength and resources are not known. They are occupying the strong fortifications thrown up by the the Imperialists when they held the city, and command all approaches. Troops are being hurried back from Tôkiô, but it is expected—so say the native papers—that great difficulty will be experienced in effecting a landing. To-day it is announced that the insurgents are in strong force in the provinces of Higo and Hiuga, and that they are preparing to attack the Government troops at various points. Also that the strong-hold of Miyasaki has been retaken by the Satsuma forces. It is not of course for a moment to be credited that all these reverses to the Government are being effected by a few hundred desperate men who have made their escape from the army by which they were said to be surrounded. It is most probable that the Satsuma troops are in two bodies under Kirino and Saigo; one being in possession of Kagoshima, and the other on the frontiers of Higo and Hiuga. Such a disposition would be especially advantageous as it would oblige the Imperialists to divide their forces.

Although the march to Kagoshima and successful occupation on the city evince a most masterly leadership, whether it has been executed by Saigo or his right hand Kirino, it is impossible to conceive the blundering that left Kagoshima almost entirely unprotected. Either there is an utter absence of generalship among the Imperialists or it is owing to that want of harmony among their leaders to which we have often referred, and which led to the retirement at the most critical point of the war of two of the principal Generals, Kuroda and Kawadji. Only to such a cause can such an act of culpable folly as leaving the most important military station and head depôt of Government stores with a guard of a few policemen only, be traced. The prestige that this exploit has given to Saigo, and the harm that the palpable carelessness or incapacity of their generals will do the Government are incalculable. The leaders would have done well to have borne in mind the maxim quoted by a native writer in one of our translations to-day.

"The fortunes of the Empire are attained through fearfulness and are lost through carelessness. Fear is the fountain of prosperity, carelessness opens a door to calamity."

We may look for stirring news within the next few days.

Original from UNIVERSITY OF CALIFORNIA

We published in our daily issue of the 7th instant an account obtained from the native papers of certain disasters which had befallen the vessels anchored at Kagoshima during the severe gale, or typhoon, on the 26th ultimo. As far as we could then ascertain it was doubtful if the *Riôjô Kan* had been actually driven on shore, but the *Mainichi Shimbun* since implied that such was the case, stating that her propeller was damaged and that the *Kasuga Kan* was lying by her to render assistance. From other sources we hear that the *Riôjô Kan* is hard and fast on the shoal, and that her plates have started, so that considerable leakage has occurred. It is also said that her battery and coal were thrown overboard in order to lighten her, but that all attempts to float her had been unsuccessful.

The utter unreliability of statements made in the native papers, to which we have so often had occasion to call attention, is so entirely proved by the events of the past week, that we really look upon it as almost wasting the time of our readers to republish any of them. Of course the editors and conductors of the journals are not to be blamed for publishing what may be placed before them, as they must fill their columns with some matter. Whether the following from the *Akébono Shimbun*, be an actual confession or a composition we cannot say, but it bears out those statements that were generally made at the outbreak of the war, that the taking up arms against the Government was in entire opposition to Saigo's wish, and that it was not until the Imperialists had proceeded to extremities that he gave his support to the movement.

A prominent man among the insurgents, who was recently captured, has confessed that at the time when the pupils of the *Shigakko* obstructed the attempted removal of powder from the magazines on Sakurashima, Saigo was absent from Kagoshima, but returned immediately on hearing what had occurred. When he learned the true state of affairs he was very angry and said: "This act of violence has sullied my reputation. It has been my wish to endeavour to represent the evils caused by the present Government in a just and temperate spirit, and quietly to urge their reform. You have acted intemperately." While he was meditating what steps to take, Fuchibe Gunpei and Hemmi Juro brought to him what were said to be the confessions of the men who had attempted his assassination, and greatly exaggerating the danger to his life urged him to take some steps to secure his safety. Oyama Tsunayoshi, the then Governor of Kagoshima, also came and informed Saigo that he had notified the *Fu*, *Ken* and the garrison that Saigo, Kirino and Shinowara were, with a large armed force, about to proceed eastward and demand some explanation from the Government. Saigo was again terribly angry at such a proceeding, remarking that although the proclamation could not now be recalled, Oyama should never have issued it. By this time, however, the *samurai* in a state of intense excitement were gathering from all parts, and Saigo had no alternative but to accompany them to Higo. Although he had no great opinion of the military and naval resources of the Government he had as yet no intention of resisting by force of arms. When, however, he reached Kawajiri, he saw flames and smoke in the direction of Kumamoto, and asked if the town had been fired by Satsuma men or by the troops of the Kumamoto garrison. When he learned that it was the work of the latter, he said "Then all is at an end. I had intended to proceed to the capital without having recourse to arms, but when I find the garrison have fired the town, I can only conclude that the Government have decided on war. Therefore war it shall be." He then at once set about preparing for a campaign, for which hitherto no preparations had been made. Certainly Saigo had no intention of appealing to arms before he saw the fire at Kumamoto.

This so called confession certainly goes far to explain the motives that kept Saigo for so long a period apparently inactive before Kumamoto, and the manifest carelessness with which he allowed the Government to collect all the resources at its command for his overthrow.

In the *Daily Advertiser* of September 3rd we had occasion to call attention to an error made by the *Gazette* in its statement of the supposed object of Mr. Lister's visit to Japan. This we did in the following terms:

"The *Gazette* of Friday has the following paragraph—

Mr. Lister, Postmaster General in Hongkong, is now on a tour of inspection of the branches of the Hongkong Post Office in Japan. He will probably proceed to Kobe by next mail steamer. One of the objects in view in connection with his visit is to decide the question, whether or not to withdraw the British Post Offices from Japan, and, if the withdrawal is to be effected, to arrange with the Japanese Postal authorities the terms on which the latter will undertake the responsibilities of the service. We are unable to state at present whether Mr. Lister is empowered to set right that misunderstanding, or ueglect, on the part of the British Government which has till now delayed the recognition by Great Britain of Japan as a Postal Union Power.

Our contemporary is singularly unfortunate in its information on any points connected with Postal arrangements. Now, had the *Gazette* been content to state simply that Mr. Lister had come on a tour of inspection of the branches of the Hongkong Post Office in Japan, and would probably proceed to Kobe by next mail steamer it would have kept to the plain facts. But when it begins to draw other conclusions from Mr. Lister's visit, it soars into the region of romance, and states that which is purely erroneous. Mr. Lister has nothing whatever to do with the decision of the question whether the British Post Offices are to be withdrawn from Japan, nor can he in any way be empowered to do so as it is an Imperial and not a Colonial question. Neither has he any authority to arrange the terms of withdrawal, or even to discuss the subject with the Japanese Postal Authorities. He is not empowered to "set right" any "misunderstanding, mistake or neglect on the part of the British Government," which the *Gazet.e* abuses for some reason with such hearty good will whenever a Postal question gives it a chance, for the simple reason that no error or neglect has been committed. Our readers are perfectly well aware that Great Britain has caused no delay in the recognition of Japan as a Postal Union Power. If the British mail steamers do not at the present moment carry Japanese mails from Yokohama, it is not on account of the entry of Japan into the Postal Union not having been recognised; it is simply because the Japanese Government *do not wish* to send mails by those packets until, as we have on several occasions clearly pointed out, all questions relative to the conveyance of Japanese Mails by British Packets shall have been decided and settled in London."

With reference to the above paragraph, it is necessary for us to explain that Mr. Lister, the Post Master General at Hongkong, arrived at Yokohama on the 29th ultimo on the usual tour of inspection of the British Post Offices in this country, and on the 5th instant proceeded to Kobe and Nagasaki. The *Gazette* will insist, that apart from attending to his own business he is entrusted with a weighty negotiation on the part of Her Majesty's Government; in fact nothing less than that of deciding whether or not the British Post Offices are to be withdrawn from Japan, and of arranging the terms on which the Japanese Government will undertake the duties of those offices. Now, although the *Gazette* must be well aware, or at least can, if it choose to take the trouble to inquire, find out that our statement is exact in every particular, it persists in asserting what is evidently incorrect, and refuses to profit by our friendly efforts to put it right. We can only repeat that Mr. Lister has neither to arrange nor decide anything of the kind. He has not opened his mouth to the Japanese Government—nor could he under any shadow of excuse do so—on the subject of the withdrawal of the British Post Offices. Whatever decision may eventually be taken relative to those offices will not emanate from Hongkong, but from the Home Government, who, as we have long ago stated, are engaged in the consideration of the subject, and the futility of any negotiation being entered into in Japan at the very time that the question is being discussed in London must be patent to every one except the *Gazette*. This is a plain statement of the facts, which we trust our contemporary will accept without being able to discover what it pleases it to call "chopping of logic."

In this connection it is really amusing to notice how this postal question has been made the vehicle for gratification of private spite by hurling abuse against Her Majesty's Minister. Subordinates, who, forgetful of the fate of the ambitious frog, puff themselves up with windy dignity, and call themselves a "Department" (Heaven save the mark!) are naturally stung to the quick when they are found to be acting without proper warrant, and a check placed on their unauthorized proceedings. Under such circumstances it is not of course admissable to call

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

a spade a spade, but we must have a rant about the bullying propensities of the British Nation, an outrage on international rights and similar "bunkum." Whatever choice terms, however, these rabid haters of everything English may see fit to employ must be a matter of supreme indifference to Her Majesty's Minister, inasmuch as the English community, as well as the Japanese Government, are well aware that instead of seeking to keep in abeyance any privileges acquired by Japan under the treaty of Berne. Her Majesty's Minister endeavoured to facilitate the immediate execution of the treaty, but found that the Japanese Government (as distinguished from the "Department," in refusing to recognise the supremacy of which Her Majesty's Minister of course committed an unpardonable sin) did not wish its provisions to come into operation in respect to mails conveyed by British packets, until their Agents in London had concluded the negotiations on which they are now engaged, or which may possibly by this time have been completed.

The performance of the Japanese Troupe of Acrobats at the Gaiety Theatre last evening was in all respects well worth witnessing, and although the attendance was fairly good, there is no doubt that if the excellence of the performance had been generally known, a far larger audience would have rewarded the laudable efforts of the Amateur Dramatic Corps, under whose auspices the performance was given, to provide that rare treat, a pleasant evening's entertainment. One great charm about the performance was the absence of any bodily contortions, or of any of that unpleasant and unwholesome excitement produced by feats involving great personal risk. Everything that was done was carried out with such perfect ease and self-possession, that the spectator was compelled to admire the consummate grace and facility with which the various feats were accomplished almost more than the wonderful skill of their execution. The possibility of failure in anything undertaken is never for a moment allowed to enter the mind of the audience. Natural laws are apparently set boldly at defiance, and what, until the contrary is demonstrated, seems impossible, becomes in the hands, or rather we should say the feet, of these clever performers a matter of the simplest ease. To dress one's self while standing perfectly unaided on a slack silken rope no thicker than a blind cord must certainly be harder than getting into one's nether garments in the cabin of a ship at sea, and yet we have succeeded in accomplishing the latter feat only after many trials, wherein we met with ignominious failure and severe bodily damage. Why an umbrella should become bewitched and execute on the soles of its—dare we say manipulator's—feet what it could never be brought to do in the hands of an ordinary person surpasses our comprehension. In fact we cannot praise too highly the excellence of the whole performance. As it appears to be necessary to the successful carrying out of the various tricks that the performers should each time appear in a fresh costume, the delays caused by these changes of dress were tided over by songs by several amateurs. When we say that they fulfilled the intention of stop gaps and that the efforts of the singers met with warm appreciation, we have said all that this portion of the entertainment calls for, but on some other occasion we hope to have the pleasure of hearing at least two of the gentlemen, a better opportunity being thus afforded for friendly criticism.

We learn from the *Mainichi Shimbun* that the Kanagawa *Ken* officials have concluded an agreement with a contractor for the sum of 300,000 *yen* to clean out all the wells connected with the aqueduct which supplies the native town with drinking water. This is doubtless a sanitary measure of the greatest importance, it being one calculated to repress the frequent and virulent attacks of typhoid fever to which Japanese towns are always subject, and we commend the energy and far-sightedness which the *Kencho* officials have shown by entering upon so desirable an improvement. But is not the contract price rather high?

We are indebted to a Japanese friend for an interesting account, which we publish elsewhere, of the proceedings of the **Loochooan Envoys since their arrival in Japan in October 1875,** and the causes which led to their mission. One cannot read the memorials, from which we have only space to insert a few selections, without being touched with the earnest simplicity of the pleading, and sympathizing with the difficult position in which these quiet, harmless people find themselves placed. For a long time past the country of Loochoo—the Beautiful Isles—has been in the anomalous position of acknowledging one lord, China, and paying homage to another, Japan. It is very evident that although for a time serving two masters may be successfully carried on, it is certain in the long run to bring about a state of things in which the unfortunate vassal finds himself bullied by both and assisted by neither. And this is the present position of Loochoo.

With regard to the allegiance which Loochoo claims that she owes to China, it appears in a sketch which we find among "Waifs and Strays" that the first complimentary tribute was sent by the reigning Prince to the Chinese Emperor Hung-wu, the founder of the Ming Dynasty in the year 1378. This expressed admiration for their gigantic neighbour does not appear to have arisen from a toadying spirit of the weak toward the powerful, but from a sincere admiration of the literature and enlightenment of China. Twenty-seven years afterwards the Loochooan ruler solicited the confirmation of his prerogatives, and his investiture with kingly power at the hands of the Emperor, thus instituting a custom which seems to have been continued by all his successors down to the the present day. Thus while acknowledging the seigniory of China, Loochoo enjoyed all the blessings of independence, the tributes sent to China being merely complimentary, while China interfered with the Government of the tiny realm only to the extent of occasionally lending kind and excellent advice, and acknowledging the "kindness" of her vassal. In the middle of the sixteenth century, however, the independence of Loochoo received its death blow. The then reigning prince of Satsuma, a noble fond of war and adventure, invaded the Beautiful Isles, and succeeded in overcoming their forces and obtaining possession of their King, whom he took away and kept a close prisoner for four years. At the end of that period he restored him to his throne, but the independence of Loochoo was at an end.

The Loochooans are descended from the Japanese, as their state appears to have been founded about the seventh century by the then reigning Emperor of Japan, and they speak a dialect of the Japanese language. In spite of this family relationship, however, it does not appear that they have ever bestowed much affection on their relations and suzerains. Their sympathies have always been with the Central Kingdom, and their respect for her unbounded. Graciously, however, as China has accepted this homage, and patronisingly as she has looked upon her tiny neighbour, she never appears to have promised her powerful assistance should necessity arise, and has quietly permitted, what she must have known, Japan to be the true lord of the Isles. It certainly must appear that when China allowed Japan to chastise the Formosans for the murder of some Loochooan sailors, she was tacitly acknowledging that Loochoo was a dependency of the Japanese Government. But if an understanding to this effect has been brought about between the two countries, in common justice the King of Loochoo or his Envoys should be clearly informed that such is the case, so that the latter may return in safety to their homes. At present matters seem to be at a standstill. No further correspondence has taken place, and the unfortunate Loochooans are still between two stools. Anxious to do what is just and right, and to give offence to neither of their powerful neighbours, they are threatened by both, and are unable to help hemselves. The Envoys are specially deserving of sympathy, as they are compelled to remain in exile until some final answer is forthcoming, a favour which the Japanese Government seems either unable or unwilling to accord.

The following explanation of the singular reflecting properties possessed by Japanese Metal Mirrors is given in *Nature*, and appears satisfactorily to explain the phenomena.

More than eleven years ago, in February, 1866, I published in *The Reader* (since extinct), a letter giving, I venture to think, a complete explanation of the phenomena exhibited by certain Japanese mirrors

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

(through a mistake as to their nationality I called them Chinese); and as your readers appear to be unacquainted with this, perhaps I may be allowed to reproduce the substance of my former letter. In order to ascertain whether any variations in the form of the surface of the mirror, which was very slightly convex, affected the question, I looked for any distortions that might be produced in the image of the ground-glass globe of a gas lamp, as the point of incidence moved across that portion of the polished surface on the back of which was a raised figure. Let A and B be two lines on the surface immediately over the two edges of such a figure. Then as the limb of the image approached A, it became flattened; when it had passed A it expanded to more than its original size; indeed between A and B the image was sensibly larger than when viewed from any other part of the mirror. When the limb approached B it was again flattened, and beyond B it resumed its original dimensions. This clearly proves that the portion of the surface of the mirror between A and B was, if not actually plane, at least less convex than the rest of the surface; and as upon this supposition the figures when thrown upon a screen should appear *brighter* than the rest of the image, which is exactly what occurs in fact, there can be no doubt that this is sufficient to account for the peculiarity in question. In all probability the mirror had warped in cooling, except in the thicker portions where the raised figures existed. J. Parnell

Hadham House, Upper Clapton, July 6.

From the "Japan Mail Daily Advertiser."

Monday, 3rd.

Owing to the failure of the rice crop in China, the price of rice has risen here, which probably means that purchases are being made for China.

From the *Akébono Shimbun.*

Sakuma Oyakata, of Loo-choo, has arrived in Tôkiô to represent his *Han.* He presented himself at the Imperial Palace and had an audience with His Majesty the Mikado on the 30th ultimo.

On the 31st ultimo the editors of the *Kanayomi* and *Sakigake Shimbun* were sentenced to a fine of ten *yen* for violating the 5th article of the Laws of Libel.

Kodama, who was the leader of the riot among the farmers of Wakayama *ken* a year or two ago, has formed a large private school at Konagawa in the above *ken*, called the *Mosan-gaku-sha*, in which the principles of the People's Rights and Liberties are taught.

From the *Hôchi Shimbun.*

During last month snow fell on the mountains of Dewa.

On account of the recent reforms in the Department of Imperial Household, the annual allowance for the expenditure of that Department has been reduced to the extent of seventy thousand *yen.*

From the *Nichi Nichi Shimbun.*

A fire destroyed forty five houses in Odawara on the 30th ultimo.

Five native Christians of Ôshiu, who intend to make a pilgrimage to Jerusalem, have proceeded to Nagasaki, where they are waiting for the mail steamer.

Tuesday, 4th.

The *Herald* of yesterday evening contained the startling announcement that Saigo had forced his way into Kagoshima, and that the *Kenrei* had fled to Nagasaki. The native papers make no mention of such an event having taken place, and it is needless to say that the rumour requires confirmation, for it would be very strange indeed if Saigo had obtained possession of Kagoshima. It cannot be credited that the Imperialists would leave the town entirely without a garrison, and it is doubtful if Saigo could have had a large force under him when he fled from Nobeoka. Again, we last heard of the new *Kenrei* of Kagoshima being in the neighbourhood of Nobeoka and Miyasaki, so cannot understand how he could have fled from Kagoshima to Nagasaki on Saigo's entry into the former town. There seems, however, to be little doubt but that a large number of troops are to be sent South by next Wednesday's steamer.

The Agent of the Great Northern Telegraph Company informed us yesterday that the Russian land lines were again in working order.

From the *Nichi Nichi Shimbun.*

The following are particulars of a few of the amounts of the Bonds that the *Kuazoku* are to receive in lieu of their pensions:—

Sanjo 65,000 *yen*; Iwakuru 62,297 *yen*; Tokugawa 738,326 *yen.*

The editors of the *Yomiuri, Eiri, Kanayomi* and *Sakigake Shimbun* were summoned before the Bureau of Police last Saturday, and ordered to make a statement in writing as to whom the newspapers that are sold in the public streets belong, and by whose permission they are so sold.

The following notification was issued by Iwamura, the Governor of Kagoshima *Ken*, at Nobeoka:

"Many notifications have been issued by the rebels in places under my jurisdiction. It must be distinctly understood that such notifications are void of all authority. A branch hospital having been established at Miyazaki, any that desire medical treatment will there receive it at the Government expense. Those who require the same should apply at once.

"Those who have been rendered homeless by reason of their houses having been destroyed by fire during the war, can obtain immediate relief by sending in a petition duly endorsed by the *Kucho* and *Kocho.* Owners of houses will be allowed a sum of 5 *yen*, and tenants 7 *yen.*"

From the *Hôchi Shimbun.*

Paper money below the denomination of 50 *sen* to the value of 100,000 *yen* is to be sent to the seat of war, and the Mitsui Bank is now busily collecting the same.

From the *Osaka Nippo.*

Lieut.-Generals Tani and Nodzu were both slightly wounded on the occasion of taking Nobeoka.

Wednesday, 5th.

The Messageries Maritimes steamer *Tanais*, with French mails on board to the 27th July, was to leave Hongkong at 7 o'clock this morning.

We publish the latest telegrams from the South which appear in the *Mainichi Shimbun* of this morning, though they are not very explicit. It would appear that Lieut.-General Miyoshi sailed from Hiuga with the force under his command, and landed at Kajiki, to the north of Satsuma, with the intention of cutting off the rebels in their advance on Kagoshima, of which the Imperial Commanders seem to have obtained information. Miyoshi was unsuccessful in stopping Saigo's advance, and after being defeated, seems to have fallen back upon Kagoshima, in order to unite with such forces as were stationed there to resist the rebels. Some fighting occured at a position the Imperialist troops had taken up in and about a rice godown in the neighbourhood of the *Kencho*, but the telegrams do not give the exact position of this godown. Admiral Kawamura had arrived at Kagoshima, it is presumed on board some man-of-war, though no particulars are given.

The forces under Saigo are variously estimated at from 500 to 1,500 men. The *Nichi Nichi Shimbun* considers this dash on the part of Saigo as the last daring effort of a desperate man, which cannot be ultimately successful, but will certainly lead to the annihilation of himself and followers.

From the *Mainichi Shimbun.*

A telegram despatched from Nagasaki at 8.50 p.m. on the 2nd instant, says that the rebels, after defeating the Imperial forces under Lieut.-General Miyoshi at Yokogawa, entered Kagoshima. Nine hundred policemen are keeping them in check, while the *Kasuga Kan* is firing upon them from the harbour.

The *Ken* officials fled in the *Takachiwo Maru* to Nagasaki with all Government documents. Nearly all the Government arms and ammunition were saved from capture.

Another telegram from the same place, despatched at 11.35 a.m. on the 3rd instant, says that four hundred policemen and one hundred sailors from the men-of-war were stationed inside a rice godown in the neighbourhood of the *Kencho*, and seven hundred of the *Shinsen-riotan* were camped outside the godown on the night of the 31st ultimo. On the morning of the 1st Lieutenant-General Miyoshi, at the head of six companies of troops, arrived at Kajiki and immediately advanced toward Yoshida to check the rebels.

At 11 a.m. guns were heard and shortly afterwards the rebels made their appearance. The *Kenrei* then fled to the *Takachiwo Maru.*

The forces under Miyoshi most probably fell back to assist the forces at the rice godown.

A telegram despatched from Kumamoto at 3.10 a.m. on the 4th instant, says that a report had been received from Admiral Kawamura at Kagoshima, to the effect that he reached that harbour on the 3rd instant. The rebels had made several attacks upon the Imperialists at the godown since 11 a.m. on the 2nd instant, but the Government troops held their position. Atamura, with one regiment of Imperialists joined the troops at the godown, and succeeded in opening communication with the landing place on the coast. The rebels have stationed themselves in the forts which the Imperialist had constructed, and fighting still continues. Reinforcements arrived in the neighbourhood of Kagoshima that day by various roads, so that the Imperialists will soon be sufficiently strong to enter Kagoshima.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

From the *Hôchi Shimbun*.

Assassinations are constantly occurring at Kumamoto, which naturally causes great excitement among the people.

From the *Chôya Shimbun*.

Our reporter at Kumamoto telegraped to us at 6.30 p.m. on the 3rd instant, announcing that Saigo and four or five hundred men, who broke through the Imperial lines at Inotake, have, after passing through the province of Osumi, arrived in the neighbourhood of Kagoshima. The Imperialists are in hot pursuit.

It is said that one thousand police constables and two hundred police officers, under Police Inspectors Nakagawa and Kato, will start for the South by the *Tokio Maru* on the 5th instant.

From the *Nichi Nichi Shimbun*.

A telegram despatched by Iwamura, the Governor of Kagoshima *ken*, from Nagasaki at 3 a.m. on the 3rd instant, says that Saigo and Kirino, at the head of several hundreds of the rebels, after breaking through the Imperial lines, attacked and entered Kagoshima on the 1st of this month and set fire to the *Kencho* and the town. The *ken* officials all fled for safety on board the *Takachiwo Maru*, which at once left for Nagasaki. All the Imperial vessels at Kagoshima are safe.

The *Daijin* and the *Sangi* held a meeting at the *Daijokuan* after eight o'clock on the night of the 2nd instant.

During the gale on the 26th ultimo, sixteen junks were wrecked on the coast of the Osaka *Fu*, and forty-eight on the coast of Hiogo *Ken*, and some forty-eight people lost their lives.

The Government has contracted for 100,000 stand of arms from France, of the value of $350,000, and also for 5,000,000 cartridges which are to be obtained through Messrs. Favre Brandt & Co., a Swiss firm.

Seikanino-no-Miya, a princess of the Imperial blood, and widow of the last Shôgun but one, died at Tônosawa, Hakoné, while taking a course of the baths for the cure of *kakke*, from which Her Highness had for some time past been suffering. The body will be brought back to Tôkiô on the 5th instant. On account of the death of this Princess the Emperior will not meet the *Daijin* and *Sangi* at the *Daijôkuan* for three days.

NOTIFICATION No. 63.

On account of the death to-day of *Nihon-shinshi Naishinnô* (Seikanin-no-Miya), no music or dancing is allowed take place for three days in Tôkiô *Fu*, commencing from to-day, and in other *Fu* and *Ken* for three days commencing from the date that the above notification is received.

SANJÔ SANEYOSHI,
Prime Minister.

2nd August.

Thursday, 6th.

The *Kworio Maru* arrived this morning from Kagoshima, which port she left on the 1st instant, having had to put into Osima and anchor there for twenty-four hours, owing to stress of weather. The *Kworio Maru* has on board 50 policemen, and 136 refugees from Kagoshima, most of whom are women and children, but as far as we can ascertain brings no news of the entry of the rebels into that town.

The *Tokio Maru* took away 1,800 troops for the south 5th inst., and a large quantity of ammunition which came down from the capital by special train on the previous evening.

From the *Akébono Shimbun*.

A man named Ito Jinkichi, of Kanda, Tôkiô, was stopped while crossing the Kiji-bashi at 8 o'clock on the evening of the 2nd instant, by three men dressed in grey uniform of foreign style, and robbed of *yen* 23.60. The thieves escaped.

The well known Okura-gumi, and other mercantile firms who lately established themselves at Kagoshima, have incurred great losses by the entry of the rebels into that town.

It was lately announced that Mr. Hanabusa, of the *Gaimusho*, would proceed to Loochoo on Government business. This is probably an error. Mr. Hanabusa's destination is more likely to be Korea, as during this month the opening in that country of two more ports for trade, one in the north and the other in the vicinity of Kokua, has to be settled according to agreement, and most likely Mr. Hanabusa has received orders to arrange these matters.

From the *Nichi Nichi Shimbun*.

This being the 23rd year since the great earthquake of the 2nd year of Ansei, which was so destructive of life, a special *matsuri* will be held at Ekô-in, Riogoku, Tôkiô, in commemoration of those who perished on the occasion. The festival will last for three days, commencing on the 1st October, and at the same time prayers will be offered for those who have fallen during the present war.

The funeral of the late Seikan-in-no-Miya will take place at Zôjô-ji, in Shiba, on the 9th instant. The Princess will be buried near the tomb of her husband, the late *U-daijin* Tokugawa Iyemochi (the last Shôgun but one).

From the *Eiri Shimbun*.

All the Government Departments, except those of the Navy and Army, the Bureau of Police, and the Tôkiô *Fu*, will be closed for three days on account of the death of Her Imperial Highness Seikan-in-no-Miya.

From the *Hôchi Shimbun*.

A telegram despatched from Osaka at 1.18 p.m. on the 4th instant, says that a report has arrived from Major General Yamagata to the effect that the rebels, after passing through Meradami, Kobayashi, Odori and Yokogawa advanced to Kajiki, where they encountered the troops under Miyoshi, and commenced an engagement at 10 a.m. on the 30th ultimo.

The result of the engagement was that Miyoshi fell back towards Kagoshima, but made a stand at Yoshino, expecting thus to prevent the rebels entering Kagoshima, but they avoided him, making a detour by Kôriyama, and entered Kagoshima at 11 a.m. on the 1st instant.

Friday, 7th.

From Nagasaki we hear that early on the morning of the 26th ultimo there was every indication of a typhoon threatening that port, and the vessels in harbour made every preparation to meet it, H. M. S. *Lily* getting up steam. At 9.45 a.m. the barometer fell to the lowest point, 28.78, but it shortly afterwards commenced to rise, till at noon it stood 29.24. The wind had also shifted, and by the afternoon all danger was past. This storm seems to have been felt severely at Kagoshima, as according to the native papers the *Riôjô Kan* parted both her anchors and drifted towards a neighbouring sandbank, though it is not clearly stated if she took the ground there, or succeeded in safely anchoring again. The *Kantsu Maru* sank, probably at her anchors, and five or six lives were lost, while all the men-of-war and transports were in great danger, but seem to have ridden out the storm without loss of life though apparently many of them were damaged. The want of preciseness which distinguishes the native press is fully exemplified in the account given of this storm, as it is impossible to gather from any of the papers which mention its occurrence, any very definite idea of the damage done.

From the *Mainichi Shimbun*.

A person just returned from the south informs us that the twenty-one men-of-war which were cruising off the coast of Hiuga, on hearing of the entry of the insurgents into Kagoshima on the 1st instant, immediately sailed for Kajiki, near Kagoshima. Saigo's eldest son has surrendered himself to the Imperialists.

From the *Hôchi Shimbun*.

The *Môshun Kan* left Nagasaki on the morning of the 2nd instant for Kagoshima.

Some trouble took place at the Kumamoto police station a few days ago, but as yet we are unaware what caused the disturbance.

It is rumoured that a telegram was received from Nagasaki on the afternoon of the 4th instant, announcing that the Imperial forces have retreated from Kagoshima to Shiroyama, where they are completely surrounded by the rebels, so that communication is cut of from the sea.

From the *Chôya Shimbun*.

A violent storm took place on the 24th of last month at Tatéishi, in Bungo, by which seven lives were lost, four houses carried away, many cattle killed, and a large number of telegraph poles broken down.

Nearly all those who have been examined at the Nagasaki Special *Saibansho* on the charge of complicity in the rebellion have been acquitted, only a very few having been condemned.

The storm of the 26th ultimo caused a large quality of edible seaweed to be thrown up on the shores of Kadzusa, principally near Shirasato, the value of which will amount to thousands of *yen*.

From the *Nichi Nichi Shimbun*

Two regiments of the Tôkiô garrison will act as an escort when the funeral of the late Imperial Princess, Seikan-in-no-Miya takes place, and the coffin will be followed to the grave by several members of the Imperial family, many of the *Kwazoku*, the *Daijin*, *Sangi*, and higher officials of the various Government Departments. Tokugawa Iyemichi, the son of the last Shôgun, should be the

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

chief mourner, but as he is at present absent in Europe, he will be represented by one of his relatives.

The port of Nagasaki is protected by the fourth Division of the Imperial Army in order to prevent the rebels from entering this town, though there is not much fear their making such attempt.

The Pension Bonds of the house of Shimadzu (Satsuma) amount to 376,664 *yen*, and those of Hoçhisuka (Awa) to 508,951 *yen*.

From the *Akébono Shimbun*.

A telegram, which is said to have been despatched from Kumamoto at about 3 a.m. on the 4th instant, announces that the Naval forces have landed at the Kôtotsu-gawa and the troops under Miyoshi are advancing from Jôfu to chase the rebels out of Kagoshima. The rebels show signs of retiring by Miurai and Beppu, and are nearly surrounded by the forces of the Navy and Army.

Saturday, 8th.

The Agent of the Great Northern Telegraph Company informed us yesterday afternoon that the cable between Gutzlaff and Amoy was interrupted.

The *China Mail* of the 28th August states that the *Antenor* left Singapore for Hongkong on the morning of that day, and that the *Agamemnon* had arrived at Penang.

The steamer *Gleneagles* left Singapore for Hongkong on the 22nd ultimo, and the *Yorkshire* on the 26th.

The *Hôchi Shimbun* states that at three o'clock on the 6th instant, two armed men broke into a house at Mukô-yanigawara, Tôkiô, a residence of Mr. Ohara, a *Kuazoku* and Under Secretary of the Foreign Office. Ohara, with his wife, was asleep at the time, and was aroused by a severe sword cut across the shoulder, and on attempting to rise received another cut which instantly killed him. His wife, alarmed and screaming, attempted to obtain safety in flight, but was cut down before she could leave the room, and now lies in a very precarious condition. The two assailants then left the house and have not since been discovered, but as nothing was stolen by them it is thought that their attack was prompted by revenge.

From the *Nichi Nichi Shimbun*.

It is rumoured that five Chinamen who were in the employ of the Army Department when Saigo was in Tôkiô, were arrested at Nagasaki on the 19th of last month, for having given information to the rebels as to the situation of the Imperial army, and that they have been brought before the Special Court for examination.

A telegram despatched by Kawamura from Kagoshima on the forenoon of the 6th instant, announces that the rebels have encamped on Shiroyama, in the rear of the castle, near the Private School.

A telegram from our reporter at Nagasaki, despatched at 1.15 p.m. on the same day, says that Shimadzu Saburo and his son have retired to Koike, on Sakurashima.

From the *Chôya Shimbun*.

Our reporter at Yashiro, in Hiuga, sends a telegram at 10.20 a.m. on the 6th, announcing that the rebels are still in Kagoshima, and are surrounded by the Imperialists so that they cannot escape. The Imperialists are thoroughly prepared to make a general attack.

From the *Akébono Shimbun*.

A telegram despatched from Nagasaki at 8.20 a.m. on the 6th instant, says that it is rumoured in that town that the province of Hiuga is overrun by the rebels, and an insurgent force is said to have made a sudden attack upon Miyakonojô.

From the *Hôchi Shimbun*.

All the Government Departments will open for business at 9 a.m., and close at 2 p.m., on and after the 12th instant.

E. MASSAIS, M.D.
Surgeon-in-charge.

THE CASE OF THE TSUKIJI LAND RENTERS.

WHAT strikes us as the most unpleasant feature of the proceedings some time since instituted by the Japanese authorities to enforce payment of rent for certain holdings within the Foreign Concession at Tôkiô, is the circumstance that with precisely similar facts and arguments before them the American and British tribunals, administering what in effect is precisely the same law, have arrived at directly opposite conclusions; the judgment of the British Court being wholly in favour of the Imperial Government while that of the American Court, rendered some months back, is as on every point the reverse. Such a result cannot but occasion a disagreeable feeling of insecurity with respect either to the law we live under or the legal competence of those who administer it. The question of law involved in the cases before either Court was a simple one enough, namely, whether a tenant can rely on a breach of a covenant by the landlord as a defence to a demand by the latter for rent, and is one which has been over and over again settled in favour of the landlord. There are, no doubt conceivable cases in which the tenant might properly refuse to pay the rent, as, for instance, where the landlord could not give or assure possession, but the Tsukiji land renters were by no means in this position. They were, and intended to remain, in occupation of their holdings, but pretended to a right to enjoy all the advantages of their tenancy without paying a cent of the consideration upon which it was founded, until the Government had compensated them for an alleged breach of covenant and engaged not to repeat the breach. Such a pretension was, of course, monstrous, and was denounced by the foreign press of Yokohama as soon as it was put forward. Its extravagant nature is best shown by a reference to what its allowance would involve. A tenant who could plead a breach of convenant in bar of a demand for rent, would be in possession of a sort of lien, and would be at all times able to enforce performance of a landlord's covenant, of however trifling a character, by retaining the rent, however large in amount and whatever inconvenience might be caused by its retention, until the covenant were performed to his satisfaction. In fact, in almost all cases of dispute between a tenant and his landlord, the latter would be at the mercy of the former, for the tenant could at all times hold over him the threat of a suspense of rent as well as menace him with proceedings at law, while the landlord would have to remain content with such aid or protection as the Courts could afford him. Neither justice nor common sense call for such a preference of the tenant over the landlord, and so far as we are aware the law of no country accords him such a preference. Certainly the law of England and America does not, but true to its feudal origin, is rather inclined to favour the landlord at the expense of the tenant, through every year the tendency increases to put parties to a contract having reference to land on the same equal footing that parties to any other contract are held to be on. We cannot, then, but regret that the American Court did not reject, as the British Court has lately rejected, a plea so untenable in law and so contrary to common sense, however true the facts alleged in it may be as that on which the defence in both cases mainly relied. We regret it the more, in that the American decision in effect forces the Japanese Government to submit even demands made against it by an American

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

tenant to a foreign Court,—in other words, forces the Japane Government to appear as defendant as well as plaintiff in such cases in the American Courts, in manifest opposition both to the letter and the spirit of the treaty between the United States and Japan.

The Japanese authorities, however, may put their case much higher, and allowing the admissibility of the plea in question, deny, as the British Court has denied, the correctness of the inference which the defence drew from the facts stated in it—an inference which the foreign community, with some astonishment, saw acquiesced in by the judgment of the American tribunal. The kind of reasoning which appears to meet the intellectual wants of the landrenters, allows them to arrive at the conclusion that a promise to afford the community certain facilities, involved an undertaking not to grant further facilities. Their argument, reduced to its simplest expression, is that they took up their holdings under certain conventions made in November 1867 and May 1870 between the Japanese Government and the foreign representatives; that by these conventions the Japanese authorities bound themselves in express terms to permit foreigners to reside in Tôkiô in a particular quarter known as Tsukiji, and *therefore* likewise bound themselves by implication not to permit foreigners to live in Tôkiô outside Tsukiji. To ordinary mental vision, not only is the *sequitur* in this argument altogether undiscernible, but the argument involves a palpable absurdity. For if adopted it leads to one of two conclusions, both of which will be recognised as ridiculous the moment they are stated. The one is, that by these conventions the Japanese authorities had impliedly prevented themselves from conceding further facilities to any foreigners, even to the Tsukiji landrenters, the other is, that they had prevented themselves from granting further concessions to any foreigners but Tsukiji landrenters, to whom, and to whom alone, an extension of residential limits could properly be accorded. A wider application of this species of reasoning would give landrenters in all the treaty ports the *pas* over the landless members of the foreign community, as the only foreigners who could be allowed to reside or lease land outside of treaty limits.

It is inconceivable that those who have relied upon such arguments as we have endeavoured to give the brief effect of, should not have perceived that the conventions were concessions or promises made to the whole foreign community, not to any section of it, and that however much the Japanese authorities may have precluded themselves from withdrawing from their engagements, it would be suicidal logic to assert that by granting some facilities with respect to the occupation of land to the community they had bound themselves not to increase those facilities. Nevertheless, although on the principle that a wrong road must not be sought to a right end we heartily condemn the means by which the Tsukiji landrenters have endeavoured to attain this object, we cannot but sympathise with them to some extent so far as the object they appear to have had in view is concerned. Tsukiji rents are undoubtedly far too high, and it is folly for a landlord to attempt to avail himself of his rights, however clear they may be, for the purpose of enforcing payment of rents which his tenants are altogether unable to afford, and which are in excess of the value of the land. We hear there is some chance of an arrangement being come to under which Tsukiji land owners will be placed on the same footing as that on which proprietors of Yokohama lots at present stand. We shall be glad if the rumour should turn out to be founded on fact, though we doubt much whether, under any probable circumstances, land in Tsukiji will be worth paying such a rent for as would suffice to cover the interest on the cost of preparing the ground, the expense of maintaining the concession in repair, and the ordinary land tax which would be leviable in respect of if it were in Japanese occupation. In Yokohama also, and especially with respect to the Bluff settlement, the need of some change in the existing land-system is felt to be an urgent one. We have not the figures at our command for the moment, but a very large sum is annually collected from the foreign community of this port, in the distribution and management of which we not only have no voice, but are left in complete ignorance as to the details of its expenditure. We are in this respect in a worse position than if we were under Japanese jurisdiction, and have drifted into an utter indifference as to the present and future condition of both settlements, which is not at all creditable to us as a community. It will be our duty again to touch upon this subject when proper statistics shall lie before us. When we shall be in possession of these we believe we shall be able to show that the rent paid for town lots probably, and that paid for Bluff lots certainly, far exceed what is usual in London, New York, or Shanghai, even when to the ground rents paid in those places are added the various municipal taxes. We see no reason whatever why some compromise should not be effected, permitting of the community having at least a consultative voice in the administration of the funds it is obliged to furnish, without infringing in the smallest degree upon the paramount executive rights of the Japanese authorities, whose power we would rather see increased than lessened. The objection always raised by the Japanese when the rent question is mooted is, that the rents at present collected do not cover the cost of municipal administration. This may be so, but it remains to be seen whether the administration is as economical as it might be, and as most probably it would be if the community who furnish the funds had something to say as to their expenditure. At all events, if the community were admitted to a share in the management of what so intimately concerns them, and found that no diminution of the present rent was advisable, we should be no worse off than we are, while the wants of both settlements, being better appreciated, would be more effectually and promptly attended to. What of itself utterly condemns the present system is the fact that no means whatever exist of bringing the requirements of the community to the official knowledge of the authorities, who are, of course, completely beyond the influence of public opinion and are absolutely irresponsible for their acts.

No doubt we cannot force the Japanese Government to alter existing arrangements; we have no legal rights to insist upon in the matter, but it is neither wise nor just to refuse to us all share in the economical administration of the settlement and in the management and employment of so much of the rents we pay as represents municipal taxes. We have not space to show in any detail how unwise and unjust the treatment often is we experience at the hands of the authorities, and we shall only advert to the practice of constantly throwing fresh land upon the market while a large portion of the ground previously taken up remains unoccupied. The only result of this

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

proceeding is so to diminish the value of property below its legitimate limit, that the collection of rent becomes every year a matter of increasing difficulty, and the number of defaulters greater. No one questions the right of the Japanese authorities to follow this policy, but we may fairly question its wisdom even from a Japanese point of view, while there can be no doubt of the hardship it inflicts upon all who are unfortunate enough to be owners of land.

Finally, we cannot help observing, that if the foreign representatives, before entering into the various existing conventions between them and the Japanese Government, had ascertained the opinions of their countrymen with regard to the proposed arrangements, most of the difficulties that have since arisen under them would have been avoided, and the Tsukiji leases would have been undisfigured by so monstrous clause as that which imposes a fine of 24 per cent. on unpaid rent. Our ministers should remember also, that they have to protect the future as well the present interests of the foreign community, and not only against the exactions of the Japanese Government, but against the eagerness and carelessness of the members of the community for the time being as well.

SPIRIT OF THE JAPANESE PRESS.

The Future of Japan.

(From the "Hôchi Shimbun," August 22nd, 1877.)

The conflagration in the south-west has called forth extraordinary efforts for its suppression, and so much time has been expended that half a year has elapsed. However, the rebel forces have now been completely defeated, while Saigo and Kirino are in position of perplexity and embarrassment, so that every one is well aware that before many days are past the restoration of quiet will have been achieved. I believe that if I take this opportunity of expressing the anxieties which beset me concerning the future which will follow on the entire destruction of the turbulent horde, it will not be merely the vague mutterings of a man in a dream.

An ancient has said: "The fortunes of the Empire are attained through fearfulness and are lost through carelessness. Fear is the fountain of prosperity, carelessness opens a door to calamity." It is a wise saying. In all human matters if there is cautious fear then there will be far-sighted preparation; and if there be far-sighted preparation, then if a sudden and unlooked for emergency arises, all perturbation and confusion are avoided, while loss and injury can be prevented before they have attained development. To take a single example. In the case of the late Kagoshima disturbances not only did independent members of society foresee the event and lament over the certain expectation of its occurrence, but the Government also was fully aware, and had already given much anxious thought to the arrangements which would be required for dealing with it. Consequently, when the insurrection eventually broke out our "enlightened rule" Government showed no signs of perturbation or confusion, but taking a courageous and resolute course at once issued an Imperial proclamation declaring His Majesty's offended wrath, from which moment the policy of subjugation never once lost an opportunity, and has finally achieved the present result. But if, on the contrary, such a powerful horde as this was, had been allowed suddenly to start forth at an unexpected moment and under unforeseen conditions, no one can tell what a state of chaos might not have followed in our Empire. I can see that the present disturbances would have attained far greater proportions, and that they have not done so is entirely owing to the foresight and providence of our Government, which has imperceptibly come to the aid of the popular disposition to tranquillity.

However that may be, although the Kagoshima insurrection was a cause of joint anxiety and wrinkling of the forehead to the whole Japanese people, whether living near the court or in the country districts, its suppression can now be expected within days so few that they may be counted on one's fingers, and we have therefore reached the moment when our Japanese Empire will be freed from this congealation of disease. While therefore desiring to approach and solve for myself the question whether our Empire from the 11th year of Meiji onwards will attain to genuine tranquillity, and the ears and eyes of this people be no more startled by the flash of swords and the roar of cannon, a sudden feeling of anxiety surges up in my bosom, and I fear my want of capacity and power to drive it off.

What sort of companions does the public take the turbulent horde of Kagoshima to be? Amongst them are, of course, many men who once took part in the sovereign government and achieved reputation and popularity, so that they are altogether different from such fellows as the *Jimpûren* who were so crooked-minded and ignorant as to speak of Europeans and Americans as "barbarians," and look upon the feudal system as the golden age. (We put aside for a moment the discussion of such faults as slandering true men and calling them assassins, fabricating accusations and offering resistance to the Government, etc.) But as they desired to seize the governmental power by force, and place their comrades in the position of rulers over Japan, they certainly did not belong to the popular rights party which is devotedly attached to freedom. It must be well known to every one, therefore, that they had different aims from our reformers who advocate popular rights and value freedom, and in fact would have been unable to avoid opposing them. We may therefore say that the present disturbances being suppressed, the lurking-place of rebels upset, and the fountain-head having been cut off, what may be called the conservative party in Japan has lost nearly all its power, and can never recover sufficient force to make opposition, so that our reformers have arrived at the moment when they may freely stretch their legs and expand their wings.

However, it is a part of human destiny that calamities should spring up under unforeseen conditions, and that fruits should ripen in unexpected places. The Book of Poetry says: "Brothers may "quarrel inside the walls, but they will resist insult from without." Our Government has entered upon the path of reform and progress, and already the reforming and progressive party begins to show signs of a division into "gentle" and "violent," though the two kinds are still one party, and as such, far from manifesting a disposition to oppose the Government, have united together to crush the ignorant views of conservatism. In the late insurrection their opponents, the conservative party, have been completely routed and the earth is strewed with their remains, and as there is no further need of exertion to "resist insult from without," one fears lest the violent party should change their topic of dispute, and spying out the weak points in our Government, show signs of "quarrelling inside the walls." And further, since the Government, in repairing the breaches in its resources caused by the war, must pay special attention to frugality and economy, it is impossible to say that it may not be obliged before long to diminish unnecessary expenditure and decrease the number of superfluous officials. And no one can undertake to say that the clever and talkative amongst the officials whose services have been dispensed with will not perhaps stake "popular rights" and seek to stir up and lead on the violent party. (Did we not see signs of this after the convulsion of January last?) These may be of some use by becoming the Government's opposition, but by reason of "quarrelling inside the walls," they may be the cause of the Government running counter to popular feeling, and when I think of this I cannot resist a feeling of anxiety.

But if I were asked, What in your opinion would be the best course for the Government? I should reply: If the Government after the suppression of the late disturbances continues in the path of reformation and progress, carrying on a just and enlightened administration; instituting that which ought to be instituted; abolishing that which ought to be reformed; if they carry out at once the faithful promises of Imperial proclamations, not disdaining to captivate popular feeling, abandoning all traces of arbitrarily maintaining their own views, and prevent public opinion from cherishing feelings of animosity and resentment, then, even if the violent party should yet desire to oppose them, it will be deprived of every kind of pretext, and the present liberal party will, together with the Government, form one party running on the same traces. There would then be no ground for anxiety.

But if the Ministers who occupy important positions in our Government are robbed of their souls by evil demons, and presuming on their capacity, proud of their strength of will, relying on the intelligence and valour of the generals, officers and soldiers of our Empire, begin to fancy in their hearts that because the strong fellows of Kagoshima have been crushed by the force residing in their own tiny bosoms, and none of them remains alive; if they think that there is nothing more to fear in the Empire, that they need not concern themselves about the turns of popular feeling, that no bamboo-spears or mat-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

ting banners* need cause them alarm, nor any tongue-tips or pen-points of students disquiet them; and if relying solely on the talents of their own set, they contemplate the performance of an extraordinary set of exploits in the enlightened age of MEIJI, I secretly fear lest the Empire of Japan may have business before it, and that we may see sad clouds floating in the distant sky of the future.

But as the Ministers of the Empire are sagacious and modest gentlemen, who have never shown any tendency to maintain their own arbitrary views at all risk, we may therefore believe that this is not likely to occur in the future either. So I shall not be wrong if I pass round a big glass, and celebrate the fact that my anxieties are but vague mutterings of a dreamer after all.

THE INSIGNIFICANCE OF TOSA.

(From the "Chôya Shimbun," August 29th, 1877.)

Since the outbreak of the spirit of war at Kagoshima the eyes of the public have been concentrated on the South-west, in the desire of learning the course of the fighting, while with one ear they attentively listened in order that they might become acquainted with the doings of the men of the Kôchi prefecture. For the men of those parts have now during several years been divided into several parties, the most powerful of which, the *Risshisha*, has advocated popular rights, and thus was taken to consist of men who based their actions upon right principle, unlike those who proclaim their discontent by appealing to force. Nevertheless, what came to light of their doings failed to inspire the whole of the public with confidence in them; some termed Kôchi a conventicle of discontented spirits, others even spoke of it as a second Kagoshima. Consequently when the disturbances in Kiushiu broke out the public was constantly watching their every act and movement, and when the *Shizoku* of the Kôchi prefecture started the question of embodying a force of militia, under the pretence of protecting the soil, and bitterly criticising the affairs of the day, demanded from the Government the establishment of a popular-elective assembly, the public began to take alarm at their strange behaviour, while the Government also began to fix its attention on Kôchi and to take precautions for maintaining order in Shikoku. Messrs Fuji and Muramatsu, having been detected in the crime of communicating with the Kogoshima rebel hordes, were arrested. Mr. Hayashi Ruizô also, one of the most influential members of the *Risshisha*, was taken into custody, and just recently Kataoka Kenkichi, Iwasaki Nagaakira and nine others have been brought prisoners from the Kôchi prefecture, while the government is despatching three hundred and fifty policemen to that prefecture in great haste. The public under these circumstances, begins to be anxious lest the Kôchi men should after all have been harbouring criminal designs, and lest, the whole band being liable to be tried before a court of law for political offences, the complicity of others should involve that prefecture in incalculable troubles.

It was natural that the hostility of the officials should be excited against those, who at the moment when the conflagration kindled by the Satsuma rebels was at its height, not only began to agitate for the embodiment of a militia, causing the public grave disquietude, but also took advantage of the confusion consequent on a state of war, and the embarrassed position of the Government, to pick out all the failures of the administration, and without the slightest consideration, to print and circulate their statement throughout the country. And when these individuals proceed to enter into correspondence with rebels, their guilt is far greater, and such that the laws of the country do well to rebuke and punish. Some intriguers suggest that the chief provinces where there existed strength and obstinacy having been well weeded, there remains only the prefecture of Kôchi. If this is not brought under discipline now, they say it will give trouble at some future date. Fortunately there is no want of a pretext, if it be thought desirable to punish them for their indiscreet behaviour. Besides, as the flame of rebellion in Kagoshima has been extinguished, whatever violence the Kochi *samurai* might commit, they are not formidable, and therefore if a great process is instituted, and a disturbance provoked, though it may be necessary to use arms, yet the evil spirit will thereby be cleansed away, and no root of disaster left. How can this be? Though by using petty arts of "contrivances and versatile schemes" and plotting against the peace of society, the desired result may be attained, what shall be said of those who leave an incomparably foul and ugly blot on the history of this reign. The military prestige gained by cutting to pieces the great whales of the Western Sea is sufficient to to make the whole world quiver and tremble. But as for the one or two monkeys who live in the mountains of Shikoku, they should be stroked when they are tame and slain if they become noisy, but why employ such a shabby stratagem as digging pitfalls and pushing them in.

We desire to demand something from our Government. There are reasons why things should not be judged in times of war and confusion in the same way as during profound peace. Having fixed the direction in which the Empire is to turn by force of arms, it is time to manifest indulgent magnanimity, and to let the waverers be in peace. Is it to be supposed that it was only a few *samurai* of the Kôchi prefecture who, in consequence of the late Kagoshima disturbances, stirred up the brains of the discontented, and stroking their swords by lamplight worked themselves up to a great pitch of excitement? If all such are to be sought out and brought to trial, with the object of making an end of their kind, the result will be simply to display to the Empire a want of greatness of soul. Having by the blessing of Heaven, been enabled to triumph over this great peril, what harm could arise hereafter from allowing one or two malcontents to go unpunished? Except in cases where they distinctly break out, and offend against the laws of their country, it would be better to forgive them, and allow them to reform. If it is supposed that dragging forth secret conversations held in a house, and searching for secret words in letters is the best art of ruling in peace, then for our own part we can only say that we will not believe it of the Japanese Government.

* An allusion to agrarian riots.

DEATH OR DISHONOUR?

("Hôchi Shimbun," 5th August.)

As we have already stated, Saigô, Kirino and others have broken through the Imperial lines at Ei-ga-take, and have pushed their way into Kagoshima. On the 17th of last month, the rebels appeared to have occupied a position similar to the bottom of a wash-bowl, in a corner of the province of Hiuga, while the Imperialists commanded all the mountains on the rim of the basin. It seemed therefore certain that on that night the rebels who had been causing such disturbance since the commencement of the year would be entirely annihilated.

At that time there were many who said "Saigô is a man of sound judgement and dauntless nature. A man who on one occasion attempted to commit suicide by leaping into the sea because he almost despaired of being unable to succeed in the cause he was upholding. He will therefore never suffer a disgraceful death as a prisoner in the hands of his enemies." But contrary to all their prognostications that he would die by his own hand, taking advantage of a thick fog, before the morning dawned, he at the head of a body of picked men broke through the Imperialist lines and made his escape.

Then the people said, "Saigô is certainly a great leader, but when he must know that the cause he is fighting for is hopeless, he should kill himself rather than prolong a life that must end shortly. Is his end to be like that of Mayebara? Is such the end of all great men?"

For ten days after his escape we heard nothing of Saigô, nor could we learn what had became of him. Certainly his entering Kagoshima is a manœuvre that we did not even dream of.

Now we cannot agree with people who hold such opinions as those we have stated above. Saigô of to-day is very different from the Saigô of ten years before. At that time he would never have fled from his enemies as he has just now done. With advancing age his knowledge has also advanced.

A Chinese poet at the tomb of Kô-u, Emperor of China, composed the following poem. It must be borne in mind that Kô-u had said to an old man who desired to ferry him over the river that he would be ashamed to show himself in Kôtô, and in consequence committed suicide on the banks of the Ukô.

"The victory or defeat of warriors cannot be foretold beforehand. A brave man will patiently bear reverses and shame. At Kôtô were many strong fighting men. Had Kô-u gone there, and taking command of them tried another campaign, he might have found himself victorious in the end." *

There is a similarity between Kô-u killing himself and Saigô attempting suicide. When Saigô left Kagoshima he had twenty thousand men. Now they say he has barely two hundred. Had Saigô been like Kô-u he would have said that he was ashamed to appear at Kagoshima again, and would never have broken through

* This Emperor Kô-u had taken command of eight thousand warriors of Kôtô, and after fighting many battles succeeded in overthrowing the reigning monarch, and usurping the throne of China. He was afterwards defeated by Kô sô and driven back to the Ukô. Fleeing alone he came across a boatman, who recommended him to cross the river to Kôtô and raising fresh forces, make another attempt. But feeling that all was lost he killed himself in despair.

the lines at Ei-ga-take. But Saigô has grown in wisdom and he would not repeat what he once attempted (suicide) nor follow the example of Kô-u.

But Saigô's reverses are even greater than those of Kô-u, and in spite of the valour of his followers we do not believe that he will ever succeed. Saigô must himself know this full well, but he also knows that by his making his way back to his native place, and eluding all efforts of the Imperialists to capture him, that his reputation will be more brilliant and lasting than if he had died in a remote corner of Hiuga.

For our part we are greatly grieved at the prolongation of the present strife, but the insurgents must greatly rejoice at it. Truly Saigô's daring in returning to his native place must be deemed a brilliant action by all great men.

The reasons for our praising Saigô is that although he is a criminal blackened with great crimes, we cannot withold our admiration of his greatness. His failure or success has nothing to do with our estimate of his character.

Since the escape of the rebels, the war assumes an entirely different aspect for the Imperialists, and we are very sorry for it. But it is scarcely possible that although the rebels have captured Kagoshima they can continue to hold it. They number only about two hundred, while they are under the fire of the fleet. Neither have they any ammunition. The insurgents, being so well acquainted with the geography of the country, may manage to elude the Imperialists, who cannot have troops in every part of the country. The latter must therefore station forces in various commanding positions, and then send one body in pursuit of the rebels. Thus they will succeed in capturing the whole of them.

Saigô was a man of ordinary birth, but raised himself to fame and rank. For half a year he has successfully resisted the forces of the whole Empire. Though his actions are hateful, it cannot be deemed that he has accomplished a splendid manœuvre and his name will ever be famous.

But for the people it is a grievous thing. In conclusion we quote the song of Shôshô.

"A flourishing country has been turned into a field of battle and the inhabitants thereof are sorely tried. Let us never praise the great generals. For when a leader accomplishes mighty deeds, thousands of bones are strewn around."

LOOCHOO.

For the past five hundred years the Loochooans have been acting as the vassals of China, and appear to have been so regarded by the Emperor of that country, to whom they have done homage by sending an envoy bearing tribute, principally in sulphur, every two years, and at the accession of each Emperor messengers with congratulations, who received Imperial letters in return.

The Loochooan Government also maintained friendly intercourse with Satsuma until the commencement of the 17th century, when they attempted to sever their connection with that province. The *Daimio* of Satsuma, however, being greatly offended at their neglect, sent a force to the islands and brought them under allegiance.

From that time retainers of the *Daimio* of Satsuma, seven in number, were selected each year and sent to Loochoo, where they took part in the administration of the Government. At the end of the year they returned and their places were filled by seven others. Whenever any Chinese Envoys arrived at Loochoo, these representatives of Satsuma retired to the hills and there hid themselves, thus causing China to believe that Loochoo was entirely her vassal.

The yearly tribute of the latter to Satsuma was of considerable value, while that sent to China was of comparatively trifling amount. Thus China was the nominal master of Loochoo while the actual suzerainty was held by Satsuma.

In this way matters were permitted to go on until a few years after the Restoration, when the Daimiates were abolished and the former feudal lords were replaced by officials appointed directly by the Government. Loochoo thus became a *Han*, was put under the jurisdiction of the Foreign Department, afterwards being transferred to the Home Department.

Mr. Matsuda, the First Secretary to the Minister of the Home Department, was sent to Loochoo in the summer of 1875, with orders from the Japanese Government that the custom of paying tribute or homage to China should be discontinued. The Loochooans brought forward various excuses, as will be seen in the translation of their petition, and refused to obey the orders given. Mr. Matsuda tried all means in his power to persuade them to a contrary course, but failed to do so. In the month of October of the same year, an Embassy, consisting of from fifty to sixty persons, accompanied Mr. Matsuda on his return to Japan. Here they have remained ever since, and though they have frequently petitioned the Japanese Government, requesting to be permitted to maintain the same attitude toward China and Japan as heretofore, no answer has been vouchsafed to them. They still remain in Tôkiô, where the chief Envoy, Ikeshiro, died a few months ago.

The native writers accuse the Loochooans of ingratitude and say that they acknowledged the sovereignty of Japan, inasmuch as they requested the Government to punish the Formosans for having massacred some Loochooan sailors. But the Loochooans assert that China, at that time, informed them that she would bring about a settlement of the question, and that they need give themselves no anxiety concerning it.

This is the present position of affairs. The Loochooan embassy still remains in the capital, being unable to return until some settlement shall have been brought about. They continue to lay their petitions before the Government, but it is quite uncertain when any arrangement will be arrived at.

The islands of Loochoo are important to Japan from their geographical position, and it would be most unadvisable that Japan should permit them to fall into the hands of any power which would be only too glad to make them a naval station.

The Loochooan Envoys announced their arrival in Japan to the Government in the following letter to the Prime Minister :—

"Tôkiô, 15th October, 1875.

"Mr. Matsuda, a *Daijô* of the *Naimusho*, visited our *Han* some time ago and brought with him certain orders from this Government which we were called upon strictly to obey. But as therein were involved questions of the greatest importance to all of us from our King downwards, the whole of our people were at their wits' end, not knowing what course to adopt.

"Since our country came into existence we have ever endeavoured to maintain national honour (or gratitude) and national propriety. As the orders which we were suddenly called upon to comply with were not in accordance with those principles, we petitioned that we might not be required to obey them, but our request was not listened to. The son of our King therefore desired to proceed to Tôkiô in order that he might personally lay his petition before the Throne, but was not permitted to do so. We were at the same time informed that recourse would be had to severe measures if the orders sent us were not at once obeyed.

"The King and people of our diminutive country are thus thrown into a state of extreme anxiety. The orders are to us incomprehensible, and should we carry them out without understanding them, what explanation could we offer to the people. It being feared, therefore, that some great trouble might befall our country, we have been ordered to visit Tôkiô and lay before the Japanese Government the condition of our country and the agitated state of the people, and to obtain some information with respect to the orders sent us.

Although we are aware how busily occupied Japan is at present with both foreign and internal affairs, we humbly entreat Your Excellency to listen to our prayers.

From Your Excellency's reply we shall be able to infer what further petitions we may address to the Goverment.

Ikeshiro Oyakata.
Mayohara,
Kochi, and others.

To His Excellency
Sanjô Saneyoshi."

On the receipt from the Prime Minister of permission to send in a Petition, the Envoys drew up and forwarded the following statement :—

"Tôkiô, 27th October, 1875.

"Some time since, Matsuda Michiyuki, a *Daijô* of the *Naimushô*, came over to our *Han*, bringing with him the

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

order that we should discontinue the practice of sending tribute to China or of sending Envoys to present our homage on the occasion of the accession of new Emperors to the throne of the Chinese Empire, or of receiving letters accepting our congratulations. We were also, at the same time, ordered to observe certain changes that were to be made in our administration. After fully explaining to Mr. Matsuda the state of our country, and the spirit prevailing among the people, we earnestly prayed that he would not compel us to obey the above orders, but he declined to listen to our entreaties. We have therefore received permission to visit Tôkiô, and proceed to give a detailed statement of the condition of our *Han*.

"Loochoo has for the past five hundred years to a certain extent enjoyed the protection of China. Were we now to sever all connection with her, it would be not only ungrateful but unjust, and contrary to those principles which should exist between man and man, or country and country. It is known to the whole world that our country has been a dependency of two great powers for centuries past. Our wish to continue, therefore, under the protection of China is very different from a desire to obtain any new protector. Japan honourably carries on intercourse with foreign powers; permit us therefore with equal justice to continue our relations with China. The benignity of His Majesty the Mikado will thus be increased, and the whole world will acknowledge the reasonableness of our demand.

"Though the Japanese Government permits us to trade with China, how could we show our faces there if we were to sever the connection which has existed between the countries for so many hundred years. Thus our trade would cease and we could no longer obtain from China any supplies. This would be but a natural result, and the very existence of our *Han* may be said to hang upon this question. For these reasons the minds of our countrymen are greatly agitated.

"Mr. Matsuda informed us that the Loochooan question had been settled between China and Japan at the time of the arrangement of the Formosan difficulty, but not only have we seen no documents setting forth the terms of such settlement, but when the bearers of the customary tribute arrived in China in March of last year, they received no notice to that effect, but were treated in every way as on former occasions. The Envoy returned this summer with an Imperial letter announcing the death of the Emperor Dôji, and another announcing the accession to the throne of his successor. Everything was thus carried out in the customary manner with no change whatever. Were we, therefore, without cause or intimation to cut off all intercourse with China, it would be ungrateful on our part, and we therefore pray that we may continue our relations with China and Japan as heretofore. Should Your Excellency find such a course absolutely impossible, we trust you will enter into deliberations with the Chinese Government as to the settlement of this question, so that if we are compelled to resign our former position with regard to China we may not labour under the imputation of being ungrateful. If such a course be pursued, we shall without a murmur obey the orders of this Government.

"With regard to the administration of our *Han* we can only say that it is adapted to the requirements of the people, that i suits their wants and preserves peace and tranquillity among them. It is impossible, without first proving it by experiment, to say what kind of government shall best suit any particular people. Our present form of administration seems perfectly adapted to our country's wants, and were it changed in compliance with your orders, it would no longer be in accordance with the wishes of the people.

"But Matsuda has informed us that since our country has been converted into a *Han* our form of government must be changed. Since the very beginning of our country, although we have been, in a measure, a dependency of two great powers, a King has been at the head of an established constitution, and when our country was first converted into a *Han*, we were specially notified by the Japanese Minister of Foreign Affairs that no change would be made in our administration or constitution.

Again, Hayashi Tomoyuki informed us at the time that the jurisdiction over our country was transferred from the Foreign Office to the Home Office, that everything would remain unchanged; for which we then expressed our thanks.

Should the same form of Government which now exists in Japan be forced upon Loochoo, there would be an end of peace and order. For this reason do we earnestly entreat that by Your Excellency's good offices with the Government, our administration may be permitted to remain as it is.

The above points, which concern the very existence of our *Han*, we explained in full to Matsuda, and begged him to act in accordance with our wishes, but he refused to do so. Our countrymen have accordingly been greatly agitated, and were on the verge of breaking out into disturbance but we quieted them by saying that we, the Envoys, should probably meet with generous consideration at the hands of the Japanese Government. If our petition be rejected peace may be imperilled in our country. Our minds are therefore sorely troubled, and we entreat that Your Excellency will grant this our humble petition.

(*Signed*) IKESHIRO OYAKATA,
AND OTHERS.

To H. E.
Sanjô Saneyoshi."

The reply of the Prime Minister, Sanjô Saneyoshi, to this petition, was made on the 17th November, 1875, and was briefly as follows:—

"The settlement of the questions mentioned in your petition was entrusted Matsuda, who has again and again explained to you whatever part of the orders might seem obscure. You are therefore commanded to have those orders put in force in Loochoo as soon as possible, in accordance with the instructions given to your King by Matsuda."

The Envoys repeated their petitions on the 27th November 1875, on the 17th February and 18th May, 1876, saying that they could not under any circumstances act according to the orders of the Government, and pleading that their prayers might be listened to. On the presentation of the petition dated the 18th May the Japanese Government ordered the Envoys to return home, as no attention would be given to their petition, and announce to the King that Konashi Seiichiro would be despatched to Loochoo with further Government intentions.

It seems that the orders which Konashi carried down were to enforce Japanese law in Loochoo, under the auspices of the Branch Office of the *Naimusho* established there, for on the 16th of June, 21st August and 13th September of last year, we find the Envoys petitioning again to the following effect:—

"We have recently received an order from the Japanese Government that all criminal cases, in which both parties concerned are Loochooans, should first be tried before Loochooan officials and then brought before the Branch Office of the *Naimusho* established in that *Han* for judgment, and that all civil cases, wherein both the parties are Loochooans, or one Japanese and one Loochooan, should be brought directly before the Branch Office of the *Naimusho*.

"Although our country is but a tiny island in the wide ocean, we have for generations been under a King who has possessed sole control over the administration of justice. How then does the Japanese Government desire to delegate that power to its Home Office. This mode of action differs so much from what our countrymen have been accustomed to, that it will surely put them in a state of great uneasiness, and perhaps ultimately lead to some unfortunate disturbances.

Moreover, His Excellency Soyejima, the ex-Minister of Foreign Affairs, informed us by an official letter, dated the 20th September 1873, that no change would be made in our administration.

We therefore most earnestly entreat that our *Han* may still retain the power it always hitherto possessed of exercising judicial authority over cases in which our countrymen alone are concerned. We will agree that cases in which one of the parties is a Japanese shall be tried at the Branch Office of the *Naimusho*."

The Envoys further stated that as they have been specially commissioned to arrange the matter of their relations with China, they could not venture to return to

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

their country without having first arrived at some settlement of the question with the adjustment of which they had been entrusted. All their petitions, were, however, disapproved by the Government. After several times memorializing the Government with no better success, Tomikawa Oyakata arrived from Loochoo in October 1876, as Special Envoy from the King, to inform the Japanese Government that China had demanded of the Loochooans the reasons for their not sending the customary tribute for the previous year. Sanjô then replied that Japan would answer China on that point, and that there was no need for Loochoo to trouble herself about the question.

On the 6th of April last a letter was sent from Loochoo to the Japanese Government, stating that Kôchi Oyakata had been sent to China with the tribute, and that the message that Japan would herself reply to the objections of China arrived too late to prevent the despatch of the envoy.

COUNTRY TRIPS, BY A VICTIM.

Part 4.

"Well, if I be served such another trick, I'll have my brains ta'en out and buttered, and give them to a dog for a new year's gift."

As my travels in various parts of the world have rendered me the miserable victim of numerous agonising means of locomotion, so also have my vagabondisings caused me to become the unhappy receptacle of divers curious meats and culinary preparations which cannot be found among Lady Harriet Somebody's "Dainty Dishes," and will be searched for in vain in the classic pages of Mrs. Beeton. Perhaps it is as well that the art of preparing them should not be handed down to our descendants; that their component parts should remain as much a mystery to posterity as to those unhappy ones who have been forced to partake of them. If any man ever discovered the secret of their composition, it has only been when too late, and the secret has died with him.

Most of us in knocking about the world have assuaged the pangs of hunger with preparations of mysterious nastiness, the component parts of which the finest analytical chemist of the day would fail to discover. I remember some frightful experiences; to look back upon which is to shudder and turn pale. There be some, who to show how wide is their travelled wisdom and of how delicate taste they be, will complain, forsooth, of the unknown meat enclosed in a pasty covering of supernatural hardness, and called pork pie. Also of the sandy-sugary, flat-oval productions containing a few gritty currants imbedded in a brownish substance like rotten apple and yclept Banbury cakes. These are foods peculiar to English Railway Station refreshment counters, and he who wilfully partakes of them when he can get plain bread and cheese, has no right to complain of the evil mindedness of his fellow men, and of their disposition to harm under guise of nourishing. Moreover these are even as heavenly food compared to what the wanderer in that wide region of the world known as "abroad" is condemned to suffer from. I have a horrid memory of arriving one bitterly cold night, after a twelve hours dreary journey, at a certain station on the Grand Trunk Railway, where we starved and freezing passengers were to find refreshments warm and comforting. With what haste we descended and rushed to the dining hall, where, filling the whole bleak length and breadth of the room with deliciously oderous steam, stood an enormous tin boiler of Irish stew. Now there is nothing nicer than this Hibernian composition when properly and conscienciously prepared, but it possesses fearful capabilities for deception in unscruplous hands. I took my portion hungrily and thankfully. It was warm, peppery and oniony. What more could a fasting, freezing man desire? My travelling companion also took his; but he was one of those unfortunate beings to whose share small evils always fall. The one rock in a plum cake, the one bee in a piece of honeycomb, the solitary fly in the milk jug, were certain to become his by unlucky chance. These continual tricks of Fortune had made him suspicious and he was always on the look out for any practical joke that the Dame might try to play on him. He therefore invariably instituted minute search wherever suspicion seemed justifiable, and on this, as on most occasions, he was rewarded by a find. I had finished my first plate and was asking like Oliver Twist for a little more, when I heard him say "Ah, I thought so." In reply to my shuddering enquiries he silently and slowly coaxed to the edge of his plate a little screw of whitey brown paper, such as ladies are apt to leave on their dressing tables after much combing of their back hair. He was proceeding to open its dreadful recesses by the aid of two forks, but I waited not for further developments. All my sins suddenly seemed to rise in judgement before me, and I went out and crew bitterly.

Some of us have partaken of startling revelations as to the possibilities of nastiness at stations on the Central Pacific. A voyage to Kobe by a Mitsu Bishi steamer will sometimes create fresh surprises in this direction. The stately ships that go on to their haven at Panama do not always take care to have their *cuisine* directed by a pupil of Soyer.

But all these trials and short comings sink into nothingness,—nay, seem to be a perfection of the culinary art and height of luxury, when compared with the miserable lot of the misguided being who allows himself to be deluded into going into the country for pleasure and "doing as the Japanese do." To such an one a meal at a way-side station would be a royal banquet; a pork pie furnish a Heliogabalian feast.

I must go on with my journey. But you must pardon these digressions. When I think of my pleasure trip all the horrible circumstances which have happened to me during my chequered existence rush to my mind and try to find their exit from my pen.

Aching, hungry, hot and sore was I turned out of my *kago*, to await the lunch of which I stood so much in need. It came. Some very red, very raw, and superlatively fishy smelling slices of fish, flanked by sliverings of ginger root and shavings of some unknown wood, together with a small pyramid like a "fizzgigg" of some greenish white substance. Likewise a little yellow bowl of that essence of cockroaches, known as soy. Cold rice in abundance on the sideboard; that is on the adjoining mat to the one on which I sit like Buddha, though not in divine contemplation. I am told that I must take up a flake of this raw, red fish with my chopsticks; also with it a small portion of the shavings and a little of the fizzgigg, and dipping them into the blackbeetly sauce, place the precious morsel in my hungry mouth. I endeavour to follow these instructions. With careful labour and after many failures, I succeed in getting a piece of fish with its "trimmins" tightly embraced between the slippery end of my chopsticks. Carefully I dip it in the condiment, and then slowly, and with many an inward qualm, I raise it, and place it———

In my mouth? Oh dear no; nothing of the kind. Just as I get it near that destination it escapes with a bound from the chopsticks, and hides itself in all its coldly fishy and saucy abomination, somewhere in the voluminous folds of my Japanese robe, so that I am compelled to get up and shake my skirts and untie my girdle before it can be discovered. Then I make another and more successful attempt, inasmuch as I succeed in placing it in my mouth, but having got it there, what am I do with it? Swallow it I cannot. The more I think about it the more impossible does it become. Something is rising in my throat, my powers of swallowing are paralysed; black things are dancing before my eyes; chaos is come again!

It was all very well for my companion to laugh, and make me an object of derision to the handmaids who also seemed much delighted with my inability to conform to savage customs. As for the former, it is my firm belief that if he had been on board the Nancy Bell, he would never have permitted that elderly naval bore to have monopolized the interest of that story about "the cook and the Captain bold, and the crew of the Captain's gig." He would either have shared the honours of the yarn or have proved the truth of the theory of the survival of the fittest.

Did you ever taste an overdone omelette that has been allowed to grow cold and leathery, and into which a careless cook has contrived to drop one bad egg? I never did; but am convinced that it would exactly resemble in appearance, consistency and flavour what is known, I believe, as *tamagoyake* (fried eggs), and which was supplied to me

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

for my midday repast when it was discovered that nature rebelled against the cannibal notion of raw fish. Of this, in my state of utter inanition, I was compelled to eat, cheered by the consoling remarks of my hearty tormentor "that if I were lucky enough to get such grub every day I ought to be thankful." I have no doubt I ought to be, and I was not, and I but could not help reminding him that I am not fitted internally with a patent digester, like a kitchen range, neither has nature bestowed upon me a spirit which takes delight in savage and unnatural feats of *gourmandise*. But he only laughed, and said we must get on.

Now I was determined that my personal liberty should not again be restricted to the limits of a *kago*, and thus it was agreed—and as we had both experienced the delights of the vehicle, our unanimity on this point was something wonderful—that a couple of pack horses should carry us the rest of day's journey. Accordingly the fiery and untamed steeds, smothered in wonderful harness of scarlet cloth and sacking, and straw wisps and ropes, were brought, in charge of their respective grooms, mine being an old lady of immense age, superhuman ugliness, extremely loose as to the fit of her skin, also as to her tongue, which ran on with the most irritating volubility, while my companion's charger was restrained by a very pretty, and remarkably grubby, little girl of about thirteen. How shall I describe the saddles of these animals? If you can imagine an extremely steep and sharp Gothic roof, slightly reduced in size, on which was placed for humanity's sake a small cushion,—like Cox's bolster, with a handful and a half of cotton wool at each end and nothing whatever in the middle—you will have some idea of their shape and adaptability to the comfort of straddling humanity. Especially as on each side were sundry pads, and spars and booms and rigging and tackle generally, which sent the legs of the unhappy rider out at something very nearly like right angles to the body. Oh! the agonies that I endured going up hill for fear I should slip off over the tail. The anxieties that I suffered going down hill—there was not a yard of level ground—lest I should take a header on to the rocks below. The thrill of fear that pervaded my entire frame when the beast made furious dashes with his hind leg at busy, curious, thirsting flies; and he was always at war with the flies. The flush of horror that swarmed over me when he caught his straw enwrapped front hoofs against a stone, and he was always strumbling over something or other, eliciting pious ejaculations in Japanese from the old woman, and in English, from myself. The see-saw, ricketty-racketty movement which produced a frightful sensation of nothingness in the interior, and a feeling that the exterior would part asunder and fall on either side of the severing saddle. Nor was this all. Flies of the most frightful pugnacity, blood-thirstiness and powers of infliction launched themselves against my unprotected legs. Terrible monsters with attachments like darning needles, and productive of quite as acute suffering when run into the flesh, with the additional disadvantage of making a wound that smarted and ached and swelled for three days afterwards.

It was all very well for the cast iron creature that rode before me to go into raptures over the beauty of the hills as they unfolded before us, with their rounded billowy forms and flying purple shadows, as the silver mists swept over and lightly kissed their fir crowned heads. To rave over the fairy like beauty of some cool dark glen with its moss covered rocks and lichen-hung tree trunks, its carpet of luxuriant ferns and wholesome fresh smell of balsamy wood, while through the leafy screen of many a tangled bush flecked with bright stars and flakes of light that pierced the gold green roof, the flashing mountain torrent rushed and tumbled amidst the mighty boulders of its bed. To appeal to me in terms of ecstatic delight to admire the prospect, from some lofty ridge, of all the fair plain country at our feet, a sea of harvest wealth, while in its midst lay many a bowery isle of quiet homestead and peaceful hamlet, framed by protecting hills. I daresay it was all very pretty, but I refused to respond to his ecstasies. In fact I could not. Seen from the top of a pack horse, on an empty stomach, Mont Blanc would have no more interest for the beholder than a confectioner's sugar topped cake, Niagara would dwindle to a mill race, and the Promised Land seem an exceedingly common-place kitchen garden or ineligible building site.

Then I thought I would improve my position according to an evil suggestion made by my ancient and malevolent groom. Stopping at a way-side tea house she borrowed three *futons*, those extremely unwashed and numerous—using the word in its proper sense—quilts of the country. These being folded and tied together were lashed on the top of the saddle. By bringing the horse alongside a raised bank where grew a tree, I was enabled to clamber to an overhanging branch and thus let myself down on to my seat, on which I placed myself like a tailor on his board. Secure? Oh dear no! I did not feel so by any means, but it was my only alternative if I would not arrive at the end of my day's journey in two pieces, or should so final a mishap not befall me, in anything like my pristine integrity. A piece of rope was connected with some mysterious portion of the saddle far in the dim distance below me, to which I was told to hold on, thus assuming a security which I certainly did not possess. This was better for a time. Increased comfort was obtained at increased risk. I could fancy myself a Bedouin of the desert, a Maribout perched upon the hump of his camel. I gave the reins to my fancy, and a gradual feeling of peace to which I had long been a stranger stole into my soul. I even forgot the extremely insecure tenure of my position, of which I was suddenly reminded by a shock like an earthquake and a sensation of being propelled upwards as from a catapult. I have a distinct recollection of seeing, while in the air, my horse performing the maddest capers at one end of his rope, while the witch of Endor who was attached to the other end executed a complete summersault. Then I realised that I had left the saddle. I had plenty of time to think "what a fall I am going to have," and then down, down, like tumbling off the monument, half of me going on a grassy bank, and the other half, the tenderest, on rocky ground. A sensation as of having suddenly been born; a consciousness of feeling very white; a cold dampness of the forehead; a craving for cold water; a vision of the old woman rubbing her elbows, abusing the horse, and apologising to me for the unprovoked attack of a hornet upon the animal which had led to the dreadful catastrophe; an unalterable determination to trust myself on that shifting altitude no more, and a fixity of purpose to return home the very next day if my bruises and scratches would permit me.

Of course he, the author of my woes, the primary cause of my miseries, was far ahead and had possession of both bottles of whiskey, and knew nothing of my mishap until I caught him up late in the afternoon. Of course, when I did overtake him, and tell him of my accident he said with irritating heartiness "By Jove, old fellow, it's a good job you didn't hurt yourself any more," as if I had not hurt myself quite enough. Naturally, too, I found that his young lady groom had managed to stow our only stores, the two bottles of whiskey, in such a manner that the lashings had given way and that one—naturally the full one—had been smashed.

The day was dying, but had evidently made up its mind to die hard, and to weep at its own decease, as the rumbling of thunder, the gathering clouds, and dropping rain too plainly showed. We had still two *ri* further to go, and as a *kago* was not procurable, and a pack horse not to be thought of after what had happened, it was necessary to walk. Before we started my companion caught sight of some very fine live eels in a tub, and with forethought that might have done a less selfish person credit, purchased four for our supper at our night's halting place. He refused a guide, saying that he knew the road and that we should arrive before dark. But when the last glimmer of daylight was gone, and the rain had turned into a steady downpour, two lightly clad, drenched outcasts were found on a wide moor by a belated and kind hearted countryman, searching in the long grass for four eels which, with the slipperiness for which those creatures are remarkable, had managed to escape from the close confinement of a pocket handkerchief in which they had been tied by their purchaser. Gentle reader, I would not willingly harrow thy tender feelings by details of too painful a nature, but I ask if history furnishes any instance more pathetic, more suggestive of utter loneliness and melancholy, than an empty, hungry, scratched, bruised, drenched, half clad dys-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

peptic searching for his slippery and fugitive supper on a barren moor in a strange land, in a pouring rain on a pitch dark night!

The eels were never found!

Faint and wearily we way-worn travellers arrived at last at our night's resting place, thanks to the guidance and lantern of the friendly countryman. "Supper, Supper," was the first cry. "Yes directly, but would not the gentlemen have their warm bath first?" No first of all something to eat. "Ah, certainly, now at once; but indeed it was sad, and they had not expected visitors, and it was a very poor place, but if the gentleman would wait something should be forthcoming."

The gentlemen waited, and whilst doing so with difficulty preserved themselves from immediate starvation by drinking sundry cups of remarkably feeble tea, and eating little sugar comfits of spiky forms, and harmless but unsatisfying nature. And then at last came the mockery of dinner, soup containing little cubes of bean curd and shavings of dry fish. Open your mouth and shut your eyes and it has vanished. Another bowl disappears in like manner. What is this? A cold flabby fish of a remarkably gamey flavour and smell. Also a little dish with a few leathery black substances like tanned perwinkles in a blackish sauce. What courage hunger gives to be sure. They are in taste absolute saltness, in consistency precisely like the edible India rubber so dear to schoolboys. I have eaten three, for by their aid I manage to consume a bowl of rice, a perfectly impossible feat for me if unaided by any dainty. "Ah," says my companion with a horrible chuckle, "I told you you'd come to your appetite, and that you'd like the chow well enough when you got used to it. Horrid sell about those eels, though." Then it occurs to me to ask the smiling handmaid, kneeling all eyes and attention by my side, what it is that I am eating. In a soft, respectful voice I am told—"*Tanishi.*"

"Oh!" says my companion with his mouth full, "I know, its badger."

"No" I reply, with a sudden rising in the throat, and a horrid consciousness dawing upon me of what I am eating, "No, it isn't badger; that's *Tanuki*," and I add in a fainter voice, "Lend we your pocket dictionary."

Yes! there it is! all my fears are confirmed! *Tanishi*, the common garden snail!

* * *

After an interval, of painful intensity, my first thought was whiskey. The partially emptied bottle, containing all the comfort obtainable for many a long mile, was there on the floor, and by its side a bottle of water. "Here! quick, quick, mistress waitress, the water in that bottle is warm and far from clear. Throw it away and quickly bring some that is fresh and cool." "Hé-é-é! immediately." And I lie back on the mats with my hand over my eyes, thinking grievously.

No sooner had the maiden returned than with a piercing shriek she fled again, horrified at the demoniacal expression which the Gentleman's face suddenly assumed. And was it a wonder that all his blood turned to gall and bitterness on the instant, and that he raged even as one of the heathen? The wretched Hebe had thrown away the WHISKEY!

* * *

And this is going on a country pleasure trip, and doing as the Japanese do!

A men killed himself on the railway on Friday night by lying down in front of the last train to Osaka, just at the other side, we believe, of the new Ikutagawa. On investigation he was found to be a man in the employ of Sanda, who, for reasons, had his wages "cut" and decided that under the circumstances life was no longer worth having. He had written letters to the Kencho and to his friends explaining the whole thing, and if his thoughtful system were more generally carried out by persons who decide on making the same sort of experiment, a vast deal of quite avoidable annoyance would be saved to all other parties concerned.—*Hiogo News.*

Just before going to press we hear from a very good source that about four days ago Kirino was captured while trying to make his escape into Higo. He was said to be wounded in the thigh.—*Hiogo News.*

The S. S. *Dragon* has been arrested and detained in Shanghai under an order of H. B. M.'s Consul. Those interested in ship or cargo have been notified of the same.—*Nagasaki Rising Sun.*

Correspondence.

MR. ASTON'S GRAMMAR.

TO THE EDITOR OF THE "JAPAN WEEKLY MAIL."

SIR,—Though Mr. Aston is doubtless a grammarian "quite capable of conducting his own defence," still, as it would not be fair to make him responsible for all the opinions of his would-be supporters, and as, moreover, his hypothesis of the former existence of a verb *nu*, 'to be,' is not so much attacked in itself as struck at indirectly by your last week's correspondent, it may be as well for me to state categorically the manner in which I conceive the hypothesis in question to gain support from the new facts adduced in my critique.

I.—Mr. Aston says: "It may possibly be the radical *n* "of this verb vocalized into *u* that we find as the final "vowel of the conclusive form of verbs."—This portion of the hypothesis surely gains in probability when we find that in one of the local dialects the conclusive form *does* end in the letter *n*. The longer of two forms is almost invariably the more original; and the presence of an *u* before the *n* seems to offer no difficulty, for it cannot be that Mr. Aston would have us suppose that the original conclusive form of, say, the verb *nomu* was *nomn*,—a combination of consonants difficult for any one to pronounce, and altogether impossible for a Japanese. The final *n* must have been joined to the root by some vowel; and the vowel *u*, being in Japanese the most neutral of all the vowels, would be the most likely one to be taken for such a purpose.

II.—Mr. Aston thinks it probable that "the so-called "negative particle *nu* is the verb *nu*, 'to be,' and that the "negation really resides in the vowel *a* which precedes it."—That the dialect quoted by me shews us a negative form *noman* contrasted with a positive *nomun*, is surely as clear evidence as could be wished for in favour of the view which attributes to the vowel *a*, and not to the termination suffixed to it, the real negative power. *Nomun* and *noman* differ but in their second vowels.

III.—With regard to the strengthening of the hypothesis by a consideration of the archaic future in *na*, there is greater room for doubt. The following suggestions are, therefore, to be taken merely as suggestions, and not as the expression of a settled opinion: the *na* of the future (*e.g. taworana*) may be the negative base of the supposed verb *nu*, which, besides doing the negative work attributed to it by Mr. Aston (p. 121), here has the future force. No student needs to be reminded of the fact that, though, for the sake of brevity, we always speak of the "*negative* base" only, still the proper title in full is that figuring on p. 89, viz.: "Base for Negative and Future Forms"; so that, if this base be used independently to convey the idea of negation, we may just as reasonably suppose that it will be used independently to convey the idea of futurity. The natural connection subsisting between the ideas of futurity and negation seems to have taken special hold of the Japanese mind; for not only was the same base originally taken to denote both, but even in the modern colloquial dialect, we find that the so-called future is half a negative: it is a doubting form.

Your correspondent asks what are the obscure points in the structure of the Japanese language on which Mr. Aston's hypothesis, if shewn to be correct, would throw light. In a writer who makes the consequences of the demonstration of its truth reach over so immense an area as to "affect the drift of one current of philological enquiry over the whole realm of human speech," curiosity on a subject which must, if this be so, sink by comparision into utter insignificance, appears rather strange. Nevertheless, I will state the three points to which I more especially alluded:

One is the otherwise most perplexing phenomenon of the double use to which *nite* is put.

The second is a similar perplexity in the case of *naru*.

The third is the proper meaning of the genitive particle *no*. The genitive case is, as the study of our own Aryan tongues may teach us,—not an original case,—but one which may constantly be resolved by analysis into something having originally a much more specific meaning. Now it is merely an adjective in disguise, then a locative, and then again an ablative. If here we have it

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

as the verb substantive, we can see the idea which lies at the root of the Japanese genitive particle ; and such constructions as *Yamato no kuni* (mentioned by Mr. Aston) become perfectly clear. (The fact that in many European languages,—English among the number—the genitive particle is used in the same manner, e.g. 'the land *of* Yamato,' must not blind us to the real strangeness of a construction which puts in the genitive case one of two nouns which should, logically, stand in apposition.)

For that portion of your correspondent's letter which accounts for the causal sense frequently conveyed by the abstract nouns ending in *mi*, I offer him my best thanks, and regret that I mistook Mr. Aston's meaning on a point which to others has seemed so clear. I still think, however, that it would be advisable to insert in the grammar a sentence drawing the attention of the student to this somewhat difficult construction, accompanied by one of those poetical citations, in which the author is so rich, to illustrate its use.

I am, Sir,
Yours truly,
YOUR REVIEWER.

Law & Police.

IN H. B. M.'s COURT AT KANAGAWA.

Before RUSSELL ROBERTSON, Esq., *Consul*

Monday, September 3rd, 1877.

Julius Raeske, W. J. Anderson, William Mitchell and Findlay Chisholm, were charged by the master of the *Sir William Wallace* with leaving the ship without leave.

The Master was examined and stated that yesterday he gave strict orders to the prisoners that they were not to leave the ship, notwithstanding which, three of them stole away from the vessel about two o'clock, and the other about half-past four.

The prisoners had nothing to say for themselves, and were sentenced to fourteen days' imprisonment.

IN THE JUDICIAL COURT AT KANAGAWA.

Before Mr. ASAINA KANSUI, Vice-President.

Monday, September 3rd, 1877.

G. W. MILLER *vs.* NAKAYAMA GONJIRO and Another.

This case, in which the plaintiff claims $500 damages for breach of contract, was resumed this morning from the 30th ult.

The Court explained to the plaintiff that the defendants were unable to attend the Court to-day, and so had appointed an attorney as their representative.

Mrs. Miller was then examined and stated that she had written the petition. The lighters that had been engaged were lying loaded at the English hatoba ; and when requested to proceed to Shinagawa the coolies refused to go that day, as they had received no orders from their employers, the defendants. Witness went to one of defendants' houses for the purpose of ascertaining the cause of this, but he sent his servant to say that he was not at home, though witness knew that he was. About 60 coolies had been engaged and had already been sent to put the ballast on board the vessel. Captain Eckstrand and a Japanese Captain called at plaintiff's house about eleven o'clock at night, saying that they had received instructions by telegraph that the ballast was to be sent to Shinagawa. The next morning the lighters were unloaded, and about 9 o'clock they left the hatoba for Shinagawa, to ballast the *Kumamoto Maru*. The witness' testimony relative to the ballasting of the *Dana* was corroborative of plaintiff's evidence.

Some Japanese witnesses were then called to support the statement made by plaintiff that Jinkichi and Gonjiro had prevented him from obtaining other boats ; and that the lighters were not ready on Saturday night at 6 o'clock. Their testimony was contrary to what was expected by the plaintiff.

His Honor announced that if possible he would give judgment on the evidence already adduced ; but if he felt perplexed on any point it might be necessary for plaintiff to attend the Court again.

Some time ago we drew attention to the leisurely manner in which armed pickets patrol the settlement, and again a correspondent has complained to us of the careless way the soldiers carry their rifles. They stroll, or rather slouch about the settlement with fixed bayonets which they carry horizontally over their shoulders, endangering the eyes and features of unsuspecting passers-by. Were it absolutely necessary for these men to patrol with fixed bayonets, they might at least do so in the usual military order, and instead of causing complaint, they would earn our thanks for their vigilance.—*Nagasaki Rising Sun.*

We heard from a man who returned from Nobeoka on Monday last that no fighting took place there at all,—and the insurgents did not lose a man before being dispersed. Upon the arrival of the Imperial troops, they evacuated the place.—*Cosmopolitan Press.*

FARMHOUSES.

(Saturday Review.)

Nothing can possibly vary more widely than the fashion of different farmhouses in different parts of the country. They range from embodiments of the sternest prose to idyllic romances of the poet's fancy ; but it is to be remarked that they are almost invariably in keeping with the character of the people, of the climate, of the district, and of their rural surroundings generally. Thus in North-Eastern Scotland they are severely practical. Little is sacrificed to show and beauty, although there may be a certain compromise with the æsthetic when it can be indulged in without appreciable cost. There may be a struggling background of hardy trees, spruce fir, larch, or ash, because these are useful as shelter from the wind. There is a bit of a garden, where a fringe of flowers runs round a sprinkling of fruit bushes and some beds of the commoner vegetables. There are pear or apple trees trained over the walls ; possibly even an ivy bush or a plant or two of roses, although these last are rare enough. As for the walls, they are sufficiently solid, as befits a region where the winters are so inclement. Wholesale reconstructions and reforms have of late years been proceeding apace on those Northern properties. With the rise in the value of land and the keen competition for farms, landowners have realized the fact that it is remunerative to borrow cheap upon mortgage in order to reinvest in permanent improvements, and dwellings that are thoroughly subtantial of their kind have everywhere replaced the ancient hovels. Before the days of furrow-draining and artificial manures, when the grass-land was as ragged as the coats of the cattle, and the bottoms grew luxuriant crops of rushes, you saw low tumble-down dwellings, with bulging roofs of grass-grown thatch which very much resembled badly-built haystacks. Nowadays these have been replaced for the most part by buildings that are meant to endure. There is seldom need for doing much quarrying where the stones that are continually cropping up from the soil have to be cleared away into the "dykes" that do duty for hedges ; and then you have walls that are thoroughly waterproof. There are firmly fitting window-sashes of satisfactory size, now that there is no tax upon light. The farmsteading is modelled on the farmhouse, and the whole of the buildings have a well-to-do air about them. But nothing gives one the idea of there being much of a margin, or of the occupants being in very affluent circumstances. Probably the farm has been let on a nineteen years' lease, after sharp bidding in open market, and under rigid conditions as to cropping. Neither landlord nor tenant is disposed to launch out into any outlay on idle luxury. The farmer and his family, like the beasts in their fields, show no sign of short commons ; there is abundance of good oatmeal in the "girnel" and plenty of rich milk in the dairy ; there is the whisky bottle in the cupboard to offer to a friend, and the household go clothed in decent broadcloth and smart cottons or woollens on the Sabbath ; but they have never been habituated to the refinements of existence, and set small store by its graces.

Further to the south, in the straths of Perthshire, and in the fertile Lothians, you find yourself among a race of leviathan agriculturists. Well-sized mansions are scattered among the smaller homesteads, for there are farmers there who pay rents of £500, £1,000, even £2,000 a year or more. These are the men who agitate on behalf of their order. They may keep vehicles that are drawn by a pair on occasion ; they send their daughters to second-rate boarding-schools, and buy them evening dresses and pianos ; and necessarily they live with a certain pretention. But there, too, the prevailing impression is that due regard is paid to the main chance. There is no stinting in judicious business expenditure. The large Scotch farmer is an excellent customer of the great agricultural implement-maker. He uses steam-ploughs and patent threshing-machines, sowing-machines, reaping-machines, clod-crushers, and all the rest ; and yet he has as many horses in his stables as his father, and just as many hands in his pay. But as the fences round his great enclosures are carefully straightened, and every foot of the soil is economized, so in the style of his architecture and in the arrangements about his dwelling he has carefully studied to make the smallest sacrifices that are compatible with his solemn sense of his position. The garden is more for use than pleasure. There is the merest strip of grass reserved by way of a lawn ; there is but the scantiest allowance of ornamental timber ; and though there is a scrap of an approach leading up to the brass-knockered door, it is squeezed in between the oats and the turnips. As for the house, it is in the style of those roomy Presbyterian kirks which are reared by the contributions of reluctant heritors. It is decidedly of the packing-case order of architecture, with a couple of windows on either side of the entrance, and without the semblance of a bow

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

window or a gable to break the blank baldness of the elevation. In the Border country, again, you are conscious of a difference. There the houses are externally as grim as those further north, or even more so; but, seen in certain aspects, they have a touch of wild picturesqueness about them. In winter, in wet or stormy weather, nothing can well be more forbidding, and a stranger feels that a permanent tenancy of them might at any moment be abruptly terminated by suicide. But in the bright summer days the grey walls and the yellow lichens on the weather-beaten roofs light up cheerfully; while the bare turf on the surrounding hills, relieved by the patches of golden gorse, reflects the warm brilliancy of the sunshine. Happily over-cultivation is out of the question in that region, and natural beauties are not to be crushed out under the pressure of the plough and the harrow. There is no draining away the abounding stream that breaks and flashes at the foot of the knolls, over the boulders that strew its bed between banks enamelled by wild flowers. With the clear, bracing air, and the chances of fair fishing and coursing, you feel that you might easily make shift to rough it there for a few weeks of the summer.

It is in the Southern English countries, however, we find those farmhouses where the occupants venture to advertise for summer lodgers, or seek to tempt city gentlemen and single ladies into offers of bewitching rural retirement. In the case of many of these farms the only danger is that you may fall over head and ears in love at first sight, to awaken from your pleasant dream in a process of painful disillusioning. The locality is some peaceful parish, beyond the immediate influences of the city or of railways. The features of the landscape are rich woodland, broken every here and there by breezy commons. There is a general air of untrimmed luxuriance and serene indifference to high farming. Copses run in and out of queerly shaped fields, where the boundaries are formed by straggling hedgerows overgrown with wild clematis and dog-roses. Lanes that seem to lead to nowhere in particular meander about in all conceivable directions. So far as you can fancy, their course may never have been changed since the days of the Heptarchy. The homesteads are scarcely so old as that; still they can boast a most respectable antiquity. Here is one that lies somewhere in the wealds on the borders of Kent and Sussex. At a corner of a hollow lane you catch sight of the tall angular stacks of chimneys, breaking the swelling outline of a clump of spreading oaks. They vanish for some moments, and then, when they reappear, there are gables beginning to disengage themselves from the foliage. There are mullioned windows with lozenged panes, and quaint gargoyles and grotesque waterspouts, for in former times the farm was a manor-house. Among the mossy fruit-trees in the garden there are still the clipped hedges, although they have begun to thin and straggle at the roots; and there is the terrace wall that has begun to crumble, leaving chinks that make a paradise for birds in the breeding season. There is a moss-covered sundial too; and you can trace the brick-faced banks of a fishpond, which is now become a watering-place for the cattle and horses. Within doors is a broad, black oaken staircase, with the remains of heavy moulded cornices, though these, with the great crossbeams of the ceiling, are very possibly smothered in whitewash. You might roast a sheep, if not a heifer, in the spacious chimney of the kitchen; and there are huge oak cupboards with mysterious recesses, and oak chests and buffets blackened with time. Upstairs the low-roofed bedrooms, with the scanty bits of carpet spread over the uneven floors, are brightened with gay chintz and white dimity curtains. If you have come in search of quarters, you are irresistibly taken with the place, and close the bargain at once, contracting to pay a term in advance. Nor does disenchantment begin at once on nearer acquaintance; on the contrary, your first awakening in the morning is an hour to be remembered. A clustered branch of the Banksia rose-tree outside has forced itself in at the open casement. The ill-kept parterres of the garden beneath are gay with old-fashioned flowers, and there is a hum of bees from the row of hives. Blackbirds and thrushes are foraging among the fruit; the air is alive with swallows, sweeping and dipping over the horsepond, and the sparrows that build in swarms everywhere are twittering in chorus on the roof overhead. At the other angle your room commands the straw-yard, where the cows are filing forth to be milked, and the fragrance from their fresh breath is mingling with the scents from the flower borders. The clucking of the fowls with their broods of chickens blends with the gobbling of the geese and the soft cooing of the pigeons. After a rapturous stroll round the place, you come in with a keen appetite to a breakfast-table spread with simple dainties. There are new-laid eggs and unexceptionable rashers of bacon, with home-baked bread and cream and butter that are beyond all compliments. The dinner may, on the whole, leave something to desire; but still you did not come there for luxuries, and for some days, while the novelty and the fine weather last, you have no reason whatever to regret your choice.

Suddenly, however, there is a change, and for the worse. The rain which has been descending in a steady downpour, searches out the weak places in the antiquated roof, and comes washing in at the windows. The trees that hug the house, whose shadows were so delicious when the skies were cloudless keep up a perpetual drip and drench, enclosing you in clouds of steaming vapour. The tendrils of the roses and honeysuckles that creep over the tiny casements exclude the filtered light, and in your depression you discover that your apartments are gloomy. You are made more and more of a close prisoner too: for it is brought home to you that the farm lies upon clay, and the lanes and field-path are become well nigh impassable. It true that there is a delivery of letters once in the day; but the hour of the postman's arrival is highly uncertain and you take to counting the minutes while waiting for your papers. And now that you have almost knocked off exercise you are fastidious about the softness of the mattress which hitherto you accepted so placidly Your broken nights are inconsiderately curtailed by that crowing of the pertinacious cock which sounded at first so charmingly rural; and, as you lie tossing feverishly through the early hours, you shudder at the formidable labour of killing the coming day. Then all the Dutch picturesqueness of the horse-pond has vanished when you have discovered that in its stagnancy it is horribly odoriferous; and, as you have not been acclimatized like your robust entertainers, you are haunted by nightmares of typhoid fever. It is very much a question of weather; but the chances are that, at a moderate sacrifice, you bring the period of your seclusion to an abrupt termination, and return to town, having learned the lesson that lodging in the prettiest of farmhouses is a very venturesome speculation. Indeed, even without going through that experience, we may gather from observation that the advantages of the various styles of farmhouses are by no means unequally distributed. Visitors will either avoid them altogether, or court them purely for the sake of the picturesque; but it may be useful to remember that, as a general rule, their comfort and salubrity are in the inverse ratio of their picturesque antiquity and the charms of their situation.

REUTER'S TELEGRAMS.

LONDON, September 5th, 1877.

INTELLIGENCE FROM THE SEAT OF WAR IN TURKEY IN EUROPE.

According to a Russian Official Despatch all attacks made by the Turkish forces East of Plevna were repulsed, the Turkish troops being driven back.

INTELLIGENCE FROM THE SEAT OF WAR IN TURKEY IN ASIA.

Despatches report the Turkish troops to have evacuated Sukumkale.

INTELLIGENCE FROM FRANCE.

Monsieur Thiers is dead.

LONDON, September 3rd, 1877.

INTELLIGENCE FROM THE SEAT OF WAR IN TURKEY IN EUROPE.

The victory of the Turkish forces on the River Lom is fully confirmed.

Osman Pasha made a reconnaissance of the Russian positions east of Plevna, attacked and routed the enemy, taking three redoubts by assault. Valentine Baker greatly distinguished himself.

LONDON, 1st September, 1877.

WAR IN TURKEY IN EUROPE.

Despatches report that Suleiman Pasha blockades the Russian forces at Schipka.

After desperate fighting on the banks of the River Som* the Russian Troops retreated in disorder with a loss of 4,000 killed, that of the Turks being 3,000 killed.

The Turkish Forces have resumed the offensive along the whole line.

* Query Lom.

LONDON, 30th August, 1877.

The Russian Forces unsuccessfully attacked the Turkish positions at Schipka Pass on August 26th, being defeated with a loss of 3,000 killed.

ARRIVAL OF THE ENGLISH MAIL.

TELEGRAMS.

(*Strait's Times.*)

Bombay, 3rd August.—By an arrangement with the Turkish Consul all the Mahomedan mosques here were illuminated last night in honor of the Turkish victory at Plevna. There is great excitement among Mahomedans. Sir Richard Temple will preside at a meeting to be held here on the 10th instant to perpetuate the memory of the late Sir Jamestjee Jeejeeboy. The local mortality rate is now 52 per thousand per annum.

London, August 4th.—The *Times* announces that two troopships are ordered to be ready for sea by the 11th instant, to embark 3,000 additional troops for the Mediterranean. Stocks are buoyant, it being considered that the Turkish victory in Bulgaria will lessen the chances of foreign intervention. Greece is arming the staff of the Greek army, and commanders of Brigades have been appointed.

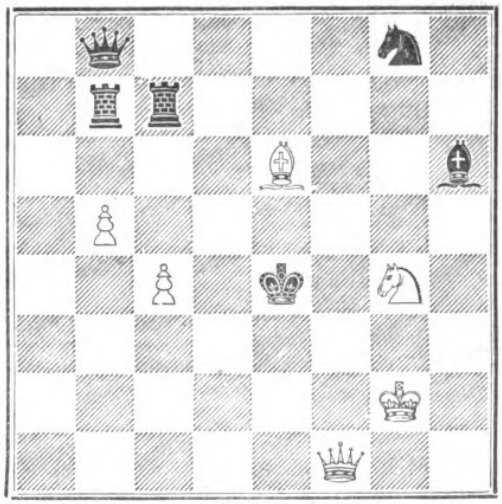
London, August 5th. No fresh news has been received from the seat of war in Bulgaria or Roumania. The whole of the Russian Imperial Guard and several Russian divisions have been mobilised, and most of them are going to Bulgaria, whilst the remainder will proceed to the Caucasus. A Russian Imperial ukase also calls out 190,000 men of the Landwehr.

London, 9th August.—Osman Pacha has been reinforced, and is strongly entrenched at Plevna. The Russians are encamped 15 miles away, with their advanced guard only 6 miles distant. It is reported that the Turkish commander-in-chief with an army corps is marching towards Tirnova. The Russians (? Roumanians—Ed.) are bombarding Widdin. Turkish official accounts state that the Russians retreated in disorder after their defeat at Eskisaghra. Suleiman Pasha has occupied the Hamboghaz pass. Hobart Pasha has been appointed Admiral of the Black Sea fleet and has destroyed the Russian fort at Tchamchira. The Turkish expedition in the Caucasus has been abandoned. The relations between Turkey and Greeece are in a critical condition.

London, 7th August.—An official Russian despatch states that the Russian loss at Plevna was 5,000. The retreat of General Gourko into the Balkans is admitted. 300 Bosnian insurgents have been driven by the Turks into Austrian territory and have been disarmed.

The question as to the future policy to be adopted in regard to the cultivation of Chinchona is at present under the consideration of the Government of India. The offtake of grain by the Madras Railway amounted yesterday to the encouraging total of 1,880 tons!—a day's food for four millions of people (the population of London). The Government of India has conveyed an intimation of the probable grain requirements of the famine districts to the Government of the Straits Settlements and thence to Saigon, Bangkok, &c. Doubtless large shipments may be obtained from these countries in case of need. Captain Lovell, Superintendent of the P. and O. Company in Calcutta, died when proceeding down the river Hooghly, on his way home, on board the *Nepaul*. He had been in failing health for some time, and, like too many others, had continued at his post too long, before seeking the necessary change. The *Englishman* states that he will be universally regretted in Calcutta. As a mark of respect, Captain Black, the travelling Director of the Company, who was on board, ordered the *Nepaul* to be put back to Diamond Harbour, where the body was buried on Tuesday evening.

London, 7th August.—The House of Commons has negatived a motion made by Mr. G. O. Trevelyan, declaring it to be too late in the present session to sanction the royal warrant on army promotion. At a Conservative meeting, Lord Salisbury has said that the British Government desired to observe a strict neutrality. He hoped that they would honorably steer clear of the many difficulties of the situation without endangering peace. The Turks have occupied Kassanlik and Selvi. Russian reinforcements to the number of 15,000 men have crossed the Armenian frontier, and threaten Mukhter Pasha's right wing and centre.



London, 8th August.—Server Pasha, the Turkish Minister for Foreign Affairs, has denied that Midhat Pasha is on any mission from the Porte. The Russians have evacuated all their positions south of the Balkans, with the exception of the Schipka Pass. It is announced that a special Turkish imperial guard camp from reserves will be formed to protect Constantinople. The Turkish official despatch states that the Russians unsuccessfully attacked Lovatz on the 7th instant, but were defeated and compelled to fall back, losing 300 killed and 6000 wounded. The Turks have completely defeated the Bosnian insurgents.

London, 9th August.—The Grand Duke Michael is at Alexandropol and is expected to resume the offensive [in Armenia.—Ed.] in a few days. General Tchernaiyeff will join the army of the Caucasus. Admiral Hornby and General Dickson have inspected the lines at Gallipoli, and reported thereon to Mr. Layard, the British Ambassador at Constantinople. The Porte has informed Mr. Layard that the Ottoman Government will complete the fortifications of Gallipoli, increase its garrison and defend the place itself.

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabrics & Yarns.—Our market has been quiet, and at the close a general dullness is prevailing. *Yarns:*—Only medium qualities of 16/24 continue saleable at previous rates, whereas other qualities and counts are neglected, and in some instances they are lower. For *Shirtings* there is barely any enquiry, and prices are quite nominal. In *White Shirtings* and *Drills* there is nothing doing. Of *T. Cloths* and *Turkey Reds* small sales are reported. *Velvets* are saleable to a moderate extent,

Grey Shirtings:—							
7 lbs.	38½ yds.	39 in.	per pce.	...	$1.40	to	$1.75
8 lbs.	38½ yds.	44 in.	,,	...	1.80	to	2.20
8 lbs. 4 to 8½ lbs.	38½ ,,	39 in.	,,	...	1.55	to	2.32½
9 lbs.	38½ ,,	44 in.	,,	...	2.00	to	2.60
T. Cloth 7lbs.	24 ,,	32 in.	,,	...	1.40	to	1.60
,, 6lbs.	24 ,,	32 in.	,,	...	1.10	to	1.25

White Shirtings:—							
60 to 64 reed	40 yds.	35 in.	per pce.	...	2.20	to	2.40
Turkey Reds	24 yds.	30 in.	2—3 lb. per lb.	...	0.67½	to	0.85
Black Velvets	...	...	...	...	7.25	to	8.35
English Drills	14/15 lbs.	40 yds,	30 in.	...	2.40	to	2.65
Taffachelass	12 yds,	43 in.	...	...	2.00	to	2.35

Yarns.—

No 16 to 24	...	...	per picul	...	$28.0	to	31.25
No. 28 to 32	...	...	per picul	...	$32.25	to	34.75
No. 38 to 42	...	...	per picul	...	$35.00	to	39.00
Reverse Twist 16-24	...	...	,,	...	—		

Woollens have been very quiet since our last, and there is no material change in quotations to report. Plain *Black Orleans* seem to attract more attention, and plain *Mousselines de Laine* are reported to have been sold at slightly reduced rates. In *Blankets* and *Cloth* there is less doing,

Plain Orleans	40—42 yds.	32 in.	...	5.60	to	7.00
Figured Orleans	29—30 yds.	31 in.	...	4.25	to	5.25
Shimaguro	30 yds.	30 in.	..	3.75	to	5.25
Italian Cloth	—30 yds	32 in.	...	0.25	to	0.32
Camlet Cords	29—30 yds.	32 in.	...	5.75	to	6.00
Camlets Asstd.	56—58 yds.	31 in.	...	—		
Lastings, Japan	22—30 yds.	32 in.	...	12.00	to	13.00
Plain Mousselines de Laine	—30 yds.	30 in	...	0.17	to	0.18

Figured Mousselines de Laine	30 yds.	30 in...		0.25	to	0.28½
Multicolored ,,	30 yds.	30 in...		0.28	to	0.37½
Cloth, all wool plain or fancy	48 in.	to 52 in...		0.80	to	1.20
Presidents	54 in.	to 56 in...		0.60	to	0.65
Pilots	54 in.	to 56 in...		0.45	to	0.55
Union	54 in.	to 56 in...		0.60	to	0.75
Blankets, scarlet & green	6 to 8 lbs...	per lb	...	0.40	to	0.46

Sugar.—Very little as been done during the past week, but holders are firm, as supplies of *Formosa* Sugars have now ceased to arrive. Stocks still consist of about 85,000 piculs.

Sugar:—Takao in bag	(nom.)	per picul	...	$4.80		
,, in basket	,,	,,	...	$4.70		
Taiwanfoo in bag	...	,,	...	$4.70		
do. in basket	...	,,	...	$4.60		
China No 1 Ping-fah	...	,,	...	None		
,, No. 2 Ching-pak	...	,,	...	$8.40	to	$8.70
,, No. 3 Ke-pak	...	,,	..	$7.80	to	$8.20

China No. 4 Kook-fah	...	...	per picul	..	$7.40	to	$7.70
,, No. 5 Kong-fun	...	...	,,	...	$6.50	to	$7.40
,, No. 6 E-pak	...	...	,,	...	$5.70	to	$6.10
Swatow Brown	...	...	,,	...	None.		
Daitong	...	...	,,	...	$3.80		
Japan Rice	...	...	,,	..	$2.50	to	$2.65
Kerosene Oil nominal	...	...	,,	...	$2.65		

Kerosene Oil.—Prices are very irregular, with much speculation. Offers of $2.65 are refused, holders being firm, and it is doubtful if $3 would be accepted. Stocks are reduced, and not more than 10,000 to 15,000 cases remain in first hands.

EXPORTS.

Silk.—At the time when our last report was written the market was very flat and prices weak, but directly afterwards several Continental buyers made rather important purchases, since which time the demand for Hanks has continued at rapidly advancing rates, which close firm at the quotations given below. The stock of *new* Silk is nearly exhausted. During the past few days Oshius have attracted more attention at a small advance, and several lots of Filatures have been disposed of. Settlements are 500 bales of Hanks, 150 bales of Oshius and 25 bales of Filatures, making a total of 675 bales. Stocks are 600 bales. The total export from 1st of July to date is 3,152 bales, against 9,690 bales, for same period last year.

		In London at 4s. 0½d. per lb.	*In Lyons at f. 5.10 per kilo.*
Hanks, Superior No. 1	$570	20/8	57.00
,, Best No. 1 & 2	$530 to 550	19/3 to 20/	53.00 to 55.00
,, Good No. 2	$500 to 520	18/4 to 19/	50.50 to 42.50
,, Good all round No. 2½	$470 to 490	17/4 to 18/	48.00 to 49.50
,, Medium No. 3	$450 to 460	16/7 to 17/	46.00 to 47.00
,, Common to inferior No. 4 & 5	$420 to 440	15/7 to 16/3	43.00 to 45.00
Oshius, Good to medium	$470 to 500	17/4 to 18/4	48.00 to 50.50
Kakeda	$500 to 620	18/4 to 22/4	50.50 to 62.00
Hamatski Common to medium,	$420 to 430	15/7 to 15/11	43.00 to 44.00
Filature Silk	$580 to 730	21/ to 26/	58.00 to 72.00

Tea.—The closing week affords little or no matter for comment on our tea market. Settlements amount to 900 piculs, mostly low cost teas, and holders show no desire to press desirable parcels on the market. Prices remain unchanged.

Common	$ 8.00 to $11.00	Fine	$23.00 to $27.00
Good Common	$12.00 to $14.00	Finest	$28.00 to $32.00
Medium	$15.00 to $17.00	Choice	$34.00 nominal.
Good Medium	$18.00 to $21.00	Choicest	—

EXCHANGE AND BULLION.

Exchange.—During the past week there has been more business doing, and rates have advanced about ½ to ¾ per cent., closing firm at quotations.

Rates close as follows:—

REPORTS.

The *Fetisch* reports: Left New York on the 12th of April. Crossed the equator on the 16th May in long 23° W.; had moderate S. E. trades; passed the meridian of the Cape on the 21st of June in lat. 40 10 S. Had strong westerly gales while running the Easting down, and one hurricane during the first three days of July. Passed an American barque on the 5th of July in lat. 37 50 S. long. 76 E. with rudder damaged. Made Amsterdam Island on the 6th July; thence to Java Heads had strong easterly trades. Passed Anjer on the 24th July, and came up through Banca Straits with fine weather, and in the China sea had fresh S W. winds to 24° North. On the 25th August when near Kurosima, experience a typhoon from E S. E., wind veering by East to North, lasting 20 hours. Made Rock Island on the 1st September, and arrived in port on the 2nd instant, making the passage in 142 days.

The *China* reports:—Sailed from Hongkong August 30th at 3p.m., had N.E. winds and fine weather throughout, and arrived at Yokohama September 7th at 7.20 p.m.

BROADWELL'S
BREECH LOADING ORDNANCE COMPANY, CARLSRUHE.

MANUFACTURERS and Patentees of the IMPROVED-BREECH, STEEL RIFLED ORDNANCE, largely adopted in Europe and America: Inventors of the new Star ring artillery shell.

The Broadwell System is now applied to the Krupp Cannon.

The undersigned are prepared to receive orders and undertake contracts, on behalf of the Company, for ORDNANCE of any calibre, at the Company's tariff.

EDWARD FISCHER & CO.,
d. w. & m. SOLE AGENTS FOR JAPAN.

INSURE YOUR HEALTH

BY TAKING

HOCKIN'S
IMPROVED SEIDLITZ POWDER.

IT differs from the Seidlitz Powders usually sold in having all the ingredients in one bottle, is quite tasteless, and may be taken by persons of all ages as a *Cooling Beverage, Mild Aperient* or *Brisk Purgative* according to dose. Its extensive use during nearly HALF A CENTURY proves its valuable qualities as a Purgative Saline, and the fact that the powder retains its qualities for any number of years renders it a most reliable and efficient Domestic Medicine. It will be found invaluable to Families, Travellers, or Emigrants, as a preventive or remedy in all cases of **Sickness, Headache, Bilious Attacks, Fevers,** and the other ordinary **ailments** of life.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded.* This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omisson to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

DIED.

On the 10th September, at No. 9, Bluff, at 3 A.M., DAVID SCOTT, Jnr.

On the 14th September, at Shinbashi, Tôkiô, JOHN ENGLAND, M.I.C.E., Principal Engineer Imperial Government Railways, Tôkiô, aged 54 years.

The funeral will leave Christ Church for the Cemetery at 4 P.M., to-morrow, the 16th instant.

Notes of the Week.

In the entire absence of telegrams from the South, with the exception of the few utterly meaningless ones that appear in the native journals, we are entirely in the dark as to what may be transpiring in and around Kagoshima. Since the news arrived that on the 5th instant the Satsuma troops defeated the *Shinsen-riotan* (newly enlisted police forces) at the fight at the rice godowns, capturing from them four cannon and a large quantity of ammunition, there has been absolute silence as to the proceedings of the opposing forces, and we can only conclude that their positions remain unaltered. The arsenals at Tôkiô and Osaka are working day and night to supply the 10,000 rifles that have been asked for from the seat of war. There can be no doubt that when they recaptured Kagoshima the Satsuma leaders were able to supply their followers with all they needed in the way of arms and general supplies. Fifteen hundred new overcoats were also included in their booty. This morning's native journals report that Saigo with a number of followers is strongly intrenched at Shiroyama, but that he is entirely surrounded by Imperialists. Under such circumstances it seems strange that Kagoshima should remain in the hands of the insurgents. With such meagre details as come to us, it is impossible to hazard any conjecture as to what turn events may take.

The *Chôya Shimbun* publishes a letter, which it states has been received from Onuma Tokuzen of Uwajima in Shikoku, containing the following important intelligence. Although faith is expressed in its being reliable, the *Chôya* warns its readers against accepting it as absolutely correct.

"The Lieutenant of the police forces stationed in this province arrested, a few days ago, a *samurai* named Kuwahara Heihachi of Nakamura, who was formerly assistant judge of Miôto *ken.* On a search being instituted at his house, and after examination of his family, a number of documents were found, proving the existence of a thoroughly organised plot against the Government. Among them was a paper containing a list of the names of all the members of the conspiracy, numbering about six thousand. Arrests of over a hundred of the principal men have already been made within Nakamura, while many others are to be arrested in Kôchi and sent to Tôkiô for trial. One of the documents shows that a large quantity of ammunition has been manufactured in certain villages and stored in godowns at Menoshita. The plans of the conspirators were first to attack the police forces at Uchimatsu-mura and Shimo-ôno near Uwajima, and after getting possession of the arms and ammunition to advance to the town of Uwajima, and coöperating with the *samurai* of this place to attack the *Kencho* at Matsuyama. In another document the necessity for caution and patience was advocated as the navy was known to keep a very strict watch, and it might take a month to carry the plans for leaving Shikoku into effect. The paper which contained the names of the conspirators bore the date of June. I obtained this information from the Lieutenant of the police forces stationed at Shimo-ôno." At the same time it is reported that the whole of the policemen in the Kôchi *ken* are to be replaced by police from Yedo, so that it would appear that there is some good cause for distrust.

There have from time to time during the past three months arisen certain grave rumours of the presence of that dread scourge Asiatic cholera in various parts of China and in certain districts of Japan. The outbreak in Amoy was the most serious, and from the accounts which reached us there seemed to be some grounds for the alarm which was naturally felt and expressed. Later information, however, proved that the so-called cholera was only a form of choleraic complaint, equally as fatal as cholera to the individual attacked, but less so to the community at large. The rumours of its appearance in Japan happily proved so far unfounded, but they have had the one good effect of rousing the Japanese authorities from their Oriental indifference to the causes and spreading of epidemics, into something like energetic action with regard to sanitary measures. We have much pleasure in drawing attention to an article, of which the first portion appears in our present issue, on this most important subject, and we earnestly hope that it may be brought to the notice of the native authorities and that it may aid them in the preventive measures they show themselves anxious to adopt. We may be permitted to say this much, the article in question, as will be readily apparent to our readers, is from the pen of a resident professional man who feels very deeply the necessity of the immediate introduction of sanitary reforms among the native population, and whose ability to handle the subject will at once be evident.

The funeral of Her Imperial Highness Seikan-in-no-Miya, which took place on the 13th instant, was conducted in an imposing manner and in strict accordance with the Bhuddist ceremonial. The procession which left the residence of the deceased at Ichibei-machi, Azabu, at 11 a.m., was headed by a squadron of the Imperial Guards, a regiment of the line, a military band and a field battery of six guns. These were followed by men dressed in white carrying large white lanterns, and by priests bearing incense. Then lanterns and priests and banners, two lotos flowers on a pole, a band of Japanese instruments playing weird and mournful strains, then more lanterns and priests and banners, preceding the body, which was contained in a plain white wood coffin, carried by bearers dressed in white, while others held over it brown canopy. Again priests and lanterns, followed by seven ladies of the Princess' household dressed entirely in white, in carriages. Then followed the chief mourner, Matsudaira Kakudô, who represented Tokugawa Kamenosuke, the grandson by adoption of the deceased; Isshiki Junichi, who represented the Princess' adopted son Keiki, the last Shôgun ; the Prime Minister and other high Government officials, and many of the *Kuazoku*. Altogether nearly 150 carriages added to the great length of the funeral cortège; the whole being closed by a great number of retainers of the Tokugawa family, followed by a regiment of the line. The streets were well kept by the police, both mounted and on foot. The procession arrived at Shiba at a quarter past twelve, and was received at the entrance of the temple grounds by about a hundred priests in full canonicals. The body of the Princess was then interred in the tomb of her husband, Tokugawa Iyemochi, who died in December 1866. The following inscription is placed on the tomb. "Nihon Nai-Shinnô Shinshi, formerly Katsu-no-Miya, the eighth child of the late Emperor Jinkô Tennô, and Shogo-i-no-ge Shô-tenji Hashimoto Tsuneko, born on the 10th of the 5th month of the 3rd year of Kokua, at the residence of the grandfather of the present Emperor."

The deceased lady was thus only thirty one-years of age. This is probably the last occasion on which the tomb of the Shôguns will be opened, and the groves of Shiba become the resting place of any member of the Imperial family, though it may be, that when he shall have passed away, the last of the Shôguns will also be laid beside his ancestors. The flags of the men-of-war in this harbour were lowered to half-mast at the time the funeral took place, and minute guns were fired by the *Adzuma Kan*. All Government offices in Tôkiô were closed during the day.

The Princess whose obsequies are noticed above was the younger sister of the former Emperor, Kôme Tenno, and was married to the Shôgun Tokugawa Iyemochi in December, 1861, in order to cement an alliance between the Imperial family and the house of Tokugawa. Iyemochi died five years afterwards, and his widow then shaved her head and took the name of Seikanin. In the 6th year of Meiji she received the rank of *Nihon*. In August of the present year she was attacked with dropsy, of which complaint she died at Tônosawa, whither she had gone to try the effect of the hot springs. Since her decease the name of the illustrious lady has been changed to Koyowa-juntei-kiotaishi.

In the midst of the horrors of famine which threaten India and from which so many districts of China are suffering, Japan seems especially favoured by a particularly abundant harvest. The weather has been throughout the summer most favourable to the growth of the rice crop, and although for a few day complaints were heard from some portions of the country of too little rain, it came in due season, and now from all parts come reports of the splendid prospects of the crops. Even in Kiushiu, devastated as it has been by the civil war, and where the labours of the farmers must have been sadly interfered with by the withdrawal of men, the harvest promises to be one of singular plenty. Under the present condition of the country nothing could be more fortunate. A short crop, to say nothing of its almost total failure as in some portions of the East, would have been the greatest calamity that could have befallen Japan. Hard driven as the people are now to find the means of living, it is painful to think what would happen to the nation and the Government if the harvest were unfavourable. There are certainly some weeks yet before harvesting, but the critical season is well past and it is not probable that anything will occur to mar the present fair prospect.

To many of the well informed and studious men of this country the name of John Bright and the principles he upholds are probably perfectly familiar. He is well named the Apostle of Free Trade, and we are always glad when we can lay before our Japanese readers any of his utterances on a question that so intimately concerns them, as we believe that the views expressed by so eminent a man will be read with attention, and demonstrate how weak and pernicious are the so called teachings of Protection.

In recognition of the great services rendered to the cause of Free Trade by John Bright's co-worker Richard Cobden, a statue of the latter has been presented to the town of Bradford by an American, at the unveiling of which an address was delivered by Mr. Bright, wherein occurs the following passage:—

"It is difficult to get (monopoly abolished) in France but in the United States, at any rate, you might have it; only the organisation of the monopolists is so complete, that they have, unfortunately, a very plausible excuse that having incurred vast expenses in the civil war it is necessary to have heavy duties upon imports, because, that is the easiest way the national income can be collected. But we need not go so far as that to find some instances of the lingering love for protection (hear, hear). I do not hear that the majority of the manufacturers, or of the farmers even, have become reconciled to their position. Even among manufacturers there still lingers a little love of the old faith, and a little wish to return to it. Some say that as they cannot sell as easily as they would like—as they cannot sell as freely, none of their countrymen should buy as freely as they could wish (laughter). That is briefly the opinion that is running in the minds of some. I venture to say that for this country the return of protection in any form would be in reality to bar the progress of the world, and I should say of our hopes of future peace (applause). If we look to France we see there that protection is becoming weaker. If we look to the United States or consult any intelligent American that comes to this country we shall find that it is shaking and tottering to its fall. I suspect that the extraordinary depression which has been felt throughout all the manufacturing industries of the United States is almost entirely to be attributed, if we probe it to the bottom, to their protecting system; to their having misdirected so much capital; to having, on the strength of their high tariffs, embarked in investments which in the end did not result satisfactorily. I believe that the riots in Pennsylvania have indirectly sprung from the same system of protection and inflation of the iron trade which was afterwards followed by a collapse and the impoverishment of the capitalists, and hence a demand for the reduction of wages. The workman being accustomed to high wages resisted, and hence the disturbances which almost took the character of a local insurrection—one of the most deplorable things that has happened in the Northern States as far as my memory goes. This will be found to have resulted from the financial and fiscal errors which the government and people of the United States have committed. I was talking a few days since to a gentleman from Berlin on the subject of free trade, and he also held strong views as to the armament of Europe. He said that we had been discussing the free trade question as a question of economics, of buying and selling, of buying in the cheapest market and selling in the dearest, and giving to the world all we could produce. But, he said, there is a question which has not yet been discussed—the question of the armament of Europe. He thought it could be shown that a great reduction in the duties of Europe would, as a matter of necessity, bring about a corresponding reduction in the armaments of the different countries, and a cessation almost entirely of all causes which provoke war.

While upon this subject we would refer to the following extract from an article in the *Saturday Review*, of July 28th, entitled "The American Railway Strikes," and in which the late terrible riots in the United States are indirectly traced to the follies and errors of protection, to which no doubt they owe their origin. Surely no more powerful argument against this ruinous doctrine could be brought forward than these strikes and their consequences.

The chronic conspiracy of producers against consumers has never been more consistently prosecuted than in Pennsylvania. The rails on which trains have temporarily ceased to run, and the engines which are thrown out of work, have probably cost twice their natural prices, because the local iron-masters have combined to levy a burdensome tax on their neighbors. The desire for a profitable monopoly has now descended to the engine-drivers and their assistance, to the great inconvenience of the capitalists whose example they follow, as well as of society at large. The doctrine of selfishness is perhaps professed in a simpler or more naked form by trades-unionists than by protected manufacturers who contrive to delude others, if not themselves, by an affectation of patriotism. In England, and probably in the United States, the literature of strikes is pervaded by the assumption that capital is the enemy of labor, or, in less metaphorical language, that the working classes should care for nobody but themselves. In America and on the Continent of Europe, manufacturers and the politicans who flatter them

generally profess a disinterested jealousy of the commercial aggressions of England. In this spirit Mr. Jules Simon has lately protested against the suspicion that a Republican Ministry could by any chance have preferred the welfare of the whole community to the private interests of cotton-spinners and iron-founders. The Government and Legislature of Pennsylvania would repudiate the charge of indifference to the protection of indigenous industry. The workmen on the Baltimore and Ohio Railway in turn regard both employers and rival candidates for employment as natural enemies, to be annoyed and plundered as far as circumstances may allow. It may be conjectured that among the rank and file of the States militia there are many workmen in various trades who contemplate the possibility of other strikes for wages. Railway proprietors would, as capitalists, be excluded from popular sympathy, even if it were not known that they included a large proportion of foreigners, who are universally regarded as proper victims of spoliation. Passengers and foreigners must share the disregard which is felt for consumers in nearly all parts of the world.

By a happy exception, England, beyond the limits of trades-unions, has alone among civilized nations heartily adopted the principles of free trade. The sole cause of exemption from a widespread error has been the accident that the corn laws were formerly maintained in the supposed interest of an aristocratic minority. If land had been subdivided in England as in France, protection would be in full vigor at this day; but against a small number of privileged land-owners a Free Trade agitation was popular, and it proved to be irresistible. When the corn laws were repealed, the manufacturers who had demanded cheap bread happened to be strong enough to defy foreign competition; and consequently Free Trade was established by universal consent. The skilled artisans alone took up the abandoned theory of Protection, though their efforts have been directed, not against foreigners, but against their own countrymen. The theory that clothes exist for the sake of tailors, and hats for the benefit of hatters, was propounded thirty years ago with crude and passionate earnestness in "Alton Locke" and other popular publications. In West Virginia and Pennsylvania the rioters and their friends in the militia practically assert the proposition that stokers and engine-drivers are the ultimate objects of railway construction. The truth that hats were designed to cover heads and railways to convey passengers and goods requires, though it is not recondite, to be seen through a non-refracting medium. It is easy to understand the popular feeling that men who work ought to enjoy a larger share of the products of labour; but it might occur to the advocates of trades-unions that the most immediate sufferers by strikes are often of the same class with the malcontent workmen. The reduction of wages which caused the strike on the Baltimore and Ohio Railway was a consequence of stagnation of trade, which is necessarily accompanied by scarcity of employment. It appears that competent persons are ready and eager to supply the vacancies on the railway at the reduced rate of wages. It is against the outside candidates for employment that the violence of the men on strikes is primarily directed. The struggle of labour against capital is generally at the same time a struggle of labour against labour, and the claims of the workmen are also necessarily adverse to the interests of the consuming community.

The people of the United States, among other great qualities, enjoy a fortunate immunity from pedantic deference to verbal logic. The protectionists of Pennsylvania will not be restrained by scruples of consistency from repressing a seditious movement for the protection of a certain class of workmen. It is satisfactory to learn that the respectable citizens in the disturbed districts are ready to act as special constables; and even if the local government finds itself incapable of restoring order, the whole force of the Union will, if necessary, be exerted in vindication of lawful authority. In the same State a number of Irish miners lately held a large district in terror during a strike for wages, and some of them even resorted to murder in pursuance of their purpose; but the overzealous champions of labour found that, in leaving their own country, they had not left law behind them. About the time when Mr. Bright eloquently praised William Penn for dispensing with capital punishment, a dozen of the delinquent miners were hanged in a batch by the government of Pennsylvania. It may be hoped that the railway mutineers will not expose themselves to the same penalty; but it would be a far graver fortune that their defiance of law should be rewarded by success. In the mean time they will not have failed to accomplish abundant mischief. The frauds of railway boards and the unprincipled legislation of some of the Western States had already discouraged English capitalists who might otherwise have invested money in American railways. The lawless seizure of many of the principal lines by the engineers and stokers discloses an additional risk by bondholders. Attempts of the same kind have been defeated in some Northern States; but the present strikes seems to be unusually formidable.

In the description of the funeral procession in Tôkiô on Thursday, the *Gazette* gravely states that "The *cortége* consisted of forty-eight magicians in the van, who were followed, etc." Now what on earth could they be wanted for, and in a van too? The only similar occurrence on record that presents itself to our memory was on the occasion, not of a funeral, but of a marriage—that of the peerless Chaoukeun to the magnificent Youantée—a full account of which will be found in the pages of the Wondrous Tale of Han, from which we quote:—

"Five thousand political mountebanks, contradicting each other, and exerting themselves for the amusement of the people, who however suffered rather severely from their mad tricks.

The Emperor's juggler who astonished the whole empire by his extraordinary feats and the rapidity of which he relieved them of all the money in their pockets."

Our contemporary then goes on to say that the body of the Princess "was laid beside that of the husband of the late Shogun." We would suggest that some correction be made here in the issue for the mail, as otherwise readers at a distance may be misled as to the sex of the Shôguns.

CRICKET.—The cricket match which was played on Thursday, "Settlement *v.* The Fleet and Visitors," was by far the best we have had this season. The "Settlement" sent their opponents in first, Havergal and Lee appearing at the wickets to commence the game. Lee was quickly disposed of and so were his two successors, when Bain took his place opposite to Havergal and the two kept up a very lively game between them. Abbott was not up to his usual form of bowling, and it would perhaps have been more judicious if he had been taken off earlier, and tried again later in the day. However, Bain succumbed to a ball from him at last, and of those who followed, only one, Loane, succeeded in just getting into double figures. But Havergal stood his ground nobly, and when the last wicket fell for 161, carried out his bat, with the proud satisfaction that he had himself contributed a well played 91 towards making up that total,—a score never yet approached on this ground. Throughout, his was a careful and extremely well played innings, though he was let off once or twice in the neighbourhood of the wicket.

The fielding of the "Settlement" was better than on former occasions this year, though it will still admit of great improvement, but it is difficult to see how this can be attained if the greater number of the eleven never appear on the Cricket Ground except at matches. It is worthy of note that "The Fleet and Visitors" scored no byes at all.

For the "Settlement" Dodds and Mollison first appeared at the wickets, and both played well and carefully, though Dodds, who gave several chances to the field, only escaped because the ball was "muffed" time after time. Mollison was at length bowled by a ball which first hit his leg, and his place was taken by Abbott, who was caught by Havergal when he had added but 4 to the score. Hamilton succeeded him, and began at once with very free hitting, which seemed to demoralize the bowling, never very good at any time. After running up a capital score of 56 Dodds gave a very easy chance to short leg, which Havergal did not fail to take advantage of. Wheeler followed him, but was put out almost immediately. Kirkwood then went in, and played a very cautious game until he became better acquainted with the bowling, and then commenced hitting more freely. In the meantime Hamilton, who had punished the bowling pretty considerably (he made one splendid hit clear over the railings), perhaps, became careless, and was bowled by Keary. His place was taken by Barlow, who ran up a score of 15, while Kirkwood increased his to 30, and at this stage the stumps were drawn, showing a total of 205 for the "Settlement" with only five wickets down. Several ladies were present during the afternoon to watch the progress of the game, and at 4 o'clock the band of *Tennessee* arrived on the ground. The following is the score:—

THE FLEET AND VISITORS.

Havergal, not out	91
Lee b. Dodds	1
Keary b. Abbott	1
Llewellin c. Mollison, b. Dodds	3
Bain b. Abbott	26
Wade c. Milne, b. Dodds	1
Boyer c. Abbott, b. Dodds	2
Tate b. Abbott	1
Loane c. Mollison, b. Dodds	11
Campion b. Dodds	0
Woodbridge b. Hamilton	0
Leg Byes	3
Wides, etc	21
Total	161

On Friday lot No. 9, on the Bund—the site of the Hopitâl Jaurés which was burnt down three years ago—was sold by auction and fetched only $3,000. Two years ago this lot was purchased by a Yokohama firm for the sum of $9,000, which was then considered a moderate price. This is a pretty fair proof of the fall in value of property in the settlement, and surely affords sufficient grounds for our protesting against the excessive ground rents which property holders are compelled to pay.

From the "Japan Mail Daily Advertiser."

Monday, 10th.

When the *Wilhelmine* left Hakodate the *Ocean Pearl*, *Friedrich* and *Ching-Too* were loading there, and expected to leave on the 6th August for this port.

From the *Mainichi Shimbun.*

Since the entry of the rebels into Kagoshima, they seem to have obtained possession of all the arms and ammunition which were formerly hidden in the provinces of Hiuga and Osumi, for they are now armed with snider rifles and have excellent cartridges.

It is not true that Hiuga is over-run by rebels, or that Miyako-no-jô has been captured.

We hear that a private letter has been received to the effect that many of the *samurai* of different parts of Satsuma, who were confined to their homes after surrendering to the Imperialists, on receipt of the news of Saigo's march South, were either compelled to once more take up arms against the Imperialists, or have voluntarily joined Saigo, for when he passed Yoshino his forces numbered about four thousand. At the time that the rebels broke through the Imperial lines at Eigatake ° ° ° very narrowly escaped being killed outright at the hands of Kirino, and now lies seriously wounded. When the officials were fleeing from Kagoshima ° ° ° was lost sight of and has never since been seen. We have heard many other facts but refrain from publishing them.

From the *Nichi Nichi Shimbun.*

His Majesty the Mikado has presented the family of Ohara, the noble who was murdered a few days ago, with three rolls of red and white silk.

H. E. Sameshima, Vice-Minister of Foreign Affairs, and Mr. Mori, a Secretary of that Department, went to Kobe by the *Tokio Maru* on the 5th instant.

During the month of August the following prisoners were sentenced at the Tôkiô *Saibansho*:—1 to be beheaded; 13 to hard labour for ten years and under; 199 to hard labour for less than 100 days.

There are many armed burglars now in Tôkiô.

From the *Akébono Shimbun.*

At about 2 p.m. on the 8th instant, His Excellency Okubo went in great haste to the Bureau of Police, but as the office was already closed, His Excellency immediately proceeded to the residence of Mr. Kawaji, the Chief of Police. What can be the cause of this hurry?

A telegram despatched from Nagasaki on the 8th instant at 6.10 a.m., says that the Imperial head-quarters have been removed to Taniyama.

From the *Akébono Shimbun*, extra.

A telegram from Kajiki, despatched at 3 p.m. on the 5th instant, announces that Assistant Police Inspector Watanuki has successfully defended the godown near the *Kencho* at Kagoshima, which is still in his hands. The repulse of the rebels on the 4th instant has opened communication with the coast.

From the *Hôchi Shimbun.*

It is rumoured that Miyako-no-jô is again in the hands of the rebels, and that great agitation is prevailing in Shikoku.

The rebel leader Katsura Yemon, with eight thousand men, three thousand of whom were wounded, has surrendered to Lieut.-General Nodzu.

From the *Osaka Nippô.*

At Fukuyama, in Bingo, a fire broke out on the 28th instant which distroyed three hundred houses. Twelve persons were burned to death.

From the *Chôya Shimbun.*

A telegram despatched from Osaka at 9.45 on the 7th instant, says that a report has been received from Colonel Ozawa at Hososhima, to the effect that the rebels are now stationed at Shiroyama and Shigakuto, in Kagoshima. They made a general attack upon the Imperialists at dawn of the 4th instant, but were repulsed with the loss of thirty-one men, among whom was Kishima Kiyoshi and several other leading men.

Kawaji, the Chief of Police, will probably start for Kagoshima on the 14th or 15th instant.

Three hundred policemen are to be despatched to Tosa in a few days.

The P. M. Steam-ship *China* left for San Francisco yesterday evening, taking the following cargo of Tea:—

From	San Fran.	N. York.	Other cities.	Total.
Shanghai	—	625	—	625
Nagasaki	—	—	233	233
Hiogo	476	290	8	766
Yokohama	2,919	15	471	3,373
Hongkong	328	2,898	241	3,266
Total	3,723	3,828	953	8,263

Tuesday, 11th.

From the *Osaka Nippo.*

There were 3,855 patients in the Osaka Special Hospital on the 6th instant.

From the *Nichi Nichi Shimbun.*

Kirino was wounded on the 30th ultimo, says a letter from Kagoshima, and Hemmi Juroda has since been commanding the rebel forces.

Ikebe Kichijuro, the commander of the Higo *samurai* who joined the rebels, was wounded once at Kumamoto and again at Hitoyoshi, but accompanied the rebel troops as far as Sadowara. At the engagement there he saw his men put to flight, which so incensed him, that wounded as he was he rushed to the front to endeavour to rally them and oppose the enemy. When the Imperialists drove the rebels before them he was unable to accompany the latter in their flight, owing to his wounded state, and nothing has been heard of him since. The above particulars were obtained from a rebel prisoner.

From the *Hôchi Shimbun.*

It was agreed with Korea that two more ports should be opened twenty months after the date of the signing of the treaty, but owing to the war in the south no preparation has hitherto been made to carry out this agreement. The *Nisshin Kan* is now being prepared at Yokosuka for a voyage to Korea there to survey and select favourable ports.

From the *Osaka Nippo.*

As Kataoka Kenkichi, the President of the *Risshisha* is undergoing examination at Tôkiô, Shimaji Masanori has been elected Vice President by the members, and is conducting the affairs of the Society.

From the *Akébono Shimbun.*

A telegram despatched by Sub-Inspector Watanuki from Kagoshima at 4 p.m. on the 8th instant, says that according to the orders of Vice Admiral Kawamura police forces have been stationed at Taniyama and other places to capture all the rebels who attempt to seek safety by flight.

Major General Kuroda has said that he has very often fought in company with Saigo and observed many instances of his excellent strategical skill, but that he did notice any display of it during the present war as the manœuvres were of a very ordinary nature, until Saigo's re-entry into Kagoshima, which was indeed an act worthy of his reputation.

Wednesday, 12th.

We understand that the O. S.S. *Agamemnon* will remain at Singapore for repairs. The S.S. *Nestor* has a new shaft on board for her.—*China Mail.*

From the *Nichi Nichi Shimbun.*

The expenses of the war up to the 10th instant, as paid by the *Okurasho*, amounted to 34,020,298 *yen*.

Original from UNIVERSITY OF CALIFORNIA

From the *Chôya Shimbun.*

A telegram from Nagasaki despatched by Police Sergeant Nakagawa to Kawaji, the Chief of Police, at 2.30 p.m. on the 10th instant, announces that Police Sergeant Ando left that port yesterday evening, and Yujun was also leaving at time of despatching the message with eight hundred policemen. The remaining police would leave at 4 p.m.

A telegram from our reporter at Kumamoto, despatched at 9.30 a.m. on the 9th instant, says that the rebels defeated the *Shinsen-riotan* at Kagoshima on the 5th instant and captured four large guns and a large quantity of ammunition. The Kagoshima *Kencho* was transferred to Kajiki, in Osumi, on the 7th instant.

Miura and two other *samurai* of Tosa were brought to Tôkiô under arrest on the 10th instant.

From the *Hôchi Shimbun.*

A telegram from Taniyama, despatched by Sub-Inspector Watanuki at 5.30 p.m. on the 10th instant, says that some of the men under his command were sent to Tenoura, and there ascertained that all the paroled Satsuma men who were forced to join Saigo on his march through, deserted from the rebel ranks after the arrival of Imperial reinforcements at Kagoshima.

Soyejima, the ex-Minister of Foreign Affairs, who has been in China for some time, is said to have left that country for Japan on the 7th instant.

Sakuma Oyakata, Iye Shinunjô, and Moromizato Shinunjô, of Loochoo, have for some time past been examined at the 3rd Police Station, but since yesterday such examination has been transferred to the Tôkiô *Saibansho.*

There are many pretended graves of Saigo to be met with the borders of the provinces of Hiuga and Osumi, on opening which only old rebel paper money or bodies of rebels of no importance are to be found.

Thursday, 13th.

By the *Saikio Maru* yesterday 387,655 old silver *bus* were shipped to the Mint at Osaka.

From the *Mainichi Shimbun.*

A telegram from Sub.-Police Inspector Watanuki at Kagoshima, despatched at 5.40 p.m. on the 10th instant says :—109 of the rebels who were hiding at Tano-ura, with their swords and a few fire arms were captured on the 9th instant. Another capture of 88 rebels has also been made.

It is reported that a telegram has been received from Sub.-Inspector Watanugi to the effect that the sending of reinforcements should be discontinued for the present, as he has certain schemes of his own which will be frustrated by the presence of too many troops.

From the *Hôchi Shimbun.*

In our yesterday's issue we stated that several of the Loochooan envoys had presented themselves at the *Saibansho.* It now appears that their attendance there was occasioned by the fact that a Loo-chooan has been arrested at Osaka for stealing some articles from the residence of the representatives of Loochoo at Tôkiô, and the envoys now request that the prisoner may be sent to Loo-choo to be tried before the native court.

From the *Nichi Nichi Shimbun.*

A man named Yoshida, of Ishijiku in Musashi, was so excited by the discovered infidelity of his wife, that in his madness he was determined to kill her. Arming himself with a sword he rushed out of the house for the purpose, and seeing, as he thought, his wife standing at the outer gate, immediately cut off her head, only to discover, when too late, that he had killed his neighbour's wife instead of his own.

The *Tsukuba Kan* is, it is said, to be despatched for Korea on the 18th instant. Mr. Hanabusa, of the *Gaimushô*, has been appointed Chargé d'Affairs for that country.

From the *Osaka Nippô.*

One regiment of troops from the Hiroshima garrison has been despatched to Kumamoto garrison, and the Hiroshima garrison has been reinforced by one regiment of troops from Matsuyama, while one regiment from the Himeji garrison has been sent to Matsuyama.

From the *Akébono Shimbun.*

The *Okurasho* has handed over 700,000 *yen* to the Bureau of Police to be sent to the Kagoshima *Kencho*, in order to meet the expenses caused by the unexpected entry of Saigo into the town of Kagoshima.

Friday, 14th.

From the *Nichi Nichi Shimbun.*

The widow of Ohara, the under Secretary of the Foreign Office, has died of the wounds which she received at the time of her husband's assassination.

From the *Nichi Nichi Shimbun.*

A new building in foreign style is to be erected for the Daijokwan within the Palace grounds at Akasaka, the cost of which will be 30,000 *yen.*

From the *Osaka Nippo.*

On the eighth instant six field pieces, and one thousand stand of arms were sent from the Osaka arsenal to Kagoshima.

A request has since been received from the seat of war that ten thousand stand of arms be sent down at once. The Government arsenals at Osaka and Tôkiô are to turn out five thousand stand each, and send them to the South as soon as they are ready.

Saturday, 15th.

Late yesterday evening the Agent of the Great Northern Telegraph Co. received intelligence that the cable between Gutzlaff and Amoy had been repaired, and communication again opened with Hongkong.

From the *Chôya Shimbun.*

The Emperor will review the 3rd Division of Police at Fukiage, Tôkiô, on the 15th instant.

Our reporter at Kumamoto sent a telegram at 3.30 p.m. on the 13th instant, announcing that the Kagoshima *Kencho* has been established at Shirahama-mura in the Department of Heisa. No changes have taken place in regard to the position of the opposing forces.

From the *Hôchi Shimbun.*

All the policemen of Kôchi *ken* (Tosa) are to be dismissed and a body of the Tôkiô police will be sent there.

The rebels have taken possession of 1,500 overcoats that the Okura Company had made for the Imperial troops by order of the Army Department.

On an average the Osaka Mint supplies the Osaka garrison with three and a half million *yen* per month, to cover the war expenses.

From the *Mainichi Shimbun.*

An Italian silk merchant has said that as Japan produces such large quantities of silk-worm's egg cards, of which fact the raisers of silk in Italy are fully aware, so that they will not therefore give high prices for them. For this reason, if the number of cards was limited to five hundred thousand, it would be much better for both Italian and Japanese merchants.

Nakamura Shikan and several other famous actors of Tôkiô will shortly give a performance at Sanomatsu-za in Hagoromo-chô. They will be succeeded by some famous actors from Suruga.

From the *Nichi Nichi Shimbun.*

The eighty-nine rebels of Higo who were captured at Nobeoka were sent to the Kumamoto *Kencho* on the 30th ultimo for examination.

A telegram from Police Sergeant Hagiwara at Saiki in Bungo to the Chief of Police Kawaji, despatched at 11.05 a.m. on the 11th instant, is as follows :—"I have been ordered with three hundred men under my command to go to Kagoshima, so will start to-morrow with four companies."

H. E. Sanjô has been appointed to review the troops at Fukiage in the place of the Mikado, as for certain reasons His Majesty is unable to attend in person.

Just when Iwamura, the Governor of Kagoshima *ken*, was starting hurriedly for Nagasaki, he left the following, which was addressed to the rebels entering the town :—"Do not des-

Digitized by Google

troy the *Kencho*. Do not act violently to the wounded rebels in the Hospital. Do not oppress the people."

From the *Akébono Shimbun*.

We hear that a committee has been appointed, consisting of certain Government officials, to reform the newspaper laws, and that the draft copy of the new regulations has been prepared. But we hear that the members of the committee were divided in opinion, some saying that distinction should be made between those who wilfully and those who unintentionally violate the laws. Some, again, were of opinion that the laws should be made more comprehensive, and others that the penalties should be lightened, while others, again, thought that the laws should remain as they are at present. At all events one of the Ministers urgently requests that some decision may be arrived at before the present troubles are over.

The 17th instant being *Shinshō-sai* (day of thanksgiving for the new harvest), a military band will play at the exhibition.

IMPERIAL GOVERNMENT RAILWAYS.

YOKOHAMA STATION.

Statement of Traffic Receipts, for the week ending Sunday, 9th September, 1877.

Passengers, Parcels, &c.	$6,370.24
Merchandise, &c.	$ 818.03
Total.	$7,188.27

Miles Open 18.

Corresponding week last year.

Passengers, Parcels, &c.	$7,193.53
Merchandise, &c.	$ 833.84
Total.	$8,027.37

We are led to understand that the rumour regarding the retirement of Sir John Smale from the Bench here is entirely groundless. His Lordship, who rejoices in the possession of good health, has at present no intention of retiring, although doubtless he will not object to his usual furlough when his turn comes round.—*China Mail*.

The S.S. *Venice* reports very bad weather to the southward. On Sunday night she experienced a heavy gale from the S.W and during a heavy lurch the cargo shifted slightly to port, and the same day she lost her after awnings.—*China Mail*.

The S. S. *Amboto* from Saigon encountered a typhoon on Sunday last, at 9 p.m., when a little to the southward of the Island of Hainan, and sustained considerable damage. She reports having lost all her sails, one boat and everything moveable about the decks. The force of the sea was so tremendous that the steam-pipes on the decks used for conveying steam to the winch were torn completely up and the tarpaulins were washed off the hatches. —*China Mail*.

The wind has veered round from the South-west to the West and North to-day, bringing with it a very heated atmosphere, and a shower of minute black worms, with which many people found their clothing and persons covered. It is to be hoped some naturalist will be able to inform the public what they are; many residents of long standing have never experienced a similar visitation before.—*Shanghai Courier*.

A letter from a Wuchang correspondent comes to hand just in time to announce that some energy has at length been shown in the matter of the attack by the students on the gentlemen of the Wesleyan Mission. Two hundred of the students were captured and marched to the parade ground, and some who were identified have been severely sentenced, two of them to 600 blows and five months imprisonment.—*Shanghai Courier*.

The steamer *Athol* Captain Thomson, experienced a typhoon on the 26th ult., while on a passage from Nagasaki to this port. She behaved well, and has sustained little damage.—*S. C. & C. Gazette*.

THE QUARANTINE REGULATIONS AND THE PREVENTION OF DISEASE.

THE native authorities have evidently taken alarm in reference to the possible introduction of cholera, and it is an evidence of substantial progress that this alarm has caused the issue of regulations which, while very defective in some essential particulars, are yet, on the whole, conceived in a proper spirit and calculated, if stringently enforced, to effect great good.

It will be lamentable if the Government, having taken so long a step in the right direction, does not go on in the work of sanitary precaution, applying it not merely to the exclusion and limitation of cholera, but to other more common and more manageable diseases, the causes of which are always present, and which are often exceedingly fatal in Japan as elsewhere.

A few words on preventible diseases, and on sanitary science as applied to the control of such diseases, seem appropriate in this connection.

Modern investigations have proved that a large number of the most common and fatal diseases are either entirely preventible, or may, at least, be controlled and limited even when they have made their appearance in virulent form. Most of these diseases belong to the class known as infectious, that is, diseases caused by the reception of some poisonous matter within the system, the peculiarity of this poison, by which it differs from ordinary poisons, being that it possesses the power of reproducing itself under favourable circumstances to an almost infinite extent. Certain diseases, as small pox, scarlet fever, measles and syphilis have long been recognized as infectious in the highest degree. Many other diseases formerly considered as non-infectious are now known to belong to this class, such as typhoid fever, relapsing fever, cholera and dysentery; while the tendency is rather to enlarge the list of infectious diseases than to diminish it. It is believed by many able men that pulmonary consumption and scrofula will yet be proved to be communicable, and consequently preventible diseases.

Without going deeply into the vexed question of the physical nature of the poisons of the infectious diseases, it is sufficient to say that the tendency of modern thought is to the belief that in nearly, if not quite all of these diseases, the poison is either in the form of low vegetable organisms, or else belongs to that border land between the plant and animal, the existence of which is now generally acknowledged. On no other hypothesis can most of the phenomena be so easily explained, and, while in regard to the greater number of infectious diseases the poison itself has never yet been isolated or seen, yet in at least two distinctly infectious disorders—malignant pustule and relapsing fever—the efficient cause of the disease has not only been found and examined, but in the case of malignant pustule has been used successfully to produce the disease in the lower animals. In these cases the disease germs appear to belong to the lowest forms of the vegetable kingdom, and to that class of simple structure known as ***bacteridia***.

It is probable that the mode of reproduction of the infecting material, be this material what it may, bears a close resemblance to that of the lower forms of fungi, and is favoured by like circumstances. It may be that the germs of some diseases multiply only within the animal organism; it is certain that the multiplication of others is favoured by their reception in a suitable soil with surround-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

ings of dampness and decaying organic matter and under reasonably high temperature.

From the above it follows that we may, for any of the infectious diseases, speak of its causes as primary and predisposing, the primary cause being the specific germ of the disease, probably always originating from some antecedent case, and the predisposing causes being those conditions which favour the development and reproduction of this germ.

Disease poisons vary as to the mode by which they are propagated from individual to individual. In some diseases the infection is carried suspended in the air, as in typhus. Again the poison is transmitted by the contamination of drinking water, as in typhoid, or by direct contact, as in glanders or malignant pustule; while in some cases the virus may be transmitted by all of these or by other means. These poisons differ also as to their tenacity of life, in whooping cough, for example, the contagion acts but through a brief space, and during a short time, actual reception of the breath of the affected individual appearing necessary for the propagation of the disease. In other cases, as in scarlet fever, the poison exhibits the most wonderful endurance and vitality, clinging to infected articles of dress or to houses for months or years. It is this tenacity of life on the part of some of the disease poisons that enables us to explain the appearance of the *first* case in many epidemics of several of the infectious diseases, the poison having lain dormant until favouring circumstances stimulated its development, the case from which the poison was originally derived having occurred long previously or at some far distant point.

In attempting the prevention of infectious diseases, we have first to undertake the destruction of the disease germs where we *know* them to exist, viz.: in the body of the sick: second, to close all channels by which they may be transmitted from the affected individual to others, or to lurking places when they may lie till they find a victim: third, to render the conditions unfavourable to the development, propagation and preservation of the germs which have escaped.

For the destruction of the disease germs within the body of the affected individual, we are in general powerless. In a few diseases we probably succeed in so doing, to at least a certain extent, but in by far the greater number we can do little other than to sustain the patient, guide and mitigate the course of the disease, and wait for the cycle of changes in the diseased process to complete itself. It is to the second and third means that we must look for success in the prevention of disease. For the arrest of the transmission of contagion to others, the first steps are the isolation of the sick and the prevention of approach to the dead, a course undoubtedly repugnant to our feelings in many cases, but one so essential that it will certainly in the future be enforced by an enlightened state medicine. Measures should also be taken to avoid accumulation and concentration of the poison in the sick room, and to neutralize and destroy the poisonous emanations of the sick as fast as they are given off. We can, as yet, fulfil these indications but imperfectly, yet can do much. The means to be used consist in free ventilation and the employment of volatile disinfectants such as chlorine, carbolic acid or sulphurous acid, together with the prompt disinfection and, if possible, destruction of all those solid and fluid matters derived from the body of the sick, which experience has shown to be presumptive carriers of contagion.

The third indication mentioned above, that of rendering the conditions unfavourable for transmission and multiplication of disease germs, is only to be fulfilled by the exercise of an intelligent supervision of the surroundings and mode of life of each member of the community. Conditions favouring the development of infectious disease may exist within the individual, for anything which depresses the vital powers or predisposes to disease in general may predispose to infectious disease. The more robust and perfect the health of the man, the less likely is he to contract infectious disease. The food supply of the people, the quality of their drinking water, their habits of life, such as personal cleanliness or the contrary, and the ventilation and warming of their dwellings, should all receive attention in this connection.

Experience has proved beyond a doubt that the condition of the water supply of a community is one of the most important factors in the causation of health or disease. This applies not only to the wholesomeness or otherwise of the water considered with reference to its chemical constitution or impregnation with mineral matter, but more especially to water as a carrier of disease germs from man to man. Water is of all other articles of human consumption that which is most easily and frequently contaminated. The connection of a cesspool or sewer with the water supply of a town has again and again caused epidemics of typhoid, and under similar circumstances might aid in the diffusion of cholera to an almost unlimited extent. Mere filtration of infected fluids through the soil is by no means certainly destructive of their power for evil. All depends upon the distance through which the fluid passes in the earth, and on the chemical constitution and porosity of the soil. Wells may be, and often have been, contaminated by leaky drains or sewers even when many feet distant. Porous or leaky water pipes passing near or through sewers are also active carriers of infection.* In fact, the minuteness of the individual germs and the smallness of the quantity of infecting material required to produce disease, render it almost impossible so to construct drains or sewers as to prevent injurious leakage or percolation. The only safety seems to be in a wide separation of the drainage system from the sources of water supply.

Any collections of filth, stagnant water, or decomposing offal are likely to afford a favourable soil for the development or preservation of disease germs. All such possible foci of infection should therefore be as soon as possible removed from the neighbourhood of human habitations, while in time of epidemic they should not only be removed but should in most cases be disinfected and where possible destroyed. This is more especially necessary with reference to night soil and other human excreta, which if not

* A striking instance of this occured during 1876 in the native police force of Yokohama, where an epidemic of typhoid fever amounting to 23 cases in a total of 200 persons, was clearly and unmistakably traced to the use of water from a certain well fed from the acqueduct, but of which the supply pipe passed directly through a large and foul sewer. In this case none were attacked save those who used the infected water, and measures taken for the correction of the evil were immediately followed by the cessation of the epidemic. The history of this outbreak, which is interesting on account of the clearness with which the connection of facts was traced, has been fully reported by the observer, Dr. D.B. Simmons, Surgeon to the Police Force, in the April number of the Am. Journal of Medical Science, 1877.

already containing the germs of disease, afford the most favourable locality for their reception and development.

This subject will be continued in a future issue, when the details of the methods to be employed for prevention of disease will be considered, more especially in connection with what we believe to be important omissions from the new quarantine regulations.

SPIRIT OF THE JAPANESE PRESS.

Privileged Classes.

(From the "Choya Shimbun," 9th August, 1877.)

A title without privileges attached to it is a worthless honour. People are glad to have titles bestowed on them, because it is a mark of honour, and it grieves them when they are deprived of them because it brands them with disgrace. But when titles are bestowed they are always accompanied by certain rights and privileges, otherwise they would constitute no reward for noble actions, while their withdrawal would carry with it no disgrace. For instance, when Gombei is told that his name is changed to Hachibei, he will not on account of his change of name set to work to reform his conduct. If a farmer, because he committed some crime, were to be told that he would hereafter be called a merchant, what would he care? Such changes have no effect on character, for the simple reason that Gombei in no ways feels honoured by his name being changed to Hachibei, while the farmer suffers no disgrace from being called a merchant.

By the same course of reasoning depriving *samurai* of their rank of *shizoku* and calling them *heimin* has no longer any effect. At the present time if a *samurai* commits an offence, which according to the laws is punishable by one hundred days' imprisonment, he is merely deprived of his title. Thus while all offenders who are merely commoners have to toil at carrying earth and stone for making roads, the *samurai* can remain in idleness, although they may have committed crimes of equal gravity with those who suffer the punishment of hard labour.

When this law first came into operation, however, it was not intended thereby to treat the *samurai* with any special clemency. In former days there was, in their opinion, nothing so disgraceful as to be deprived of their title, for in feudal times a *samurai* was so far above the mass of the people, that a commoner had to stand one one side and make way for his superior to pass. In those days the richest merchants and wealthiest land owners would not have hesitated for a moment in giving up all their possessions, if only thereby they might become *samurai*, so precious did the title then seem. Moreover, everyone who held the rank of *samurai* had certain estates granted him by his lord, which no longer remained to him if he was deprived of his title. Thus loss of rank in those days was indeed a serious punishment.

But the *samurai* of to-day is a very different being from the *samurai* of former days, and it is hard to say what there is to distinguish him from the *heimin*. They are either defenders of their country or drones, or anything in fact, and to all intents and purposes they might just as well be *heimin*. If any farmer or merchant were told to-day that he could have the title of *shizoku* bestowed on him as a reward for having performed some praiseworthy act, he would be by no means pleased at the intended honour. What punishment, then, can it be to a man to be deprived of a title that no one deems it an honour to receive? Surely it can be none at all.

Now to punish the *samurai* by taking away their rank for the same crimes for which other men have to wear red cotton garments and work hard in the streets, is not in accordance with the spirit of the times. Moreover, when the *samurai* are given bonds for the pensions they have hitherto received from Government, then the bonds will become their own personal property of which the Government cannot deprive them. Thus the change of the name of *samurai* to *heimin* is nothing more than changing Gombei to Hachibei. We urgently request, therefore, that this law should be reformed, for under it the *samurai* are treated with too great clemency. Unless it be altered there is nothing to restrain the the *samurai* from committing crimes.

The same remarks hold good of the *kuazoku*.

Our Military System.

(From the "Akebono Shimbun," 3rd September, 1877.)

The military force, composed of volunteers most of whom are *samurai* and the standing army raised by general conscription, is a necessary establishment in the country at the present time, and destined to play an important part in its history. It is impossible as matters are at present to trust to the volunteers alone to defend the peace of the country, and no change can now be made in our military system. In time of such great emergency as the present the standing army is insufficient to resist the Satsuma insurgents, and new levies have to be raised. The question with which we now have to deal is whether our standing army should be increased or decreased.

In the olden times in Europe there were no standing armies, but as the rulers of the various countries acquired greater powers, their institution was found to be necessary, and thus at the present day each Empire has its standing army. The individual powers of the rulers have been curtailed, but the strength of the armies has been increased. The military forces of different nations are either smaller or greater according to the nature of the Government and the geographical position of the country. It is well known that in order to support standing armies the people have to be heavily taxed, whilst there is always the danger that rulers may make use of the military to enforce despotic measures, but the fact of their maintenance is sufficient to prove their necessity.

Now Japan has no neighbouring countries from whom inroads are to be feared, neither is there much danger of attacks from outside. Besides, we are on friendly terms with all the nations of the world, and there is no likelihood of any necessity arising for the sending out of hostile expeditions. Least of all does it appear likely that our Governmant would ever have recourse to the army to enforce despotic measures upon the people. There can therefore be no reason why our military force should be increased.

But it is urged by some that it is impossible to forsee what emergency may arise in the future, and in such a civil war as the present the Government has been sadly troubled by insufficiency of troops. This then would seem to show that the army ought to be increased.

Now we must bear in mind that Satsuma, against whom the Imperial troops have been so long struggling, has up to the present time been allowed to consider herself an independent province, and her *samurai* have been renowned for their skill in military science. It is on this account that the troops of the six garrisons, the Imperial guards, and the reserve forces have together proved insufficient for her subjugation. In the rebellions headed by Yeto Shimpei or Mayebara we had never to complain of paucity of troops, and when the present Satsuma insurrection has been suppressed, the peace of the nation will in all probability remain ever after undisturbed; that is to say, provided that the Government does not seek to enforce despotic measures, in which case no matter how strong the standing army, it would be worse than useless, as it would probably turn against the Government, which would be without any means of protection.

We trust therefore that the Government will be just and liberal in its dealings with the people, and set to work to frame a constitution that will prescribe bounds for the exercise of administrative powers. Then it will at once be able to reduce the military strength, the support of which is an unbearable burden upon the people.

The question may be asked, Is the present military system the best that could be adopted? We reply that it certainly is not. When Prussia was defeated by the forces under Napoleon, the latter forced her to bind herself not to keep an army of over fifty thousand men. Owing to this arrangement, in Prussia every man in turn underwent a short period of military service, so that in time the whole nation became trained in the use of arms. This is the system which we wish to see adopted in Japan, for by such means will the whole nation be brought to know the rights it is bound to defend, and be prepared to meet any internal disturbance or any attack from abroad, although the actual numerical strength of the standing army be very small.

"Berkeley, Sept. 1869.—Gentlemen, I feel it a duty I owe to you to express my gratitude for the great benefit I have derived by taking 'Norton's Camomile Pills.' I applied to your agent, Mr. Bell, Berkeley, for the abovenamed Pills, for wind in the stomach, from which I suffered excruciating pain for a length of time, having tried nearly every remedy prescribed, but without deriving any benefit at all. After taking two bottles of your valuable Pills I was quite restored to my usual state of health. Please give this publicity for the benefit of those who may thus be afflicted.—I am, Sir, yours truly, Henry Allpass.—To the Proprietors of Norton's Camomile Pills."

January 13, 1877. 13ins.

A CHAPTER OF MODERN JAPANESE HISTORY.

After Imagawa Yoshimoto, the *Daimio* of the provinces of Tôtômi, Mikawa, and Suruga, was defeated and slain by the troops of Ota Nobunaga at the battle of Okehazama, in the year 1560, his son Ujizane turned *rônin*. His descendants also, down to the time of Oshiwo Heijibei, who was *Yoriki** under the Governor of Osaka at the end of the last century, remained *rônin*, and had no settled residence or occupation. This Oshiwo, who was a man of good repute, had a son born to him about the year 1792, who was named Heihachirô, the events of whose life are briefly recorded in the following narrative.

As a boy Heihachirô was remarkable for cleverness, and for his fondness for literature, fencing and all the accomplishments which go to make up the education of a *samurai*. At the age of fourteen or fifteen he set out for Yedo, having received permission from his father, in accordance with his wishes, to complete his education in that city. As he was travelling over Sudzuka-yama in the province of Isé, a pass nearly as high as that of Hakoné on the Tokaidô, he was stopped by two robbers of great stature, who came up and demanded his money, threatening to kill him unless their demand was complied with. Heihachirô, not being a youth easily frightened by such threats, determined not to yield without a struggle, and clutching one of the robbers, succeeded in hurling him over a precipice. Drawing his sword he then turned on the other, who was also armed, and they fought for some time. Finally they grappled, and Heihachirô managed to disable and bind his antagonist. He then said, "Your life is in my hands, but I will have mercy and spare you on certain conditions. You are a strong, able man. If I let you go free you must promise me that you will repent and lead a different career. Get your living by honest means, as you are quite capable of doing, and leave your present degraded mode of life." The fellow promised, and Heihachirô letting him go free, proceeded on his way to Yedo.

On his arrival there he became a student of the National University, and resided in the house of Hayashi Daikaku-no-Kami, the Director of the College. For a period of five years he pursued his studies with untiring diligence, and became the head student of the University and Professor of Literature. He was then compelled to return to Osaka in consequence of the illness of his father, who died very shortly after his return, and Heihachirô succeeded to his position and emoluments. Takaye Yamashiro-no-Kami, the then Governor of Osaka, hearing of the excellent abilities of the new *Yoriki*, appointed him to the position of judge, which office he discharged with great honour. In those days the judge was both the judge and the law, for legislation being then in its infancy, cases were mostly decided at the will of the judges. The consequence was that such judgments were mostly given as partiality might dictate, or bribes could buy, and the grossest injustice and corruption prevailed.

But this was not the way in which Heihachirô discharged his duties. All his judgments were delivered in a straightforward manner, and in accordance with strict justice. He never courted the favour of the powerful nor played into the hands of his friends, neither did he flatter his superiors nor despise those beneath him. His chief aim was to promote the welfare of the people, and after his official duties were discharged, he occupied his leisure in teaching a number of pupils fencing and literature.

As he had now arrived at the age of thirty and had no children, he adopted a pupil of his named Nishida Kakunosuke, who showed signs of great talent. Heihachirô had always been a special favourite with the Governor of Osaka, Takaye, who had long since recognised his abilities and on many occasions profited by his advice. Unfortunately for him, his patron was recalled to Yedo, and his place was filled by another Governor, a man of totally different character, who refused to listen to any of the representations which Heihachirô made on behalf of the welfare of the people. The latter, therefore, finding all his endeavours set at nought, and the workings of justice interfered with, resigned his post, settled certain property on his adopted son, and retired to his estates where he devoted his time entirely to the education of his pupils.

Now in those days a terribly selfish and oppressive spirit prevailed among the official and wealthy mercantile classes, and it had always been Heihachirô's earnest desire to bring about a better state of things and alleviate the condition of the people at large. The crops had for several years past been very bad, and the consequent high price of rice was causing much misery to the farmers and the poorer classes. It was in vain that Heihachirô and his son memorialised Atobe Yamashiro-no-Kami, the new Governor of Osaka, to take some steps to aid the suffering people. Their petitions were rejected and their representations remained unnoticed. Then Heihachirô in anger denounced the selfishness of the authorities, and seeing no other means of affording relief, sold his property and distributed the proceeds among the most needy.

From the commencement of the year 1836, heavy rain fell unceasingly, and so unusually cold was it that summer clothes could scarcely be worn in the sixth month (August according to present reckoning). During the same month there occurred a severe storm which nearly ruined the crops of the fifteen provinces of the Tôkaidô and Oshiu, already poor enough on account of the inclement season. The following month there was a still more violent tempest which uprooted trees, wrecked many vessels on the coast, broke down the river embankments, and caused floods which carried away houses and destroyed the remnant of the crops that the former gale had spared. In some regions the people were rendered utterly destitute and many died on the road-side of starvation. Such terrible sufferings from famine as those endured during this 7th year of Tempô have fortunately rarely been recorded in the history of Japan.

During the famine the Government authorities acted in the most shameful manner toward the helpless and destitute people. They cared only for their own selfish interests, and did nothing to relieve the starving population. The rich merchants, also, by means of bribes to the officials, taking advantage of the general distress bought up all the rice and other necessaries, and sold them again at outrageous prices, thus making capital out of the general misery and filling their own pockets at the expense of the starving thousands. Instead of doing anything for their assistance, they added to their own luxury and spent their ill-gotten gains in every kind of degraded pleasures.

To a man like Heihachirô, who had at heart only the well-being of the people, this state of things was unendurable, and in the following year, 1837, he determined to make an attempt to relieve the ever increasing misery, by overthrowing the corrupt officials, and depriving the merchants of their inhuman gains.

With this intent he got together a body of men to whom he stated his views, and drew out a manifesto to the following effect:—

"The Government most gravely mismanages the affairs of the State and uses no discrimination in its administration. The officials have no respect for the will of the Emperor, and act in utter violation of the laws established by the Tokugawa dynasty. Taxes are for ever being imposed and those who collect them seem insatiable. However great the sufferings of the people may be, the officials show not the slightest wish to do anything to alleviate them. They and the wealthy merchants indulge in every kind of luxurious pleasure, never showing an atom of sympathy with the distress of the poor. For these reasons it is decided that such officials must be destroyed, and the inhuman merchants be deprived of their wealth, that you, the people, may be relieved from your present misery. Should any uprising take place, select your leaders and come to our assistance, so that you may be transported from the tortures of hell to the happiness of Paradise?"

The above was written in the plainest and easiest Japanese style, so that farmers, women and children could read and understand it. At the end the proclamation was inscribed "Punishment from Heaven." It was then enveloped in silk with the words "Heaven's commands to the farming class," and distributed throughout the provinces of Settsu, Kawachi, Idzumi and Harima, copies being pasted on the pillars of every Bhuddist temple and Shintô shrine.

* An officer with magisterial power, who in time of war was called upon to perform military service.

Now the 19th of the second month (April) was appointed as the day on which Hori Iga-no-Kami, the Governor of East Osaka, and Atobe Yamashiro-no-Kami, the Governor of the Western districts, should meet and inspect the various wards of the city. It was also arranged that they should spend some portion of the day in recreation at the residence of a *Yoriki*, by name Asaoka, which stood exactly opposite the house of Heihachirô. The latter, taking immediate advantage of this opportunity, at once called together his party, made up of *Yoriki*, *Dôshin*, *Rônin*, students and the more wealthy farmers of the neighbourhood, the most prominent among whom was Hashimoto Chubei of Hanniaji-mura, whose daughter was a mistress of Heihachirô, and told them that although their plans of action were scarcely matured, it would never do to let so good an occasion for carrying out their intentions slip by. It was therefore agreed that they should fall on the two Governors when they were feasting in Asaoka's house, and having killed them sieze the castle, and after forcing the wealthy merchants to give up their property distribute it among the poor people.

Now by his mistress, Chubei's daughter, Heihachirô had one son named Hanjirô, who was then two years old, and before entering upon his daring project he secretly had both mother and child conveyed out of Osaka,and sent to some distant province where they could hide in safety.

The appointed day drew near, and orders were conveyed to the neighbouring farmers through Chubei to meet at the house of Heihachirô early on the morning of the 19th instant, as some presents were there awaiting them. On the night of 18th it was the turn of two *yoriki* named Koidzumi and Seda, both belonging to Heihachirô's party, to keep watch at the Government Office. It was therefore decided that as soon as the two Governors had set out they should fire the Office, and thus cause confusion that would be favourable to the carrying out of Heihachirô's plans.

Unfortunately for their success, one of the conspirators named Hirayama, a *Dôshin*, distrusting the success of the movement, went to Governor Atobe and disclosed the whole plot. Atobe was thunderstruck by the intelligence, and after consulting with Governor Hori, sent Hirayama early on the morning of the 18th to Yedo to convey the news to the *Bakufu*, Heiachirô being in the meantime entirely ignorant that he had been betrayed. On the 18th the Governors, intending to examine Koidzumi and Seda, ordered them to their presence. They immediately surmised that the plot had been discovered and attempted to escape. Koidzumi found himself surrounded by a body of *samurai*, and after bravely fighting for some time was cut down. Seda, however, succeeded in cutting his way through his assailants, and making good his escape, ran to the house of Heihachirô and informed him that he had been betrayed and that the whole conspiracy was known. Seeing no other alternative Heihachirô then decided to commence the fight rather than wait and be attacked.

At 8 o'clock on the morning of the 19th rockets and guns were fired to call the forces together. They had fire-arms and several pieces of cannon, and were likewise armed with spears and swords. Heihachirô, after setting fire to his own house, marched out at the head of his men. They fired the city in various parts, and extorting money from the wealthier merchants permitted the poor to take what they pleased. Osaka was very soon almost entirely in flames, the clouds of smoke that rose hanging over the city like a pall. The greatest confusion prevailed, women with their children on their backs, and the aged and helpless carried or led by the younger and stronger, struggling together in their efforts to escape the conflagration.

Heihachirô's forces gradually swelled in numbers, and were divided into two bodies, one commanded by himself in person, and the other by Oye Shôjirô. The authorities, on the other hand, were not idle. Tajima-no-Kami, the Commandant of the fortress, with the two Governors doing their best towards defending themselves. Stockades were thrown up round the Castle, while the *Yoriki* and *Dôshin* were sent out against the rioters. The fight was desperate on both sides, and the sounds of the firing and shouts of the combatants could be heard for miles. In spite, however, of their desperate bravery, the forces of Heihachirô, entirely out-numbered by the Government troops, were in the end utterly routed.

Heihachirô perceiving that there was now no longer any hope of success determined te destroy himself, but just as he was drawing his sword to inflict the fatal cut he was siezed from behind, and a voice entreated him to commit no such act. Looking round he saw a priest of tall stature, who addressing him said, "I am the robber who attacked you on Sudzuka-yama many years ago. Acting on your warning I changed my mode of life and entered the priesthood. I have been for a long time in Osaka, and knew that Oshiwo Heihachirô was the boy whom I once attempted to rob, but I was ashamed to show my face and therefore never made myself known to you. Hearing that you were leading the present attempt, I determined to come to your assistance, but found that it was too late and that the day was already lost. You once spared my life, and it was owing to your advice that I was led back to an honourable calling. I look upon you as my greatest benefactor, and all I ask is to be able to repay your kindness in the past."

With these words he threw off his clothes and made Heihachirô put them on. Then dressing himself in Heihachirô's garments, and telling him to make good his escape and bidding him farewell, he appeared before the Government troops and called out "I am Oshiwo Heihachirô and am determined to die on this spot. Come now therefore and attack me!" He was soon surrounded and for a time fought desperately. At last, disabled by many wounds, he jumped into the flames of a burning house, his last wish being to delude his opponents into believing that it was Heihachirô who thus perished. When the body was rescued from the flames, however, although the features were unrecognisable, its remarkable size proved that it could not be Heihachirô, who was a man of small stature, and it was shown to be a trick to induce the authorities to believe that the latter had thus met his death.

The struggle had now come to an end. The rioters were completely routed, but their leader succeeded in making good his escape. The flames of the burning city were not extinguished until the morning of the 21st, up to which time 18,247 houses, 400 large godowns, 703 smaller godowns and five large bridges had been swept away. Such was the result of this outbreak, which with one exception, the fight at Amakusa, was attended with more serious loss than any disturbance during the whole of the Tokugawa dynasty, and which would probably have been far greater had the plot not been disclosed.

Heihachirô, believing that he was more certain of concealment in Osaka where so great confusion reigned, than if he were to hide in some distant place, went with his son to the house of a cloth merchant named Miyoshiya Gorobei, who lived at Abura-cho, and whose wife was also a daughter of Chubei and sister of his mistress. Here they lay hid in a room that was entered only by Gorobei and his wife, their presence being unsuspected by any other member of the household. The *Bakufu* were, in the meantime, sending detectives to every part of the country to try and discover Heihachirô's place of concealment, but they could learn nothing of his whereabouts.

Now in Gorobei's employ it happened that there was a maid servant whose family lived in the neighbouring village of Hirano. Her term of service expired in March of this year, and she returned to her home. One day she happened casually to remark that she could not understand why Gorobei had lately been in the habit of using so much rice, for that more was boiled every day than the family could possibly consume, and yet it always disappeared. Now when some gossips in the village heard this, they remembered that the wife of Gorobei was related to Heihachirô's mistress, and they suspected that the merchant might be concealing the leader of the riot. They communicated their suspicions to the authorities, who immediately arrested Gorobei and his wife, and examined them before the Court. Then they confessed that from the 23rd of February up to the date of their examination, the 27th of March, Heihachirô and his son had been hidden in their house. Detectives were at once sent to the spot, Gorobei's wife being compelled to act as guide. The house was surrounded while a few proceeded to the room where Heihachirô and his son were concealed. Immediately the latter perceived that they were discovered, they set fire to some gunpowder that

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

they had kept by them, and amid the flames and smoke of the burning house, they both committed *seppuku*.

Thus ended the life of a man endowed with singular ability and of marked attainments, at the age of forty-five, his only crime being that he was too anxious for the welfare of the people. As for Gorobei, his property was confiscated, his wife was exiled and himself died in prison.

A few words about Hanjirô, the child who was sent away into safety with his mother before Heibachirô caused the outbreak which cost him his life. The mother after roaming about the country, finally came to Kagoshima with the child, but still fearing that the *Bakufu* would discover them, settled in the island of Amakusa. The boy as he grew up showed wonderful talent for all branches of military science. These youthful promises have been amply fulfilled, for the boy Hanjirô has developed into the famous Satsuma *samurai* and leader KIRINO.

JAPANESE SERMON.

FROM THE KIUÔ-DÔWA, 2ND VOLUME, 1ST SECTION.

"That which is truly cleansed day by day is day by day renewed." These words are taken from the teachings in the Daigaku and refer to the cleansing or purifying of a people.*

In old times in China, a certain great and good king called Tô ruled over the province of In. At first he was ruler of but a small state, but because of his great virtues he rose to be Emperor and was the first of a line of kings who ruled for 600 years. Though thus so great and wise a prince, in order to be ever self-watching he caused the above words to be inscribed in the vessel he used for his daily ablutions. As I said last night, each one of us when born, receives of heaven a pure heart, but by reason of covetousness this pure heart is tainted. For instance, a man's body is naturally clean, but if he perform dirty work his body becomes dirty. But at the same time, if he but cleanse himself with water he is again clean as he was at the first. Then if he be neglectful he becomes dirty again. Therefore, if the body be continually cleased it continues pure. So it is with the conscience. Although once tainted by the lust of gain, by daily self-examination, by daily purifying the conscience, the natural virtues remain intact and by these means, to speak in a large sense, is a whole country governed, or to speak in a smaller sense, by these means is a household governed. Clearly understanding this principle then, did the Chinese prince inscribe these words, and furthermore, to convey the idea of sincerity, he wrote, "That which is *truly* cleansed day by day is day by day renewed". In this wise did Tô fulfil the distinct decree of heaven. Now if even for a wise man such as he it were necessary to be day by day ever watching himself, how is it that we creatures who know nothing go heedlessly along like a gourd going down a stream, with neither aim nor object, bumping our heads here and our noses there, and feeling no shame thereat, but scolding and storming and thereby thinking to manage our households. Is not all that very absurd? He who would control others must first have a care that he has a clear conscience, else his efforts are vain. Although we may once in a way have purified our conscience we do no more, but leave the rest undone. Think well now. In the morning you clear away the dust from your window frames, and so for that day dust there is none and they are clean, but the next look again and behold more dirt has accumulated. Leave this now as it is the next day and then the next, and in ten days time there will be upwards of an inch of dust there. It is the same with our hearts; we cleanse them for one day, but we are content with this, and by and by they are begrimed with dust like the windows aforesaid. Then, on the other hand, although we may ply the duster each morning, if we do this here and there in a careless manner the dust still remain in the corners. If we cleanse at all let it be done with care. But if I speak in this way but of cleaning windows, and forget the purifying of the heart, I shall commit a grave error. This puts me in mind of a story.

The other year, when I was down in Banshiu, a certain man told me that there was at that time in the vicinity a † *chajin* who had built a small room of two mats area. Of course, after the manners of lovers of art, the place was put up in quaint fashion, with a rustic roof and window. So the matman having fitted in the mats, the paper hanger finished the papering, and the sliding screens adjusted, he employed a little boy and girl solely to wait at tea drinkings, and these he set to clean the premises. Well, the cleaning finished, the master came forth to inspect the same. What with cleaning what was already clean there was really nothing to be said, but mine host was not to be thus satisfied, so producing from his pocket a magnifying glass he proceeded to examine the corners of the sliding screens. "How," quoth he, "could I bring guests into such an ill-cleaned room as this is. Just bring the cleaning implements from my room will you. I see nothing will do but I must dust the place myself;" and so on, scolding in a most causeless manner. Forthwith the youngsters bring a box, from which he takes the implements aforesaid, which turn out to be, item one, a finely cut piece of bamboo such as they spit fish upon; item two, a piece of silk rag; and third, a piece of hollow bamboo like a fire blower. Were not these strange implements? Then what do you think he does? To the end of the bamboo rod he affixes the silk rag, and carefully cleans one by one the cross bars in the window frame, blowing the while carefully into each corner through the blower aforesaid. Really it was a terrible business. Well, this finished, our friend being satisfied, drew back, and sitting down with his tobacco box in the centre of the room, took a glance around him. It was just then more than‡ half-past four, and as the room faced the east the sun shone in through the window, when what thought possessed him? He summoned the youngsters suddenly to him. "Just go down to the cooper at the corner and bring me a fir tub of the largest size". Off go the two, and by and by return bearing with some difficulty a huge tub between them. "How now, don't put it down there," cries our host, "take it to the well and scour it thoroughly with a straw scrubber inside and outside, and underneath, then fill it with clean water and get Chôshichi to help you up with it carefully to the roof here." The children having done this, "Here" cries he, "Satsu, there's a new Corean fan in my room. Bring it to me." With this he strips him to the waist, and with great importance plunges the fan plump into the water, then all dripping as it is he thrusts it into the ray of sunlight, waving it up and down, to and fro, as though beckoning to some one or other. What was the object of this, think you? The slanting ray of sunlight was full of fine dust, and the sight annoying him, this was his way of removing it! A most wonderful love of cleanliness that, wasn't it? This is the way with us all. We do not cleanse our hearts, but allow vanity and love of self to gain the upper hand, till we become as eccentric as this man I have just told you of. With such a heart as that, though one thought to direct a household, nothing would go as one wished. Oh, the goodwife of that house is terribly slow; or the goodman of this house is very quick tempered; or our clerks are very stupid; or, again, our master will not keep his wits about him—and eight hundred growls without ceasing. Look well to this now. If these folks had their way what a state of things it would result in. Say something, and this irascible husband scolds his wife with "How can one keep house in these hard times with a dull witted dolt like you." Then jumping up angrily from bed, "Why don't you light the kitchen fire? There's nothing one sets you to do but you bungle and make a mess of." And so on all day and every day. Now if it were all as the good man wished; if the wife were short tempered, the son and the son's wife were cross grained; if the clerk and the boy drudge were over quick and the very cook irascible, if these, I say, were all like their master, what a state of affairs it would be. Why it would be up in the middle of the night, and open the door, and dust the mats, and cook the victuals, and the whole house scurrying round hither and thither. Then the rice would be burnt, the bottom of the pot would be smoke begrimed, the teapot would be broken, the oil pot upset, for all the world like holding a mat beating all the year round. Would all that be good now?

* The first of the four junior Chinese classics, viz. Daigaku, Chiuyo, Rango and Môshi.

† A votary of the well known *chanoyu*, or tea drinkings.

‡ i.e. 11 o'clock by our time.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Then think well again. The wife on her part is of a deliberate nature. See her at the end of the year going on as if there were three new year's months. "What with a temper like my good man's," she complains, "neither body nor soul can put up with it. It's really too hard to bear." If all again were as she would have it—if father and child and servants were all easy going there would be no victuals to eat. The small boy gets up about midday and opens the door to go out, when the good wife thrusts her head out like a turtle from under the bedclothes. "Well, shall I set about waking up the household," says she. To which the goodman, half waking half sleeping. "What would you do getting up at this time, it is'nt twelve yet." Whereupon, thinks the maid, coolly to herself, "Ah, I'll make the tea along with the evening rice." All this would never do. Each one of us has a different disposition, and with this difference in nature a household is governed. For instance, when the carpenter builds a house he neither does so entirely with long boards nor again with thick ones alone. It's just so with our household. Some are quick in temper and others are slow. Some are obstinate and some are dogmatic, and there is a use for each and all of these. But again, if there is no discipline, these differences give rise to trouble and everything goes wrong. There are four or five girls playing on the guitar. If they all play the same tune in the same manner it is nothing but so much noise and has no attraction. Some must play treble and some base, and thus there is melody and we are gratified. Then, furthermore, we introduce the *koto*, and the violin, and the drum, and the flute, and the bell, and with these additions we gradually acquire a pleasing orchestra. But then again, if they do not play regularly in the same time *niagari* or *sansagari* all together, the effect is very bad. So it was that the wise men in teaching music used the eight sounds produced by metal, stone, string, bamboo, parchment, wood, etc. What do we not owe to them for this instruction. In building houses the measure is essential to the carpenter, time is essential to harp and guitar accompaniments, and filial piety is the essential of a household. Possessed of these, all else goes smoothly along.

Long ago in China there were three friends, one of whom was blind, another deaf, and the third a cripple. These three would often go a drinking together, and as a pastime the blind man would sing, the cripple beat time, and the deaf man dance. One day while in the midst of their revel, a fire broke out hard by, and people flew hither and thither giving the alarm. The blind man was the first to hear this and made to escape, but knew not which way to turn. The cripple, again, perceived the fire but being a cripple could not stand up. How pitiful the case of the deaf man! He had his back to the fire and didn't even attempt to flee. They were all in imminent peril of death, when some one running in, caused the blind man to take the lame one on his back, and the deaf one to take the blind man's hand, while the cripple gave directions which way to move. In this wise the deaf man perceived the fire and lead the blind man, while the blind man, though he could not see the way, was strong in the legs and carried the cripple, and so lead by the deaf one they fled the danger. This very entertaining story a certain scholar related to me. The differences in opinion of a household are just like this. Take good care all of you. Those who will not learn what is good are the blind; those who do not listen to the counsels of parents are the deaf; those who dislike working are the cripple of our story, and such are, mayhap, to be met with in the world. But, nevertheless, on they go scolding about in the same egotistical manner, and yet with all their endeavours the affairs of the house will not go evenly. How should they go evenly? Neither master, nor man, nor mother, nor child have the essential of filial piety, and so things go awry as a matter of course. The conscience being black, we ourselves go wrong. If we ourselves go wrong the house goes wrong also. In all things it is necessary to cleanse the conscience. If we neglect to wash our garments, anon the wash tub is full of animalculæ. In the same way neglect the cleansing of the heart, and all sorts of animalculæ are generated in the household, and master and mistress, boy and maid, all go scolding round.

To such as these their fellow men appear fools, they only being wise; those they like are good, and those they dislike bad; those who speak well of them, though known to be flatterers, they somehow or other approve, while those who detract from them they abhor; they envy the talented, and hate success; they annoy others, and are themselves arrogant; in public they are fair spoken, while in secret they serve but their own interests. These all are pests begotten of neglect in cleansing. We must be ever watching.

Môshi has said "Giyô and Shun were sages from their birth, while Tô and Bu attained thereto." Wise men such as Giyô and Shun had knowledge inborn, and acted in accordance therewith, so that without striving thereat they were wise men. In the case of King Tô again, by daily cleansing the heart and by daily self-restraint he preserved his shining virtues, and became one of the wise. The Sho Kiyô in praising these virtues says, "He listens to reproof and disobeys not, he teaches others, and when they learn not, thinks of his own shortcoming." When we consider this there can be no doubt that he remembered well the plain and distinct law, and reaped the benefit of this daily self purification. How then in the case of ourselves who neglect instruction, who practice no restraint, who go on in our own selfish ways—how *should* we be good people. The way we become such good-for-nothings is after all from the evil habits begotten in our childhood. "Oh!" cry the parents, "let him tear the paper screens or he will fall ill." Or, "Don't scold him or such and such a complaint will break out," and all the rest of it, so that when he grows up he listens to no one, and when people are not as he wishes, he gets in a passion, thinking himself the only wise one, and that there is no one like him, and his heart is soon as worthless as a ball of charcoal,—and all this quickly as a conjuror's trick. "The child of a strict house knows no strictness," as the saying goes. That is to say, that those brought up from their youth in a strict household are not aware of this strict treatment. Try to cure a selfish person in a hurry and he sulks and weeps by himself in a corner. This all arises, as the saying is, from the overweaning love of parents, such as lose their heads in pampering their offspring. Those who think that, even without teaching, the child becomes the man, make a great mistake. For instance, you may sow rice or wheat and these bear fruit without doubt, but fail to manure, weed and tend them, and the seed will not ripen. It is the same with our children. Is it not an injustice to leave a child to run wild, untaught, letting him grow up as best he may, and then to complain that he is not like his fellows? Such a patient is hard to cure. How are we to deal with those who do not learn to write quickly, and who hate books? Fortunately the moral teachings of the scholar Sensha Ishida are comprehensible even to the unlearned. Examine but once the conscience and you will see that there is nothing evil in our natures. Take this blameless heart for your guide, and you will perform your duties as befits your station. I trust each of you will strive his utmost. Although I speak thus, I don't mean to say that letters are unneeded. "Work, and read when you've leisure," as the saying is: let those who have the time read as much as possible. But for each of you who have your parents, your master, and your daily tasks to attend to, if you would avoid injuring the interests of others, you have but little time for books. At the same time you can't go on without learning something, so as a last resource study, say, the moral teachings, that you may avoid at any rate doing any great wrong—this is my advice to busy people such as I am. In teaching, to choose your time is of the first importance. You may sow seed in Winter, but nothing grows, because you are out of season. Ginseng is a capital medicine, but it is useless when applied to one who is stunned by a fall from a second story. These teachings aforesaid are well suited to you busy wardsmen. But it's a vexatious matter to have something in view and not to accomplish our object.

With regard to this there is an amusing story. Please wake up and attend.

In a certain street there was a wedding feast. Well, there were present first 'the oldest inhabitant,' and the ward officers and householders, and all sorts of good things were brought out. Now the old party aforesaid was so poor a drinker, that a mere drop of *saké* was

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

enough to make him drunk; so that while the cup was passing he sat wearily by. The host was sorry to see this, and said, "Old gentleman, you do not drink, and all this must weary you. Pray have some sweets." And with that some candies were placed in an ancient figured jar of Chinese workmanship and set before him. All present exclaimed, "Ah well thought of. Pray partake of them, Sir." "Thank you, I will," says the old man, and draws the jar to him. In inserting his hand he seemed to have some trouble with the wrist, and forced his hand down into the jar. But on trying to withdraw his hand his wrist had stuck there and could not be got out, let him twist or tug as he might. While in this dilemma a neighbour saw his plight, and asked what the matter was. "Oh, my hand has got a little wedged and I can't get it out easily," and with that he pulls a long face. "Dear me, that's a pity. Let me get hold of it, and you pull as hard as you can." So getting round he pulls from one side and the old man pulls towards him—both of them at once with an "Eiya!"—"That's like Kagekiyo and Mionoya struggling for the helmet," says one, and at this there is a roar of laughter. But the old man was very far from laughing, and whimpered with a tearful face, "Oh dear, it hurts so, and I can't get it out." Then there was a dreadful to-do. Send for the doctor, cries one, or a bone-setter, says another, and the whole fun of the feast is spoiled, when one of the five guests steps out, with "Gentlemen, pray do not excite yourselves. I have heard that one called Shiba Onkô, when a boy, was one day playing with a number of children beside a large jar, when one of them fell into it. On seeing this they all ran off, except Shiba Onkô, who seized a stone which came handy, and threw it at the jar. The vessel broke and the child that had fallen in escaped with his life. A certain one told me this, and the case is very similar to that of the old gentleman's. Now I will be Shiba Onkô, and if you'll excuse me for saying so, whatever the value of this porcelain, the old man's arm cannot be sacrificed to it." With that he pompously takes a pipe, the old man with a sorry face holding out the captive hand the while, and with one stroke breaks the jar. The sweetmeats flew about the room like a lot of snow flakes. "There, it's all right now," cry all,—but when they say the old man's hand the murder was out: —*he had grasped a whole fistful of sweetmeats.* Is not that a funny story? Had he but relinquished the sweets his hand had come out easily, but having once clutched he obstinately clung to them however much his hand were cramped. In this way no ease can be procured. Speaking thus I seem to imply but the grasping of riches, but it's not that alone. There are those who grasp at good looks, at wisdom, at palliation of their faults or at position or riches, and determined to hold on go hawking these about, so that they are unable to learn, they have no peace, nor are they able to practice self control. They go about holding their sides and screwing up their faces, or drowning their sorrows in liquor. Well, it's an unfortunate thing, and there's no use saying aught after the jar is broken. Before destroying one's property it is well to have a care.

And yet some cry, "*My* conscience is quite clear; *my* virtues are intact; there's no need in *me* of cleansing."—To illustrate this, it is as though a blind man like myself set out on his travels alone, and stopping the night at a friendly inn, requests to be started off the next morning at 7 o'clock. Mine host consents, and rouses his guest betimes. The latter makes his preparations and is starting stick in hand, when the host remarks, "It's still pitch dark so you had better take a lantern." "What! a blind man with a lantern." "No, no, you won't want it for yourself, but if you go hobbling about the road in the dark travellers will knock against you. That's why I said take a lamp." "Ah, to be sure, though I shouldn't bump against any one, others who are not blind might bump against me. Then pray lend it to me" And away he goes, lantern in hand. He gets some five or six hundred yards on his way, when one comes 'thump' up against him. At this, in great wrath, he cries, "Is that fellow blind who comes knocking against me?" To which the other, also in a passion,—"I'm not blind, it's you who are blind, you idiot." "No, no, I may be blind, but I don't knock against people, there's no doubt that you are the blind one." The other, angrier still, cries, "What proof have you that I am blind?" "Oh proof enough; don't you preceive this lantern," and he thrusts out his lamp, *which had gone out as he issued from the house at starting.* An unlucky blind man, was he not?

Those who go about with extinguished lanterns, and think they burn bright, are such as have lost sight of, and believe their selfish hearts to be, their conscience; those who never think of self purification or restraint, closely resemble our blind man. I trust each of you will daily examine himself, that his light go not out.

Correspondence

MR. ASTON'S GRAMMAR.

To the Editor of the "Japan Weekly Mail."

Sir,—I am quite prepared, if suitable occasion offer, to attack directly the hypothesis that there once existed in the Japanese language a verb *nu* meaning 'to be,' to which a variety of existing grammatical forms owe their origin. At present, however, I shall confine myself to the easy task of showing that that hypothesis receives no additional support whatever from the three so-called new facts which your Reviewer puts forward in his critique of Mr. Aston's work. In doing so I must, of necessity, to some extent strike indirectly at the hypothesis itself.

Let me begin, then, by pointing out that one of your Reviewer's three facts is not a new fact at all, but simply the same fact appearing in another place. Loochooan being merely a dialect of Japanese, the negative forms *nomanu* and *noman* are clearly identical, the only and immaterial difference being that the final vowel, which is now silescent even in Japanese, has, it appears, in Loochooan, become completely silent. In supposing, therefore, the Loochooan negative form *noman* to lend any additional weight to Mr. Aston's hypothesis, your Reviewer has simply fallen into the not uncommon inductive fallacy of using for the purpose of verification one of the very facts which his hypothesis was originally framed to colligate.

Then with regard to another of the so-called facts, "the archaic future in *na*," your Reviewer now admits that there is room for doubt as to whether it does strengthen the hypothesis. But he might fairly have enlarged this admission considerably. There is room for doubt on the more fundamental question whether "the archaic future in *na*" ever existed at all. It is true there is the authority of Motowori for supposing that in such forms as *taworana* the *na* is merely the equivalent of the ordinary *n* of the future. But this dictum assuredly receives no countenance either from the other native authorities on grammar, nor from the analogy of the language itself. The explanation given by Keichiu of such forms is that they are abbreviations of the ordinary future in *n* and the ordinary interjection *na; taworan na* being, as might have been inferred from the well-known tendency of the older language to avoid double consonants, shortened into *taworana*, just as *arazan nari* is shortened into *arazanari*. And in the *Kotodama no Shirube*, one of the latest and best treatises on the particles, the author, contrasting the two opposing explanations, points out that there is no reason for supposing that *na* and *n* are transmutable, and decides in favour of Keichiu's as being the less violent hypothesis. So far therefore from being an admitted fact, available for the support of a paradoxical hypothesis, "the archaic future in *na*" is itself simply a dubious speculation of a single grammarian, opposed alike to the weight of authority and the whole analogy of the language.

There remains then the single fact—which I accept as such on trust from your Reviewer—that in Loochooan, a dialect of Japanese, the conclusive form of the verb ends in *un* instead of in *u*. Your Reviewer considers that, of the two, *nomun* is the older, *nomu* the more recent form. I confess I should draw exactly the opposite conclusion. The statement that 'the longer of two forms is almost invariably the more original' is one which is subject to considerable qualifications and exceptions, and one of the most notorious of the exceptions is in the case of forms whose lengthening consists in the addition or insertion of this very letter *n*. The addition of an euphonic *n* at the end of grammatical forms is a very familiar phenomenon,

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Witness, in Latin, the forms *alioquin*, and *ceteroquin* beside *alioqui* and *ceteroqui*, and, in Greek, φησιν, φασιν, δεικνυσιν, τυπτουσιν, τυπτωσιν, ετυπτεν and a host of similar forms, lengthened from φησι, &c., by the addition, not shortened by the omission, of the final *n*. In these cases it is perfectly certain that the longer form is not the more original; and, judging from them, it seems surely not improbable that the final *n* in the Loochooan form *nomun* owes its origin to a similar euphonic tendency. But even if it should turn out that the final *n* is an inseparable component of the word, the case for its antiquity is not a whit stronger. For the addition and insertion of *n* in roots is even a much commoner phenomenon than its use as an euphonic final. Witness, in Latin, such forms as *find-o, fid-i; scind-o, scid-i; string-o, stric-tum; fing-o, fictum;* as well as *cern-o* (transpos. for *cren-o*), *cre-vi; spern-o* (transpos. for *spren-o*), *spre-vi; stern-o, stra-vi*; and, in Greek, such forms δακν-ω, (ε)δακ-ον; τεμν-ω, (ε)ταμ-ον, not to speak of such forms as λανθαν-ω, λαμβαν-ω, θιγγαν-ω, from λαθ, λαβ, and θιγ, where the epenthesis is actually two-fold. That in all these cases the forms lengthened by *n* are not the more original forms, is as certain as that the trunk of a tree is older than its branches. But perhaps the most telling illustration of the fallaciousness of the rule so broadly laid down by your Reviewer is to be found in the case he has himself chosen, the verb 'to drink.' In Greek the root is πι (fut. πι-ομαι, aor. ε-πι-ον; Latin *bi-bere*); yet the Greek word for I drink is not πι-ω but πιν-ω. It might seem, then, not to be so certain as your Reviewer thinks, that *nomun* is a more original form than *nomu*.

But supposing that all this were otherwise. Supposing that the linguistic processes made known to us by the study of the Aryan Languages are no guide whatever to us in dealing with the Alatyan; and that *nomun* is, after all, really the older form. What would follow from the fact? Surely this, that, so far from lending support to Mr. Aston's theory, it is demonstrably antagonistic to it unless by the aid of a further gratuitous hypothesis. For all that Mr. Aston's hypothesis supposes or requires is, that the conclusive form of the Japanese verb end in *u*, which it does; by your Reviewer's hypothesis it should end in *nu*, which it does not, and which there is not a particle of reason for supposing that it ever did. Your Reviewer might be fairly asked to declare which of the alternative hypotheses he adheres to as regards the final *u*; whether Mr. Aston's, that it is the vocalised *n* of the supposed verb 'to be,' or his own, that it is a meaningless neutral vowel, put in to connect that verb with the root of the main verb. It cannot be derived from both origins. Does he suppose that his own *u*, the connecting vowel, has formed a crasis with Mr. Aston's *u*, the vocalized *n*? In that case, if analogy is worth anything as a guide, the resultant *u* ought surely to be long, which it is not, and which there is no reason to suppose it ever was. Or does he suppose that, after taking the trouble to hitch itself on to the roots of all other verbs by means of the neutral and meaningless connecting vowel *u*, this wonderful verb *nu* has simply dropped off again, body and sleeves, leaving not a trace of its presence behind? The originality of such an hypothesis is only equalled by its ingenuity. Altogether, the verb *nu*, 'to be,' conjured up in order to supply an origin for a lot of grammatical forms, reminds one irresistibly of the elephant in the Hindoo cosmology, called in to support the world. And your Reviewer has now made the parallel complete. His ingeniously imagined connecting vowel *u* is the antitype of the tortoise which supports the elephant.

On the alleged difficulties which the hypothesis would clear up, I need not say much; as, in the case of two of them at least, your Reviewer, instead of specifying them, has chosen merely to indicate vaguely their existence. As regards the only one which be fully particularises, the appositive use of the genitive particle, it is sufficient to observe that the expression *Yamato* NO *kuni* finds its counterpart in every particular in the expression "the county OF Middesex," and that the explanation which connects the *no* with a verb meaning 'to be,' is as presumably erroneous as the same explanation undoubtedly is in the case of the corresponding English preposition.

Your reviewer has remarked, with indisputable truth, that the science of language stands closer than any other to the science of the human mind. If he will only follow out the train of thought which he struck upon in his remarks on the genitive case, I think he will be led to perceive that to acquiesce in a theory which ascribes to the faded features of the verb 'to be' the distinctness and freshness of the locative case, is simply to ignore the clearest and surest of the contributions to our knowledge of the workings of the intellect which the study of comparative philology has made.

I am, Sir,

Yours truly,

SHOSEI.

PRINCE BISMARCK AT HOME.

In a few months it will be exactly fifteen years since Prince Bismarck, then simply Herr von Bismarck-Schönhausen, entered for the first time as Prussian Premier the ancient mansion of the Podewils family, in which for decades the Foreign Office had been established. He came straight from Paris, where he had been for a short while Prussian Minister, and fresh from the study of the Napoleonic ideas. Conscious that he was regarded with distrust as the pledged supporter of the unpopular monarchical régime, he did not anticipate any very lengthened tenure of his new office, and it was only after a considerable time that he felt himself sufficiently firm in his position to send for his wife and children, whom he had left behind in Paris. Even when he was permanently settled at Berlin, the Minister failed to conciliate the good-will of his countrymen. He marked his sense of their coldness by withdrawing from society and devoting himself exclusively to the discharge of official duties and the education of his children. Possibly to this period of retirement may be attributed his indifference to public opinion and bitterness of humour. A charge however, was to come. After the war of 1865 Bismarck found himself the idol of the people, and altered his mode of life accordingly. He flung open his salons, which no longer sufficed for his requirements. Some years later the adjoining palace of Prince Radziwill was acquired at a high price as a temporary residence of Prince Bismarck during the restoration of the Foreign Office, and here it may be that he will ultimately fix his permanent abode. For the present, however, his home is still at No. 76 of the aristocratic Willhelmstrasse.

A century ago, when Berlin was surrounded by walls which continued to exist until about 1860, the upper portion of the Wilhelmstrasse was the quarter of the town chiefly affected by ministers and diplomatists. Bismarck's residence, lying exactly half-way between the Leipziger and Wilhelmstrasse, is a one-storied building, devoid of every external ornament. The frontage is extensive and embraces about twelve windows. The entrance to the house is on the right-hand side. After having crossed through the large portico one arrives at a staircase, symbolically guarded by two sphinxes' heads. On the ground floor are the official bureaus, and up stairs the private rooms of the Chancellor. These apartments, furnished at the beginning of the century, consisting of a large dancing-room over the gateway and four large drawing-rooms, reserved for the reception of guests and other social purposes, look out upon the street. The large lofty library or study of the Chancellor is situated at the back, and commands a view of the magnificent garden. Since Bismarck left intercourse with foreign diplomatists to Baron Bülow, the Secretary of State, he seldom appears within the chambers really constituting the Foreign Office. Private telegraph-wires keep him informed of the course of affairs, and he issues his instructions accordingly. Formerly the hours chiefly devoted by Bismarck to work were in the night. Latterly, however, an increase of his neuralgic pains has warned him not to turn night into day. Imperatively admonished by his doctors, he no longer indulges in the heavy drinks—notably porter mixed with champagne—which used to be his favorite beverages. At his meals, only the lightest and most digestible dishes make their appearance. He himself draws up every morning with his *chef de cuisine* the *menu* for the day, and even if Ambassadors are waiting in the anté-chamxer the cook is received without delay. At table he notes down such critical expressions on the dishes as "*trop cuit*," "*pas tendre*," for the instruction or reproof of his cook. His kitchen is over-whelmed by his admirers with special delicacies of the season, and productions in which various provinces excel, such as Westphalian ham, Zauer or Frankfort sausages, Strasburg *pâtés*. A lively and entertaining host, he possesses the gift, rare in Germans, of *causerie*; and while in Parliament on public occasions his speeches are delivered with mani-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

fest effort, he is in private an easy and unconstrained conversationalist.

Bismarck leaves Berlin for a spa or his favorite country seat, Varzin, which he purchased after the war of 1866. In the capital he is rarely met beyond the precincts of the Foreign Office gardens. His constant companion in his walks is Sultan, a splendid Danish mastiff, presented to him by a friend in South Germany. His growing corpulence—not, however, disproportionate to his height—has compelled him to give up riding. His personal presence is almost too well known to need description. Small feet and hands, bald head, lofty brow, small gray eyes in deep sockets, almost hidden by bushy eyebrows, and martial mustache, now nearly white, which covers his mouth, are the features chiefly noticeable in the man. He usually wears uniform—for the most part of the Seventh Cuirassiers—which consists either of a white coat, with cuirass and a large helmet, or a blue undress coat with a yellow collar. He only appears at court on state occasions, alleging, as excuse for his absence, that standing fatigues him. The more correct explanation is that among the leading personages in the *entourage* of His Majesty are several of his bitterest personal and political foes. More than once he has almost come to blows with some of his fellow-courtiers in the imperial antechamber, and an altercation three years ago with Count Nesselrode, the Lord High Chamberlain of the Empress, a stanch Catholic, was followed by mutual challenges to a duel, which the interference of the Emperor alone prevented.

Educated at Göttingen, the great Chancellor frequently dwells in conversation on his university days, when no fun was too wild for his taste, and no excesses too severe a tax on his powers. The commencement of his official life was not very promising, for its earlier days were enlivened by a variety of characteristic exploits. When looking after the paternal estates at Kniephof, in Pomerania, his reckless behavior horrified his more sober acquaintances. But the revels of "Madcap Bismarck" were not debauches. On his father's death he inherited a smaller sum than had been expected, and he again sought Government employment. At this time he commenced paying his addresses to a daughter of the wealthy Herr von Puttkammer at Reinfeld, in Pomerania. His suit was rejected by the father, an active member of the Lutheran Church, who at first hesitated to intrust for life his child to such a lover. On the wedding tour, passed in Italy, Bismarck accidentally met in Venice his sovereign, the late Frederick William IV., with whom he entered into an animated conversation on the troubled state of political affairs in Germany. He declared himself, and he proved, a loyal and ardent monarchist, and was selected to represent the Prussian Government in the German Diet, where, owing to the weak policy hitherto observed by Prussia, Austria had indisputably gained the upper hand. The expectations which shrewd judges had formed of him were fully realized. Already his first visit to Count Rechberg, the Austrian Minister and President of the Diet, manifested his intended mode of proceeding. On Rechberg, who was then just engaged, begging him to wait a minute, he sat himself down on the sofa and quietly lit a cigar. Such were the practical and unmistakable arguments by which he succeeded in impressing his colleagues, the representatives of the other Federal States, of the equality of Prussia with Austria.

His house in Berlin is one of the most agreeable in the city, and whoever obtains entrance into it has always much to say in praise of the cordial welcome and the simplicity of the life of its inmates. Princess Bismarck is the most devoted of wives and mothers. Countess Bismarck, the only daughter of the Chancellor, is the favourite of her father and his almost constant companion. The Countess, now nearly twenty-nine years of age, has had her share of sorrow and grief. About two years ago her affianced husband, Count Wend zu Zulenburg, a man of eminent talents and with a great future before him, died suddenly. Up to his last hour he was affectionately tended by the betrothed in her father's house. The bereavement plunged the Bismarck family into deep morning. Even the iron Chancellor broke down at the obsequies of his intended son-in-law. Bismarck's two sons formerly betraying no particular signs of genius, now afford more satisfaction to their father. The elder, Herbert, has devoted himself to a diplomatic career. Nominally secretary of the Embassy in Vienna, he is at present attached by the Foreign Office to the staff of his father. The younger son, Count Wilhelm, the more popular and, let it be added, the more beer-loving of the two, is a referendar at the District Court, and is now preparing to pass his examination as an "assessor." Both sons, lieutenants *á la suite* of the First Regiment of Dragoons, fought in the late war with a great distinction, and were decorated with the Iron Cross. Of the entertainments in the Chancellor's house the most noticeable are the so-called parliamentary soirees, held every Saturday evening during the assembly of the Reichstag. To these parties all deputies who leave their cards at the Chancellor's, without distinction of political opinions, are invited. The other guests are friends of Bismarck's family, counsellors of the Foreign Office, some high officials, and German diplomatists staying on leave in Berlin. At these social gatherings, after chatting with the circle of ladies collected round the Princess, the Prince conducts the gentlemen into the music and drawing room, where they remain until the doors leading into the dining-room are thrown open. Here supper is served at small tables. Bismarck, who smokes a pipe and wears his undress coat partly unbuttoned to be more at his ease, expounds on those occasions, frequently with astonishing frankness, the chief principles of his policy.

Agreeable in society, Bismarck is systematically harsh and repulsive towards his official subordinates, and is found intolerable by not a few men of independent character. Many of those nominated by himself to their appointments voluntarily resigned after a comparatively short tenure of office. Even his own cousin, Count Bismarck-Bohlen, could not stand his imperiousness. Count Königsmark, a former Minister of Agriculture, cast the portfolio at his feet, with the remark "that he was his equal, not his lackey." Count Lippe, an ex-Minister of Justice, and the late Herr von Savigny, openly joined the Opposition, and the Secretaries of State, Herr von Thiele and Baron Gruner, sent in their resignation to avoid a fate similar to that which befel Count Harry Arnim, once a most intimate friend of Bismarck. Among all his confidential assistants, Lothar Bucher, a revolutionist and fugitive of 1848—and then he was a most decided political adversary of Bismarck—deserves mentioning as the one who has remained most steadfast to the Chancellor. Bucher, an eminently gifted man, to whom is probably not unjustly ascribed the authorship of most of the late state documents bearing the Chancellor's signature, is the sole person from whom Bismarck brooks contradiction or to whose counsel he inclines his ear. It must be considered no slight danger to the empire that the Chancellor has not been able to thoroughly initiate some high official into the mystery of his policy and the intricacies of the German state machinery, in order to leave to him, on a sudden collapse of his energies, the further guidance of government.—*The World.*

THE STALLDALEN METEORITE.[1]

(Nature.)

In the Scandinavian North, so extraordinarily rich in mines and quarries, there have been found during the last few years a number of new minerals, by which many a mine and even many an inconsiderable opening scarce known in its own parish has become world-famous in mineralogical literature. Several of these *finds* are of great interest in a systematic aspect—for instance, the discovery of *barytite*, a new, exceedingly basic variety of felspar containing baryta; of *ganomalite*, the first natural silicate of lead which has been discovered; of *ekdemnite*, a new mineral containing antimonic acid, from the mines of Langban; and of *homilite*, a new, beautifully crystallised silicate of boron, containing water, from Brevig. Others again give us a highly unexpected insight into the nature of the chemical forces which are in activety in the interior of the earth—for instance, the Wermland minerals, *manganosite*, or protoxide of manganese, and *pyrokroite*, or hydrated protoxide of manganese, which afford evidence of a powerful reducing action. The latter mineral has during last year been found at a new locality—the mines of Nordmark.

However important these newly-discovered minerals may be, they do not awaken so keen an interest as the stones which from time to time fall from the heavens, and afford us specimens of the matter to be found in spaces so remote that rays of light require thousands of years to reach them. A new and highly instructive contribution to our knowledge of meteorites has been obtained in Sweden through the fall of the meteorite, which took place at Ställdalen, near Nya Kopparberg, in Orebrolän, on June 28, 1876, at 11.50 a.m., from a fireball which was visible over a large part of middle Sweden. In the neighbourhood of Stockholm the meteor appeared as an indistinctly-defined fireball, followed by a long streak of fire. The ball was first visible below the zenith in the north-east or north-north-east, and went from hence towards the horizon in the west, where it generally appeared to fall in the immediate neighbourhood of the spectator, sometimes with, sometimes without, the throwing out of sparks. In the town of Gefle a fire-red ball, followed by a streak of the same colour, was seen moving from north-east to south-west. At the

1 Abstract of an Address by Prof. Nordenskjöld at the Anniversary of the Royal Swedish Academy of Sciences.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

neighbouring promontory, Harnäs, it was first seen of the size of a large star, speedily increasing, however, leaving a long streak of fire behind it, and finally disappearing without noise, falling, according to the supposition of the spectator, behind some neighbouring buildings.

At Malmköping the meteor appeared to proceed from the northern heavens towards the west, leaving behind it a fine white streak, which was distinguishable for two minutes. At a height of 25° above the horizon it disappeared without falling asunder. At Linköping the nucleus of the meteor was pear-shaped, of blinding whiteness, followed by a streak of fire which was strongly luminous notwithstanding the clear bright sunshine, and about eight times longer than the nucleus. It was first observed pretty high up in the north-east, but afterwards sank to a height of 10° above the horizon in the west, where it broke up without noise into a number of star-sparks. In Skara the meteor, followed by a beautifully luminous streak of fire, appeared to fall asunder, throwing out sparks strongly at the same time, after having gone from east to west with an apparent diameter of half that of the moon. In Hedemora two fire-balls were seen, one close behind the other, falling from the zenith towards the west, leaving behind them a light grey streak. A minute after the meteor passed from the field of view, a loud explosion was heard, which is also mentioned in reports from the town of Falun and from Gustafs and Stora Tuna parishes. In Mora no explosion was heard, but here the meteor, which left in its path a stream of fire of a deep violet colour, was seen to fall asunder in the south-south-east, with a strongly luminous fire rain, the fire drops of which, however, were extinguished before they reached the horizon. In Karlskoga a fireball of a blinding clear reddish white lustre was seen high up in the zenith. Hence it sank towards north-north-west to a height of 30°, and afterwards parted into three or four smaller pieces, which speedily went out and resembled the stars which fall from a rocket. The meteor left behind it a white smoke, which in the calm air remained in the direction of the fall about a minute, and afterwards dispersed. In the neighbourhood of Karlstad, the meteor was thought to fall in the north-east. It was compared to a falling star rocket. It was very bright, with a white nucleus, having fire-red edges, and passing when bursting asunder to a blinding white, the separate pieces being clearly visible. It apparent size was compared to that of the full moon, and after its disappearance a white streak remained for some seconds in the sky. In Hoböl parish in Dalsland there was seen in the sky a pointed fire-ball, resembling in form a soda-water flask, at first pretty high in the heavens, afterwards approaching the earth, dividing into two parts and disappearing without any detonation after the lapse of half a minute. At Lysekil the meteor appeared to fall prependicularily in the north-west, and spring asunder without any noise some few feet above the surface of the water. According to a statement in the newspapers the meteor in question was simultaneously seen at Christiania. In Denmark and Finland it was not visible.

From a careful and critical examination of these statements, and many others which have been collected, it appears that the meteor in question, possibly with the neighbourhood of γ Cephei as radiation point, proceeded in a somewhat oblique direction to the place where the stones fell on the meteor bursting asunder. If with a point 40 kilometres south of Ställdalen as a centre, a circle be described through Christiania, the westernmost place where the phenomenon was observed its circumference intersects Orust in the south, the neighbourhood of Stockholm in the east, and Gefle in the north-east, and includes all the places where the meteor was visible. At Stockholm, Hedemora, Karlskoga, and Lysekil, the meteor is said to have been visible first in the north-east, somewhat below the zenith, and if the direction is noted where it disappeared in the neighbourhood of the horizon, this direction in general corresponds very well with the direction from the place of observation to the place of fall. The meteor thus went under the horizon or disappeared it its neighbourhood at Stockholm to west, at Gefle to south-west, at Moura to south-south-east, at Lysekil to north, at Malmköping to north-west, and so on.

The meteor thus reached the end of its short luminous path in the region where the fall took place. It become luminous at a height which cannot, after making allowance for errors of observation, be reckoned at less than 300 to 400 kilometres, but was probably greater. At this height the atmosphere, notwithstanding its extreme tenuity, is capable by its resistance of heating red hot a body moving with *cosmic* speed, as of 75 kilometres per second, and if the composition of the atmosphere at this height be the same as the surface of the earth the meteor will meet with sufficient oxygen to maintain a lively combustion of the combustible matters which enter into the composition of the meteor. It appears to me that we have here an explanation of the considerable height in the atmosphere at which meteors first become luminous, an explanation which is so much the more probable as we now not only know a number of carboniferous meteorities, but also by the meteorite fall at Hessle, in Upland, have distinct proof that the common meteorites may be accompanied, and perhaps are generally accompanied by an easily combustible carboniferous dust. Only through such a supposition can we obtain an explanation of the large size of these meteors when compared with the stones which fall, as well as of their strong illuminating power, which clearly shows that the light arises from the glowing of solid masses, and not merely from the compressed and heated gases which the meteor has collected before it.

The statements regarding the size of the Ställdalen meteor are very various. The most probable are those which give it a diameter of six minutes, which supposing the distance to be 250 kilometres, would give the fireball a diameter of 436 metres, or nearly 1,500 feet. In comparison with this size the stones that have fallen are surprisingly small, which yields a further support to the supposition that the main mass of the meteor consisted of substances which had already high up in the air been dissipated in the form of gas or undergone combustion. In the case of the Ställdalen meteor there is also the exceedingly remarkable circumstance that the fireball was not visible in the region where the path of the meteor struck the earth and where the meteorities fell, although this place lay nearly in the centre of the area where the meteor was visible as a luminous fireball, and although the sky here too was clear and cloudless with the exception of the little dark cloud which the meteor collected before it in its path through the air. It was probably this cloud which prevented it from being seen in the region which lay in the direction of the fall. Although no fireball was seen here, loud detonations were heard and some light streaks of cloud were visible in the zenith, from which, according to some, faint flashes of fire resembling lightning were seen darting. Whistling, rumbling, and rattling noises were also heard. The sound was thought, for the most part, to come from the west or south-west. It was not heard in Karlskoga, which lies to the south, but far to the north and north-west. At Falun it was supposed that a fall of rock had taken place in a mine, and at Grandgrufvan, at Ludvika, the sound was heard as of a peal of thunder at a depth of sixty metres underground. At other places a dynamite magazine was thought to have exploded, or it was taken for a loud clap of thunder.

In the neighbourhood of a workman who was cutting trees in a wood several branches of a tree were broken off by a stone weighing nearly a kilogram, in a way which clearly showed no great falling velocity, which was further confirmed by the stone making a hole in the ground only a decimetre in depth. Another person saw a stone fall close beside him, and immediately took it up. It was not at all warm. A girl saw a stone weighing two kilograms fall to the ground "so that the earth smoked." Several fell in the Lake Björken or were picked up in the neighbourhood soon after. One weighing 8½ kilograms fell in a ryefield. In falling it had gone in two pieces and made an eight-inch deep hole in the cultivated soil. The largest stone weighed 12½ kilograms.

The number of the stones that have been found, however, amounts only to eleven, with a total weight of thirty-four kilograms. They were scattered within an oval two kilometres broad, whose larger axis had a length of eight kilometres. The largest stone was found in the south-west end of the oval, in a meadow surrounded by wood. It is probable that larger stones have fallen farther into the wood, and thus escaped observation. The stones are of very irregular form, and on their surface are full of the depressions peculiar to meteorites. On the surface they are, as usual, covered with a blackish fused crust of very variable thickness, being so thick on some of the fractured surfaces as to completely conceal the colour and inequalities of the main mass, and on other similar surfaces so thin that the colour and crystalline structure of the main mass may be clearly distinguished. Sometimes the crust is completely wanting, so that the surface of the stone, with the exception of an inconsiderable blackening, resembles a fresh fracture. The stones are thus fragments which have been formed at different times, and exposed for different periods to the action of the glowing envelope. The largest stones are covered in many directions with black friction surfaces which are more clearly marked on these meteorites than on any I know. These too have probably been formed in our atmosphere, and show that with the great pressure produced by the resistance of the air, cracks have been formed in the meteorite along which its different parts before springing asunder rubbed against each other during the rotation of the irregularly-formed mass, whereby the uneven surfaces have been smoothened, and coloured black by the heat developed during friction, the projecting metallic

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

particles flattened, &c. On breaking in pieces the meteorites in question, they are found to consist of a coarse breccia-like mixture of grey and of nearly black portions, little differing from each other in chemical composition. It is remarkable that the grey mass when heated becomes dark, and thereby in appearance quite like the black, which appears to show that some of the breccia-like pieces found in the stones had been heated, while this does not appear to have been the case with the other part. Different pieces of the Ställdalen meteorites thus appear to have been exposed to the action of very different temperatures before they were united into the mass, hard, tough, and difficult to break up, which formed the meteorite.

The stones that fell at Ställdalen have been carefully analysed by Mr. G. Lingström, assistant in the mineralogical department of the Riks Museum, who found them to consist of nickel-iron; a silicate decomposed by acids, chiefly olivine; a silicate indecomposable by acids, probably bronzite; magnetic pyrites, and inconsiderable quantities of phosphide of nickel-iron; of a phosphate, and of chloride of iron. The first-named substance, a metallic alloy of ninety per cent. iron and ten per cent. nickel, is not known of terrestrial origin, but distinguishes most meteorites, and makes it possible to separate with certainty the meteorites which have fallen at Ställdalen from all other minerals occurring in the quarter. The two other main constituents again, olivine and bronzite, are also wanting in our granites, gneisses, and common slaty rocks, but are found commonly entering into the composition of a number of rocks which by most of the geologists and mineralogists of the present day are considered to be of plutonic origin. Many circumstances, however, indicate that these rocks, which in remarkably regular layers cover extensive regions of the earth's surface, *often, but not always*, consist of stratified tuff-like formations which during the enormous duration of geological periods have assumed a crystalline structure. The resemblance between them and various constituent parts of the meteorites is so striking that the question must be seriously and impartially discussed whether a part of the plutonic rocks are not of cosmic origin. By this I mean that it gradually fell to the earth even after its surface formed an abode for animals and plants, and that under favourable circumstances it collected so as to form proper stratified so-called plutonic rocks, in which, through subsequent chemical changes, so great a development of heat has sometimes taken place that volcanic and plutonic incandescent craters have arisen in the interior of the earth.

Many observed facts may be quoted in support of this view, if it for the present appears very strange on account of the great changes it would bring about in the prevailing ideas of the history of the formation of the heavenly body which we inhabit. We have perhaps here the true solution of the many disputed questions raised by the discovery of meteoric iron at Ovifak, in Greenland, a simple explanation of the abundant occurrence of magnesia in certain geological formations, and of many other geological phenomena difficult of explanation according to theories now prevalent.

REUTER'S TELEGRAMS.

BY THE ENGLISH MAIL.

LONDON, 7th September, 1877.

A telegram has been received from Mehemet Pasha that Eyoub Pasha has driven the Twelfth Russian Army Corps across the River Lom: the Russians lost 3,000 men, while the Turks lost only 900.

Widden has been reinforced.

LONDON, 6th September, 1877.

It is reported that the Russians have captured Lovatz.

The Servian Militia has received orders to march [sic].

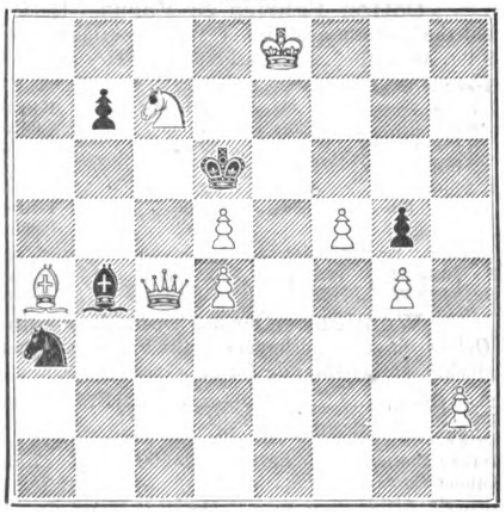
According to unofficial Turkish accounts, a Turkish Army Corps is advancing from Rasgrad to Biela: a great battle is believed to be imminent.

Newspaper correspondents assert that Suleiman Pasha has virtually abandoned his attack on the Schipka Pass.

Advices to hand state that there was some fighting at Kadikoi on the 4th instant: both sides claim the victory.

London, 30th August, 1877.

The entrenchments of Suleiman Pasha's army at the Schipka Pass are now within 150 paces of the Russian entrenchments. A strict blockade is maintained, and the only route now open to the enemy is that leading to Gebrova.



London, 29th August, 1877.

Sir Stafford Northcote has stated that England will observe neutrality until friendly intervention is possible in order to put an end to the war.

PROBLEM,

by W. S. PAVITT.

BLACK.

WHITE.

White to play and mate in 3 moves.

SOLUTION OF J. B. OF BRIDPORT'S PROBLEM OF LAST WEEK.

White.	Black.
1.—P. to Q. B.'s 5th.	1.—R. takes Q. B. P.
2.—B. to K. B.'s 5th, ch.	2.—R. takes B.
3.—Q. to Q. B.'s 4th, mates.	

If Black moves his King for No. 2, then Q. mates at Q.'s 3rd.

Correct answers received from W.H.S., and W.B.M., Tôkiô; C.B., and Q., Yokohama.

BROADWELL'S

BREECH LOADING ORDNANCE COMPANY, CARLSRUHE.

MANUFACTURERS and Patentees of the IMPROVED-BREECH, STEEL RIFLED ORDNANCE, largely adopted in Europe and America: Inventors of the new Star ring artillery shell.

The Broadwell System is now applied to the Krupp Cannon.

The undersigned are prepared to receive orders and undertake contracts, on behalf of the Company, for ORDNANCE of any calibre, at the Company's tariff.

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabrics & Yarns.—During the last week there has been a fair business doing in *Yarns*, but the medium qualities of 16/24 continue most in demand. For *Shirtings* the enquiry is still feeble, though 9 lbs. are rather more in favour. *Velvets* keep fairly saleable. *Drills* and *T. Cloths* are almost nominal.

Grey Shirtings:—							
7 lbs.	38½ yds.	39 in.	per pce.	$1.40 to $1.75			
8 lbs.	38½ yds.	44 in.	,,	1.80 to 2.20			
8 lbs. 4 to 8½ lbs.	38½ ,,	39 in.	,,	1.55 to 2.32½			
9 lbs.	38½ ,,	44 in.	,,	2.00 to 2.60			
T. Cloth 7lbs.	24 ,,	32 in.	,,	1.40 to 1.60			
,, 6lbs.	24 ,,	32 in.	,,	1.10 to 1.25			
White Shirtings:—							
60 to 64 reed	40 yds.	35 in.	per pce.	2.20 to 2.40			
Turkey Reds	24 yds.	30 in.	2—3 lb. per lb.	0.67½ to 0.85			
Black Velvets				7.25 to 8.35			
English Drills	14/15 lbs.	40 yds,	30 in.	2.40 to 2.65			
Taffachelass		12 yds,	43 in.	2.00 to 2.35			

Yarns.—

No. 16 to 24	per picul	$28 00 to 31.25	
No. 28 to 32	per picul	$32 25 to 34.75	
No. 38 to 42	per picul	$35.00 to 39.00	
Reverse Twist 16-24	,,	—	

Woollens.—Our market has been a little more active during the past week. *Shimagoro* and *Figured Orleans* have found buyers at the low prices quoted, and *Black Union Cloth* is in demand, but without available stock. *Mousselines de Laine* remain quiet, and *Blankets* continue saleable at quotations.

Plain Orleans	40—42 yds.	32 in.		5 60 to 7.00			
Figured Orleans	29—30 yds.	31 in.		4 25 to 5.25			
Shimagoro	30 yds.	30 in.		3.75 to 5.25			
Italian Cloth	—30 yds.	32 in.		0.25 to 0.32			
Camlet Cords	29—30 yds.	32 in.		5.75 to 6.00			
Camlets Asstd.	56—58 yds.	31 in.		—			
Lastings, Japan	22—30 yds.	32 in.		12.00 to 13.00			
Plain Mousselines de Laine	—30 yds.	30 in		0.17 to 0.18			
Figured Mousselines de Laine	30 yds.	30 in...		0.25 to 0.28½			
Multicolored ,,	30 yds.	30 in...		0.28 to 0.37½			
Cloth, all wool plain or fancy	48 in. to 52 in...			0.80 to 1.20			
Presidents	54 in. to 56 in...			0.60 to 0.65			
Pilots	54 in. to 56 in...			0.45 to 0.55			
Union	54 in. to 56 in...			0.60 to 0.80			
Blankets, scarlet & green	6 to 8 lbs.	per lb		0.40 to 0.45			

Sugar.—The market has been extremely quiet during the past week, and we have no change in quotations to note. Stocks still consist of about 85,000 piculs.

Sugar:—Takao in bag	(nom.)	per picul		$4.80			
,, in basket	,,	,,		$4.70			
Taiwanfoo in bag				$4.70			
do. in basket				$4.60			
China No 1 Ping-fah				None			
,, No. 2 Ching-pak				$8 40 to $8.70			
,, No. 3 Ke-pak				$7 80 to $8.20			
China No. 4 Kook-fah			per picul	$7.40 to $7.70			
,, No. 5 Kong-fun			,,	$6.50 to $7.40			
,, No. 6 E-pak			,,	$5.70 to $6.10			
Swatow Brown			,,	None.			
Daitong			,,	$3.80			
Japan Rice			,,	$2.50 to $2.65			
Kerosene Oil nominal			,,	$2.65			

Kerosene Oil.—Dealers are holding off in view of expected arrivals. Stocks in foreign hands are without much change, and prices are unaltered.

EXPORTS.

Silk.—Business has fallen off considerably during the past week. After the issue of our last report, a further advance of $30 to $40 per picul was paid for several parcels, but rates could not be maintained, and in the face of large arrivals, dealers were most anxious at the close to sell at quotations, which show a fall of 40 dollars on the highest prices paid. Settlements are 300 bales of Hanks, and 25 bales of other sorts, making a total of 325 bales. Arrivals 1,000 bales, and stocks 1,200 bales. The total export from 1st of July to date is 3,636 bales, against 10,506 bales for same period last year.

		In London at 4s. 0d. per lb.	*In Lyons at f. 5.05 per kilo.*
Hanks, Superior No. 1	—	—	—
,, Best No. 1 & 2	$510 to 530	18/5 to 19/1	51.00 to 53.00
,, Good No. 2	$490 to 500	17/9 to 18/1	49.00 to 50.00
,, Good all round No. 2½	$460 to 480	16/9 to 17/5	46.50 to 48.00
,, Medium No. 3	$430 to 450	15/9 to 16/5	43.50 to 45 50
,, Common to inferior No. 4 & 5	$400 to 420	14/9 to 15/5	41.00 to 43.00
Oshius, Good to medium	$450 to 480	16/5 to 17/5	45.50 to 48.00
Kakeda	$500 to 600	18/1 to 21/5	50.00 to 59.00
Hamataki	$410 to 450	15/1 to 16/5	42.00 to 45.50
Filature Silk	$600 to 750	21/5 to 26/5	59.00 to 73.00

Tea.—A large business has been done during the past week in our tea market, settlements amounting to fully 3,200 piculs.

Operations have been mostly confined to low grades, for which liberal prices have been paid, far higher, some imagine, than the slight recovery on the New York tea market warrants, considering the depreciation in quality which has been more than usually early this present season.

Arrivals having been limited, stocks on hand are not much over 11,000 piculs. To-day's rates close as under, teas from *Good Medium* downwards showing an advance of about $1.50 to $2.00 per picul.

Common	$ 9.00 to $13.00	Fine	$23 00 to $27.00
Good Common	$14.00 to $15.00	Finest	$28.00 to $32.00
Medium	$16.00 to $18.00	Choice	$34.00 nominal.
Good Medium	$19.00 to $22.00	Choicest	—

EXCHANGE AND BULLION.

Exchange.—During the past week there has been a fair demand for Bank Bills, with but little Private Paper offering, which, together with advices of lower rates in China, caused a drop of fully 1 per cent. here.

Rates close as follows:—

Sterling—Bank 6 months' sight	3s. 11½d.	On Shanghai—Bank sight	74
,, Bank Bills on demand	3s. 10¾d.	,, Private 10 days sight	74½
,, Private 6 months' sight	3s. 11¾d. @ ⅞	On New York—Bank Bills on demand	94
On Paris—Bank Sight	4.00	,, 30 days sight Private	96
Bank 6 months' sight	4.97½	On San Francisco—Bank Bills on demand	94½
,, Private 6 ms. sight	5.02½	,, 30 days sight Private	96½
On Hongkong—Bank sight	1¼ % dis.	Kinsatz	421½
,, Private 10 days' sight	2 ,,	Gold Yen	391

REPORTS.

The *Wilhelmine* reports:—Left Hakodate on the 2nd of August. Had calms and fine weather to 5th instant, then experienced fresh northerly winds, and, in latitude 46 degrees north, longitude 142 east, a heavy southerly swell, with thick weather. Arrived in port during the night of the 8th instant.

The *Gaelic* reports:—Left San Francisco August 21st at noon, had moderate weather across, arriving at Yokohama on the 11th at 2 a.m. Passage 19½ days. Passed P. M. S. S. *China* at 10 a.m. on the 10th, steaming East.

The *Tanais* reports:—Left Hongkong at 5 a.m. on the 5th inst. Experienced light N.E. winds and pleasant weather throughout the passage, arriving in port at noon on the 11th September.

The *Yorkshire* reports:—Left Hongkong on the 6th of September, at 6.30 p.m.; had fresh S. W. winds to Turnabout, thence variable winds and terrific squalls accompanied by thunder, lightning and heavy rain. Hove to off St. Clair Island during the night of the 4th. From Chichukoff to port had variable winds with fine weather, arriving 7 p.m. on 13th September.

The *Lothair* reports:—Left Gravesend on the 18th May; had moderate winds in the Channel, and light N.E. trade to the Equator, on the 18th June. Experienced fresh S.E. trades; crossed the meridian of the Cape on the 11th July, and had moderate westerly winds while making the Easting. Arrived in Sunda Straits on the 11th August, being four days getting through the passage; had light southerly winds to Latitude 14 North, and N.E. and East winds to 24 degrees North; thence easterly winds and fine weather to port; making the passage from pilot to port in 115 days.

The *Sunda* reports:—Left Hongkong on the 9th instant. Had fine weather to Van Dieman's Straits, where experience equally wet weather with thunder and lightning; thence fresh south-westerly winds to port. Arrived 3 p.m., 15th September.

LONDON, E.C.,

Beg to state that they are open for any Commercial Transactions, as to Consignments, for Granting Drafts, and Presenting Commercial Bills for Acceptance and Payment. For Buying English Goods at a very small Commission and Forwarding Goods to any place in England or the Continent.

WE beg to draw your attention to a very important English Invention we have on hand, viz.:

WOOLLEN BLANKETS

OR

COVERINGS,

OF ALL SIZES COMBINED WITH AN

AIR PILLOW.

It will be found most necessary and useful for Military Men, Travellers, Invalids, for use in the Hospitals, &c., &c., possessing amongst others the following advantages:—

It is the finest substitute for a Bed.

The Pillow can be raised or lowered at any time with the greatest ease.

It will pack up in a very small compass, and can be carried about without any inconvenience.

Price from 15s. to 35s. each.

When ordering the above article, please remit the amount of your order to

NOTICE TO MARINERS.

No. 67.

China Sea.

NINGPO DISTRICT.

Rock to the Eastward of Pootoo Island.

NOTICE is hereby given that Captain PETERSEN, of C. M. S. N. Co.'s Steamer "*Ho-chung*," has reported a Rock, unmarked on the Charts, to the Eastward of Pootoo Island, and he gives the following magnetic bearings as determining its position:—

West Nine Pin Rock.....N. 33° E.
Half Tide Rock .....N. 12° E.
N. W. Point of Isthmus Island...N. 14° W.
Northern end of Pootoo E. Bluff..N. 49° W.

The Harbor-Master at Ningpo has verified the position of this pinnacle rock, and reported that there will probably be only 6 feet of water on it at low water spring tides, with from 7 to 13 fathoms round it.

See Admiralty Charts Nos. 1,199 and 1,969.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omisson to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

Notes of the Week.

There is a most singular silence on everything which regards the war in the South. Not a word for a whole week of what the insurgents are doing, or what measures are being pursued by the Government to reduce them to subjection. The papers are absolutely silent on the subject of Saigo and Kirino. If, as was at first reported, there are but a few hundred men with these leaders in Kagoshima, it surely cannot be a hard matter to capture every one of them, especially as the Imperialists have now about fifteen thousand men surrounding the position held by the insurgents. Under these circumstances it is hard to comprend the inactivity of the Government troops, and it says little for the energy or daring of their leaders that they permit themselves to be held at bay by a handful of men. We suppose the truth will leak out one day, but at present it is impossible to conjecture what may be the intended movements of either party, and we must wait patiently for the next stirring scenes of the tragedy.

Mr. John England, whose decease, on 14th instant, was recorded in our last issue was one of the first party of Engineers engaged by Mr. H. N. Lay at the commencement of Railway construction in Japan in 1870, and arrived here early in that year. The late Mr. Morel, who then filled the position of Engineer-in-Chief, and at whose instance Mr. England had been appointed, having had opportunities of observing the engineering skill and efficiency displayed by Mr. England in the conduct of some important works for the Government of South Australia, at once selected Mr. England for the position of Chief Assistant Engineer; and after making a preliminary survey overland from Tôkiô to Kobé, with a view to possible future operations, he was placed in charge of the section of Railway to be constructed between Kobé and Osaka, the whole of the works in connection with which were carried out under his direction, until their completion and the opening of the line for traffic early in 1874. Upon the death of Mr. Morel in October, 1871, Mr. England was generally regarded as the probable successor to the office of Engineer-in-Chief. In consequence, however, of the difficulty experienced in reconciling rival claims, it was deemed advisable to make the appointment out of Japan, but until the nomination of Mr. R. Vicars Boyle, C. S. I., as Engineer-in-Chief in August, 1872, Mr. England acted as Chief of the Engineer staff, and after the arrival of Mr. Boyle in Japan, was confirmed as next in rank upon the staff with the title of Deputy Engineer-in Chief, and continued in principal charge of the works upon the line of Railway from Osaka to Kiôto, all of which, including the important bridges upon that line, were carried out under his immediate direction.

Upon the completion of the above works, and the retirement of the Engineer-in-Chief, combined with the (it is to be hoped only temporary) suspension of further new works, a complete re-arrangement of the staff took place, and Mr. England was selected, in consequence of his training and experience in both branches of his profession, to fill the joint position of Principal and Locomotive Superintendent of the Tôkiô-Yokohama line, which offices he filled up to the date of his decease, with perfect efficiency, and, we believe, satisfaction to the Government, which doubtless greatly deplores the loss of a valuable member of the staff.

Mr. England was educated for the mechanical branch of his profession in the establishment of Messrs. Beyer, Peacock & Co., the eminent Engineers at Gorton, near Manchester; and for the higher branches of Civil Engineering with the late Charles Vignoles, F. R. S., under whom Mr. England was for some time employed upon Government Railway works in Russia, including the celebrated Keiff bridge across the river Dnieper.

Mr. England had been suffering from impaired health for a lengthened period, but few of his large circle of friends anticipated such a serious termination to what appeared of but slight importance; or thought they were about to lose at so early a date, a friend whose general goood nature, and proverbial kind-heartedness, had endeared him to all his acquaintances.

The principal topic of the week has certainly been the outbreak of cholera among the native population of Yokohama. It is said that one or two of the medical men do not believe that it is the actual Asiatic epidemic, but be that as it may, some epidemic which proves fatal in a number of instances in a terribly short time, and which is accompanied by all the symptoms of cholera, has declared itself, and when it is arrested, it will be time enough to begin to argue as to whether it was or was not the actual Asiatic form of the complaint. What we all have to do at present is to unite our efforts with those of the Japanese authorities in endeavouring to stamp it out. The following is the latest news from the native papers regarding the progress of the disease, which now appears to have made its appearance in several parts of the Empire. The *Mainichi* states that the *Kencho* is taking every possible step to check the complaint. It has established a branch which occupies itself solely with the necessary preventive measures. Policemen are sent with doctors to every house in the port to inquire

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

whether any one is ill and to see that all proper precautions are adopted. Those who are attacked are immediately taken charge of by the police, who at once summon medical assistance which is always at hand. Remedies and disinfectants have been freely supplied by the hospital to druggists, in order that they may be distributed to those requiring it. The *Kencho* has gone so far as to announce that should poor or friendless persons die of the disease, the coffins and all funeral necessaries will be supplied. It has been ordered that in the event of any one being attacked in a bath house the whole place shall undergo a thorough disinfecting. At the *Machigaisho* there remain constantly a staff of four officials with fifteen subordinates, sixteen coolies, *kagos*, ten coffins, ten cotton gowns, and ten barrels into which the clothes of those attacked are to be thrown. By these preparations no time is lost when a case of illness or death is reported. A Special Hospital for the treatment of cholera patients has been put up at Ota, and the Government has purchased the land in the neighbourhood and ordered the tenants to remove. All theatres, lecture houses and other places where large numbers of the people assemble are closed for the present. The disease seems to prevail principally at Okina-cho and Matsukage-cho, but cases have also occurred at Homura and Homoko. Up to the present time, according to a statement issued by the Governor of Kanagawa, 156 cases have been returned of which thirty-eight have proved fatal, 22 males and 16 females. This was up to midnight of the 20th instant.

At Yokosuka and Odawara it is reported that cases have occurred, while news to the same effect comes from Osaka and Nagasaki, though except at the latter place no deaths are reported. It is stated that while the *Shinagawa Maru* was on her voyage from Nagasaki to Kagoshima with troops "several tens" of those on board were attacked, and it was therefore thought best to return to Nagasaki in order that the disease might not be communicated to the troops at the seat of war. She is now anchored in one corner of the harbour and will remain out of service for some time. In Tôkiô some few cases are reported, and it has been ordered in the *Genro-in* that any official belonging to that office who may have any member of his household attacked with cholera, shall be compelled to absent himself from his duties.

Although too much praise cannot be given to the native authorities for their prompt and vigorous efforts to arrest by all means in their power the further progress of cholera, their good intentions are sometimes productive of some inconvenience to the people, who are more energetic than prudent in the use of the desinfectants that are liberally supplied, and one or two have given themselves serious uneasiness by applying remedies internally which were only intended for external use. The officers, too, who are selected to inspect the dwellings are sometimes more zealous than learned. A day or two ago a policemen and a doctor on their round of inspection visited the house of one of our Japanese friends. After carefully looking over the premises to see that there were no lurking places for the disease, and giving some proper directions as to what to eat, drink and avoid, they asked for a tea cup, into which they poured a strong solution of carbolic acid, with instructions that twice or thrice a day each inmate should apply it to his or her upper lip with a piece of sponge, so that all germs of the disease might be destroyed before being inhaled. This was faithfully done, but the present state of the upper lips of that household render it necessary that some other method of keeping off the complaint should be adopted.

We would call the attention of the Authorities to a foul heap of decaying vegetable matter that is allowed to accumulate on the shore between the Railway Station and Takashima-cho. It is composed, we presume, of all the sweepings and refuse of the market, and sends forth an effluvium that spreads far round its neighbourhood, and must be most dangerous and prejudicial to health. Boating men know the spot too well, and in rowing past always keep as far out as possible, but even at a long distance the stench is sometimes overpowering. Steps should certainly be taken without delay to remove the offensive matter, or to render it harmless by the free use of lime and earth, and measures adopted to prevent any further accumulation.

As an illustration of the rapidity with which voyages are made in modern times, the following particulars of the movements of the steamer *Loudoun Castle* may not be without interest. This vessel left London on the 18th of July last with a general cargo for the East, called at Singapore and Hongkong, at both of which ports she discharged and took in cargo, and reached the wharf at her destination, Shanghai, on the morning of the 29th August, having completed the voyage from London in the unprecedented time of 43 days. As she passed Woosung on the afternoon of the 25th May with a cargo of new teas from Hankow, she thus completed the round trip under 96 days, a marvellous instance of despatch. At Shanghai the *Loudoun Castle* lay until the 11th September, when she left for Kobe direct, where she stayed for three days and then proceeded thence on her way to this port, arriving early on the morning of the 18th instant. She left this port about noon on the 21st, will call at Kobe again, take in cargo there and then proceed to Shanghai to complete her loading of tea for New York. It is expected that she will arrive at New York sometime between the 20th and 30th of November, complete her discharging and be back again in London about the middle of December. This will give ample time for all requisite repairs to be effected, and yet allow of the steamer loading again a general cargo for Shanghai, and arriving out there in time to proceed to Hankow for the new season's teas in May next year. The rapidity of locomotion supposed to have been accomplished by Mr. Phileas Fogg sinks into insignificance compared with the practical results of the movements of the *Loudoun Castle*.

It is interesting to compare the state of the Silk market this year with that of last. Twelve months ago the eagerness which foreigners showed to purchase silk was not to be stifled by the prices which dealers demanded they should pay, and the excitement amongst silk men was such as probably will not be seen again for many seasons to come. A favourable telegram from Europe at the present time may cause considerable settlements to be made, but there is none of that rush among the generality of buyers to follow blindly the example that one or two bolder ones may set them, and which last year caused, on several occasions, a rise of $50 to $70 per picul in a few hours time. The market this season has not been entirely at the mercy of speculative buyers, but, on the contrary, has been guided, as a rule, by the careful and steady ones, while is it a notable fact that many who were large purchasers last year are not operating at all this season. By the P. & O. steamer *Bombay* on the 29th of August, the largest shipment, hitherto, of this season was made, when 539 bales left this port. On the 20th September last year the M. M. steamer *Menzaleh* took away the unprecedented quantity of 2,189 bales, and by Mail steamers leaving previously to that date shipments were made varying from 1,150 to 1,650 bales. The total export for this season up to-day is 4,143 bales, while for last year at a corresponding date it amounted to 12,695 bales, against 3,095 bales in 1875, and 1,697 in 1874. Last year the highest price paid for Hanks was $1,150 per picul, but this year we only hear of 4 bales having been settled about a fortnight ago at $570, while very superior parcels can now probably be obtained at $550. If we take the average comparative value of Silk at this port for this year and last, up to the 22nd September, we arrive at more startling results.

Total value of Export, from 1st July to 22nd September—
For 1876.....$8,111,657=average per picul $803,
For 1877.....$1,628,663= „ „ $494½.

Speculators in London have several times made an attempt to give a fillip to this market, but being unsupported by manufacturers, the influence they brought to bear could not be maintained, and prices which had thus been pressed to an advance speedily fell to their former figure. We now learn by telegrams that the London market is weak, and that the Lyons market has altogether lost the influence it last year

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

had on prices here. America is taking more Silk than formerly and the trade promises to increase, with, we hope, a good result. Notwithstanding the startling difference in export which this season shows compared with last, we are inclined to think that the result will be a more favourable one, for though large profits were made in this article early in the season of last year, there was a sad falling off towards the close. This year operations have been on a much more limited scale, but have been conducted with more prudence and on a sounder business basis.

The *Akébono Shimbun* gives some particulars respecting Ôhara, the noble who was murdered at his residence on the night of the 6th instant by some unknown assassins. His wife was also attacked and has since died of her wounds.

The sole office that Ôhara seems to have held previous to the restoration was that of *Jiyô* (Imperial attendant) which position he only occupied for a short time, as he resigned and went to Kiôto where he lived a retired life. When the troops of the Mikado defeated those of the *Bakufu* on the 3rd of the 1st month of the 1st year of Meiji, at Toba and Fushimi, Ôhara forsaw that another battle must be fought before the troops of the Shôgun could be brought under subjection. Consulting therefore with another *Jiyô* he went at once to Matsuyama in the province of Omi, where he collected together a number of *samurai*, and formed them into a body whom he called the van of the Imperial Army. Commanding them in person he attacked the Shôgun's troops under Takenaka Tango-no-Kami, at Iwato in the province of Omi. Successful in this engagement he advanced to Isé and fought a battle at Nagashima, but his band made themselves so notorious by deeds of cruelty that they were set upon by other bodies of Imperialists, and after a number had been killed, the rest had to be disbanded and sent to their homes. Ôhara himself, however, was permitted to return to Kiôto in safety. After the restoration he was appointed to a high position in the *Gaimushô*, which he continued to hold until his untimely death at the age of forty-four.

This cruel and cowardly assassination of Ôhara and his wife is a proof of the present insecurity of life and property in the capital which is giving serious uneasiness to the Japanese authorities. Every night on an average over seventy houses are entered by armed bands, and property carried off, while resistance is met by assault or murder. The police seem powerless to act in the matter, and have so far, we believe, failed to arrest or discover the perpetrators of the numerous outrages. It can scarcely be supposed that they are committed by common thieves, and their frequency and success would seem to point to some organized plans.

By the 10.30 train on Friday we saw a number of Satsuma prisoners being taken to Tôkiô, we presume for trial. There were in all about a hundred, most of them men in the very prime of life, there being but three of them who seemed under the age of twenty, while some few were apparently over fifty. They were a remarkably fine and hardy looking body of men, some of them fully six feet in height and splendidly proportioned and developed, affording a singular contrast to the wretched apologies for men of which the last levies of Government troops mainly consisted. There were but two sick or wounded, who came to the station in *jinrikishas*, and who were apparently subjected to no restraint whatever. One of them, a singularly handsome man, made his way with difficulty along the platform, but he was allowed full leisure and any assistance he required. The prisoners were guarded by only about six policemen, and were subjected to no harsh treatment or indignity whatsoever. They were roped together with thin cord and had one hand bound behind the back, but the tying was very loose, and if any complaint was made of inconvenience, the knots were at once loosened. Both their bearing and expression were remarkably determined, and contrasting them with the general type of the Imperial soldier, one could well understand some of the causes that have enabled the Satsuma troops to hold out so long against their opponents.

The Yokohama Amateur Athletic Club have issued their programme for the Autumn Meeting, which will take place on the 27th and 28th October. With commendable judgment the Committee adopted a resolution to allow non-resident officers of the Army and Navy and the members of all Athletic Associations in China and Japan willing to reciprocate, to enter for the various events by payment of the same entrance fees that are paid by members. The Tôkiô Athletic Association has reciprocated, and will, we hope, be well represented at the sports here, while there is every prospect of an accession of strength from the men-of-war in port. All this promises well for an interesting meeting, and as one or two well known athletes, for whom some events were looked upon as certainties, have retired from competition this Autumn, the chances are that the result of some of the races being more doubtful than usual, the entries will be largely increased. The finances of the Association are not as flourishing as they should be, as extraordinary calls have been made upon the funds for repairs to the running path. Cannot a large number of youths of this community make an effort to support a most deserving institution, not only by joining it as members, but by entering as competitors at the forthcoming meeting?

The continuance of the article commenced in our last number on the Quarantine Regulations, which, as we then stated, was written by a gentleman of the medical profession residing in the settlement, is unavoidably postponed.

From the "Japan Mail Daily Advertiser."

Monday, 17th.

It is with much regret that we have to announce to our readers that we have just been imformed by Dr. Simmons of an outbreak of what is most probably Asiatic cholera in the native town of Yokohama. Thirteen cases have occurred within the last few days, of which ten have resulted fatally. The symptoms of the disease and the almost complete proofs obtained of its epidemic qualities leave little doubt that it is actual cholera. Dr. Simmons was engaged until late last night in consultation with the Kencho authorities, who are thoroughly aware of the necessity for prompt and vigorous action. A house by house inspection of the most rigorous nature is instituted wherever suspected cases exist. In fact the house and its inmates are entirely taken in charge by the police authorities, in order that no means of communication may be permitted with others. A large sum has been set apart for the immediate purchase of disinfectants, and every precaution taken that care can devise to prevent the spread of the disease. Too much praise cannot be given to the Governor and Vice-Governor for the energy they are displaying, and the community may feel assured that in no country in the world could more active and better planned preventive measures be taken. The cases have occurred in widely separated districts, but it is hoped that the primary cause may be discovered and the disease stamped out before it has time to spread. This account we have received direct from Dr. Simmons himself, and we publish it in order that no exaggerated and alarming statements may get abroad.

The Amateur Rowing Club held the concluding swimming races for the season at the boat house on Saturday. Five events were projected, but owing, perhaps, to the late unsettled state of the weather, only three of them were filled, and the 220 yards race and the mile race had, in consequence, to be given up. There was a good muster of members at 4.30 p.m., when the competition opened with the 100 yard race, for which four started. The winner led from the first, and could never be approached, the second man not succeeding in coming within 10 yards of him.

The Griffins' race was the concluding event, which was open to members of the Club who had learnt to swim during this season. Only two competed, and the advantage lay with Gordon, who seemed to possess more coolness and judgment than his opponent, as the latter spoiled his chance by trying to swim through the fuunel of a steamer which projected from the beach across the course that he took. Still Wood pressed Gordon hard, as the race was secured by barely a yard.

Yesterday morning at a quarter past eight a steam tug in charge of Mr. J. W. Brown was passing the *Nagoya Maru* on her way to the *Belgic*, when she struck and upset a native boat manned by two *sendos*. One of the men sank almost immediately, and although a number of boats were near at hand, no attempt whatever was made to rescue the unfortunate fellow. The body has not yet been recovered.

From the *Akébono Shimbun.*

A telegram despatched by Sub.-Inspector of Police Andô from Tanoura at 4.25 p.m. on the 14th instant, announces that Saigo has his temporary headquaters at Shiroyama. Kirino is going about giving orders to the men. They possess only about two hundred bags of rice. The above has been made known by a policeman of Osaka *Fu* who was captured by the rebels, and succeeded in making his escape on the night previous to this message being sent.

Another telegram despatched from Kajiki at 4.40 p.m. on the 14th instant, says that many of rebel prisoners who were set free when Saigo entered Kagoshima, are now again giving themselves up to the Imperialists.

A telegram from Police Sergeant Watanuki to Chief of Police Kawaji, despatched at 10.10 a.m. on the 14th instant, says that since the 13th instant the rebel positions are being bombarded, and the rebels are greatly harassed thereby.

On the 17th instant, being the *Shin-sho-sai* (Thanksgiving day) the officials of the higher grade will present themselves at the Palace to offer their congratulations to the Emperor.

From the *Nichi Nichi Shimbun.*

The *Okurashô* has decided that the special allowance for the Universal Exhibition at Paris next year shall be 150,000 *yen.*

From the *Chôya Shimbun.*

A telegram from Watanuki to Kawaji, despatched at 6.30 a.m. on the 13th instant, says that Saigo with his four hundred followers at Shiroyama is surrounded by the Imperialists. He does not seem to have much ammunition or provisions. It is expected, therefore, that peace will be soon restored.

It is rumoured at Nagasaki that about one hundred rebels have in some way crossed over to the island of Amakusa. Should this be true, then they must have gone there for the purpose of getting money and provisions.

The rebel leader Hemmi is said to have been in Kagoshima one day previous to the entry of Saigo.

From the *Hôchi Shimbun.*

The Bureau of Ceremony has been united to the Department of the Imperial Household.

All the middle and lower officials of the above Bureau were dismissed yesterday, but many of them were re-appointed on the same day.

A somewhat daring case of forgery says the *Straits Times*, has just transpired, the facts of which are reported to be as follows:—

Messrs. Riley, Hargreaves & Co., had accounts against Government to the amount of $437.74, and on the 26th April last, a Chinaman presented himself at the Treasury with the bills and an order for the money to be paid to him, the bills and order being both apparently duly signed by Messrs. Riley, Hargreaves & Co. A cheque for the amount, payable to bearer, was drawn and signed by Mr Trotter, the Acting Treasurer, and it was presented and duly paid at the counter of the Mercantile Bank upon which it was drawn, being endorsed 'George D. Rozario.' It has been since discovered that the signatures of Messrs. Riley, Hargreaves & Co. are forgeries, and that the Chinaman who presented their bills for payment in not their cashier. The police are now anxious to make his acquaintance, and, meantime, have arrested Messrs. Riley, Hargreaves & Co's cashier, on suspicion of collusion with the forger.

Tuesday, 18th.

One or two of our readers have remarked that it would have been better had we refrained from publishing the statement which appeared in our yesterday's issue of the outbreak of cholera in Yokohama, as the intelligence is likely to cause alarm among the foreign community. Our chief, indeed only reason for publishing such unwelcome news was that undue alarm might not be caused by magnified rumours and exaggerated statements. If this dread scourge is among us, no matter in how limited a form, it is, in our judgment, far better that the actual truth should be told, and the extent of danger made clear than that rumour and the gossip of the indiscreet, which are certain to become far more alarming than reality, should be permitted to spread terror among the weaker minded. The local authorities—and no men can do more than they are doing to arrest the spread of the disease and stamp out the germs—would do well to publish each day an official report of the result of their efforts. Forewarned is forearmed, and if there are signs of any danger it is surely best to be warned of its approach, so that all due precautions may be taken to reduce the risk to a miminum. Proper instructions to servants, attention to due cleansing of compounds, removal of rubbish and stale matter, and careful inspection of fish and vegetables, and more than all of water supply, can be taken, without undue alarm being indulged in. And here we would remark that fear is one of the most fruitful of predisposing causes. The system becomes depressed by nervous terrors and rendered unduly susceptible to attack. To sustain the spirits and to keep a calm frame of mind is of far more value than all the preventive physic that can be swallowed. Every one should consider that he has a certain duty to perform in searching out and destroying as far as lies in his power every noxious element and predisposing cause, and instead of alarming his neighbours by idle gossip and the expression of silly fears, do his utmost to effectually suppress whatever may seem likely to promote attacks. If there be no actual preventive, all have it in their power to adopt preservative measures, of which the principal are cleanliness, temperance, and sobriety in all things.

Yesterday being the *Shinsho-sai*, or harvest thanksgiving day, all the Government offices throughout the country were closed and a general holiday observed. It was also the anniversary of the death of Iyeyasu, the founder of the house of Tokugawa, better known as Gogen Sama. As in addition to the attractions of the Exhibition, the Imperial Band was announced to play in the park of Uyéno, it was expected that large crowds would flock thither, especially as the weather was most favourable, and this turned out to be the case. As the native newspapers also took advantage of a day's rest, we are unable to present our readers with the usual items of Japanese news.

The *Loudoun Castle* has arrived at the anchorage this morning, having left Kobe yesterday morning at half-past five, thus making the run up in 26½ hours.

From the *Mainichi Shimbun.*

The value of the paper money supplied by the *Shiheirio* to the *Sintô-kioku* (a Sub. Department of the *Okurasho*) during the last financial year, was 9,261,360 *yen.* The value of paper money now in circulation is 93,926,953 *yen.* The notes of the Banks are excepted.

The amount of money coined at the Mint for one year from the 1st of July, 1876, to the 30th of June, 1877, was 7,887,669 *yen.*

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

Wednesday, 19*th*.

From the *Hôchi Shimbun*.

It is reported that Income Bonds to the extent of 140,000,000 *yen* will be produced by the Paper Money Department during the present month.

Mr. Hanabusa will start for Korea on the 21st instant.

A private letter from Owake states that 1,620 *samurai* of the various districts of that *ken* who joined the insurgents have had sentences passed upon them.

From the *Chôya Shimbun*.

A telegram despatched by our reporter from Kumamoto at 5 p.m. on the 16th instant, states that the Imperialists are surrounding the rebels with increased forces. The rebel leader Hemmi stated that he is prepared to die upon the field.

We hear that several of the Kagoshima officials are about to be sent to Loochoo.

From the *Akébono Shimbun*.

Judge Kôno, now presiding over the special court at Nagasaki for trying the rebel prisoners, has requested the Department of Justice to grant him a copy of the sentences passed upon Yeto Shimpei and Shima Yoshiwo, in order to guide him in his judgement upon Ishii Takenosuke and thirteen others who have lately been undergoing trial.

From the *Nichi Nichi Shimbun*.

On the 16th instant the returns of convicts undergoing sentence of hard labour were as follows:—

Males	2,012
Females	55

When the insurgents succeeded in retaking Kagoshima, after breaking through the Imperial lines at Mitai, they captured the following stores:—Over 3,000 bags of rice, twelve or thirteen thousand *yen*, some three hundred fire-arms and 40,000 rounds of cartridges.

Hitherto the sum allotted for the annual expenditure of the *Shikibu-riô* (Bureau of Ceremonies) has been sixty thousand *yen*, but the Government has now reduced it to thirty-three thousand.

The amount expended by the Government since the commencement of the war for the enlistment of the Police forces is 778,300 *yen*.

Thursday, 20*th*.

A fire broke out in a bath house at Kanagawa last night, which extended to the houses on either side of the road, and destroyed about 2 *cho* before it was extinguished.

The M. M. steamer *Volga* is to leave Hongkong at noon to-day for this port, with French Mails on board to the 12th August.

The Agent of the Great Northern Telegraph Co. informed us this morning that the Russian land-lines are again in working order.

The *Belgic* sailed for San Francisco this morning, taking the following cargo of Tea:—

From	San Fran.	N. York.	Other cities.	Total.
Shanghai	138	424	2,514	3,076
Nagasaki	—	—	—	—
Hiogo	331	63	—	394
Yokohama	2,729	544	1,041	4,314
Hongkong	169	30	—	199
Total	3,367	1,061	3,555	7,983

From the *Hôchi Shimbun*.

On the 18th instant H.I.H. Fushimi-no-Miya reviewed the *Tonden-hei* (Yezo militia) in the place of H.I.M. the Mikado, and announced to them that an Imperial Proclamation had been issued to the following effect:—"The *Tonden-hei* were called out to suppress the rebels of the West. You have been exceedingly pains-taking in your drills and orgnization but as the rebellion is now nearly suppressed your services are no longer required, and you have permission to return to your homes from and after to-day, carrying with you my thorough approval of your conduct and discipline." At the conclusion of the review the troops were regaled with *saké* and fish.

We hear that the Imperial forces at Kagoshima have made a requisition for ammunition for their artillery, to be sent down to them without delay.

From the *Akébono Shimbun*.

The reason why the the rebels made their sudden entry into Kagoshima was not because they intended to make their final struggle in that town, but to capture some of the men-of-war and then descend upon Shikoku or elsewhere.

From the *Chôya Shimbun*.

A telegram despatched from Sashiki at 8 a.m. on the 18th instant, says that the rebel positions at Kagoshima were again shelled on the 17th instant, and that the *Shigakko* (Private School) was burnt down.

SECOND NATIONAL BANK.

(Dai-Ni Koku-ritsu Ginko.)

Statement for the week ending 15th September, 1877:—

Total Amount of notes (dollars) received by us from the *Shihei-rio*		Dols. 1,200,000

	Dols. 517,620	

Friday, 21*st*.

The *Elisabeth* left the anchorage this morning for Yokoska. The *Modeste* is still away on a cruise for target practice.

We learn from the *Hôchi Shimbun* that very heavy rain fell in the neighbourhood of Hakoné on the 14th instant. Some parts of the town of Odawara were flooded and several houses carried away. The rain ceased on the 15th, but the water which had accumulated in several places caused an outbreak of diarrhœa among the inhabitants, which the authorities were doing all in their power to check.

From the *Chôya Shimbun*.

The following notification has been issued by H.I.H. Arisugawa-no-Miya, the Commander-in-Chief of the Imperial Army, to the various divisions of the forces under him. "Half a year has now been passed in the work of suppressing the western rebels. Now, strong as the rebels were, they have been beaten in battle after battle and their strongholds have been overthrown. All this is owing the valour and zeal of the officers and the men of the Imperial Army. But the rebel leader has made his escape from us and once more appears in the front. He has again entered his old den and is there commiting acts of violence. We must not treat him and his forces with contempt, but endeavour to become still further zealous and careful, so that in the end we shall gain the day, and make known to the Emperor that we had been completely victorious.

COMMANDER-IN-CHIEF.

September 2nd, 1877."

From the *Akébono Shimbun*.

The rebels are said to have attacked some eighteen branch police-officers in the neighbourhood of Kagoshima, and killed the police they found there with hatchets, etc., in the most cruel manner. They then stripped the uniforms from their victims and donned the same themselves. This has made it difficult for the authorities to distinguish between rebels in police uniform and their own men, so that it is necessary for the latter to undergo strict examination, when not personally known, in order to establish their identity.

It is believed that cholera has made its way into Tôkiô, for since the night before last some three persons have died in the neighbourhood of Ogawa-machi from a disease resembling cholera.

From the *Hôchi Shimbun*.

The *Nagoya Maru* took down on the 19th instant a large

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

quantity of material to be used in repairing the damage the *Riujô Kan* sustained by going ashore at Kagoshima.

The rebels circulated the following letter in various districts on their entry into Kagoshima :—

"We entered into Kagoshima to-day. The officials of the *ken* have all fled, the garrison and police forces are on the verge of being overcome, and we have so far gained a thorough victory. Such being the case, whenever any policemen are seen in the districts they should be arrested and brought to our head-quarters here. This letter must be circulated in haste through all parts of the *ken*.

By Order.

Head-quarters, 2nd September."

From the *Mainichi Skimbun.*

The rebels in Kagoshima are now occupying a place about two *ri* square. They number nearly seven hundred and consist mostly of the Private School party. The head-quarters of the Imperialists are at Tano-ura. It could appear that the rebels desire to break through the Imperial lines, having made several attempts to do so, but were each time successfully repulsed by the Imperialists. The latter are bombarding the rebel positions from sea and land both night and day. The Imperialists are determined not to make any attack, but to wait until the rebels are forced for want of provisions to attempt to make their escape.

Saturday, 22nd.

As the weather is all that the could be desired, a cricket match will take place to day at the Cricket Ground, "The Professions *vs.* Trade," play commencing at half-past ten. The two elevens will be represented by the following players :—

"*The Professions*" M. Kirkwood, Revd. J. Llewellyn, Lieuts. Havergal and Wade, E. Wheeler M.D., Messrs. Litchfield, Bain, Keary, Loane, Boyer, and Campion.

Trade.—J. Dodds, J. P. Mollison, G. Hamilton, E. D. Murray, H. Barlow, A Milne, J. D. Hutchison, C. D. Moss, W. J. S. Shand, E. Abbott and another.

From the *Nichi Nichi Shimbun.*

The Satsuma rebels now number only one thousand. Being short of fire-arms, at least half of them are armed with swords only.

Hitherto the *Daijôkwan* has given direct orders to those lower grade officials who have had to proceed to foreign countries on government business, but for the future such officials will receive their orders from the respective Department to which they belong.

The cost of issuing the Income Bonds for the *kuazoku* and *shizoku* is upwards of 200,000 *yen*,

Of the eight hundred policemen who were stationed in Sakai *ken* two hundred have been sent to Kishiwada, two hundred to the borders of the provinces of Kii and Idzumi, while four hundred remain on duty at the port of Sakai.

Three officials of Kagoshima *ken* have arrived at the capital for the purpose of giving to the Government an exact account of the condition of the town of Kagoshima at the time of the re-entry of the rebels. They will also made copies of the correspondence which has taken place between the Central Government and Kagoshima *Han* or *Ken* since the 1st year of Meiji, as, with a few unimportant exceptions, all the official documents were destroyed when the rebels recently burned down the *Kencho* at Kagoshima.

From the *Hôchi Shimbun.*

The order to send the *Tsukuba Kan* to Korea has been cancelled, and instead of her the *Takao Maru*, now at Nagasaki, will take over the officials of the Foreign Office and Navy Department who have been commissioned to proceed to that country, and who will therefore shortly proceed to Nagasaki to embark there for Korea.

From the *Akébono Shimbun.*

An army surgeon named Ishizaka was captured by the rebels and taken before Saigo, who said to him in a determined voice, "I have re-entered Kagoshima and have captured plenty of supplies and ammunition, which are now at my disposal. If my enemies wish to oppose me, they must first determine to die at Kagoshima." Ishizaka was then set free.

That the people of Kagoshima generally have a strong feeling of hatred against the Imperialists is shown by the following incidents. When the *Kencho* officials were running away on the re-entry of the rebels into the town, the merchants and common people did all they could to obstruct their passage. A policeman had purchased a melon, and the vendor was peeling it for him, when the news was spread that the rebels had arrived. Immediately the melon dealer threw away the fruit he was peeling and plunged the knife into the policeman, killing him on the spot. Again, after the *Riujô Kan* was driven on shore, her crew landed stores, etc, from the ship, which were, however, quickly stolen by the Kagoshima people, who clapped their hands for joy on observing the danger the ship had got into.

IMPERIAL GOVERNMENT RAILWAYS.

Yokohama Station.

Statement of Traffic Receipts, for the week ending Sunday, 16th September, 1877.

Passengers, Parcels, &c.	$6,951.83
Merchandise, &c.	$ 837.13
Total	$7,788.96

Miles Open 18.

Corresponding week last year.

Passengers, Parcels, &c.	$5,641.01
Merchandise, &c.	$ 765.12
Total	$6,406.13

Considerable anxiety prevails among us at the sudden advent of so dire a foe as cholera, and however great any desire may have been to trust that our medical men were mistaken in announcing the fact, we are nevertheless compelled to admit that several cases have sprung up in the neighbourhood, which unfortunately leave no doubt as to the true nature of the disease. Until yesterday the localities involved were supposed to be very limited, and it was with considerable dismay that we saw the public announcement of the presence of the disease on board U. S. S. "Ranger" when the yellow flag was flying at the fore.

It was hoped that, with the precautionary measures which the Governor so commendably instituted, the range of the malady would have been limited to those districts in which it originated, and its sudden appearance on board a man-of-war proves how subtle a foe we have to contend with, seeing that all leave had been stopped and as little communication with the shore allowed, as was compatible with the necessities of the ship.

So far, the number of deaths has been small, when we consider the numerous nooks and corners apparently so well adapted for its propagation, and we have reason to believethat, although it is now some fifteen years since the disease last visited Nagasaki, its stay among us will prove a short one, as the present weather is calculated to accomplish much in the matter of disinfection, and all such means as are likely to arrest the spread of the disorder have been put operation by those who are immediately concerned in its extermination.—*Nagasaki Rising Sun.*

In our issue of 27th August we stated that the Imperial rescript authorizing the Loan states that it is to be paid in Sycee, and is repayable in Sycee; the rescript further states that in consequence of the money being repayable in silver, the interest, at first arranged at Shanghai by Tao-t'ai Hu Quang-yung at 1 per cent per month, is to be 1.25 per cent per month. The contract made by Hu Singan, (the Tao-t'ai referred to) the Government Banker at Hangchow, is for a loan of Haikwan Tls. 5,000,000, payable in silver at 5/9½ per Shanghai tael, and re-payable in sterling at the Bank sight rates of the days on which the instalments and interest fall due. It is this discrepancy we believe which causes the difficulty in completing the loan to which we referred yesterday. We presume that Tao-t'ai Hu proposed to adjust the accounts himself, and the difficulty will probably be arranged eventually, as the Tao-t'ai exposes himself to a loss of Tls. 300,000 by not fululling his contract. We should suppose the difficulty arose from some demur upon the part of the officials to stamp bonds repayable in Gold. We should not be disposed to think that the Chinese Government objected on principle to a further demonetization of Silver, especially on such swingeing terms as 15 per cent per annum. The difficulty is, in the meantime, very lightly treated by the share market and after the 400 or 500 *Banks* sold on Saturday and Monday, buyers have plucked up courage, and in the absence of shares offering are said to be making higher bids, but we do not hear of any transactions. —*Shanghai Courier.*

NECESSARY PRECAUTIONS.

WHATEVER be the faults of a despotic Government there can be no doubt that at a moment like the present, when a fatal epidemic has declared itself in the midst of a crowded population, and the arrest of its progress and salvation of the multitude depend on unquestioning obedience being yielded to such measures as the administrators and their advisers may consider necessary, it has a decided advantage over more liberal institutions. Not even in London could more active steps have been taken to stamp out the disease, or a more earnest desire shown to adopt those means which advanced medical science has proved to be most efficient in staying the spread of cholera, than have been taken and evinced by the Governor of Kanagawa and his associates. Both in England and America, no matter how necessary certain measures may appear, there are sure to be many persons holding peculiar views, or of obstinate and rebellious nature, who either refuse to obey them or by whom they are systematically evaded. Be the epidemic small-pox, typhus or cholera, there are always to be found grumblers who resist to the last all that is done on their behalf. Vaccination is fought against, cases of illness are unreported, crowding of lodging houses continues, and orders to clear out refuse and dirt neglected. Moreover, inspection is too often partial, inefficient and inoperative, and thus there is always the chance of efforts for security being frustrated by obstinacy and prejudice.

Here there is no danger of anything of this kind happening. Given authorities who are wise and enlightened enough to profit by the sad experiences of former visitations both here and elsewhere, and willing to act in concert with those of their foreign friends who are most capable of advising them, there is little fear that any action that is decided on by them will not be followed out to the letter by their subordinates and obeyed implicitly by the people. Nothing can be more admirable than the earnest and thorough manner in which the Japanese authorities set to work as soon as it was made clear to them that an actual case of epidemic cholera had occurred. A close and authoritative inspection was immediately inaugurated; simple rules and instructions issued as to preservatives against infection or methods to be adopted in event of seizure; a plentiful supply of medicines and disinfectants issued, and care taken to arrest the spread of the disease, by isolation of the sick, for whom medical aid is always at hand and to whom every attention is given. It is yet too early to say whether the pestilence will be stayed or will blaze up and extend its devastations, but what has already been done cannot but have a most beneficial effect on the sanitary condition of the settlement, and must certainly curtail, if it does not altogether put an end to the ravages of the disease. Foul slums have been looked into that have for the past two or three years been uncleansed, and whence it is a wonder that some dreaded illness did not stalk forth long ago. In fact, it is not at all impossible that much of the low fever that has been so prevalent among us has had its source in these filthy dens. The necessity of increased cleanliness in their surroundings is also proved to the Japanese, while the present alarm will probably lead to the question of efficient water supply being promptly taken up by the authorities. If the disease end with the few cases that have undoubtedly occurred, the visitation will prove anything but an unmixed evil, but on the contrary, we may be thankful that public attention has not been called in a more forcible manner to our neglect of the simplest precautions against an enemy whose attacks inspire such universal dread.

There are, we believe, discussions going on among some of our medical men as to whether the disease that has appeared is actual epidemic Asiatic cholera. At the present time we think such discussions useless. Fight the disease, whatever it be, first, and fight about its nature afterwards. Ever since its first appearance in England there have been the continual questions, What is cholera? Where does it come from? How can it be warded off? What is the best mode of treatment? It has been maintained that it is a special dispensation of Providence to punish us for our evil deeds. This explanation we must decline to accept, inasmuch as Providence is just, and when we see how many good honest souls die of cholera and how many unnecessary members of society escape it, it is impossible to pin our faith to the pious supposition. Some men, just and moderate in most things, have believed that, like war, it is a means of keeping down superabundant population. One hears constantly, "We want a good war; there is no room for us to get on now-a-days." But where and when has there been a good war? And taking those portions of the habitable globe that are actually inhabited, are we pigmies too thick upon its surface? Surely such theories are scarcely in keeping with our boasted intelligence.

Alas! there is no need of a providential mission of war or cholera to thin our ranks. Drunkenness and debauchery, and their offspring, poverty and disease do this fast enough. Most of our evils are self-inflicted, and the greater part of our diseases spring from our own crimes, or follies as culpable as crimes. And certainly cholera is no exception, but is equally the consequence of human stupidity and neglect of the simplest sanitary precautions. We know its cause, filth; and knowing it, it is in the power of everyone of us to aid in its effectual suppression.

It has been said by some among us that it would have been better if the medical men had refrained from trumpeting the arrival of the complaint. That it was injudicious to give it such publicity, as fears might thus be raised among the community. With reference to this we can only say, that if the publicity given by the foreign press has induced a general wholesome fear, and roused the public from their idle indifference to the state of things around them into energetic efforts to improve the general sanitary condition of the settlement,—and how much such improvement was required the last few days' inspection has shown—we feel that we have filled a large measure of good.

And in this connection we would say a few words on the folly and even danger of fear. There is no more predisposing cause to an attack than indulgence in weak and unavailing terror. Depress the mental system, and through it the physical, and you throw yourself at the mercy of the complaint. Fear does not certainly act as the primary cause of the disease, but it renders the system liable and susceptible to the entrance and action of the poison. Fear, too, is catching, and a thoroughly frightened and uncontrollably nervous person may do a vast amount of unintentional mischief by creating a panic. As in a regiment, a soldier to a great extent is

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

dependent for courage or the reverse on the examples afforded him by his comrades. And now that we have to face so formidable an enemy as cholera we ought to consider ourselves one and all under arms to confront and defeat it, and remember that cowardice in our ranks is to give our antagonist an extra chance of seizing us. Perhaps we may not be called upon to do battle with this dread foe, but if we must, let us remember that each of us have duties to perform, and that calm courage is a powerful buckler in warding off its attack. There are no more effective preservatives than a quiet, well balanced mind, and cleanliness and sobriety in all things.

SILK-WORMS' EGGS.

THE season for 1877-78 may be said to have fairly opened, as the first small lots of cartoons have made their appearance in the Yokohama market, and a number of *graineurs* have arrived. As far as can be seen at the present moment, it is reasonable to suppose that the ruling prices will be extremely low, and the Japanese will probably find themselves disappointed if they expect to realize anything like the prices which they readily obtained in some former years. It is true that although the Italians last year were firm in their refusals for a long time to accede to the demands of the native producer, they were at last compelled to pay the prices demanded, but they only gave in at the last moment under pressure of the danger that might result to the shipments from the lateness of the season. To a certain extent the Japanese thus gained their object. The circumstances, however, which ruled the value of the cards last year, were entirely different from those which govern this season at its opening. This difference we will proceed to point out.

In the first place, the silk crop in Italy last year was nearly an utter failure, which not only caused silk in this market to attain an almost unprecedented figure, and thus naturally affected the prices of everything connected with that product, but the Italian reproduced seed was also very limited in quantity and exceedingly doubtful in quality. This failure in the silk was especially unfortunate for the Italian reproducers. It is well known that the use of Japanese seed is attended with less risk than of that which is home produced. Since the appearance of the silk-worm disease in Italy, the use of this latter has always involved a greater amount of danger of failure, the seed produced in Japan being more hardy and certain. The Italian growers were commencing to believe that they had succeeded in so invigorating by imported seed their own reproduction, as to render in a short time importations from Japan unnecessary. Indeed, many growers had already dispensed in a great measure with the use of Japanese cards when the undesirability of relaxing their precautions was forcibly brought home to them by the failure of the silk crop. We do not mean to attribute this failure to the use of Italian reproduced seed, but it naturally made them return to what they considered the safest course, the use of Japanese seed. The native dealers, who are always perfectly posted on the conditions which rule the demand and are not slow in drawing their conclusions, at once understood that the game was in their own hands. The repeated and united protestations of the *graineurs* that they really did not want the seed except at absuredly low figures; that they had plenty of reproduced seed of good quality at home, and that the growers, owing to the failure of the crop, had actually no money to pay the fair prices for imported seed if they wanted it ever so, as well as their threats to return to Europe without buying a card unless at their own prices, were met by the Japanese with calm obstinacy and quiet ridicule. It was the game of "pull devil pull baker" in which the Japanese pulled their opponents completely over the line; for at that time the former felt wealthy by the money they had made in silk (which however they afterwards lost), while the latter knew that their future crop depended on their buying the cards. Another reason that made the Japanese more firm in their demand, was the fact that the Government had put the usual limit on the number of cards to be set aside for export, which amounted to about one million.

The present season opens under entirely different auspices. In the first place the Japanese Government has removed the limit hitherto imposed, and the cards for sale will probably number about two millions, which is far in excess of any possible requirements. This alone would be sufficient to break down the market. In addition to this, the other causes which to a great extent justified the high prices paid last year, in spite of the illogical reasonings of the *graineurs*, are now absent. It has been urged that the prices of last season were proved to be too high by the heavy losses made by certain Japanese and foreign speculators both here and in Europe. But this is no proof. This trade is essentially a monopoly in the hands of the *graineurs* (who, as a rule, came out well on their purchases), so that outsiders cannot but work at a disadvantage, and those who meddle with a business, the success of which so largely depends on a *clientelle* on the Continent, must not be surprised if they lose when those who possess the requisite advantages succeed.

Besides the large excess of cards, there remain still other reasons which will further tend to reduce their price. Most of the Japanese connected with the silk market, trade alike in that staple and in cartoons. The profits which they last year made have been, to a great extent, swallowed up by subsequent losses. The quantity of new season's silk sold does not amount to half that at the corresponding period last year, while the value of the article has fallen fully sixty per cent. from its highest point. It is therefore reasonable to suppose that the native merchants, being in want of funds, will more readily accept moderate offers, whilst the excuse that may be made by the *graineurs* that silk cultivators cannot pay high prices for cards is perfectly valid, when the present low price of silk in the home markets, and the widespread feeling of uncertainty as to its future, are taken into consideration.

Mr. Mori Arinori, the Japanese Minister, is about to return to his duties at Peking and will probably leave Shanghai to-morrow for the North. This morning he attended the Mixed Court and heard several cases tried, afterwards visiting the prisons attached to the Court. He expressed his general satisfaction with what he saw.—*Shanghai Courier.*

Chang-sze-kwei, one of the Chinese Ambassadors to Japan, is not, as stated by our morning contemporary "a well-know Ningpo Shopkeeper and Junk owner," nor has he ever been such. He was sometime since Secretary or Manager of the Northern Guild, an influencial body of merchants; and is a gentleman of wealth and position. More than twenty years ago he began to take an interest in Western Sciences, and under the instruction of Dr. MacCartee made considerable progress. It is to his proficiency in these subjects that he owes his promotion in the Chinese service.—*Shanghai Courier.*

SPIRIT OF THE JAPANESE PRESS.

The Deep Laid Plans of Satsuma.

(From the "Hôchi Shimbun," 20th September.)

When in 1874 the *samurai* of the province of Saga broke out into rebellion, they were destroyed or forced into obedience and the rebellion entirely stamped out in a few days. But the leaders Yeto, Taniguchi, Ishii and Toku managed to escape and conceal themselves so successfully, that although the Government made the strictest search they were not to be found. It was known afterwards that Yeto went to Kagoshima and requested Saigo to conceal and protect him. This, however, Saigo declined to do. Yeto then went to Obi and procuring a boat crossed over to Kôchi in Shikoku, where he was arrested and beheaded. No one could discover what had become of his companions. Some said that they had succeeded in effecting their escape to a foreign country, while others said they had committed *seppuku*. When the present rebellion broke out, however, it was rumoured that the remaining three ringleaders were with the rebels at Kagoshima, though such was not positively ascertained to be the case. But on the 6th of this month a telegram was received from Kumamoto announcing that they had been arrested in that town, and it became known for the first time that for the past four years they had been hiding in Kagoshima.

On this subject we shall offer a few remarks. The Private School party in all probability took pity upon these three leaders, who had no place of abode, and thus concealed them thinking that they might in the future be serviceable to them. Instead of their having fled abroad they were discovered to be hiding in their own country. Now in later times it has been the custom in Japan to exercise the most rigorous care in inquiring into the birthplace and residence of the people throughout the country. Yet such could not have been the case in Kagoshima *Ken*, proving that Satsuma has thus hitherto existed as an independent province within Japan.

Saigo must have been well aware of this, and yet took no notice of it. Yeto evidently thought by his going to Saigo and entreating his protection that his request would be at once granted. But Saigo refused, probably thinking that if Yeto remained in Kagoshima he might be an obstruction to the carrying out of the plans which he had in view. It is said by some that had Yeto applied to Beppu or Hemmi he would most probably have received the protection he sought.

But on this subject it is scarcely necessary that we should dwell. By the recent discovery of the whereabouts of the Saga rebels certain facts have been made plain. The Saga leaders in going to Kagoshima and seeking the aid of the School party had certain objects in view. They knew full well that Kagoshima would afford them safe hiding places, and although defeated in their first attempt they might be able to renew their efforts at some future day. Kagoshima *ken* was to all intents and purposes under the Government of the Private School, and the leaders of the Saga rebellion felt assured of finding there aid and sympathy. The Government failed to discover them, since it was only nominal master of the *Ken*, while it really possessed no jurisdiction whatever.

It is owing, therefore, to the assistance and sympathy of the Satsuma *samurai* that these three rebel leaders have during four years succeeded in evading the vigilance of the Government, and according to their intention, in renewing their rebellion against the Government. That the School party are no longer able to shelter them, and that they have fallen into the hands of the Imperialists, is a proof that the Government has at last succeeded in asserting its authority in Satsuma. Had it done so before, there would have been no chance of the School party defying the Government by protecting traitors in time of peace, or resisting it by armed force as in the present war.

Above all it proves that the plans of the present rebellion were laid fully four years back.

While going to press both the English and Russian Admirals have arrived, the former in the *Audacious*. The *Vigilant* has been detained, but is expected shortly.—*Nagasaki Rising Sun.*

Medical inspection takes place of all the houses infected with cholera, which we hear is increasing, especially in Oura in the native quarter. Those who show any symptoms of the disease are immediately sent into quarantine on one of the adjacent islands. Quite a panic prevails amongst the natives, and many are leaving for the country.—*Cosmopolitan Press.*

LETTERS OF AN EXILE.

How we came by the accompanying letter, we take it to be nobody's business. A lady's letter? Yes, certainly. And she gave you permission to publish it? Anyone who knows us must be aware that such a question is totally unnecessary, indeed, almost insulting. Is it a young lady? No lady is ever old, their years pass in perennial spring. Is this the only letter or have you a packet of them? We cannot satisfy your curiosity in that respect, and now we distinctly refuse to answer another question. Suffice it to say that the writer has now gone to join her friends in that civilized sphere for which her longing soul evidently panted while pining here in the bitterness of a detested exile.

My Dear,——I promised to write to you from Japan. When we parted it was so easy to make such a promise, it would have been unnatural not to make it, and yet I have been here six months and it is still unfulfilled. I have not forgotten you, nor my old existence,—it would be easier to live here if I had,—but the life is so different from anything in your experience, that it is almost as difficult to write to you as if I had already been admitted to the Elysian fields. Yet certainly we are not in heaven here; it is merely an alien life, not in any sense a celestial one. We are scarcely alive; we are not positively dead; nor are we like the mild eyed melancholy lotos eaters, inasmuch as we are generally keenly desirous to return whence we came. It would be an insult to your intelligence to write you the ordinary traveller's letter, part platitude, part statistics, principally gush. Such letters justly irritate those whose grievance it is that they are obliged to stop at home. What you would care to know is the effect of exile upon myself and the few other common-place people whom Fate has so oddly wrenched away from their homely joys and destiny obscure.

To begin with the superior sex; the men, generally, like it. I fancy I have discovered one element in the contentment of the married men; they are perfectly separated from their wives' relations, and this I believe to be to them a source of joy, deep but unacknowledged. The bachelors are less easily comprehended. Some of them deplore their solitary state, and their life lacks the excitement which would enliven it in the land of two or more millions of surplus females. The daily peril of their lives in other countries does not exist here. There are no designing damsels or dangerous widows; no match making mammas who may be trifled with until the eleventh hour and gloriously eluded at last. In this state of security they sometimes become romantic, and cherish sweet visions of domestic bliss at some future and distant period. To an observant person, fresh from the great outside world, it is strange to encounter this small well-spring of Arcadian sentiment. Many of the young men, who go home prepared for every sacrifice in the way of matrimony, return here soured, silent and still single.

But the women! Who, indeed, can tell much about them! They are difficult to understand, not because they are too profound, but because they generally do not understand themselves in the least, and neither act nor think on any established principle. It is at once a hard and an easy life and lot for women. The material aspect of it is admirable, and there are undeniable delights of scenery and climate, but women in general do not transplant well, and are rarely free from repining at their separation from their own homes and people. Then each woman stands altogether alone. There are no old associations; no old friends; no one to call one by one's first name, and talk about the days of one's youth. There is nothing that can be called society. There are balls in the winter, and dinners all the year round, but there is no way of meeting people informally. The ladies never have a certain day for receiving, as they have in every other part of the civilized world. You feel surprise, and imagine that "some one has blundered" when your footman, a tattooed Japanese, reports that the lady you have come to visit is at home, or to use his own phrase "*Okamisan arimas.*" Feeling that you are also involved in the blunder, you

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

enter, and after long waiting, your hostess who has been torn from the comforts of her peignoir, her fan and her novel, appears, and then you discover that there is nothing to talk about. You feebly prattle about Tennis and the Races, and complain of the weather, without which sacred topic we should be poor indeed. Then you ask if it is true that Mrs. * * * has really sent to Paris for "a box," that being the Eastern expression for new garments. About this last subject there is, perhaps, a little animation, but it soon dies out, and you make your languid farewells.

There are no amusements here: no theatre, no pictures, few new books, and very little music. If pleasure is simply absence of pain, it is a pleasant life; if virtue be absence of temptation, it is distinctly a virtuous one. But it is a negative and inconsistent state of being. The small questions of life in other places are the large ones here. The house-keeping is easy; the servants are satisfactory; but oh! the misery, the travail of spirit, if you wish to have a pair of gloves cleaned or to match a bit of ribbon. You can get a dozen delightful tea cups for a dollar, and tea pots that rejoice your heart for ten or fifteen cents; but the price of cream is a dollar a bottle, and it costs you ten dollars to have your piano tuned. Then it is hard not to be able to communicate with most of your servants, and to be helplessly in the power of the one or two who speak a little English; to be brought to shame and confusion by the appearance of inordinate dishes at dinner parties, and to have your cook insist upon it that you ordered them yourself. How often have I longed for the most insolent and intolerable of home cooks, with whom I could have familiar communion upon the vital question of wherewithal we shall be fed. If one of your servants dissatisfies you and you dismiss him, he takes no notice at all, but continues his routine of work with Buddhistic calmness and repose. Indeed, he is so superior in his majestic tranquillity, that you perhaps finish by begging his pardon, and entreating him to forgive your faults of temper, which are the consequence of your nationality. And so matters go on, until his next flagrant offence, when you again dismiss him, with the same result. Can you comprehend such a state of things? As I write I feel the hopelessness of it. All the miles of land and water which separate us act as a nonconductor, whose power is not to be overcome. Is it possible that you, the "friend of my better days" are still leading the old, peaceable, uneventful life, while I, like St. Paul, have been in journeyings often, in perils by the heathen, in perils in the sea? Shall we ever meet again? Or if we do, can we ever be again as we were, after this great gulf of separation?

Your friend, * * *

A VISIT TO THE YEDO POORHOUSE.

Previous to the year 1789, poor people in great distress were relieved by receiving rice from the godowns of the *Fu*, but there seems to have been no fixed sum set apart for that purpose.

In that year the Shôgun's Councillor of State (*Rojiu*), Matsudaira Sodanobu, Lord of Etchiu, whose policy was economy, perceiving that the municipal expenditure of Yedo was excessive, resolved to restrain this extravagance, and in order to accomplish this purpose he gave instructions that the amount of money to be used for municipal purposes should be restricted to a fixed sum per annum. By this means he had at his disposal at the end of the first three years of *Kuansei* (1789-90-91) a sum of 40,000 *yen*. This money was disposed of as follows: One-tenth was assigned to the various wards of Yedo, in order to meet any sudden emergency that might arise, one-fifth was alloted to the owners of the soil (*chi mushi*), and the remaining seven-tenths he entrusted to the *Machigaisho* (Municipal Office) that it might always be available for the relief of distressed persons. By "distressed persons" were meant, in addition to the ordinary poor, those whom fires, earthquakes, etc, had rendered homeless and destitute. The latter were supplied by the *Machigaisho* with temporary dwelling and with food until they were in a position to shift for themselves. About this time, in addition to the money saved from municipal expenditure, the Government, being of the opinion that the existence of such a system was of great importance to the country, presented to the *Machigaisho*, to be held in trust for the poor, the sum of 10,000 *rio*. This money, together with an annual sum assigned for the purpose out of municipal revenues, served not only to meet but was in excess of the wants of the people.

When a Japanese wanted public relief, he went to the head official of his ward, who, if he thought the case worthy of charity, conducted him to the *Machigaisho*. Here again the case was examined into, and, if approved of, the applicant received a dole of one *to* (a little less than half an Imperial bushel) of rice and fifteen cents in money. This dole was given for the purpose of relieving him till he could procure employment. If, however, he exhausted this stock of provisions and money before he was able to succeed in this object, he again made application to the *Kocho*, and if it was proved that by no fault of the applicant he had again become distressed, the above mentioned formalities were again gone through, and a second time he was relieved. It was a rule that an able bodied person should not receive the dole oftener than three times, as that amount of assistance was deemed sufficient for his maintenance till he was able to support himself.

After the Restoration (1868), the annual payment of a sum derived from municipal revenues for the relief of the poor was discontinued. However, as there was a large accumulation of money in the *Maichigaisho*, which had been laid aside for this purpose, the system of outdoor relief, as described above, was proceeded with as usual. But in February, 1873, the members of the *Kaigi jo* (Council) represented to the Tôkiô *Fu*, that the system then existing of now and then relieving distressed persons without teaching them a trade by which they might support themselves for life, although it got the name of charity, was in reality no kindness. They, therefore, petitioned that office to be allowed to establish a Poor House in Uyéno, in which extremely distressed persons might be taken care of, sick people might receive medical attendance and medicines, able bodied people might be taught some trade, and children might be instructed in reading writing, and arithmetic. For the accomplishment of this purpose they proposed to devote the money laid up in the *Machigaisho* to meet the expenses of the establishment. This proposal was agreed to by the Tôkiô *Fu*, and accordingly in the same month of the same year, the *Yoikuin* (Establishment for the maintenance of distressed persons) was opened.

The following is a short account of the original objects of the establishment:—

"The friendless, homeless, and poor are to be admitted into the House."

"The Poor House is established especially for the relief "of Yedo poor, but it will also receive people who not "being inhabitants of Yedo are homeless, and wandering "about the city; and criminals,* who, having served out "their term of punishment, cannot obtain employment."

"The sick, maimed and deformed are sent in to hospital. "Those who are insane, or who are suffering from some "epidemic disease, are put into separate apartments and "an attendant is appointed for each."

"Lunatics are frequently brought out of their rooms "for the purpose of bathing or exercise, and are treated ac- "cording to the nature of their mental aberration."

"Artisans will work at their respective trades, and "others at a paper and a flour mill† inside the building. "Of the money thus earned, half is retained for the ex- "penses of support, and the other half is returned when "the inmate leaves the house."

"Children will be taught writing and arithmetic; and "from their tenth year they will learn some trade or "occupation."

"During residence in the House, clothes are furnished "to each inmate, and baths are provided in which they "are forced to wash themselves every day. In the hos- "pital foreign bedsteads placed in rows are used, and the "rooms are kept as clean as possible."

"The prices of meals are fixed by contract, and the "master of the establishment frequently examines the "food to see that it is of proper quality."

* These are now taken care of by the Police Authorities.
† This latter does not seem to have been established.

The site chosen for the *Yo-iku-in* is a high and airy compound in the Uyéno Park, immediately in the rear of the new Exhibition. It is very picturesquely situated, and as the neighbourhood is a very quiet one it seems to be eminently suited to the purposes for which it was designed. The extent of the compound is 8,634 *tsubo*, or a little more than 7 acres, of which area the houses cover 789 *tsubo*, or about $\frac{1}{12}$th of the whole space. The main building was originally a large Buddhist temple, but as that accommodation was not sufficient for the wants of the establishment, other smaller houses have been built in the inclosure. The principal building is approached by a path about thirty yards in length, skirted on either side by evergreens and flowers.

On visiting this place on the 22nd of June of this year, we proceeded first to call upon Mr. Ida, the principal official of the establishment, who received us very kindly, and willingly afforded us any information we required. When we expressed a wish to inspect the place, he was so good as to detach an officer to act as a guide, giving the latter instructions to answer any questions that might be asked.

We were first conducted through the large entrance hall (in which were piled up the musquito curtains required for the night) to a small room on the right hand, in which about 30 children under the age of ten were receiving instruction from two teachers in reading, writing and arithmetic. The latter subject was taught by means of foreign figures. We observed a little boy of about 7 years of age adding up a column of figures with both correctness and rapidity, and other children seemed intelligent and diligent. They looked quite fat and happy, and by their dress no one could have supposed that they were pauper children. At the age of ten these children are taught some trade, the selection of which is determined by the taste and physique of the child. They occupy the same apartments as the women.

The next room to the school-room was the men's apartment. It is a large, lofty room of 200 mats‡ with plenty of ventilation in summer, and there is no reason to suppose that in winter it is colder than the generality of Japanese houses at that season. This remark applies to the other rooms in the establishment, with the two exceptions of the Hospital and Lunatic Asylum, to which allusion will be made below. On the floor of this apartment were squatted about 30 men of all ages over about 25. As it was about noon some of them were taking a siesta, but others were employed in making match-boxes, which they did with great dexterity. In addition to these 30 men, about 120 more, who at the time of our visit were employed at their various trade elsewhere, occupy this room at night. As the apartment is lofty and well ventilated, no inconvenience seems to arise from making 200 mats accommodate 150 men.

Those men who are able to work are supplied with work according to their several abilities. Some are allowed to leave the house and work outside, either at some trade such as shoemaking or the like, or as navvies. But the most of them are employed within the walls of the establishment in making paper. The average amount of money earned per head is about 8 *sen*, half of which goes towards their support and the other half is kept for them till they leave the House and is then returned to them, so that some of them leave having acquired skill in some trade and with a small capital to set them going.

The next room we visited was the womens' apartment, which is of the same description as the mens', only smaller. Out of 130 women who were in the *Yo-iku-in* in June, about fifty were in the rooms when I went there, the rest being engaged in their several occupations outside. They are engaged in the various operations of paper making, and earn from 5 to 7 *sen* a day, which money is disposed of in the same manner as in the case of the men. They all were cheerful-looking, and seemed to be quite comfortable.

The kitchen is a large long room fitted up with fireplaces, cauldrons, etc., like other Japanese kitchens. It was very clean, the paupers being compelled to keep it in that condition. We were so fortunate as to see the dinner of the inmates which was just about to be served up, and consisted of rice and pickled vegetables. The quality of the rice seemed very good, and the quantity sufficient. A man who is able to work is allowed 5 *go*,‖ of rice daily, non-working-men and women 4 *go* and children receive half that amount. As mentioned above the food is supplied by contract, but is from time to time inspected by the superintendent to see that it is up to sample both in quality and quantity. Hospital patients are allowed whatever food the medical attendants order for them, such as soups, milk, etc.

The hospital consist of two wards for male and female patients respectively. They are two long narrow rooms jutting out from the main-building. In summer they are very cool and pleasant, but in winter when they have to be warmed with foreign stoves, great difficulty must be experienced in regulating the temperature, and in ventilating the rooms properly without admitting cold draughts. Each ward is furnished with about twenty-five foreign beds, which were all occupied at the time of our visit. The principal diseases, observable in the hospital, are chiefly those which owe their causes to improper and insufficient food and other evils of poverty, such as anæmia, senile gangrene, scabies, etc. There was a considerable percentage also of venereal disease, chiefly among the women. The staff of the hospital consists of two doctors and two apothecaries, who are paid and sent by the Board of Education from the hospital at Uyéno (at which some German medical men lecture) in order to extend their experience. On an occasion in which we visited this hospital with Dr. Anderson, medical officer of H. M.'s Legation, he informed us that the treatment by these native doctors of the various diseases that came under his notice, seemed to be correct. There is a small neat dispensary attached to the hospital.

Some distance apart from the buildings described above are a series of long, low, sheds which contain the insane inmates of the establishment. We regret not being able to give such good account of this department of the *Yo-iku-in* as of the rest of the house. The sheds, above mentioned, are very roughly constructed and bear a striking resemblance to a row of dens in a menagerie. They are divided into compartments of about 6 ft. by 4 ft. in size. These have a frontage of strong wooden bars, communicate with the latrines behind, and are separated from each other, laterally, by wooden partitions which allow every sound made in one cell to be distinctly heard in those adjoining. A space of about 3 feet separates the front of the cells from the true frontage of the building, which is closed at night by ordinary shutters, and in winter days probably by paper slides. These sheds face the South, and in addition to the discomfort arising from the extremely circumscribed space allotted to him, the patient must find the heat in summer intolerable, and at night when the shutters are closed outside he must be nearly stifled, as there is no proper provision for ventilation. The building is heated in cold weather by charcoal braziers, the fumes of which must, in the absence of good ventilation, combine with the waste products of respiration and transpiration to produce a highly poisonous condition of atmosphere. The patients must, moreover, suffer terribly from cold and draughts on windy days, owing to the improper character and hasty construction of the building. The most tractable of the patients are taken out for exercise every morning and evening, and made to walk in a large open space in the compound. Those patients who are very violent are treated with the douche, the apparatus for which stands at the rear of the sheds. They are also tied up with ropes till the paroxysm is over. There is accommodation for 50 patients in the asylum, which is always full, the superintendent having had to refuse several applications for admittance. I was told that the mortality in this department is very high.

In a house, also detached from the main building, are the apartments of the blind. These poor people likewise had the same comfortable appearance that was observable in the men and women paupers described above. They are employed as shampooers, and are allowed to go out to practice their trade. On such occasions they are provided with decent clothes, which are again changed on their return for the ordinary paupers' dress—a blue gown with

‡ 1 mat=6 ft. × 3 ft.

‖ 1 *go* = about ⅓ lb. dooir : 5 *go* = 1⅔ lbs.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

the characters for *Yo-iku* in stamped on the back. They also practice acupuncture—a kind of treatment which the Japanese look upon as a remedy for various diseases.

The number of inmates of the poor house in June, 1877, was 370, of which number 240 were males and 130 females. Subjoined is a table of the averages of the admittances into this establishment for the years 1873-74-75-76, and also of the numbers of those who left it and the causes of their leaving.

Average of the years 1873-74-75-76.

Entrances	—	437
Left voluntarily	83	—
Died	165	—
Ran away	66	—
Remaining	123	—

In this table it will be observed that the number of deaths bears a very large proportion to the number of entrances. This is not so extraordinary as it would at first sight appear, when the feeble and diseased state of a large proportion of the poor who are admitted is taken into consideration. With the wards of the Hospital and the Lunatic Asylum continually full, not so much of paupers who have fallen sick in the House, as of poor invalids who are admitted for the sake of medical treatment, a more favourable result could hardly be obtained.

There is also a large proportion of inmates who have run away from the institution, which Mr. Ida accounted for by the fact that in almost every case these runaways were composed of those inmates who were too idle to work, and to whom the necessary discipline of the House (such as bathing, exercise, etc.,) was particularly irksome, and who preferred the free but precarious life of begging, to the more constrained but, as it would seem to most people, more comfortable life in the *Yo-iku-in*.

The revenue of this establishment stated above is derived from the funds set aside for the purpose of poor relief, which had accumulated in the *Machigaisho*. These funds are under the control of the Tôkiô *Fu*, who send an officer periodically to inspect the place. The Superintendent also sends a yearly report to that office. In addition to the above named funds, voluntary contributions in aid of the Institution amounted to

	Yen.
In 1873	1,603.17.5
8874	435.02.7
1875	802.61.3
1876	1,047.12.2

making an average for the 4 years of about 972 *yen*. The reason of the great excess of the contributions of 1873 over those of the succeeding three years is, that as that was the year of foundation of the establishment, the Tokio *Fu* headed the list with a contribution to the amount of 500 *yen*, an item which does not occur in the following years. The amount contributed by the paupers towards their own support out of their earnings (roughly calculating an average of 3 *sen* per day from an average of 200 working inmates)§ would amount to about 3,000 *yen* per annum.

The expenses of the *Yo-iku-in* for the corresponding years amounted to

	Yen.
In 1873	9,465.48
1874	18,773.31
1875	19,033.13
18k6	14,667.60

or an average of nearly 15,485 *yen*. Of this salaries and wages amount to 3,120 *yen* per annum. As mentioned above the medical officers are employed by the *Monbusho* and consequently their salaries are not included in this sum. As it may be interesting to see how the above sums are disposed of, we give below a table of the accounts of the Institution for the month of June last.

Expenditure.	*Yen.*		Receipts.	*Yen.*	
Salaries	268	78	Received from Tôkiô *Fu*	1,400	50
Casual recipients of relief	20	93	Extra for repairs	5	61
Miscellaneous	23	63			
Medicines	85	48			
Implements of trade	27	63			
Food	584	29			
Burials	3	03			
Clothes	148	10			
Repairs	5	61			
In hand	238	64			
Total	1,406	11	Total	1,406	11

In conclusion we may remark that with the exception of the Lunatic Asylum, there appears to be little or nothing to be desired in the management of this Institution, and we are certain that the first Poor House ever established in Japan would not suffer much by comparison with many similar establishments in Europe and America.

Correspondence

MR. ASTON'S GRAMMAR.

To the Editor of the "Japan Weekly Mail."

Sir.—If your readers are not already tired of a discussion so remote from general interest as that which Shosei and myself have been conducting in the columns of your journal, I will ask you once more for space therein to notice some of my opponent's latest remarks.

On the main points at issue little remains to be said. Shosei's reasonings do not convince me, and mine do not convince him. So there the matter must rest.* All I would now attempt to shew is that the writer who likens Mr. Aston's theories and mine to the fancies of our old friends, the Hindoo cosmologists, builds up his own speculations with materials so light and airy as assuredly to obviate any danger of a comparison to those ponderous creatures, the elephant and the tortoise. What are the facts, or what the arguments brought forward in support of his assertion that the form *nomu* is probably more ancient than *nomun?* Why! the fact that there are numerous examples in Latin and in Greek of the euphonic insertion of the letter *n* at the end of words and in roots, and the inference that the Loochooan final *n* in such words as *nomun* has a similar origin. Surely, this is strange philology. Between the Tartar languages and the Aryan lies a gulf which no science has yet been able to bridge. On points the most vital, the two families present phenomena entirely dissimilar. And yet here, on the subject of the terminations of Loochooan verbs, we have an attempt to support a most daring hypothesis (for I again assert without fear of contradiction that in the immense majority of cases the longer form of a word is the more original) by an appeal to such minutiæ as the euphonic insertion of letters practiced in one or two members of the Aryan family. We might almost as well seek to explain the presence of a troublesome *r* at the end of words in any out-of-the-way tongue by a reference to such common English mispronunciations as "Maria*r* and me," "Victoria*r* our Queen," etc., etc., etc.

Secondly, with respect to the opinion held by Mr. Aston and myself on the original meaning of the genitive particle *no*, viz, that it signifies 'to be' (*naru*), Shosei remarks: "As regards.....the appositive use of the "genitive particle, it is sufficient to observe that the ex"pression *Yamato* no *kuni*, finds its counterpart in every "particular in the expression *the county* of *Middlesex*, "and that the explanation which connects the *no* with a "verb meaning '*to be*,' is as presumably erroneous as the "same explanation undoubtedly is in the case of the cor"responding English preposition,"—i. e., 'we do *not* know 'the original meaning of the Japanese particle; we *do* 'know the original meaning of the English particle: '*therefore* any explanation of the origin of the Japanese 'particle which would make that origin different to the 'origin of the English particle is absurd.' Surely the logic of this latter statement is as astounding as the philology of the former. What should lead us to expect to find that the genitive particle in English and the genitive particle in Japanese have a similar genealogical tree?

§ There is no authority for taking this average but it cannot be far from correct.

* As my last word on the *nomu* and *nomun* question, I may quote the opinion of a great authority, whose name, however, I am not at liberty to mention. He writes to me as follows: "The "Loochooan termination *un* is a strong confirmation of the theory. "The *n* is here inevitable. A Japanese or, I presume, a Loochooan "could not possibly say *nomu*. He would be compelled to do one "of two things,—either to vocalize the *n* as the Japanese have "done, or to insert as neutral a vowel as possible as the Loochoo"ans seem to have done."—I cannot, therefore, lay claim to the whole of the originality and ingenuity attributed to me by Shosei in his reference to my theory of an intercalary *u* between the termination *n* and the root.

Original from UNIVERSITY OF CALIFORNIA

It is as though one should assert, that because in the expressions 'le roi de Rome,' or 'il rè di Roma,' the apparent genitive is really an ablative, therefore in the corresponding Latin expression 'rex Romœ' the apparent genitive must also be an ablative, whereas we all know that it is nothing more nor less than a locative. And this fundamental difference between genitives presents itself,—not in languages of widely severed origin,—but in a parent tongue and those to which it has given birth. When, therefore, Shosei writes that "to acquiesce in a "theory which ascribes to the faded features of the "verb 'to be,' the distinctness and freshness of the "locative case, is simply to ignore the clearest and "surest of the contributions to our knowledge of "the workings of the intellect which the study of "comparative philology has made," his words touch neither Mr. Aston nor myself. Neither of us ever ascribed to the faded features of the verb 'to be' the distinctness and freshness of the locative case, which is by no means the sole original of the genitive. What we did was to ascribe to the as yet distinct and *unfaded* verb 'to be' the power of usurping the place of the genitive, and of supplanting as a genitive particle the old and faded postposition *tsu*, which seems to have been the original genitive particle,—an opinion which derives great support from the use of *no* after the adverbial form of adjectives, where it evidently means *naru*, 'to be,' and from the fact that *no* is always the genitive particle used "where the same thing is meant by the nouns which it "joins, or where one is a part of the other," † and, generally, in all cases where *naru* might be substituted for it without changing the meaning of the sentence or making the latter unintelligible.

My last ground of quarrel with Shosei is the way in which he speaks of Motowori, and throws doubt on the very existence of the future in *na*. An anonymous foreigner's opinions on such a subject are, of course, open to universal criticism. But for another anonymous foreigner contemptuously to cast Motowori's decision on one side as "the dubious speculation of a single grammarian, opposed to the weight of authority," is surely as rash a thing as could well be conceived. Who, then, carries authority with him if Motowori does not? Motowori *is* authority. But, as a matter of fact, Motowori does not stand unsupported; for Chikage, in the Riakuge edition of the Manyōshu, explains in the same sense as that advocated by Motowori every future in *na* that presents itself, viz.: as being precisely equivalent to the ordinary future in *n*. Of any connection with the interjection *na*, never a word. If, then, we find in the Manyōshu, which is the most trustworthy monument of primitive Japanese, numerous examples of a form shewn by the context to have conveyed a future meaning, and by the use of such characters as 奈 and 名 to have been pronounced *na*, we have sufficient authority for the existence of a future in *na*; and if we find that Motowori and Chikage interpret this future in *na* as a simple future, and not as a compound of a future and an interjection, we have sufficient authority for interpreting it in like manner, and seeking to account for it accordingly.

With regard to the negative verbs *noman* and *nomanu*, I must still hold that the presence of the former in Loochooan, which, though doubtless a dialect of Japanese, is yet so distinct from it as to necessitate the use of an interpreter between individuals of the two nations, tells in favour of Mr. Aston's opinion attributing to the vowel *a*, and not to the termination *nu*, the negative force; for the more important element is likely to be the more persistent. As, however, Shosei has not advanced any opinion of his own on the subject of the derivation of the negative verbal forms, a discussion of them does not fall within the scope of a letter occupied with a refutation of his arguments.

I am, Sir,
Yours truly,
YOUR REVIEWER.

† Aston, p. 117.

Law Reports.

IN H. B. M.'s COURT, KANAGAWA.

Before H. S. WILKINSON, Esq., Acting Law Secretary.

Wednesday, September 19th, 1877.

STILLFRIED & ANDERSEN *vs.* D. WELSH.

(Adjourned from the 22nd ultimo.)

When this case was last heard, it was ordered by consent that defendant should, within one week, deliver to plaintiffs an account of all monies collected for them, and a list of all the invoices received from plaintiffs, the amount of which he had not collected, and that he return such invoices not so collected, to plaintiffs;—and that the plaintiffs within the same time deliver to defendant an account of all commissions due by them to him.

Mr. Andersen appeared for plaintiffs. Defendant appeared personally.

In reply to the court, asking whether the mutual claims had now been adjusted, defendant said that he had rendered accounts to plaintiffs, and plaintiffs had rendered accounts to him, but that plaintiffs are unwilling to allow him the whole commission he claims, to wit $75.00 and offered him only $43.00. As soon as his claim is allowed, he is ready to pay up what he has collected.

Mr Andersen said that the reason why his firm refused to comply with defendant's claim was, that the latter was entirely unsupported by proof.

His Honour strongly advised the parties to arrive at a compromise, and finally Mr Andersen agreed to allow defendant a commission of $60.00. It was consequently ordered by consent that the defendant pay to the plaintiffs the sum of $83.99 and $1.50 for costs on the 20th of September, 1877.

IN H. B. M.'S PROVINCIAL COURT.

Hiogo, Thursday, September 13th, 1877.

Before A. A. ANNESLEY, Esq., Acting-Consul, Judge.

WILLIAM GREGORY SANDS, HENRY LUCAS, } *Assessors.*

L. KNIFFLER & Co. *versus* WILLIAM SINCLAIR THOMPSON, Master British steamer *Atholl*.

Claim for damage to Brass Sheets ex. above steamer.

Mr Cruchley appeared for plaintiff.

The defendant did not appear.

This was a re-opening of this case, on the motion of the plaintiffs, for the production of further evidence.

Reports from B. W. Dwars, of the Osaka Chemical School, were handed in and read; also from A. C. Sim. Also a certificate from the Superientendent of Customs, Yokohama, certifying that there was chloride of lime on board the steamer, and one from Mr David Scott to the same effect. Also, certificates from Mr. G. Reding, of Messrs. Kniffler & Co of Yokohama, and from Mr. Richard Reiff, of Messrs. Gutschow & Co. certifying that they had received compensation from Messrs. Jardine, Matheson & Co., agents of the *Atholl* at that port, for damage done by chloride of lime to goods shipped to them by that steamer.

On Friday, the 14th instant, the Court rendered the following:—

Judgment.—The Court having heard and considered the further evidence adduced on a motion on the 13th instant (on the part of the plaintiffs, due notice of the hearing of which was given to the defendant's Agent), is of opinion that a new hearing of this case is now unnecessary. It has been shown to the satisfaction of the Court, in the further evidence brought by the plaintiffs, that the Brass Sheets contained in all the eleven casks which were consigned to the plaintiffs and landed at this port from the British steamer *Atholl* have sustained such damage from the action of cholorine gas emanating from bleaching powder (which it has been proved composed part of the cargo of the said steamer) as to render the same valueless to the plaintiffs for the purposes of their contract; and it having been shown to the satisfaction of the Court that the value of the Brass Sheets to the plaintiffs, if delivered in sound order, was the amount claimed—

The Court therefore orders that the defendant or his bondsman at this port pay to the plaintiffs the sum claimed, viz: $5 524.65, instead of delivering to them the eleven casks containing Brass Sheets; and also pay the fees of the surveys held on the casks and contents, together with costs of Court.

The assessors assented.

IN THE U. S. CONSULAR-GENERAL COURT.

Before H. W. DENISON, Esq., Vice-Consul General.

Monday, September 17, 1877.

JAMES R. ANGLIN *vs.* NORMAN WIARD.

This was a claim of $129.65 for work done and paper supplied. Defendant denied his indebtedness.

Both parties appeared personally.

Mr Walter Brent was sworn, and said: I am manager of the *Japan Gazette*; I rendered defendant an account, of which this is a copy (paper handed in). I have called on defendant, while he was living at Curtis' Hotel, to settle his bill; he would have nothing to do with me, he wanted to see Mr Anglin. Defendant has paid $50.00 on account since I became connected with the *Gazette*. From what I know of the work done for defendant and of the usual charges for job work, I should say that the charge is not at all ex-

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

orbitant. Defendant did not object to the price charged when he received the work.

Defendant admitted that plaintiff, on several occasions, while he was at Curtis' Hotel, tried to get a settlement; he also admitted that he had received a copy of the *Gazette* at No. 52, Bluff, up till the 30th August last.

In cross-examination of this witness defendant called for the book containing the original entries of his account. The book was produced.

Cross-examination continued.—I do not know whether these are the original entries. I have seen the pamphlet printed for you at our office. From the entry in our books I was aware that there were two editions. I personally presented you our bill once. That was at Curtis' Hotel. You said you preferred to see Mr Anglin. This book is before my time as manager of the *Gazette*. I took charge in February. On June 30th you ordered an extra copy of the *Gazette* to go to Yokoska; that with postage is $3.30, and that makes your account for July and August to be respectively $6.30, while for June it was only $3.00. I do not think I threatened to stop your paper on the 30th August. I said that one paper would still go to your private residence.

Charles D. Moss was sworn and said.—I was connected with the *Gazette* from September, 1873, to February, 1877. The entries made on page 554 of the ledger were all, with one exception, made by me. Defendant gave me the order for the 500 pamphlets and for the advertisement. The pamphlets were sent to defendant about a year ago; he complained that the price was too high.

Cross-examined by defendant: When you remonstrated with me about the price, I referred you to Mr Anglin. I do not remember that you afterwards returned me the bill, saying that you could do nothing with Mr Anglin. I believe you paid me $100. You asked at that time for a reduction in the bill, and as I had a personal disagreement with Mr Anglin, declined to make any allowance, and referred you to Mr Anglin. I think you asked for a separate bill for your subscription to the paper. These were the original entries of your account on page 554. I suppose they were first entered by Mr Anglin in his day-book.

The examination in chief of witness was resumed, and elicited the following replies:—The usual charge for book work in the *Gazette* office, while I was manager, was what we could get. We had no fixed price. The price depended upon circumstances. As I am no printer, I usually referred such matters to you. I think I have known instances when you have charged less than $2 50 per page. For instance, the Eastern Club Book. I told you at the time that I thought the price charged defendant too high, and you replied that you had made the arrangement. Although there are 500 pamphlets, each containing 28 pages, I considered the price extreme.

This concluded plaintiff's case.

The court adjourned until 1.30 p.m.

James R. Anglin was sworn, and said, in answer to questions put by defendant: There are two distinct editions of your pamphlet. The second edition was more than half re-set. The terms were $168.00 for the edition, but on account of errors the price was reduced to $158.00. The price charged by me was by a special agreement. It is my department of the business. You never objected to the price, but told me you were obliged to me for letting you off so easily. The 28 pages of your pamphlet, at the cost of $2.50 per page, would have been $62.50 for the first hundred copies, and half that price for each subsequent hundred. At this rate the price of 530 copies would be $210.00. I do not remember any discussion about stereotyping the book. I do not know whether you ever used the first 500 copies; you saw the proofs, and took delivery. I am not aware that you visited Nikko while the pamphlet was being printed. I do not know that proofs were made ready for you to take along with you. I never called on you at the International Hotel to see about 490 copies of the pamphlet. You told me that you had been distributing the book so freely to friends that you had concluded to have a hundred more printed on superior paper, to send to high officials. I told you that more than half the book was in case, and that it would cost as much as the first edition, as the work had to be redone. You said: "Never mind, there are such glaring errors in the first edition that I must have another edition." I tried to persuade you not to do it. I offered to put in a table of errors. But you would have a second edition, and so I printed it on extra heavy paper. I don't know that there is any difference in the meaning of the two words "hudwink" and "hoodwink." I told you some of the type was in case, I did not say the whole of it was distributed. I made a reduction in the price, because a portion of the type was still standing. I made an agreement with you for $158.00 and for $42,00. It ought to have been more, but you pleaded poverty. It is impossible for me to mark in the pamphlet how much was re-set. The second edition of the pamphlet has a more workmanlike look than the first. I do not know whether it was $2.50 per page or the sum of $158.00, that Mr Moss considered too high.

Mr C. F. Reimers, sworn, said: I am defendant's secretary. On the 4th instant I called at the *Gazette* office, and spoke with Mr Anglin about the pamphlets in the presence of the manager, Mr Brent. I told him one of defendant's objections to the bill was that he had been charged full price for the second edition, because it was not re-set. Mr Anglin told me that it was all re-set, as he could prove by the men in his office.

Cross-examined by plaintiff: You certainly told me that you wanted to have nothing to do with me. You said "all the type" had been re-set.

Mr Norman Wiard, sworn: I am defendant in this case. I agreed with Mr Anglin to set up the type, furnish superior heavy paper, and print 100 copies of the pamphlet for $1.50 page, which was the price I told Mr Anglin I had paid in New York and Washington for setting up type and stereotyping. Mr Anglin agreed with me, and urged me to have additional copies printed, for which I was to pay only the price of the paper and the press work. When I told Mr Anglin that I was not a skillful proof reader, he said he would read the proof himself and make me a first-rate book without giving me any trouble. I told Mr Anglin I should be particular to have the book done in a workmanlike manner. I give him a model pamphlet, showing weight and character of paper, weight of cover and its peculiar tint of colour, and width of the margin. I told him I had published nearly 100 pamphlets, and I wanted them all alike. When I received a proof, I found a very large number of errors, considering it had been set up from printed copies. One letter had been reprinted four times, another was printed twice, and so it is in both editions. I scratched it from the proof, and returned the same with the request that it should be removed. The next day I received another proof; two of the letters complained of had been removed, two more remained, and besides a lot of typographical errors, which Mr. Anglin promised me to correct. I told him that I was going to Nikko, and that I wanted 50 copies of the pamphlet at once, as I wished to distribute them before leaving, but to be sure and have all the errors corrected. He had previously told me he desired to make a nice job of it, and if I insisted upon having so many copies so soon, they could not be properly pressed nor bound and covered. On the morning I intended starting for Nikko, I received at my rooms in the International a proof copy of the book paged and printed on one side. I found nearly all the original errors in this too. I went to the office, and remonstrated with Mr. Anglin. He said he had some peculiar trouble on his mind, and had been unable to attend personally to the job. He said he could not rely upon the workmen. He said, "I will do it myself, Mr. Wiard. I will get you 50 copies to-night; what time are you going?" I said, 4 or 5 o'clock, and that I preferred not to have the 50 copies then, but 4 or 5 copies without cover. He asked me how many copies I intended to have printed, and said he would have them ready when I returned. I said I would prefer to have him not to print the books until I returned as I could not distribute them until then. We discussed the price and he said no more than the paper and the press work, and when I said 100, he said "You better have 500, it won't cost you much." I told him I should not make up my mind until I had returned from Nikko. He complained that it would keep the type locked up a long time. To which I replied that he had agreed to correct the proof, and had not done so, otherwise I should have given him my orders before leaving. He said: "You had better give your orders for the extra copies, as I have to get the paper ready." I agreed, if the book looked well when I returned. I would order 400 extra copies. I returned after ten days from Nikko, and found 500 copies of the book stored in my room. I went to Mr Anglin, and told him the book would not answer at all. I afterwards learned that a friend of mine had sent one copy, which he procured at the office, to Mr Krebs, of the Mitsu Bishi Company. I told Mr Anglin that I objected to this edition, on account of errors, paper and narrow margin, that a second edition must be printed at once. The error on page 18, naming the price of the boiler attachment, as it was only one-tenth of the price, spoiled the book, if there had been no other errors. Mr Anglin said he could not print another edition immediately, because all the type was distributed. I told him he must set it up again, and he said that it would cost just as much as the first 100. I asked him to proceed, set it up, and give it to me as soon as possible. In course of time I received the 100 copies, and immediately made a journey to Tōkiō for the special purpose of recovering the one that had been sent to Mr Krebs, and give him one of the second edition instead. I sent 24 copies to various engineers of U. S. vessels where my invention is applied. I soon received them back again, because page 9 follows page 4, and pages 5, 6, 7, and 8 follow page 12. About 80 copies were bound in this way. I sent one copy to Mr Anglin, in reply to his demand that I should pay for such work. I soon received a bill from the *Gazette* office; I went there, saw Mr Moss, and told him that I had not expected to have to pay for the first edition, because it was of no use to me. Mr Moss told me to see Mr Anglin. When I asked Mr Anglin whether he intended to charge for the first 500 copies, he said, "Yes, Mr Wiard, you had the books." I then told him that the charge was to be at the rate of $1.50 per page.

Mr R. Meiklejohn, sworn, said, in reply to defendant: I am a practical printer. I have not seen the editions in question. (One copy of each exhibited.) I could not swear whether these two editions were printed from the same form. There are some letters equally bad in the same place in both editions. It is not probable that on re-setting they would be so. The broken type would lead me to believe that the second edition is struck from the same type as the first. The cost of paper and press work of 100 copies of the first edition would be $10.00.

Cross-examined by plaintiff: To print 500 copies of the first edition I would ask $150.

This concluded defendant's case.

B. A. Klyne was sworn, and said: I am a printer in the *Japan Gazette* office. I remember defendant coming about the books. The type of the first edition remained standing about three days. I asked you (plaintiff) whether I could put it in the case, and you said "yes." I distributed over 12 pages. You brought me a corrected copy, and what was distributed was re-set.

To the Court: I don't recollect what portion of the book was distributed. I could not tell by reference to the book. I neither set nor distributed any portion of it.

Judgment reserved.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

IN THE IMPERIAL GERMAN CONSULAR COURT.

Before E. ZAPPE, Esq., Consul.

Messrs. CARL RHODE and R. REIFF, Assessors.

Monday, September 17, 1877.

This was an enquiry into a charge brought by Messrs Copeland and Wiegand against their drayman, Theodor Wilhelm Holm, for embezzlement.

The accused said, in reply to the Court, that he had whilst here in Japan filled several situations as teacher; last year he was engaged by Mr Copeland to sell beer for him, and had remained with him until the end of last month. He admitted that on the 31st August he had sold for $8.50 beer to Mr Mackenzie, for which he got Mackenzie's receipt, but that he, with Mackenzie's consent, altered the receipt to make it appear as if he had sold beer for $31.25. The whole he debited to the Brewery, and in that manner he had profited $22.75. Mackenzie had, formerly, received that quantity of beer and paid for it cash with $22.75, which amount accused had appropriated instead of delivering it to the Brewery. He likewise admitted that on the 17th August, he had sold a dozen pints of beer to Mr McCance, who had given a receipt for the beer, and with whose consent he afterwards wrote five gallons more on the receipt. These five gallons he debited the Brewery and profited the value, as he sold the beer in another place, and kept the money for himself. As to the beer sold in August, on the 9th and the 21st, to Mr Michell, who had given the usual receipts for the beer, he declared that it had been delivered by his *betto*, as he was not at that time in the waggon himself. The *betto* brought him the blank receipts with Mr Michell's signature, and the *betto* contends that he has delivered all the beer mentioned in the receipts. He had himself filled up the receipt, because the *betto* said he delivered the beer. With regard to twice ten gallons beer, which Mr Pierce in Benten denies having received, although they are written in his receipts, dated the 11th and 18th August, he contends that he has delivered the beer. With regard to five gallons of beer charged to Mr Anderson at No. 113 on the 7th August, he contends that it has been delivered, not by himself, but by his *betto*.

Mr David Mackenzie was called as a witness, and deposed that his receipt had been tampered with since he signed it. Accused had come to him on the 5th inst., and told him that he had made an error in the receipt, and asked him to say nothing about it; he, accused, would make good the difference between the beer actually delivered to witness and that mentioned in the receipt. Witness had accepted accused's promissory note for the amount. He never permitted accused to make alterations in his receipt.

Evidence sworn to.

Accused admitted that he had spoken an untruth when he said that the last witness consented to the alteration of the receipt.

Mr Richard McCance was next called, and stated that he had never consented to accused altering his receipt. He only discovered the alteration when his receipt for the beer was presented to him with a demand for payment.

Accused had no questions to ask.

Mr Michell said that he had never given a blank receipt with his signature to accused. He had signed receipts for two dozen pints, but the additional ten gallons had been put in afterwards, and that beer he had never received.

Mr Pierce denied having received or signed for the beer charged against him. He lives in Benten, and is employed in the Lighthouse Department. There is no other Pierce in the same place.

Mr William Anderson denied having received or signed for the five gallons of beer charged against him. He lives at No. 113; the only other occupant is a blacksmith named Schiras, and he has not received the beer either.

Mr Leatham Eaton said: I am the bookkeeper to the firm of Messrs. Copeland and Wiegand. The accused used to receive from me every morning, when he started on his round with the beer-waggon, a certain amount of beer, for which he gave me a receipt. When he returned in the evening, or, at the latest, next morning, we settled accounts. He then delivered up the cash he had received, and the receipts for beer given to him by different customers; and this together with the beer unsold ought to square our accounts. But accused had arbitrarily inserted into the customers' signed receipts additional dozens or gallons of beer, which he sold for his own account to third parties, and the money for which he kept for himself. The consequence was that when accused had been discharged on the 31st of last month, and the accounts were sent out from the brewery this month, protests poured in from the customers, who complained that their receipts had been tampered with.

Mr Wiegand deposed that he is a partner of the firm of Copeland & Wiegand. Accused has been in the employ of the brewery since the 15th June last year. It was his business to distribute and sell beer in Yokohama. He was discharged on the 31st of last month. We could never understand why we could not obtain our money from the German man-of-war *Elisabeth*. Accused told us that we might wait until the 1st Sept. On board I ascertained that accused had collected the money more than six weeks ago. It was rather a large amount, $254.10. He had no business to collect that money. He had returned us our bills as uncollected, and in order to be able to collect the money, he had copied the bills, and signed our name to the receipts. Five per cent. commission on the sales was allowed the stewards, and on the above $254 10, that commission amounted to about $12.00. After I had learned that accused had received the money, I spoke to him about it. He promised to pay it, but the next day he pretended sickness and remained in bed, and the next day again he said that he had lost the key of his chest. I had the chest opened by a carpenter in his presence, when he put his hand into the chest and said the money had been stolen from him. I then laid an information against him at this Consulate. His salary at the Brewery was 2½ per cent. on all sales, besides free quarters.

The deposition was sworn to.

Accused said that Mr. Copeland had given him permission to sign the name of the firm. As for his telling Mr. Wiegand that the money had been stolen from him, that was only a pretext, because he had not the money. He had collected from the *Elisabeth* $163, but the firm owed him $150, and he had thought that he could pay himself out of the *Elisabeth's* money.

Adjourned until 2 p.m.

Hiroku Saburo, a *betto* employed with the beer waggon of Messrs Copeland and Wiegand, was asked whether he, on the 11th and 18th of last month, had delivered ten gallons of beer to Mr Pierce in Benten. He answered that he was certain that he, in the course of last month, had not delivered any beer to Mr Pierce in Benten. He had formerly delivered beer to him which was paid for in cash, but that is now long ago. Mr Pierce was then living upstairs, and nobody downstairs. He had not during last month delivered any beer in kegs at Benten.

Kangiyama Sankichi, also *betto* with the beer waggon, said that no beer had been delivered by him at Benten during last month. He knew the house of Mr Pierce, and, as far as he remembers, the last time he got beer was in May. As far as he remembers, one dozen beer was delivered last month to Mr Michell, No. 71. Witness carried the beer into the house, and a Japanese boy brought him the receipt. Accused was at that time with the waggon. Witness has never carried any beer into the house No. 113.

Accused contended that witness had come to him, and told him that he (witness) had carried a keg of beer into No. 113; and he asked accused to fill up a receipt, to which he would then procure the signature.

Witness denied this *in toto*.

The witness Saburo was recalled, and asked whether beer had been delivered in the house No. 71 during last month, and his reply was that at least once one dozen had been delivered, but no kegs. With regard to No. 113, he is certain that no beer whatever had been delivered there during last month.

Accused asked witness whether he had delivered beer at No. 114, 115, and 162, all of which questions witness answered in the affirmative.

Mr. Wiegand denied the allegation of accused that the firm owed him $150. Accounts had been fully squared between them at the end of July.

Accused meant that as he had not received a month's notice before his discharge, he thought he was now entitled to a month's wages, which amount might serve as a set off against the claims now brought against him.

Adjourned until the 27th instant, at 9.50 a.m.

Before E. ZAPPE, Esq., Consul.

Messrs. E. SCHMID and CARL ROHDE, Assessors.

Saturday, September 22nd, 1877.

L. P. MOORE *vs.* BUSCH, SCHRAUB & Co.

This was a claim of $645.30, arising out of an import made by plaintiff for defendants in the commencement of the year 1876, of a certain quantity of dried fruits; defendants had taken delivery of the lot and paid for a part. Plaintiff now claimed that defendants be ordered to take delivery of and pay for the balance and also pay costs. The defendants denied indebtedness; they alleged that the fruits were not imported for their account; that plaintiff had at the beginning of last year proposed to them to import from San Francisco an invoice of dried fruits for the use of the German men-of-war then in harbour, and to share the profit. Plaintiff was to make the import for his own account and at his own risk, and it was expressly agreed that no responsibility should attach to defendants if the goods were not sold as projected. As defendants did not succeed in disposing of the goods to the *Vineta*, they wrote to plaintiff in January this year that the goods were lying in their godown at plaintiff's disposal.

Mr. H. Andersen appeared for plaintiff, Mr. E. Schraub for defendants.

The Court gave the following:

JUDGMENT.

If the defendants, with good conscience and without perjuring themselves, are able to swear that plaintiff had bound himself to take back the goods now in defendants' possession, consisting of 32 boxes dried plums and 36 boxes dried apples, in case the German men-of-war should not buy them, then plaintiff has to pay costs. But if defendants do not take the above oath, then they shall pay plaintiff $645.30 and costs,

---

A decree in the *Peking Gazette* of the 24th August grants a request by the Viceroy of Nanking for a remission of taxation in certain districts near Nanking, "on the score of their prostrate condition, and their recent sufferings from locusts and drought." A remission of three-tenths of the grain-tax is conceded in favour of five districts, and a decree to this effect is ordered to be publicly placarded and the proper steps taken to prevent official underlings extorting the sum thus surrendered.—*S. C. & C. Gazette.*

We hear that cholera is very bad at Foochow among the Chinese, who are dying in numbers. With the exception of one death which has unhappily been recorded, foreigners seems to have escaped the epidemic, though diarrhœa is prevalent among them. —*S. C. & C. Gazette.*

DIAMONDS.

(*Spectator.*)

Until within little more than ten years ago, an "Ethiop" on his native soil desirous of wearing a fair jewel in his ear would have had to import the bauble; and at a much later date, the colonists of Queensland and New South Wales believed that Nature, in the storing of her treasure-houses out their way, had drawn the line at Gold. In all the riches of the earth had English territory a share, except in those much-prized things which have inspired fancies and fables from the beginning of all records of fancy and of fable. The diamond had hitherto yielded up its peerless preciousness in Indian mines and in Brazilian gravel-beds—where in early times the men who, in washing gold found the sparkling stones, threw them away, or used them as card-markers—in the Ural mountains (where the earth was also bountiful of emerald), and in Borneo. Of these treasure-hoards, India's were the most ancient and rich, and the most industriously rifled. When, in 1727, Bernardino Fonseca Lobo, who had seen rough diamonds in India, took a number of the pretty card-markers from Minas-Geräes to Portugal for sale, the European merchants, frightened lest the discovery should cause a fall in the price of the gems in their possession, declared that "Brazilian diamonds" were only the refuse of the Indian stones, forwarded to Goa, and thence to Brazil. No inanimate article of commerce in the world has inspired more cruelty and tyranny or occasioned more misery than the diamond, and if among the animate the horse rivals it as a suggester of subtle swindling, it barely does so. The very fairies cannot help cheating in precious stones,—how, then, should mere mortal merchants? So the dealers, having the ear of the diamond-buying world, pooh poohed and discredited Brazil; whereupon the Portuguese cut their human fellow-diamonds deeply, by sending the Brazilian stones to Goa and thence to Bengal, where they were offered for sale as Indian gems and fetched Indian prices. This was a very neat transaction, pending the establishment of the "Diamantina" as a remunerative fact demonstrated by slave-labour.

Some remarkable stories are connected the discovery of diamonds in Brazil, so much regretted by the Marquis de Pombal, who vainly endeavoured to arrest the evil by forbidding search in the province of Bahia (Brazilian diamonds were known at first as "Bahias") on the plea that agriculture would suffer from the diversion of industry. We find these stories in Mr. Streeter's valuable work on "Precious Stones," in which every branch of his fascinating subject is made interesting. The discovery of diamonds in Bahia was in this wise:—"A cunning slave from Minas-Geräes, keeping his master's flocks in Bahia, observed a similarity between the soil of his native place and that of Bahia. He sought therefore in the sand, and soon found 700 carats of diamonds. Fleeing from his master, he carried these with him, and offered them for sale in a distant city. Such wealth in the hands of a slave caused him to be arrested, but he would not betray himself. The master, to whom he was given up, tried to get at his secret by cunning, but without avail, until he thought of restoring him to his former occupation in Bahia, and watching him." A year afterwards, 25,000 people were digging diamonds in the fields there (80 miles long by 40 broad), and at the rate of 1,450 carats a day. Dreadful misery ensued on the discovery of the "Diamond Rivers." The Government wanted to secure the monopoly of the new-found wealth to the Crown, and so the dwellers on the rivers' banks were driven from their homes to distant wilds and despoiled of all they possessed. "Nature seemed to take part against them; a dreadful drought, succeeded by a violent earthquake, increased their distress. Many of them perished, but those who lived to return, on May 18, 1805, were benevolently reinstated in their rightful possessions. Strange to say, on their return, the earth seemed strewn with diamonds. After a shower, the children used to find gold in the streets, and in the brooks which traversed them. Often the little ones would bring in three or four carats of diamonds. A negro found a diamond at a root of a vegetable in his garden, and poultry, in picking up their food, took up diamonds constantly." Æsop thus improved upon, in the fulness of time we find Sindbad parodied. In 1868 the child of a Dutch farmer named Jacobs, settled at the Cape, amused himself by collecting pretty pebbles on the banks of the neighbouring river, and picked up a specimen which attracted his mother's attention, so that she showed it to one Schalck van Niekerk, who was curious in such matters. He was puzzled about its nature, and offered to buy it, but Mrs Jacobs laughed at his offer, and gave him the pebble, which afterwards passed carelessly through two intervening pairs of hands before it reached—in a gummed envelope and unregistered—Dr. Atherstone, of Graham's Town, an excellent mineralogist. This gentleman, having examined its physical character and tested its degree of hardness and density, and its behaviour when subjected to optical tests by means of polarised light, pronounced it to be a diamond. This is the stone which was examined by *savants* of all nations during the Paris Exhibition in 1867, and purchased at the close of it by Sir Philip Wodehouse for £500. In 1870, Mr. Streeter's Diamond Expedition party were exploring the Transvaal far and wide, and ascertaining facts which complete our knowledge of the new wonder of the world. Amid dry geological details, charming touches of anecdote and adventure crop up, like the gems themselves, from the gravel and the quartz; and great solitary jewels, like the "Stewart" and the "Dudley," emerge and take their places in history, with the Sancy, the Pitt, the Great Mogul, the Hope Brilliant, and many another bright bauble, blood-and-tear-stained. The Transvaal, our new territory, is Sindbad's Valley in prose fact, and the origin of the most celebrated group of dry diggings—that called Du Toit's Pan, which does not sound poetical—is as simple and fantastic as a fancy of Hans Christian Andersen's. "A Dutch boer, named Tan Wyk, who occupied a farmhouse in this locality (twenty miles S.E. of Pniel), was surprised to find diamonds *embedded in the walls of his house, which had been built of mud from a neighbouring pond.* This led to examination of the soil, which was soon found to contain diamonds. On continuing to dig lower, and lower, diamonds were still brought to light, nor did they cease when the bed of rock was at length reached."

It was but natural that the discovery of diamonds at the Cape should excite only moderate enthusiasm in Brazil, but the Portuguese trick was long past, and the merchants would have been wiser had they been less angry, and especially less incredulous; had they remembered, to avoid them, the incidents of a century before. They refused to receive the warnings sent in perfect good-faith, and in stolid unbelief beheld the attention of the trade diverted to the Cape stones, which were brought to market by all kinds of holders, and so fascinated the Amsterdam lapidaries that for a long time they would cut none other. The Brazilian market went down, and down, and has never recovered itself. "The Cape yield of large stones," says Mr. Streeter "enhanced the difficulties of influencing the Amsterdam lapidaries. They finding superabundance, refused to cut small ones, and these Brazil furnished in every parcel with which the merchants supplied the market. The merchants of Brazil had therefore to exclude all small stones, and contrive to compose their parcels so as to enter into competition with Cape gems. They have not succeeded yet, not because in beauty and quality the Brazilian diamonds had deteriorated, but because of the exorbitant prices at which they had been offered for sale. The future appears decidedly unpropitious for the importation of Brazilian diamonds, as long as the prices of diamonds generally remain at the present level. A very considerable rise would alone produce a resumption of the mines in the diamond districts of Brazil, where none the less untold treasures are still hidden." So is the eclipse of the great Cuddapah, Kandia, and Ellora groups avenged.

The discipline of the Brazilian diamond-fields is well contrived and maintained, but it must be comical to behold the tableau of "honesty rewarded," when a lucky negro finds a stone of 17½ carats, and is crowned with a wreath of flowers, and led in procession to the manager. It is pleasant to know that the triumph has substantial elements also; that the virtuous digger receives his freedom, a new suit of clothes, and permission to work for wages. The only important Australian diamond-fields are in New South Wales—discovered within three years—the gems existing in Victoria and South Australia being not remarkable for quality or quantity; but Mr. Streeter is convinced that great things are in the future for Australia, when the colonial continent shall be scientifically ransacked for these mysterious and beautiful formations of the immeasurable past. He believes that in the Australian Alps the matrix will be discovered whence the crystals of pure carbon already found have been washed, and that, as the geological formation of the whole of the New England district in New South Wales resembles closely that of the district of the Baggage Mines in Brazils, it will sooner or later be found to yield diamonds in paying quantities. Of Queensland he prophesies that another diamond-field will be found, either on the Palmer River or its affluents, where some very remarkable and rich gold-mines have lately been recovered; or on the Gilbert River and its affluents, and in the country extending to the Gulf of Carpentaria,—that pitiless country, which has witnessed so much heroic effort and terrible suffering.

The Indian princes and nobles are greedy of diamonds beyond all people, and there is but one country in the world in which any product of nature is held more precious than this wonderful combustible gem, whose nature, indeed, we know, but whose genesis is still a moot question for science. That country is Burmah, the land of the White Elephant, where the finest rubies sheltered in the earth's breast are found and are rated far above diamonds. As the King of Siam prizes his cats, so the King of Burmah prizes the rubies of his country, jealously prohibiting the export of them, so that the beautiful luminous stones—which do but glow with a clearer and richer colour when they are exposed to fire in which the diamond would be consumed and disappear—can only be procured by stealth or favour of private individuals. No European has ever been permitted to see the King's wonderful ruby, "the size of a pigeon's egg, and of extraordinary quality;" and the sale of the two magnificent rubies which were brought to England in 1875—the finest ever known in Europe—caused such excitement, that a military guard had to escort the persons conveying the package to the ship. Five days' journey south-east of Ava lies the home of the blood-red gems, the jealous earth in which the people believe that they ripen, becoming from their original colourlessness, yellow, green, blue, and last of all, the matchless ruby-red. Next to these rank the rubies which are found in the Tartar wilds of Badakshan, and which the people there believe are always found in pairs. "When one of the seekers has discovered one, he will frequently hide it until its mate is found." Mr. Streeter knows of only one specimen of a red diamond, which is like a gem on fire, and it passed from his hands into the possession of a great connoisseur last year. "The red diamond," wrote Sir Thomas Nicols, in 1651, "is prized according to the glorious beauty of its perfection. It feeds your eyes with much pleasure of beholding, and hence are discovered to us the excellency of super-celestial things."

There is something fascinating to the imagination in the experiments which have been tried on diamonds in order to wrest the the secret of their nature and their formation from them. One cannot read without a feeling of suspense how the Accademia del Cimento, in the year 1694, induced by Cosmo III., fixed a diamond in the focus of a great burning-glass, and watched it, dismayed, as it cracked, coruscated, and disappeared; and how the experiment was frequently repeated, until Lavoisier (he whom Fouquier Tinville declared to be unnecessary to the Republic) proved that diamonds burn just the same as common coal, if oxygen be not shut out, because they are pure carbon and combine with oxygen. How silent

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

and how still one would have stood to watch Guyton de Morveau at his work, when he consumed a diamond in oxygen by means of the burning-glass :—"First, he saw on that corner of the diamond which was in the exact focus of the lens a black point; then the diamond became black and carbonised. A moment after, he saw clearly a bright spark, twinkling on the dark ground; and when the light was interrupted, the diamond was red-hot and transparent. A cloud, and the diamond was more beautifully white than at first; but as the sun again shone forth in its full strength, the surface assumed a metallic lustre. Up to this point, the diamond had sensibly decreased in bulk, not being more than a fourth of its original size; of elongated form, without definite angles; intensely white, and beautifully transparent. The experiment was suspended for a day or two, when, on its resumption, the same phenomena recurred, but in a more marked degree; subsequently, the diamond entirely disappeared,"—like Macbeth's witches, making itself.—air!

THE TELEPHONE.

(*Saturday Review.*)

When the invention, or rather the supposed perfection, of the instrument called the telephone was announced, speculation as to its possible uses was naturally suggested. If this novel apparatus were indeed capable of all the feats assigned to it while it was still invested with the magnificence belonging to the unknown, there was little limit to the wonders which it might accomplish. Fortunio's gifted servant Fine-ear would find in the telephone a rival that would lower immensely the value of his special faculty; and a pendant would be found to the ivory tube belonging to Prince Ali in the story of "Ahmed and Peribanou," by looking through which its fortunate possessor could view at will any scene in any part of the earth. Or, to pass from fairy-tale marvels to matters of fact, the telephone might be made useful in an infinity of ways both to the public and to the people who provide for the public's amusement. A popular lecturer, for instance, might, with the aid of the new instrument, save himself a large amount of wear and tear by delivering his discourse in a dozen different places at the same time, thus outdoing Frikell's feat of riding out at all the gates of St. Petersburg at twelve o'clock. In a marvellously clever, but little known, work called *Adventures in the Moon*, there is a story of a certain Aristus who came to the conclusion that a body was a very inconvenient encumbrance, and persuaded his household god to teach him a charm by means of which he might get rid of his limbs, and retain only his mind and voice. The arrangement did not turn out quite as successfully as he thought it would. His children, when he spoke to them, "were at first terrified by this mysterious voice, and could hardly be prevented from running away; but hearing it solemnly assure them that it was their father, and had no design of hurting them, they took courage, and were then greatly amused to find how their father had hid himself; they laughed violently whenever he spoke, and seemed to be delighted with the novelty." Increased familiarity with the wonder bred contempt. "They had been accustomed to follow without hesitation the advice which came from a peremptory countenance; but now the advice which came out of the air made very little impression upon them." Aristus's commands were met by flat refusal; his wife attempted to bring the children back to a sense of their filial duty, "but her expostulations could procure no obedience to the venerable sound, and it was disobeyed every hour." The more exasperated Aristus became the more the children were delighted, and they even went so far as to play all kinds of tricks on purpose to hear the air scolding them. Something of this inconvenience might, unless provision were made against it, belong to the system of lecturing by telephone. The authority accompanying words spoken by a man who believes in the lesson he teaches and lends it weight by an impressive demeanour, might well be lost in the case of a spectral voice issuing from a drumhead hung in the middle of the lecture-room. And, unless the instrument were very accurate, there might be some confusion as to whether a sudden pause was intended as a hint for applause, or was due to a hitch in the machinery. The first of these objections might be met without any great difficulty. There is a game, or there was when children were content with games that involved no moral or scientific lesson, in which, while one person recites a poem, another goes through the actions that he conceives to be appropriate to the poet's meaning. A hint might be taken from this; the outward signs of the telephone might be kept out of the audience's view, and a person "made up" as accurately as possible to represent the lecturer might appear to deliver the discourse with fitting gesture and aspect. In the same way the resources of the new apparatus might be turned to account by learned persons desirous of instructing the world, but unable to overcome their fear of standing up to face an audience. Sitting peacefuly in his own study, a man whose eloquence was before defeated by his shyness might give forth burning words to an audience some miles off, whose applause might be transmitted to him by a second telephone arranged for the purpose.

In the case of theatrical and operatic entertainments the telephone might render incalculable services. Suppose that a favourite actor is prevented from appearing by a fit of the gout or anything else which cripples his limbs, but leaves his voice and intelligence unhurt. What more simple in such an emergency than to arrange a telephone by which his accents shall be carried to an enraptured audience, while a double goes through the mere mechanical movements of the part? Or, if a prima donna were suddenly indisposed, and no one could be found to take her place, the manager might at once telegraph to another prima donna in a distant town, and have the heroine's music sung by telephone. This system might of course be carried still further, so as to improve on the new method lately exhibited at Bayreuth. Herr Wagner is of opinion that the sight of an orchestra interferes with the proper appreciation of the lyric drama. The imagination, which should be filled with mysterious impressions of things, far removed from commonplace life, is checked by the view of a company of men of this world engaged in blowing and fiddling. We would go further than this and say that not all the resources of machinery, steam vapour, and practicable dragons breathing real flame, can furnish an adequate embodiment of Herr Wagner's ideas. Let us, then, do away with these gross representations of poetic images. Let each member of a number of audiences assembled at various points see in his own mind's eye the scenes and personages that the composer's music, conveyed by telephones to the different assemblies, suggests. There would then be no need of building special theatres in accordance with the notions of the poet and musician. Herr Wagner might train his own orchestra and keep it constantly in his own house, ready to comply at a moment's notice with the demands made by operatic managers all over the world.

To take another musical, or, to speak according to our feelings, unmusical, matter. As we were writing the foregoing lines, and reflecting with a due solemnity upon the sublime notion of many crowds in many distant places listening in awed silence to the harmonies of the *Götterdämmerung* flowing apparently out of thin air, our meditations were rudely interrupted by the noise of one of the so-called piano-organs which are the bane of most people who have either any nerves or any love for music. That there are, on the other hand, many people to whom this horrible din is a source of delight is evident from the number of organs which patrol the streets. We have even heard it asserted by a professor of music that the street organ is not without its use in giving some notion of time and tune to people who could not in any other way acquire it. If this be so, it would be well to remedy the evil by making such arrangements as exist in every German town for popular music. But until that can be done the telephone might be brought to the rescue, if a company of the people who delight in benevolence to organ-grinders could be formed to distribute the strains of the organ to their poorer brethren. In a yet more important matter the apparatus might be turned to excellent account. The eminent statesman who has kindly constituted himself the referee of every one on every earthly question might, with a properly arranged system of telephones, do away with the trouble of writing innumerable post-cards. His many correspondents would, it is true, sacrifice the privilege of possessing his autograph; but they would gain in exchange the advantage of actually hearing the words of wisdom dropped from his mouth.

Unfortunately these and like dreams do not for the present, at least, seem likely to be realized. The telephone in its present condition, to quote from an accurate account of it which appeared some days ago, "only enables a performer to play the 'Minstrel Boy' and 'God save the Queen,' on a most imperfect musical instrument five miles away," and from this fact the writer justly infers that the invention "is of very little practical value." It may also be remarked that, as a matter of fact the telephone is not, in idea at least, a new invention. In 1861 Herr Reis of Frankfort invented an instrument called a telephone, which telegraphed musical sounds by means of a rod of soft iron in a coil of wire, through which a current was sent. "The reproduced notes," to quote from an account of this instrument, "though of the same pitch, are not of the same quality as the transmitting (transmitted?) notes. They are very faint, and resemble the sound of a toy trumpet" Mr. Varley may be said to have improved upon this, although we are disposed to agree with a critic who has said that the sounds produced by Mr. Varley's telephone on the occasion of its private trial were "a little grouty and nasal." "Grouty" is an expressive, if not a usually recognized word, and gives a good impression of the general character of the sounds, which are at present further disfigured by a drum-like vibration of the membrane from which they are produced. However, the same writer who described the notes as "grouty" observed that "the interesting and important fact was that they were there." This fact certainly cannot be disputed; and, as we are told that the inventor hopes "to be able to produce articulate speech," we may perhaps look forward to some of the brilliant ideas entertained of the telephone's powers being realized.

REUTER'S TELEGRAMS.

LONDON, 20th September, 1877.

INTELLIGENCE FROM THE SEAT OF WAR.

The Russian army in Poland has been ordered to Bulgaria.

A great battle is considered imminent between Mehemed Pasha's and the Russian forces.

It is officially denied that the Servian troops are marching towards the Turkish frontier.

LONDON, September 18th, 1877.

Despatches report the losses of the Russian forces at Plevna to the 15th September as numbering twelve thousand men, three hundred officers, and three thousand six hundred Roumanians. (Query killed.)

According to an official Turkish despatch the Russian troops have evacuated Tirnova, and Mehemed Pasha has defeated the twelfth Russian Army Corps, inflicting on it great loss.

LONDON, September 16th, 1877.

According to unofficial Turkish accounts Mehemed Pasha is marching with his troops against the Russian

positions on the river Jantra, and the Russian forces are falling back.

INTELLIGENCE FROM THE SEAT OF WAR.

According to Official despatches, the Turkish troops have recovered three of the entrenched positions at Plevna which were captured by the Russian forces on the 11th September. The Russian losses have been enormous.

Suleiman Pasha with his artillery has silenced the Russian batteries along Trajan's road.

LONDON, September 15th, 1877.

INTELLIGENCE FROM THE SEAT OF WAR.

According to Russian official despatches, a general assault was made on Plevna on the 11th September, the Russians capturing four redoubts and losing three distinguished Generals. The number of killed and wounded is unknown.

INTELLIGENCE FROM FRANCE.

Monsieur Gambetta has been sentenced to three months' imprisonment and a fine of two thousand francs for a speech he made of a nature most hostile to the Government.

WINNERS OF THE ST. LEGER.

Silvia, first.
Golightly, second.
Manœuvre, third.

LONDON, 14th September, 1877.

INTELLIGENCE FROM THE SEAT OF WAR.

According to Russian Official Despatches the Russians, admit a great defeat with heavy loss and are compelled to raise the blockade of Rustchuk.

The Turkish forces are retreating by the bridge of Pyrgos.

ARRIVAL OF THE ENGLISH MAIL.

TELEGRAMS.

(From the Straits Times Extra.)

Calcutta, 13th August.—The ship *County of Stirling* was totally lost on Saturday. In going down the river she touched the Fulka sand and rolled over. The first mate, two apprentices, and two sailors were drowned. The export of grain from Calcutta to Madras last week was 557,814 cwt. A Durbar will be held at Belvedere to-morrow to confer the sannads granted on the 1st January to native gentlemen.

Ootacamund, 15th August.—The weather on the Neilgherries and in the Wynaad has been rainy for the last four days, and the greater part of last week. In Wynaad, corpses of coolies are frequently observed under hedges and coffee bushes. The rain was too long deferred to repair all mischief caused by drought to the coffee estates, but the prospects of the crop are decidedly improved. Much anxiety is however felt regarding labour for the future, as the famine in Mysore is decimating the coolie population, whence the supply is obtained.

Bombay, 16th August.—The Viceroy holds a levee at Poona on the 22nd. The Colonel and Adjutant of the Bombay Volunteers have been selected to attend. The total importations of food grains into the Madras Presidency in the week ending 8th August were 12,892 tons, against 15,388 tons in the previous week. The exports from Calcutta for Madras during the same week were 28,000 tons, the largest clearance in one week yet made.

The Home Government being informed of the wreck of the *Meikong*, the Secretary of State requested the Bombay Government by telegraph to direct the Aden authorities to send the *Quantung* or other available vessel to report, and if necessary to protect the property of the *Meikong*.

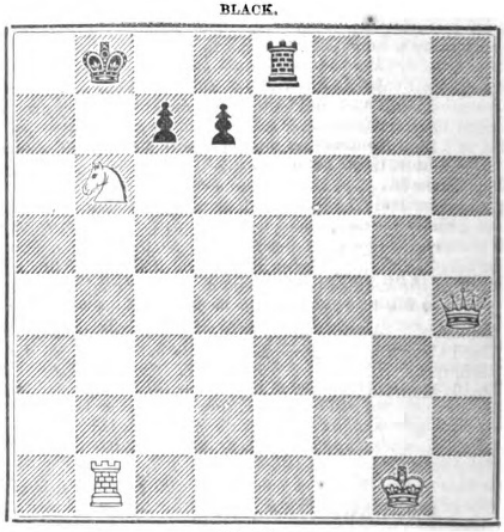
London, 17th August.—Dervish Pasha announces indecisive fighting at Batoum. A court-martial has commenced sitting on Abdul Kerim Pasha and Redif Pasha. A Turkish official despatch states that a Russian reconnoitring party unsuccessfully attacked the Turks at Kaslar and were defeated and compelled to fall back on Keserova with a loss of 500 killed and wounded. The Royal Warrant respecting army promotion was only signed on the 13th instant. During the last fortnight it has been materially modified in favour of the purchase officers.

London, August, 18th.—The Mansion House Famine Relief Fund is rapidly increasing. Lord Northbrook has presented £500, and the Rothschilds' and Baring Brothers' Banks have presented £1,000 each to the Fund. Several Mayors are responding to the appeal of the Madras Committee, and have called meetings for the 13th instant. Suleiman Pasha, with his army has arrived at Elena, north of the Balkans. Salonica has been placed in a state of siege. General Marsky supersedes General Melikoff (as Russian commander in chief in Armenia). Poti has been deserted. Hobart Pasha is at Sinope. The Circassian emigration to Turkey is increasing.

London, August 19th.—The Russian Imperial Guard has crossed the Danube. Skirmishing has occurred in the vicinity of Rustchuk. A Turkish official despatch states that a detachment of the garrison of Rustchuk has repulsed a detachment of Russians. A Turkish force landed in the Dobrudscha on the 17th inst. The Russians are advancing against it. It is expected that the Egyptian troops will shortly attack the Russian positions along the Kustendjie railway. According to a Russian official despatch, a Russian reconnaisance has been repulsed by a strong Turkish force on the Osmanbazar road. A Turkish official despatch from Batoum states that Dervish Pasha has carried the advanced Russian positions.

London, 20th August.—The Russian force, consisting of 35,000 infantry, ten regiments of cavalry and 110 guns attacked Ahmed Muktar Pasha on the 18th instant near Kars. The engagement lasted the whole day and eventually the Russisns were defeated and were compelled to fall back with a loss of 1,200 men; the Turkish loss being only one hundred. The Russian have re-occupied Kustendjie.

London, 20th August.—The mobilization of two divisions of Russian grenadiers and one of cavalry has been ordered. The Russians have strongly occupied the line of communication between Tirnova and the Schipka Pass.



Alexandria, 20th August. The river Nile has been stationary for four days; its level is fourteen feet below the average for the past three years.

London, 31 August. The Russians still strongly hold the Schipka Pass. Suleiman Pasha has made a reconnaisance of the Hankoi Pass and has found that the Russians are strongly entrenched. According to a Russian official despatch, the Turks were repulsed.

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabrics & Yarns.—A good business has been transacted in *Yarns* during the week, and prices are firmer, medium and lower qualities being still most in demand. *Shirtings* are saleable only at low rates. *Velvets* are fairly steady, but enquiry is not so active. *T. Cloths* are rather more enquired for.

Grey Shirtings:—					White Shirtings:—			
7 lbs.	38½ yds.	39 in.	per pce.	$1.40 to $1.75	60 to 64 reed 40 yds.	36 in.	per pce.	2.20 to 2.40
8 lbs.	38½ yds.	44 in.	,,	1.80 to 2.20	Turkey Reds 24 yds.	30 in.	2—3 lb. per lb.	0.67½ to 0.85
8 lbs. 4 to 8½ lbs.	38½ ,,	39 in.	,,	1.55 to 2.30	Black Velvets			7.25 to 8.35
9 lbs.	38½ ,,	44 in.	,,	2.00 to 2.57½	English Drills 14/15 lbs.	40 yds,	30 in.	2.40 to 2.65
T. Cloth 7lbs.	24 ,,	32 in.	,,	1.40 to 1.60	Taffachelass	12 yds,	43 in.	2.00 to 2.35
,, 6lbs.	24 ,,	32 in.	,,	1.10 to 1.25				

Yarns.—

No. 16 to 24	per picul	$28.00 to 31.25	No. 38 to 42 per picul	$35.00 to 39.00
No. 28 to 32	per picul	$32.25 to 34.75	Reverse Twist 16-24	—

Woollens remain quiet and there is no absolute change in prices to report.

Plain Orleans	40—42 yds.	32 in.	5 60 to 7.00	Figured Mousselines de Laine	30 yds. 30 in.	0.25 to 0.28½
Figured Orleans	29—30 yds.	31 in.	4.25 to 5.25	Multicolored ,,	30 yds. 30 in.	0.28 to 0.37½
Shimagoro	30 yds.	30 in.	3.75 to 5.25	Cloth, all wool plain or fancy	48 in. to 52 in.	0.80 to 1.20
Italian Cloth	—30 yds.	32 in.	0.25 to 0.32	Presidents	54 in. to 56 in.	0.60 to 0.65
Camlet Cords	29—30 yds.	32 in.	5.75 to 6.00	Pilots	54 in. to 56 in.	0.45 to 0.55
Camlets Asstd.	56—58 yds.	31 in.	—	Union	54 in. to 56 in.	0.60 to 0.80
Lastings, Japan	22—30 yds.	32 in.	12.00 to 13.00	Blankets, scarlet & green	6 to 8 lbs.	per lb	0.40 to 0.45
Plain Mousselines de Laine	—30 yds.	30 in.	0.17 to 0.18				

Sugar.—The market is weak, as buyers offer lower rates than holders are disposed to accept, especially for *Formosa* kinds. White Sugars show a decline of 20 cents per picul.

Sugar:—Takao in bag	(nom.)	per picul	$4.75	China No. 4 Kook-fah	per picul	$7.20 to $7.50
,, in basket	,,	,,	$4 65	,, No. 5 Kong-fun	,,	$6.30 to $7.20
Taiwanfoo in bag		,,	$4.60	,, No. 6 E-pak	,,	$5.50 to $5.90
do. in basket		,,	$4.50	Swatow Brown	,,	None.
China No. 1 Ping-fah		,,	None	Daitong	,,	$3.80
,, No. 2 Ching-pak		,,	$8 20 to $8.50	Japan Rice	,,	$2.30 to $2.50
,, No. 3 Ke-pak		,,	$7.60 to $8.00	Kerosene Oil, nominal	,,	$3.00

Kerosene Oil.—Late consignments having been nearly all cleared off, prices are firmer, and dealers now offer $2.80, on which rate, however, importers are asking a reasonable advance. Stocks are moderate.

EXPORTS.

Silk.—Fair transactions took place at the begining of the week at last rates given, but later on several buyers settled large lots of Hanks, and consequently dealers asked an advance of 10 to 15 dollars per picul. This has stopped operations to a great extent, and rejections have been very considerable. We therefore leave quotations almost unaltered. Oshius and Filatures have been sold in small quantities at the prices giving below. Settlements are 525 bales of Hanks, 60 bales of Oshius and 15 of Filatures, in all 600 bales. Arrivals are 700 bales, while Stocks consist of 1,300 bales. The total export from 1st of July to date is 4,134 bales, against 12,695 bales for same period last year.

		In London at 4s. 0d. per lb.	*In Lyons at f. 5.05 per kilo.*
Hanks, Superior No. 1	—	—	—
,, Best No. 1 & 2	$510 to 530	18/5 to 19/1	51.00 to 53.00
,, Good No. 2	$490 to 500	17/9 to 18/1	49.00 to 50.00
,, Good all round No. 2½	$460 to 480	16/9 to 17/5	46.50 to 48.00
,, Medium No. 3	$430 to 450	15/9 to 16/5	43.50 to 45.50
,, Common to inferior No. 4 & 5	$400 to 420	14/9 to 15/5	41.00 to 43.00
Oshius, Good to medium	$450 to 500	16/5 to 18/1	45.50 to 50.00
Kakeda	$500 to 580	18/1 to 20/9	50.00 to 57.50
Hamatski	$410 to 450	15/1 to 16/5	42.00 to 45.50
Filature Silk	$600 to 730	21/5 to 25/9	59.00 to 71.50

Tea.—The market for the past week has been somewhat quieter, and settlements only amount to 1,200 piculs. The demand continues for "Teas for price," although better classes have received a little attention. We make no change in quotations, but the tendency of the market is in buyers' favour.

Common	$ 9.00 to $13.00	Fine	$23 00 to $27.00
Good Common	$14.00 to $15.00	Finest	$28.00 to $32.00
Medium	$16.00 to $18.00	Choice	$34.00 nominal
Good Medium	$19.00 to $22.00	Choicest	—

EXCHANGE AND BULLION.

Exchange.—Since the departure of the *Belgic* on the 20th there has been little or nothing done, and rates generally are easy.

Rates close as follows:—

Sterling—Bank 6 months' sight	3s. 11⅛d.	On Shanghai—Bank sight	73⅞
,, Bank Bills on demand	3s. 10⅞d.	,, Private 10 days sight	74¼
,, Private 6 months' sight	3s. 11⅛d. @ 4	On New York—Bank Bills on demand	94
On Paris—Bank Sight	4.90	,, 30 days sight Private	96

NINGPO DISTRICT.

Rock to the Eastward of Pootoo Island.

NOTICE is hereby given that Captain PETERSEN, of C. M. S. N. Co.'s Steamer "*Ho-chung*," has reported a Rock, unmarked on the Charts, to the Eastward of Pootoo Island, and he gives the following magnetic bearings as determining its position:—

West Nine Pin Rock.....N. 33° E.
Half Tide Rock .....N. 12° E.
N. W. Point of Isthmus Island...N. 14° W.
Northern end of Pootoo E. Bluff..N. 49° W.

The Harbor-Master at Ningpo has verified the position of this pinnacle rock, and reported that there will probably be only 6 feet of water on it at low water spring tides, with from 7 to 13 fathoms round it.

See Admiralty Charts Nos. 1,199 and 1,969.

W. & C. SCOTT & SON.

FIRST PRIZE MEDAL and DIPLOMA OF HONOUR awarded, CENTENNIAL EXHIBITION, Philadelphia, 1876. For excellence of Materials and Workmanship in their PREMIER QUALITY and medium grades. Their New PATENT TRIPLEX action and COMPENSATING LUMP.

The attention of Sportsmen is requested to the above new system of action. Its superior strength and solidity imparts greatly improved shooting powers. Hard hitting being the desideratum required is obtained by this powerful Gun.

Prices of the TRIPLEX: £22.10.0, £30.0.0, and £37.10.0. This latter is our highest quality and is marked "THE PREMIER QUALITY."

Excellent DOUBLE-GRIP BREECH-LOADERS at £8.10.0, £12.0.0, £16.0.0 and £20.0.0. Shooting guaranteed.

OUR PATENT TOP LEVER with PURDEY solid double bolt. Shooting guaranted. Sound plain finish £15/0/0. Well finished, good materials £21.0.0. Cases and implements £4, £6 and £8 extra.

In the New York International Gun Trial competition, 1873, the Committee awarded our guns the Diploma, being declared first for points of merit of action, materials, proportion and shooting qualities.

Extract from Forest and Stream, New York, December 26th, 1876. Contributed by one of the judges of awards of guns at the Centennial. "The crowning glory of the display was the case of W. & C. Scott & Son. This firm has sent more good guns to this country during the past few years than any other, and they especially commend themselves to American sportsmen from the fact that they furnish good guns, honestly made, and of high shooting powers at very moderate prices. Their TRIPLEX ACTION combines, in the highest degree, strength with simplicity, and it must rapidly secure the favor of all who test its merits."

OUR PATENT COMPENSATING LUMP strongly recommended; should be ordered on every gun (cost, 30 shillings extra). For the Sportsman abroad, this invention is invaluable, being secured against the joint becoming loose after several years wear.

CHOKE BORED GUNS.—Slight, Medium or Full.

BREECH LOADERS in all systems from lowest qualities.

SINGLE and DOUBLE MUZZLE LOADERS.

Makers of the NEW SWINBURN-HENRY Sporting Express and SWINBURN-HENRY RIFLES and Carbines taking Government Ammunition. This Rifle is a great improvement on the Martini.

BIRTH.

On the 28th instant, at No. 71, Bluff, the wife of ARTHUR BELLAMY, of a daughter.

On the 29th September, at No. 38, Bluff, the wife of JOHN GRIFFIN, of a daughter.

DEATH.

On the 25th instant, MELTIAH JORDAN, a native of the State of Maine, U.S.A., Master of the British schooner *Beatrice.*

Notes of the Week.

From the very commencement the rebellion in Kiushiu has presented a series of startling surprises that have rendered it hopeless to conjecture what the final result would be. The last scene of the tragedy, however, that has been played before the eyes of this country for over seven months, was performed with terrible swiftness when the last remnant of the Satsuma army found bloody graves on Shiroyama on the morning of the 24th. From the time of the bold re-occupation of Kagoshima a strange silence had been observed as to what was transpiring, and the news that the brave leaders and their small band of devoted followers had met a common death was alike surprising to natives and foreigners. In spite of the determined bravery with which the war has been maintained against fearful odds, and giving full meed of admiration which they compel to the bold manœuvres of the insurgent leaders, it must be admitted that they have shown themselves wanting in that military genius with which Saigo and Kirino have always been credited, and which alone could have ensured their success against overwhelming numbers and resources. The waste of precious time before Kumamoto which gave their opponents ample time to prepare; the utter want of concerted action; the strange refusal of Saigo to profit by the offers of assistance made to him from time to time seem to have been a series of fatal mistakes, of which lastly, brilliant though it was, the retaking of Kogoshima was the crowning error. As no details have yet been published it may be premature to express any decided opinion, but from what can be gathered from the limited evidence supplied by the native papers, it would appear that Saigo, Kirino, Murata, Hemmi and the other principal leaders, accompanied only by about four hundred men, after having, by a wonderfully bold dash, reoccupied Kagoshima, deliberately retired to a position which enabled them to be entirely surrounded by a body of some fifteen thousand Imperialists, whence all possible mode of escape was cut off, and where they permitted themselves to be slaughtered like rats in a pit, without making the least effort to defend themselves. The Government despatches state that while only about thirty of the insurgents escaped, but nine of the Imperialists were wounded, not one being killed. This is certainly, if correct, the most incomprehensible of all the mysterious events that have occurred during the war, and can only be accounted for on the ground that it was premeditated. It is possible that Saigo and the rest may at last have realised how hopeless was their position. Sympathy with their action took only the form of carefully hushed expression. The errors made in the early part of the campaign rendered it impossible to escape from Kiushiu. Flight could only entail inglorious retreat among the mountains, which would probably end in ignominous capture. Preferring death to dishonour they determined, in the true *samurai* spirit, to perish together, refusing to survive the loss of the cause for which they had so bravely fought. That the last struggle was anything more than a massacre cannot well be doubted. What else can it be called, when a few hundred men are destroyed by fifteen thousand without the loss of a man on the part of their assailants? But after all it was a fitting end, and far better so than a shameful death at the hands of an executioner. Hero as Saigo has always been to the people, he will be none the less so esteemed from the manner of his death. The record of his life is stained by no deeds of oppression, no tales of selfish ambition. Admitting that his action in taking up arms against the Government may be deemed unjustifiable, he died as he had lived, a brave and noble *samurai*, and his companions in death showed themselves fit followers of such a chief. Though much misery and loss has been entailed upon the country by a civil war of which he was, if not the secret promoter, the acknowledged leader; though he

> "Hath widowed and unchilded many a one
> Which to this hour bewail the injury,
> Yet he shall have a noble memory."

The son born to the Mikado on the same morning that witnessed the last terrible scenes of the civil war on the heights of Shiroyama, will, in the event of the Empress having no issue, be heir to the Imperial throne. To-day the ceremony of naming the Prince took place. Salutes were fired, and a general holiday observed in all the Government departments.

We regret to observe that the attacks of cholera do not diminish in number. There is certainly no more ground for alarm now than there was when its appearance was first announced. It assumes no more virulent form, nor do the average number of cases increase; still it exists, and every day there are reported a certain number of deaths from the disease. It has broken out on board the *Raiden Kan*, nine cases having been reported, as also one case on board another vessel in

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

harbour. From various parts of the country reports are likewise received of its appearance, although, happily, nowhere does it seem to exist in any but a mild form. The Japanese authorities continue their praiseworthy exertions, and it is in all probability owing to the extreme precautions adopted that the disease has been kept within present bounds.

In our issue of the 15th instant appeared an article entitled "A Chapter in Modern Japanese History," which was a sketch of the life of the father of the famous Satsuma leader Kirino. Our readers may remember that after the failure of his attempt against the Government in Osaka, Oshiwo Heihachirô and his adopted son Kakenosuke were said to have committed suicide in the house of a cloth merchant, where they were discovered in concealment. It is now, however, affirmed by some one who has been diving deep into the records of the past, that Kakenosuke, then aged sixteen, managed to escape and fled to Kagoshima. Here he was noted for his brilliant talents and amiability of disposition, and was compared with Rikiya (celebrated in the *Chuishi Gura*). It has been ascertained that Oyama Tsunayoshi, the Governor of Kagoshima at the time of the present outbreak, was formerly called Kakenosuke. His age—fifty—exactly corresponds with that of Kakenosuke, and there are many other circumstances connected with his career which have induced a wide spread belief that Oyama Tsunayoshi and the adopted son of Oshiwo Heihachirô are one and the same man.

While it is lamentable to read the account of the distress that already exists and must continue to arise from the failure of the crops in India, it is cheering to see the wise and statesmanlike steps that are being taken by the Government to mitigate the terrible sufferings of the people. The prospects of the crops in many parts seem to grow worse. In Madras especially are the effects of the threatened famine to be feared. In answer to an appeal from the Madras Government, at a meeting held at Calcutta Mr. Eden stated that the Supreme Government took upon itself the whole responsibility of famine relief, and requested that no appeal should be made to public charity unless the Government, finding itself unequal to the task, should make the appeal in the name of the Viceroy in Council. Such appeal says the *Friend of India*, it is not probable will ever be made. Already the number of those employed on the relief works in Madras amounts to close on a million, while those in receipt of gratuitous relief exceed that number. The same journal goes on to say that is impossible to exaggerate the gravity of the crisis, and that such preparations must be taken to meet it as would be required to meet a great war. The first Imperial year has thus become the gloomiest since the troubles that led the crown to assume the Government of India, but having won it by force of arms, it must now make it trebly its own by saving it from the most serious time of famine the land has seen for more than a century. The Viceroy, in spite of bad health and against the advice of his physicians, is travelling in the famine region, and thus at considerable personal risk seeing what measures of relief may be necessary, and the best means of carrying them out. The fact that the State thus charges itself with the entire responsibility of meeting the calamity is so important an advance on the attitude which the Government used to assume in these calamities, that it would be unwise by an appeal to private charity to do anything to weaken its significance. In former calamities of the same order, the Government had been very slow to admit that it could do anything to mitigate them, beyond the remission of the land revenue in the distressed districts, and the opening of relief works therein for the employment of the able bodied labourer. The cause of the sick, the aged and the young was devolved by the State upon the charity of the people. A very important step was made in advance, when the Government came forward later with the offer to meet private charity half way in the cost of maintaining those classes, who from age, infirmities or caste could earn nothing on relief works. The Government has now charged itself with the task of relieving all classes alike, and such a step meets with unaminous popular approval. An appeal to private charity is certainly the unfairest form that taxation can assume, as only the very few ever think of giving systematically, but no opposition can be raised to the State obtaining by taxation the money needed to mitigate the dreadful sufferings of the people.

When we see what measures a properly organised Government can take to fight a foe so terrible as the Indian famine, it is lamentable to look at the state of affairs in China. There too, in many districts, as in India, failure of crops has occurred for the last three years, and hundreds of thousands have perished and will perish of starvation, without the Chinese Government making any efforts worth the name to save the lives of its wretched subjects. There can be no exculpation on the ground that the Government has been overtaken unawares. A series of disastrous years should have opened the eyes of the rulers to the necessity of inaugurating proper measures of relief. Why was not something done as in India in the way of inaugurating relief works? Surely there is work enough and to spare if the Chinese Government will only take it in hand. But the fact is that the dynasty is nodding to its fall. It is almost lifeless, and a mass of corruption and incapacity from head to foot. The last three years have terribly shaken its already crumbling foundations, and there is not much doubt that the misery that must fall on the people from the failure of crops in the present year, will culminate in a revolution that will in all probability overturn the whole tottering edifice.

By an advertisement in the columns of one of our contemporaries we see that the liquor sellers of Yokohama—we presume notably those of the Homura Road—have called a meeting for the purpose of considering the best means of expelling their Japanese brethren from the settlement. We do not know on what grounds the presence of the native dealers is objected to, and can only suppose that it is in consequence of their providing their patrons with more harmless compounds at a lower price than their foreign rivals. It is impossible to suppose that the movement against them can have had its origin in any high moral sentiment on the part of the foreign dealers. If it comes to a question of poisoning, we should say decidedly the native is by far the most innocent, and if it should be put to the vote as to which should be sustained we should unhesistatingly throw all our influence on the side of the Japanese. They are at least under a law which can be enforced. Their liquors can always be inspected, forfeited if necessary, and the conduct of their houses regulated. Unless they should hire a foreign bar-tender their minds would remain in happy ignorance of the concoction of "drinks," the sole object of which is to madden with thirst, and place the pocket of the unfortunate imbiber at the mercy of the grogshop keeper. Not that we desire to insinuate for a moment that any one of the Homura Road liquor sellers would commit a dishonest action; but when Jack comes ashore flush with money, it is desirable that he should as rapidly as possible get into that bemuddled state which makes it imperative that he should treat his friends all round to "one glass more," and swell an account that might be disputed in sane moments. Now it must be acknowledged that Homura Road grog shop keepers are allowed to take their lives—and seriously affect morals and health of their customers—in a delightfully free and easy manner. They are entirely debarred from any municipal interference. They can do their spiriting in what way seems unto them best. There is nothing to prevent them from dealing in poisons without let or hindrance, while the sale of equally dangerous compounds would bring upon an unfortunate druggist the heaviest penalties of the law. Why don't the latter, by the bye, call a meeting to consider the best way of expelling the foreign liquor sellers from the Homura Road? Still, after all, it is perhaps refreshing to see that there is so much honour among—liquor sellers, as to cause them to be jealous of any one interfering with their mortiferous privileges. It is not just, they may say, that a Japanese should have the right to destroy the coating of a foreigner's stomach. That we must reserve solely, to ourselves. Let us call a meeting and expel the rightful keepers of the vineyard so that their inheritance may be ours. And this they do by order (so

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

runs the advertisement) of E.L.C.O.P.—which can be ominously interpreted as standing for Every Liquor-seller Capable Of Poisoning. Far be it from us to assert that such should be its meaning, but that is all we can make out of it. Evidently a dangerous and deadly secret society is at work in our midst. General Van Buren warned us of its existence many a time and oft, and denounced it in fearless terms. We refused to listen to him; some of us laughed at him, and now we see how boldly it rears its head. It should be served like Buckingham.

The *Mainichi Shimbun* relates in so grave a style the following story, that it is not permitted us to throw any doubt on the statement made by our contemporary. It appears that a carpenter living at Noge, who had stopped for the night at Hodogaya, was returning home at daybreak on Thursday morning, when as he was taking a short cut across the hills he saw a little child running and calling to him. From its voice he took it to be about five years old, and wondering how so young a child could be out alone at that early hour, he ran to its assistance, when on catching hold of it he discovered that it was a badger which had disguised itself, but whose identity was betrayed by a very bushy tail which it had forgotten to conceal. He managed to capture it and take it to his home, where our contemporary asserts, "it now remains." Now here is a chance for some enterprising spirit to make money in these hard times. No doubt the child-like and bland badger can be purchased for a moderate consideration. Who knows that it may not have powers of transformation unlimited? Perhaps it is the original *bumbuku chagama* (the lucky tea kettle). Taken to London on exhibition, say at the Westminster Aquarium, what shillings would it not bring into the pocket of its fortunate possessor? Psyche and Zoe would have to play whist with a dummy audience. Zazel would not be able to find money to buy the powder to blow him or her out of the hundred ton gun. Even Pongo's nose, what there is of it, would be put entirely out of joint, and the transforming badger would become the lion of London. Visions of untold wealth and Barnumian luxury rise before us as we write. We give fair warning that we propose to devote the whole of to-morrow in searching out the abode of the fortunate carpenter, and in securing the monopoly of the wonderfully gifted animal. We shall be generous to the community, inasmuch as we intend to give a performance with new and wonderful transformations, interspersed with songs by several distinguished Amateurs, at the Gaiety Theatre, in aid of the funds of the Amateur Dramatic Corps. This is the only means we see at present of restoring them to a state of solvency. We shall announce full particulars shortly.

While on the subject of badgers, with regard to which animal so many strange stories and superstitions exist among the Japanese, we can of our own knowledge state that they sometimes appear to show a strange fearlessness of the presence of man. It is popularly supposed that badgers prefer to take up their residence near a temple, and the hill on which stands the shrine of Sannosama in Tôkiô is said to be a favourite haunt. Be that as it may, when Mr. Godfrey, the late Chief Consulting Mining Engineer to the Japanese Government, resided at the Niwa Yashiki, which is close to the temple referred to, it was a common occurrence in the winter time for a large badger to come into the kitchen and lie down near the fire. The servants, of course, held it in superstitious reverence, and not only allowed the door to remain open for it whenever it might choose to pay a visit, but supplied it with food and milk, of which it sometimes condescended to partake. No attempt was ever made to capture it, and it betrayed no fear of any member of the household. We have several times heard this fact related by the lady of the house, who had frequently been called to see the animal lying down in the kitchen.

The *Shanghai Courier* states that "The *Peking Gazette* of the 29th August contains an amusing decree, refusing to recognise the re-embodiment of a certain Thibetan Lama, who committed some serious crime during the reign of Tao Kwang, and was consequently stripped of his rank and office and deprived for ever of "the privilege of successive births into the world." The Lamas apparently declare that he has come back, despite the Imperial decree, and hence have petitioned through the Imperial Resident at Lhassa, that the child in whom his spirit has been discovered may be recognised. But the Emperor declines utterly. It has been decreed that he shall not be reborn, and he cannot be." The Emperor, we humbly submit is acting unwisely. If he wishes to perpetuate the vengeance of his ancestor he should by all means permit the Lama to return to earth. Some one has said, "If you wish to punish your enemy, let him live." The doctrine of re-incarnation is anything but a comfortable one, for "it is a bad world my masters."

In the obituary notice of the late Mr. John England, M.I.C.E., which appeared in our issue of 22nd instant, it was stated that Mr. England was educated for the mechanical branch of his profession in the establishments of Messrs. Beyer, Peacock & Co., Gorton, near Manchester. It should have been stated that he was educated at the establishment of Mr. W. Fairbairn, of Manchester.

From the "Japan Mail Daily Advertiser."

Monday, 24th.

The Cricket match "The Professions *vs.* Trade" was not carried to a conclusion on Saturday, owing to several players from the *Modeste* not appearing, as was expected. As it was thought that they might turn up during the morning, the match was commenced, "The Professions," in consequence, being sent first to the wickets at 11 o'clock, and play for the projected match continuing until tiffen, but as the missing *Modeste* men had not arrived by the time that tiffen was finished, the original match was abandoned, and in its place a scratch match was got up. For some time it was a matter of difficulty to decide what the sides should be, but after various suggestions, it resolved itself into a competition of "The Talls *vs.* The Shorts."

Time allowed of only one innings being played, which resulted in favour of "The Shorts," as the following score will show:—

SHORTS.

Some very good play was made, and there was a marked improvement in the fielding to be noticed. With the assistance that can now be obtained from the Navy, there is very good material for excellent matches, and we hope that several more will be played before the season closes, as the Yokohama Cricket Club decidedly requires some incentive to revive the waning interest of the members it already possesses, and to induce an accession to their ranks from the numbers in Yokohama who no doubt can play cricket, but yet, for some unknown reason, do not join the club.

From the *Osaka Nippô*.

According to a return made on the 19th instant, there were 4,780 patients in the temporary Army Hospital at Osaka.

The *Okurashô* has decided that the appropriation for the Universal Exhibition at Paris next year shall be 150,000 *yen*.

One of the *Shoji* named Yanagiwara presented the Emperor with a son at noon on the 23rd instant.

Some kind of agrarian riot took place at Fukui in Echizen on the 18th instant, a body of men, numbering about 1,500, assembling and making a disturbance.

The P. & O. steamer *Bombay*, with English mails on board to the 17th August, left Hongkong on Saturday last, the 22nd instant, at 5 P.M.

From the *Chôya Shimbun*.

The Government has issued orders that in the event of an official or workman belonging to any of the departments having any member of his household siezed with cholera, he shall not be permitted to attend at his office until permission is given him by the medical board. A similar notification has been issued to all the primary schools.

The Chinese Government has sent an embassy consisting of five ambassadors to Korea.

Masuda Sôtaro, the commander of the Nakatsu rebels, was captured on the 3rd instant when Kishima Kiyoshi was killed. [This man was formerly editor of one of the Tôkiô newspapers.—ED. *D. A.*]

From the *Mainichi Shimbun*.

On the 21st instant from 1 a.m. to 12 midnight thirty-one persons were attacked with cholera within Kanagawa, Yokohama, Hodogaya and Yokosuka, of whom eleven died, seven being males and four females.

From the *Hôchi Shimbun*.

A telegram despatched from Kajiki, at 5.55 a.m. on the 21st instant, states that thirty men belonging to the *Shinsen-riotan* made an attack upon the rebel position near the Private School on the night of the 20th instant, and after killing three men set fire to the remainder of the buildings at that place.

The Kanagawa Kencho has requested the Government to make a grant of five thousand *yen* to meet the extraordinary expenses incurred by be prevalence of cholera in Yokohama.

The wheat and barley crops in Korea are this year very good, and the Japanese merchants who imported rice for sale there have had to ship it back to Japan. "I have seen," says a correspondent, "some thirteen or fourteen specimens of gold dust obtained from washings of rivers, so it is supposed that much gold can be obtained in the country."

From the *Nichi Nichi Shimbun*.

The Bureau of Police at Tôkiô has ordered the various police stations in the city to make enquiries as to what quantities of carbolic acid there are in possession of the druggists under their jurisdiction, as that article will be much required in case the epidemic of cholera spreads.

Tuesday, 25th.

We hear that the police authorities at Tomioka, a small village between Kanazawa and this, yesterday applied to the *Kencho* for remedies for those who are attacked with cholera, and also for disinfectants, as a few cases have occurred among the inhabitants of that village. Several cases have also been reported from Kawai-no-tsuji, on the road to Hachoji.

From the *Mainichi Shimbun*.

A telegram despatched from Kagoshima at 10.55 a.m. on the 24th instant, says that the Imperialists made a general attack upon the rebel positions at dawn of the 24th instant and captured them. Saigo, Kirino, and Murata were killed.

From the *Hôchi Shimbun*.

A telegram sent by Iwamura, the Governor of Kagoshima, to the Governor of Tôkiô, despatched at 7 a.m. on the 22nd instant, says that cholera is prevailing at Taniyama, Sendai and Sakurashima, and twenty deaths have already occurred. This disease was introduced from some of the ships, and the epidemic seems likely to spread.

On making an inquiry at the chief hospital of the Tôkiô *Fu* at Atagoshita on the 23rd instant, we were informed that thirty cases resembling cholera had occurred in the city, but only five or six cases of real cholera had been met with.

A telegram despatched from Kagoshima at 9 a.m. on the 22nd instant, says that the rebel position is being daily bombarded and the insurgent forces have become greatly reduced. The distress of the people is increasing daily, and the Governor is in a state of great anxiety about them.

There is a rumour current that some of the rebels who were at Shiroyama, in the rear of Kagoshima, have fled to the island of Amakusa in Hizen.

A telegram despatched from Kobe at 2.30 p.m. on the 22nd instant, reports that two cases of cholera have occurred in Hiogo *ken*, one of which has proved fatal.

The amount that the *Okurasho* has spent up to the present time in the suppresion of the Satsuma rebellion is over 34,642,300 *yen*.

From the *Akebono Shimbun*.

Mr. Okubo Seifu, the editor of the *Heian Shimbun* lately published at Kiôto, has been sentenced to five months' imprisonment for violating the 15th article of the Press Laws, by publishing in the fifteenth number of his issue a letter sent to him by Mr. Seki Kerichi to the following effect:—"Oppressive governments should be overthrown, and the laws which obstruct the liberties of the people should be reformed." His sentence also included punishment for having published the particulars of his trial, in the eighteenth number of the issue of his paper. Mr. Seki, the writer of the incriminated letter, has been sentenced to 20 days' imprisonment and a fine of 15 *yen*.

From the *Nichi Nichi Shimbun*.

The value of the money coined at the Osaka Mint from its establishment to December 1876 are as follows:—

Gold	Yen	51,156,032.00
Silver	„	20,715,042.05
Copper	„	2,330,903.52

Wednesday, 26th.

At the request of the Board of Health we publish the following statement which they desire to make public:—

"As there seems to be an uncertainty in the minds of some of the community, as to the exact nature of the disease now prevailing, the undersigned, medical members of the Board of Health, deem it wise to state positively that the disease in question is, beyond the posibility of a doubt, Malignant or Asiatic Cholera.

In making this statement formally and publicly, the undersigned have no wish to alarm the people of Yokohama, on the contrary, it is their opinion that however great an epidemic may exist among the native population, the conditions surrounding foreign residents are such that its extension to foreigners generally is unlikely. Nevertheless, as experience has proved the value of certain precautions in preventing the advance of cholera, as the course of the disease once introduced is beyond human prediction, and as many are careless or reckless unless assured of present danger, it seems advisable that the foreign residents of Yokohama should realise their position.

Measures have quietly been taken, under the direction, or upon the recommendation of the Board of Health, which we believe have placed the foreign settlement of Yokohama in as fair sanitary condition as is possible under the circumstances, and the Board will continue its action during the existence of danger. Meanwhile it is hoped that every resident, trusting to the good intention and disinterestedness of those

We would call attention to the official statement, to be found elsewhere in our columns, of the ravages of cholera among the Japanese. This return, altered day by day, will appear every morning among our advertisements.

The *Elisabeth* has returned to the anchorage from Yokoska.

The *Nichi Nichi Shimbun* of the 25th gives the following account of the final struggle at Kagoshima:—On the 24th instant at 4 a.m., the Imperialists made a general advance toward the rebel positions, and ascending Shiroyama, at 4.30 made a simultaneous attack on the insurgent positions. By 5 o'clock they were in entire possession of the place, Saigo Takamori, Kirino Toshiaki, Murata Shimpachi, and other Satsuma leaders being among the killed. Thus the rebellion has come to an end.

The first step that the insurgents took in the outbreak on the 30th of last January was that of capturing Government powder from the magazine at Kagoshima. They then collected troops from Sutsuma, Hiuga, Osumi and Higo, and beseiged the castle of Kumanoto. Here and at Yamaga, Takase and other strategical points, for about a space of fifty days they kept the Imperialists at bay, but being attacked both in front and rear by the Government troops, they raised the seige of Kumamoto on the 15th April and took up their position at Koyama, to the south of Kumamoto. Here several desperate battles were fought in the neighbourhood of Mifume and Takemiya, but being defeated they retreated to Yabe. They then attempted to hold Hitoyoshi and Oguchi, but were again unsuccessful. For a short time they managed to surround Kagoshima but were compelled to retreat toward Osumi and Hiuga. In every engagement they were unsuccessful, and finally they sustained a terrible defeat at Nobeoka. At Inotake they were surrounded by the Imperialists and came within an ace of losing their heads, when on the 17th August they succeeded in breaking through the lines of their opponents, and in making their way to Kagoshima, which they re-entered on the 1st September. Here they took up their position on Shiroyama, and on the 24th their final defeat and death of their leaders occurred. For over seven months have they kept moving from place to place, and it must be admitted that they have proved themselves very strong.

On the 23rd the Mikado had a son born to him, and on the 24th the final defeat of the insurgents took place, over which happy tidings our readers will probably heartily rejoice.

From the *Nichi Nichi Shimbun.*

A telegram despatched by Admiral Kawamura, the Vice-Minister of the Navy, from Kagoshima, announces that Saigo, Kirino, and Beppu have been killed. The head of Saigo is not to be found. Search is now being made for it.

A telegram from Lieut.-General H.I.H. Higashi Fushimi-no-Miya, despatched from Kagoshima at 10.10 a.m. on the 24th instant, announces that the troops under his command and all the other Imperial forces made a general attack upon the rebels at Shiroyama, commencing at dawn of that day. By 5 a.m. all firing had ceased, the defence of the rebels not having been anything like so energetic as the Imperialists expected, only eight or nine of the Government troops having been wounded and none killed during the attack.

The local officials of Kumamoto *Kencho* having had much extra work to do since the breaking out of the rebellion, the Home Department has asked the *Daijôkuan* for permission that a sum of money, not to exceed 50 *yen* each, may be awarded to those deserving it. This request has been granted.

Three police sergeants and nine constables have been ordered on service to the Loo-choo *Han*, and will consequently start for those Islands on the 26th instant.

From the *Chôya Shimbun.*

Okura & Co. have received an order from the Government to make several thousand wadded gowns, which are to be supplied to the rebels who surrendered themselves.

From the *Akébono Shimbun.*

It is said that ten thousand *yen* are to be sent to the Kagoshima *Kencho* to cover extraordinary expenses.

A telegram from Uwajima in Awa, Shikoku, says that, according to an order received from the Minister of Home Affairs, all the Tôkiô policemen now in and about that town will return to Tôkiô by the *Atago Maru.*

From the *Hôchi Shimbun.*

On the 23rd instant a rebel visited the Imperial camp who was deputed to carry a message from the Private School party, but the nature of the communication he made has not transpired.

Miyaji Kinkichi, representing Kasuya Shuso of Chiba *ken*, presented a letter addressed to the Prime Minister to the *Daijôkuan* on the 24th instant, which contained the assertion that Shimadzu Saburô and his son are the real leaders of the present rebellion, and not Saigo.

It is said that Saigo, Kirino and Murata were killed on the 23rd instant at Iwasaki, on Shiroyama.

Thursday, 27th.

Ex-*Sangi* Soyejima, the former Minister for Foreign Affairs, returned by the *Tokio Maru* yesterday from China.

The *Braemer Castle* left Singapore for Hongkong on the 14th instant. The *Glenartney* arrived at the latter port on morning of the 16th instant, after a run of 39 days from London.

From the *Mainichi Shimbun.*

A Chinaman living at No. 165, Yokohama, having been detected in an attempt to send over to China some Japanese whom he had purchased in Shikoku and near Kobe, has been brought before the *Saibansho* for examination.

From the *Akébono Shimbun.*

Those policemen who have been ordered to Loochoo go there to relieve others whose term of service has expired. The former will start from Kobe for Loochoo in the *Taiyu Maru.*

On the 25th instant eleven persons in Tôkiô were attacked with cholera, which in one instance proved fatal.

From the *Hôchi Shimbun.*

One battalion of artillery from Hiroshima garrison is to be sent to Kôchi *ken* (Tosa).

There are now twenty-five police stations in Kagoshima *ken*, and a force in all of 1,491 policemen.

The number of policemen at Miyazaki in Hiuga is 697.

From the *Chôya Shimbun.*

Thomas Muel (?), a British subject residing at the Bonin Islands, has requested that he might be allowed to become a natualized Japanese subject.

Friday, 28th.

The verdict which was to have been given in the German Court yesterday in the case of Theodor Wilhelm Holm, formerly in the employ of Messrs. Copeland & Wiegand, has been deferred to a later date.

When the *Oceanus* left Hakodate the steamer *Dragon* had just arrived. There were no men-of-war at all lying in the port.

From the *Nichi Nichi Shimbun.*

A telegram sent by Police Inspector Watanuki to Kawaji, the Chief of Police at Tôkiô, despatched at 6.05 p.m. on the 26th instant, says that Fukami and twelve other rebels who were trying to excite the people of Akune and Koshiki-shima to make an attack upon Nagasaki, have been all arrested at various dates since the 22nd instant.

A telegram despatched by the H.I.H. Higashi Fushimi-no-Miya, and which was received at 2 a.m. on the 25th instant, is as follows:—"Saigo was killed by the troops under my

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

command. Kirino, Beppu and Hemmi destroyed themselves. Sakata has surrendered. The 4th Division and the troops under my command attacked Iwazaki-dani and killed fifty of the rebels."

Another telegram received later on says:—"About one hundred rebels surrendered to H.I.H. Arisugawa-no-Miya. Yasumura, who pursued Saigo, was wounded by him, and much regrets that he could not obtain his head. He succeeded in taking a revolver that Saigo had in his possession. Saigo's head was shortly afterwards discovered, having been buried."

A telegram received at 10 p.m. on the 25th instant from Yamagata, the Minister of War, announces that the Imperial head-quarters have been transferred from Hososhima in Hiuga to Kagoshima.

When the news arrived that there was some agitation prevailing in Tosa Mr. Sasaki, a member of the *Genrô-In*, was immediately despatched to that province. A report has since been received from him to the effect that all is quiet, and that he will soon return to the capital.

From the *Chôya Shimbun.*

We hear that all the Imperial forces will be withdrawn from Kiushiu about the 30th of this month.

From the *Akébono Shimbun.*

Seven new cases of cholera occurred in Tôkiô from 12 noon of the 25th to the 26th instant, one of which proved fatal.

From the *Hôchi Shimbun.*

As some thirteen of the crew of the *Raiden Kan*, now lying in the port of Yokohama, have been attacked by cholera, the vessel is to be despatched to Yokosuka, where the whole of the crew and the ship's stores will be landed.

Saturday, 29th.

Cholera seems to have broken out at the Takashima colliery. According to the *Hôchi Shimbun*, among the miners, from the 16th instant to the 21st, forty-one were attacked by the disease, of whom eleven died. Among the coolies during the same period twenty-four were attacked, of whom ten died.

From the *Hôchi Shimbun.*

Police Sergeant Arima, at the head of over one thousand policemen who have been stationed at Uwajima in Awa, Shikoku, is expected to return here to-morrow.

From the *Nichi Nichi Shimbun.*

The amount of gold *yen* exported from the country averages one million *yen* per month.

From the *Chôya Shimbun.*

Prisoners in any of the jails throughout the country are now allowed to see such newspapers as the authorities may pronounce unobjectionable.

The P. M. Co.'s steamer *City of Tokio* left for San Francisco at daylight this morning. She takes 300 bales of Silk, and the following cargo of Tea :—

THE POLITICAL SITUATION.

AT a moment when Europe is convulsed by war, when millions of men are being led to slaughter in in a cause for which the immense majority of them care nothing whatever, and when the foremost nations of the earth are trembling with alarm lest they should be drawn into the quarrel raging with increasing fury round that '*teterrima causa et sempiterna belli*,' the Eastern Question, Japan may fairly congratulate herself upon the final suppression of the rebellion in the south-west, which leaves her at peace with herself and all the world. Over her political horizon no cloud broods, not even a difference of any political importance exists between her and any of the Treaty Powers. To such terrible famines as are desolating India and China she is fortunately a stranger, and but very ordinary statesmanship is necessary to ensure her continued advance in civilization. It is in the highest degree unlikely, if not absolutely impossible, that the attempt of the ill-starred leader of the Satsuma insurgents should be repeated or imitated, and with the close of the civil war that has been desolating the south during the last six or eight months, is removed for ever the most serious danger to which the new order of things was exposed. The power of the *samurai* is utterly broken, and no intestine commotion need henceforth be apprehended that will exceed the limits of a riot. It is not therefore necessary that the faults or errors of the vanquished should be visited with a rigorous enforcement of the law. From the enlightened political code of the day mere vengeance has been eliminated, and where a crime cannot be repeated it would be an abuse of the forms of justice to resort to a severity which circumstances have rendered needless. Lenity were therefore wisdom; and what humanity entreats, a sound policy demands. When the masses perceive that the Government can afford to treat its enemies with clemency they will be assured of its strength, while an expiation of their errors by their lives would convert into martyrs those whom it is in the interest of peace and order, that the people should come to regard, as simply wrongheaded and violent disturbers of public tranquillity.

We are far from asserting that in no case is rebellion justifiable. But there are two essential conditions of the righteousness of taking up arms against an established Government. The first is, that the evil sought to be remedied should be of so intolerable a nature, that to continue to endure it involved consequences more disastrous than what would probably result from a state of civil war. The second is, that there should be no reasonable doubt of the movement being joined in by the majority of the people or at least to such an extent as to ensure its success. In the case of the Satsuma insurgents neither of these conditions were present. Their aims seem to have been sectional rather than national, their grievances personal rather than public in their nature, and from the beginning to the end the rising was viewed with dislike by a considerable portion of the people and with apathy by the remainder. The Government, undistracted by domestic or foreign complications, can now turn its undivided attention to the internal needs of the Empire. The development of the resources of a country and the lightening of the burden of its taxation are, or should be, the constant objects of the care of those by whom its affairs are administered, and we do not

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

suppose that the Imperial advisers will neglect the ordinary duties of their position. Among the pressing wants of this country, however, there are two which call for special attention,—wants of such importance, that if not promptly and sufficiently cared for, the progress of the Empire in prosperity and civilization must be greatly retarded, if not altogether prevented. The first of these is the improvement and increase of the means of communication—a subject upon which we touched some weeks ago, and therefore need say but a few words here. As commerce means simply interchange of productions, it is clear that the existence of adequate means of interchange is of paramount importance as an element in its successful development. The provinces of the interior especially are deficient in good roads, wheel roads hardly exist at all, and even pack-horse paths are insufficient and are not maintained in anything like proper condition. Nor is it only in the interests of commerce that it would be wise for the Government to devote a large share of the resources at its command to the creation of new, and the improvement of existing means of communication. A considerable extension of the road system of the country would bring with it benefits of no less importance from a political than from a commercial point of view. As travelling became easier and cheaper, the intercourse between the different parts of the country would be largely increased, the local isolation in which nineteen-twentieths of the population are at present forced to spend their lives would be greatly lessened, and the process of completely unifying the various provinces into a coherent Empire would be immensely facilitated. Almost all the troubles that during the past nine or ten years have beset the Government have been the inevitable accompaniments of the transition from the state of loose aggregation of semi-independent principalities which existed under the Shôgunate, to that condition of unity which the statesmen of Japan have ever since the Revolution endeavoured to realise, and which they may now, with justice, hope at no distant period to see accomplished. Whatever tends to make the different sections of a people better acquainted with each other tends at the same time, as all history shows, to create among them a sentiment of union and a strong distaste for any kind of civil commotion, and the development of the means of internal traffic is the indispensable preliminary, as the Romans long since taught by precept and example, to the achievement of this desirable end.

The other principal need of the country, every possible means of supplying which ought, in our opinion, to be anxiously considered by the Government, is the education of the people. The subject is one of the highest importance and of no small difficulty, and we cannot pretend in these columns to treat it otherwise than very superficially. But if Japan is ever to occupy or maintain the position among Eastern nations which its geographical situation and its freedom from embarrassing questions, religious or political, external or domestic, afford it every chance of attaining, the present oligarchical system must be sooner or later replaced by one founded upon the broader basis of popular representation, and institutions, democratic in their essence if not in their form, must be rendered possible and safe by the existence of a sufficiently numerous class of fairly well educated citizens to support them, to appreciate their value and to obviate the dangers inherent in popular Government. While we should regret a neglect of the national history and literature we are convinced that the kind of education which the aspirations of the country call for is mainly of an European character. A mere familiarity with one or two foreign languages, is of some but not of great importance, and no solid advance can be hoped for until the political and social philosophy and modes of thought current in the West shall have obtained a tolerably wide recognition among the more cultivated classes of this country. It is in their hands that the real power must ultimately be vested, for even in the most democratic countries, the masses obey, involuntarily perhaps and oftenest unconsciously, the impulses given by the men of culture and reflection, to whom the men of action and the indifferent crowd are but implements and material.

THE LAND RENT QUESTION IN TSUKIJI.

IT is with no small relief that we find ourselves at length able to congratulate both parties to the long-pending dispute between the Government and the land-renters of Tsukiji, upon the termination of a quarrel that reflected little credit upon the discernment of those who originated it, and afforded the Japanese strong grounds for doubting whether we are influenced in our dealings with them by a higher sense of justice than that which governs their conduct towards ourselves. As our readers will probably remember, the question was—briefly stated—whether the authorities had forfeited their rights as landlords to the rents reserved by the leases, through their having enlarged the facilities originally conceded to foreigners for residing in Yedo. The land renters alleged the affirmative, and not only claimed to continue their occupation free of rent, but demanded a large sum by way of compensation as well,—thus, in effect, putting the landlord in a worse position than if an out and out gift had been made of the subject matter of the dispute. The common sense of the community at once saw that the position of the land-renters was wholly untenable, and viewed with some impatience the favourable decision they obtained in one of our tribunals. It is, however, unnecessary to enter a second time into the merits of a question already sufficiently discussed, and we shall therefore confine ourselves to a few remarks upon the fortunate termination to the whole affair, which is recorded in another of our columns. The entire claim for compensation has been very properly withdrawn, and all back rent has been paid up, while the Japanese authorities, on their part, have with great fairness consented to waive their right to the penalty legally enforceable under the leases, and have in addition, in consideration of the bad times, remitted for the present about 25 per cent of the rent originally reserved.

It cannot be said that such an arrangement, while it completely vindicates the action of the Japanese authorities, bears at all hardly upon the land-renter. It is true that Tsukiji property can scarcely be regarded as a very valuable investment, and it is probable that even at half the original rental it would not, for the present at least, be considered an attractive or a profitable one. But this is the misfortune of the renters, not in the smallest degree the fault of the Japanese authorities, who, in establishing the settlement, simply acted at the request and in accordance with the wishes of the foreign representatives. The holders of Tsukiji

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

land knew perfectly well what it was they were purchasing, what were the rents and penalty, and what the conditions they would be bound to pay and observe. At the time when the arrangements for opening Tsukiji were made public, those who intended to avail themselves of them were apparently satisfied with the terms of the convention under which the sales were afterwards made, and with the conditions endorsed upon the deeds of lease. At all events, no objections, so far as we are aware, were raised to either terms or conditions, and indeed, if any objections were raised, these were waived by the foreign representatives.

We cannot refrain, in conclusion, from expressing our regret that in a dispute with the Japanese, foreigners—some foreigners at least—should have been so utterly in the wrong as they have undoutedly been in this instance. We regret even more that they should have resorted to a defence which, even if admissible in law, was to an absurd degree untenable on its merits; the defence, namely, that the depreciation in the value of Tsukiji property was due wholly to the fact that the Japanese Government had allowed foreigners—chiefly in their own service—to reside, or had not prevented foreigners from residing, out of Tsukiji. No proof whatever, worth a moments consideration, has been offered in support of this plea, and it is a patent fact to all who have any acquaintance with the commercial history of Japan during the last six or seven years, that the depreciation of Tsukiji property is due partly to causes affecting trade generally, but chiefly to the circumstance that the hopes which, when Tsukiji was thrown open, were entertained of its becoming a centre of business and a rival settlement to that of Yokohama have been entirely unfulfilled.

Yet upon such slender grounds the land-renters asked for a decision which would have compelled the whole foreign community, for an indefinite period of time, to have consulted in their choice of a place of residence in Tôkiô—or indeed for that matter in Japan—not their own inclinations or interests, but the pockets of land-speculators.

The British schooner *Airlie*, while on passage to Hakodadi, on the 6th of August last, found, in Lat. 36° N., and Long. 131° E., the lower half of a camphor-wood chest of drawers, containing shirts and collars, &c., &c. One of the shirts was marked "J. Watts," and some of the collars were stamped "Watson & Co., Shanghai." The Captain took all the articles forward with him, and on arriving at Hakodadi handed them over to the British Consul there. There is reason to believe that the wreckage belongs to the missing barque *Eaglet*, and, we understand, it is to be sent for from Hakodadi, with the view to see whether it can be identified by the agents here. The *Airlie*, on her return passage, picked up twelve Japanese sailors from a water-logged junk, in the Japanese sea, and brought them to Shanghai. They were handed over to the Japanese Consul.—*S. C. & C. Gazette.*

The Chinese Government has made a claim upon Siam, for twenty years arrears of tribute; threatening war as an alternative should it be withheld. The *China Mail* says,—Siam must fight. To pay the tribute and thereby acknowledge herself only a province of China, would nullify all her treaties with foreign nations and made her at once the scoff and division of the East. Better death than that, they say; so the sound of warlike preparation reverberates through the land.—*Shanghai Courier.*

The M. M. str. *Volga* put in an appearance shortly after 8 o'clock on Saturday evening. The cause of detention was, as we surmised, a slight mishap in the engine-room. She left Yokohama on the 7th September, and the following day, when in the neighbourhood of Van Dieman's Straits, experienced some rough weather, which occasioned the damage. The engineers made temporary repairs, and 48 hours after the accident, the vessel was enabled to proceed, but she was kept running at a very low rate of speed.—*China Mail.*

SPIRIT OF THE JAPANESE PRESS.

SAIGO.

("Hôchi Shimbun," 25th Septnmber, 1877.)

Saigo is dead! The pestilent cloud of war which overhung the south-west has dispersed; the day has come for the forces of the Army of Chastisement to raise the song of triumph; our Government has no longer to cope with the western difficulty; and we editors may bid adieu to war intelligence. Ah! what a man Saigo was! He belonged to no wealthy family, he had no hereditary retainers attached to his person. He managed to gain the hearts of the people, oppose the numerous armies of the Empire, and though beaten in repeated engagements, he withstood the combined forces of the Empire in many a bravely contested battle in the three provinces, and kept them at bay for more than half a year. He then broke through the manifold lines which had been drawn round him in Hiuga and fled to his native place, to die there sword in hand. When we review these events, we must admit that Saigo has had no reason to feel ashamed of himself, and that even dead, he should be content with himself.

Japan had already abolished the feudal system, and completely introduced a centralized form of Government. The military prestige of our country was falling to decay, when Saigo seized the opportunity to detach himself from this movement, and gathering to himself what was left of feudal power, for years nourished and collected it near his own person. It at length manifested itself in February last, when it appeared as the shrewdest and most subtle force that Japan could well give birth to. A rush was made for Kumamoto, and Uyeki and Tawano were the scenes of hard fought battles. At this time there was a general feeling that no one could predict how things would turn out for the Empire. Still, when the news came that Saigo had laid siege to Kumamoto castle, many of those most experienced in warlike matters distinctly condemned Saigo's strategy. It is probable that the siege of Kumamoto was the cause of the present bloody defeat at Kagoshima. Suppose that he had at the time forborne to lay siege to Kumamoto and had pressed on direct to Fukuoka, sending a detachment to make the conquest of Bungo, and that he had applied in this new direction the efforts which have up to the present been spent in opposing a large army, no one can conjecture what would have been the consequence.

But all Saigo's plans have failed to hit the mark; his opposition to the forces of the Empire has only brought about the ruin of four provinces. The only result of his efforts have been these two things, viz: the impoverishment of the treasury and the loss of human life. At the beginning of the war he was worsted at Kumamoto, and the defeat of Hitoyoshi, Miyako-no-jô and Nobeoka followed in succession. He found at last that opposition was hopeless, and breaking out from the lines constructed round him at Nobeoka he reached Kagoshima after several days hard fighting. Here he burnt the *Kenchô* and entered on a conflict in which he merely gave loose to extreme violence. From this sketch of the war since the beginning of spring, it will be seen that from first to last Saigo has done nothing but give a proof of his incapacity as a general. But if he has proved himself a bad general his deeds show that in spite of his incapacity, and the poverty of his warlike resources, he still deserves to be ranked with the heroes of Japan. For ten days he defended a little nook of ground, till at last he, with Kirino and his other followers, fell in battle on the 24th, overpowered by the forces of the crown, and his stronghold was at the same time captured. Who will not rejoice for his country when he hears of the despersion of this pestilential vapour? In the present war in the south-west, all those who harboured enmity to the Government had made their appearance there. The insurgents of Saga, the remainder of those of Yamaguchi, the rebels of Kumamoto, Nakatsu and Obi each uprose with their chiefs at their head. All the subtle powers of the Feudal system were here assembled and broke out in one corner of the south-west, so that Saigo's *last** battle was not only his own last struggle but was the last struggle of that subtle force which animated the Feudal system. The poisonous influences of this institution have now been extinguished, and if this Empire is again disturbed by war, it will arise from some other cause.

A REVIEW OF THE LATE REBELLION.

("Nichi Nichi Shimbun," 26th September.)

On the 24th instant the Satsuma rebellion was brought to an end and peace restored, so that the foundations of the present Government may be said to have been firmly laid in this 10th year of Meiji. The Government under which we live was founded at

* 'Last' is in Japanese '*Saigo*.'

Original from UNIVERSITY OF CALIFORNIA

the overthrow of the Shôgun, and with the end of the Satsuma rebellion, the final overthrow of feudalism has taken place. Although the Government has been continually progressing, the administration of the Kagoshima *ken* remained as in the feudal times. The provinces of Satsuma, Osumi and Hiuga were entirely governed by the *samurai*, and although they were a portion of the Empire, they really occupied the position of independent states.

When the *samurai* of Saga, Kumamoto, Yamaguchi and other parts, rose against the Government, they expected to receive the support of Satsuma. But now that this powerful clan has been brought into submission, one may say that a second Restoration has taken place. Saigo, although a traitor, was a brave general, and a man who possessed immense influence over the minds of the people. When he took the field at the head of thirty thousand fearless *samurai*, including the dauntless Private School party, with such leaders as Kirino, Shinowara, Murata, Kishima Beppu, Fuchibi, Hemmi, and Ikegami, who had the daring and courage to face any mortal danger, and marched northward out of Kagoshima, it seemed at first very doubtful if the Imperialists could succeed in checking his progress, and no one could foresee to which side the victory would fall. But the Emperor, with a determined will, issued a proclamation for the suppression of the insurgents. H. I. H. Arisugawa-no-Miya was appointed Commander-in-Chief, and in eight months from the outbreak of the rebellion, the stronghold of the insurgents has been taken and their leaders killed. This success is due, not only to the wisdom of the Emperor, but to the ability of his Ministers and the valour of his Generals.

It was first known that the rebellion had broken out when the insurgents siezed the Government powder. Military and naval forces were at once despatched to the south, and a few days after the issue of the Imperial decree, H.I.H. Arisugawa-no-Miya, with his adviser H.E. Yamagata took up their head-quarters at Fukuoka in the province of Chikuzen in Kiushiu. On the 25th of February the rebels had advanced to Kumamoto. The garrison at that place and the police forces did not altogether number three thousand. The 14th Battalion was expected to come to the assistance of the garrison, but had not arrived. Moreover, the courage of the troops was much tried by the unexpected attack they had received from the Jimpu party in the previous year. Lieutenant-General Tani determined to remain in the Castle, and thus prevented the insurgents from advancing northward. Yamagata, seeing that the success of the campaign depended to a great extent upon the fall or relief of Kumamoto, advanced his headquarters to Minami-no-seki. A body of insurgents advancing from Yamaga and Takase were checked at Iwamura, where Colonel Fukuwara was killed, and another body was defeated at Takase and Konoha where Lieut.-General Miyoshi was wounded. But the insurgents, with full knowledge of military tactics, took up their positions at Iwaro and Yamaga and managed to hold the Imperialists at bay, trusting that meanwhile Kumamoto would fall into their hands. Here many a bloody struggle took place by day and night, and on the 20th March Leiut.-Generals Nodzu and Oyama took possession of Yamaga. The two bodies of Imperialists then joined, and attacked the rebel positions at Kodome, Uyeki, and Torinosu.

Shortly before this Major-General Kuroda, with Lieut.-Generals Yamada, Takashima and Kawaji, together with a large force of police men landed at Hinaku and advanced through Miyahara and Yatsushiro to Udo and Kawajiri, so that the insurgents were now attacked both in front and in rear, while their position at Kodome was considerably weakened. The insurgents, fearing that they could make no prolonged stand against this force, on the 15th of April retreated to the east of Kumamoto. Thus after a lapse of fifty days the siege of Kumamoto was raised, and after the Imperialists had effected a junction with the troops of the garrison, it became evident to which side victory must ultimately fall.

Although the insurgents retreated, however, they were yet far from being utterly defeated. They established head-quarters at Koyama, and extended their lines of defence to Otsu, Takamiya and Mifune, which places were strongly fortified. A great battle was fought on the 20th April, and the rebels were again forced from all their positions and compelled to retreat on Yabe. Here they were again unfortunate and had to fall back on Hitoyoshi. At this time Admiral Kawamura, the Vice-Minister of the Navy and one of the advisers of the Commander-in-Chief, was able to render great assistance to the troops on land by the aid of his navy.

Although the power of the insurgents had become greatly weakened, yet Kagoshima still remained in their hands. It was consequently taken by the Imperial naval force on the 26th April. The insurgents then marched to Kagoshima and made desperate efforts to retake it, but the town was so vigorously defended that they failed in their efforts. General Nodzu, advancing from Mitai, and also Yamada and Kiyoshi advancing by Kumagawa, beseiged the castle of Hitoyoshi. Kawaji also advanced against Oguchi, Sashiki and Yonedzu, and the insurgents, unable to stand against the combined attack of the Imperialists, were compelled to retreat from Hitoyoshi on the 1st June, Oguchi and Kakutô also falling, almost immediately after, into the hands of the Government troops.

On the 26th May the forces at Kagoshima defeated the insurgents at Taniyama, and shortly after Kawaji and his men made their way into Kagoshima followed by the other bodies of the Imperialists. The insurgents then retreated in several bodies towards the provinces of Osumi and Hiuga, while another party made their way to Nobeoka, and thence into the province of Bungo, but were driven out again by the forces under Nodzu and Tani. In Hiuga, also, they lost one position after another, until they were compelled to make a final stand at Nobeoka. The Imperialists then removed their head-quarters to Hososhima, and thence directed a general engagement against Nobeoka, forcing the insurgents to retreat northward to Kumata. At Inotake the latter were completely surrounded, but undismayed by their defeats, the rebel leaders permitted all the weaker soldiers to surrender, and with a few hundred of their bravest followers cut their way through the surrounding forces, marched south, and made an unexpected appearance at Kagoshima on the 1st September, where they took up their position on Shiroyama. They were immediately surrounded by the Imperialists, who, after a period of twenty days, attacked them on the 24th of September and utterly annihilated them. Thus from the time the insurgents attacked Kumamoto to their final defeat on Shiroyama, two hundred and sixteen days elapsed.

That peace has at last been obtained is owing to the indefatigable energy of those who conducted the war, among whom must specially be mentioned H.I.H. Nihon Shinnô, the Commander-in-Chief, and his advisers Yamagata, Kuroda and Kawamura; also his generals Nodzu, Miyoshi, Miura, and others. The officers under them also behaved with the greatest bravery, while the paymasters, surgeons and commissioners of the arsenals all showed the most unflagging zeal. Generals Saigo and Toriwo conducted all matters connected with supplies for the army, and sent forward such reinforcements as were required, while in the north strict watch against any outbreak was kept by generals Ida and Shijô. Now all these men have performed very meritorious deeds, and the events of the 24th of September should remain for many a day in the minds of the Japanese.

Despotism and Epidemics.

("Hôchi Shimbun," 24th September.)

As there are evident signs of epidemic cholera having broken out, the authorities have lost no time in taking all possible steps to check it. Whenever a person shows signs of being attacked by the disease he is immediately conveyed to a hospital specially established for the purpose, while police officers are appointed to make a house by house inspection, and to enquire whether anyone is ill. Too much cannot be said for the prompt steps that the Government have taken in order to give ample protection to the people.

A foreign writer has said "The Japanese Government being despotic and the people of an obedient disposition, the efforts to stamp out the disease will probably be successful." Now if we think only of the outbreak of cholera there is nothing to be offended at in these words. But the writer in saying this much has also probably intended to show the general spirit of the Government and the servility of the people of Japan. This very fact of the police, doctors and all officials taking such good care of the people has caused much anxiety among some of our thinking men. Not, however, because the Government shows so much good will towards us, for certainly nothing but praise should be bestowed for such acts of benevolence. But whence arises all this display of good will? Is it not to be supposed that if it takes such pains about an epidemic, it will also do so in other matters affecting the interests of the people? And thus it is that while men are pleased at the efforts of the Government to arrest the progress of the disease, they dread that it will show equal earnestness in meddling with everything else, and hinder the people from enjoying due liberty.

Of course urgent remedies are demanded to meet urgent cases, and the breaking out of cholera is altogether an exceptional event. At such a time any course which the Government may see fit to adopt which has for its object the checking of the disease, and prevention of misery among the masses, should be accepted thankfully. If the Government had been guilty of such an act as limiting the pri-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

ces of certain drugs when no disease was prevalent, writers would have severely criticised such a proceeding, but when it is done for the protection of a people, who are craving for the full exercise of their rights and liberties, not a word can they say. Thus, to say that measures for the arrest of disease can be more effectively carried out under a despotism is as though one said that a despotic form of Government is good for checking cholera. Be a Government despotic or liberal it is evidently its duty to arrest any disease of this nature, and if it succeed, all one can say is that it has done its duty.

Now the present active measures speak for themselves, and a despotic Government has had an opportunity of showing one good that it can do. But it should be borne in mind that we do not wish despotism or cholera, which latter serves to prove the usefulness of the former, to exist for ever.

As we said before, desperate cases require desperate remedies, but it would be a pretty state of affairs if the Government were led to suppose that in thus acting it was doing more than its duty. Nor must the people be induced to believe, because it is taking such care of them in the present instance, that it is going out of its way to do anything on their behalf or doing anything more than it ought to do. There is, therefore, no need for them to go out of their way to praise the paternal care of the Government, nor should the latter feel flattered if the people extol what has been done for their protection.

That a foreign writer should say "A despotic Government is effective in checking the progress of cholera" cannot be taken as anything to our credit. Rather should such words be hateful to us, for the evils of despotism are no less than those of cholera. We earnestly hope that the day may come when such things can be no longer said of us.

SOME OTHER CHAPTERS OF JAPANESE HISTORY.

Jusammi Dainagon Mitsusada, the Lord of the province of Kii, when he was forty years old had a son born unto him who was called Tokutarô. Now according to an ancient Japanese superstition it is most undesirable that a father at the age of forty-two should have a child two years old, such conjunction of numbers being supposed to entail some great calamity, and thus Tokutarô had to be disposed of in some way in order to avert the supposed evil consequences. It happened that Kanô Shôgen, the Chief Minister of the *daimio* lost a child of nearly the age of Tokutarô. Arrangements were at once entered into, and the child was adopted into the family of Kanô.

When Tokutarô was six years of age, he accompanied his adopted father to Yedo, where he went to superintend the affairs of the *yashiki* of the *daimio*, and on his arrival Tokutarô had his name changed to Yoshimune.

Years rolled on, and as he grew up to man's estate he fell in love with Sawano, a handmaid of the wife of Kanô, whom she had brought with her from Wakayama, a girl of attractive looks and gentle manners, who returned his affection. But trouble fell upon the lovers. Marriage was the only means of hiding the girl's disgrace, but how could the descendant of the family of a *daimio* marry so far beneath his rank? There was nothing to be done but to keep the matter as quiet as possible, and send the girl away. So this was done, and when she left her lover he gave her a sum of money, and a document testifying that he was the father of the child, which he would provide for if it should prove a male, but which was to be at her own disposal if a girl. This was in the first year of Hôyei (1704). He also gave her a famous dagger, which had been presented by Tokugawa Iyeyasu, the founder of the Shôgunate, to his eleventh son Yorinobu, an ancestor of the Lord of Kii, and which she might require to produce at some future day as proof of her child's parentage. With these gifts did Sawano return to her home in the village of Hirasawa, in the province of Kii, and relate to her mother Osan the sad story of her shame.

On the 25th day of the 3rd month of the following year, Sawano gave birth to a boy. Osan was overwhelmed with joy to think that her daughter should have borne a son to a noble, but her happiness did not last long, for the child died a few hours after its birth, and the young mother, overcome with grief at the loss, quickly followed it, and both were buried at a temple called Kôdenji. Osan become crazy with sorrow, but at length by the attention and kind nursing of her fellow villagers, she was restored to her senses.

Now after this the Lord of Kii, Yoshimune's father, died, and his death was followed by that of both his sons who succeeded him. The family line having thus become extinct with the exception of Yoshimune, the latter was recalled from the care of his adopted father and became the Lord of the province. This was in the year 1714.

Now Yoshimune was a wild and reckless youth, fond of hunting and fishing and all kinds of field sports. When for some reason or other the *Bakufu* had forbidden fishing to be carried on in the neighbourhood, Akugi Bay on the coast of Idzu, he used to go and fish there every night. When Oöka Chiuyemon, the governor of that district, heard of this, and heard the rank of the offender, he sent orders to him to desist from fishing in these waters. When he received the message he replied to the bearer of it, "I am Yoshimune, the third son of the *daimio* of Kii. Are you blind? Can you not see the crest of *awoi* on my lanterns?" The *yoriki* (police officer) returned and informed the governor of the reception he had met with. On the following night, therefore, the governor accompanied by two *yoriki* went himself and ordered Yoshimune to cease his fishing excursions, but he received the same reply as had been made to his messenger the night before. He therefore proceeded to arrest the offender and imprisoned him for the night in an empty house under a strong guard. In the morning, summoning the prisoner, he thus addressed him. "Scoundrel, in open defiance of the Government you dare to fish in prohibited waters, and then try to make me believe that you are a son of the *daimio* of Kii, and that therefore you have a right to fish. Wretch that you are, you should in justice be punished with the utmost severity, but out of merciful consideration I acquit you." Yoshimune, apparently much alarmed by the determination of the Governor Oöka, went away without a word.

In the year 1716 the seventh Shôgun, Iyetsuna, died without issue. A successor had consequently to be selected and choice must fall on the *daimio* of Owari or the Lord of Kii.* After great meetings and consultations among the *daimio* of the various provinces, and the high officials of the *Bakufu*, it was decided that Yoshimune the Lord of Kii should succeed to the Shôgunate, who accordingly in the thirty third year of his age became the 8th Shôgun, and received the ratification of his title and office from the Imperial Court at Kiôto.

Shortly after his accession he asked some of the officials what had become of Oöka Chiuyemon, the former Governor of the district of Yamada in Idzu, and was informed that he still held that position. The Shôgun then ordered that he should be summoned to the capital.

When Oöka received this message calling him to Yedo, he imagined that he was to be punished with death, remembering his former treatment of the Prince who had now become the Shôgun. He therefore set out fully prepared to commit *seppuku* if called upon to do so. When he was admitted to the presence of the Shôgun, the latter said to him, "Do you remember me?" The Governor replied, "Your Highness' countenance very much resembles that of a mischievous fellow whom I once arrested on the Bay of Akugi, many years ago, for fishing against the express orders' of the Government." Contrary to what he expected Oöka was appointed forthwith to the high and responsible position of Governor of Yedo, and received the title of Etchizen-no-kami.

Now in the village of Hirasawa where poor Sawano and her little son had died, there stood a temple called Kanô-In, which was presided over by a good hearted priest, always ready to give his prayers for those who had need of such pious services. This priest had a friend, who was a *rônin*, Miyajima by name, who had fallen into a sad state of poverty, having a wife and infant son dependent upon him. Of these latter the good priest took care, but when the boy Hôtaku was six years old both his parents died, and he was adopted by the holy man. Now Hôtaku was a keen witted boy and performed his duties in such a way as to become a credit to his teacher and benefactor, and a favourite with all who came

* This was necessary as the founders of these daimiates were sons of the first Shôgun, Iyeyasu.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

in contact with him. He so quickly acquired a knowledge of reading and writing and the use of the abacus, that when he had arrived at the age of eleven, he was as far advanced in these branches as most men of twenty. He was much petted by Osan, the mother of Sawano, who looked after the boy's wants in many ways. One day when he was paying her a visit she asked him his age, and on his replying that he was eleven she discovered that he was just the age that her grandchild would have been had he lived, and thinking of her sad loss she began to grieve bitterly. Hôtaku asked the cause of her tears, and she then related the story of her loss and how the father of her little grandchild was now the Shôgun. She then asked Hôtaku where he was born, and he produced a document from his *mamori bukuro* written by his father showing the day of his birth, the 25th day of the 3rd month of the 2nd year of Hôyei, which was the very day on which Sawano had borne her son. Hôtaku remarking that there was nothing very remarkable in such a coincidence, asked her if she had no writing to prove that her grandson was really the son of the Shôgun. Osan replied that she had, but that she had never yet shown it to anyone. As Hôtaku was, however, so dear to her, she produced the paper and likewise the dagger which Yoshimune had given to Sawano at parting.

Here the temptation first presented itself to Hôtaku. His young but singularly developed mind became filled with the idea of impersonating the son of the Shôgun, and he saw that if he failed in securing the inheritance, he might at least become one of the *daimio* of the *gosan-ke*.†

After a year had passed he accompanied his teacher to the shop of a druggist in the neighbouring town of Wakayama, whither the priest had been called to offer up certain prayers. Here Hôtaku, by the exercise of much cunning, succeeded in possessing himself of some deadly poisons. The 12th month of the year was remarkable for the occurrence of great snow storms. One very cold snowy night, the priest received a present of a quantity of *saké*. Now he was a man who never tasted a drop, so Hôtaku went to him and telling him that a wished to make some present to the old woman, Osan, in acknowledgement of her many kindnesses, and knowing that she liked *saké*, asked if he might have a portion to give to her. The priest, praising him for his thoughtful kindness, gave him at once what he wanted.

So on this blustering snowy night when other boys of his age would have lacked the courage to stir out of doors, Hôtaku set out for the house of his old friend, taking with him the present of *saké*. Osan was much pleased, and drank so much of it that she was compelled to lie down to keep off its effects. Hôtaku then proceeded to strangle her, and placed her over the fire place in such a position that it might seem that she had fallen into it in a drunken sleep. Then carefully destroying all proof of his guilt, he took the document and dagger given by her lover to Sawano, and went his way home. For several days no one knew what had become of Osan, until one of the villagers went to her house and found her dead. But no suspicion of violence was aroused in the breast of any one, all thinking that she had fallen into the fire when drunk with *saké*, and so had died.

Hôtaku's next wish was to get rid of his benefactor, the priest, as he knew full well that he could not carry out his object as long as the priest was living. He therefore put some of the poison he had stolen from the druggist into the old man's rice, and so killed him. Thus all obstructions in his path were removed.

On the death of the venerable priest the villagers held a meeting and decided that Hôtaku should succeed to the office. But Hôtaku pleaded that he was yet young and inexperienced in the duties of priesthood, and requested that he might be allowed to travel for a period of five years, and learn his duties. The relatives of the priest and the villagers, although they argued that he was too young to travel alone, were at last induced to give their consent, and collecting sums of money, gave them to the boy for his expenses, and some among them even offered to escort him for some distance on his journey. This latter offer however Hôtaku refused, urging that in that case, when it came to parting from them, he might lack the courage to leave such good friends behind him, and so begged them to let him leave in the morning before anyone was astir.

On the following morning, therefore, Hôtaku dressed himself in the garb of a pilgrim, and taking with him the precious document and the dagger, left his native village, which he was never to behold again. When he arrived at Katada-no-ura, a short distance from the temple, he saw a dog lying asleep. He killed it with his sword and cut his clothes, smearing them with the blood of the animal, so as to make those who found them believe that the wearer had been murdered. Then leaving them with his hat by the road side, he put on another dress, and throwing the body of the dog into the sea proceeded on his journey.

One of the villagers soon after passing by, discovered the clothes and recognised them as those worn by Hôtaku. Taking them to the village he showed the marks of the sword cuts and the blood stains, and it was at once concluded that the unfortunate Hôtaku had been murdered by robbers for the sake of the money with which he had been provided, and that his body had been thrown into the sea. Greatly did the simple villagers mourn his untimely end, and the clothes were stored in a godown where all ownerless articles were laid by.

Hôtaku made his way to Kumamoto in the province of Higo, where after a number of adventures, he obtained employment in the shop of a *mochi* (rice cake) seller. He remained in this situation until 1725, waiting for some favourable opportunity to carry out his plans. At last he found occasion to alter an account, which was to be sent for collection to the *daimiô* of Kumamoto, for forty-seven *riyô* to one hundred and seventeen *riyô* by drawing a line over the character for four, and with the money thus obtained he escaped from Kumamoto and commenced to make his way to the north. One night while travelling through the province of Bingo, it grew dark before he could arrive at any post town. Wearily climbing a steep and rugged mountain pass, he at last came to a wayside temple, which he entered determining to rest there for the night. He had not slept long, however, when he was awoke by some noise at the entrance, and on looking up saw a *samurai* of large stature and powerful frame, smoking his pipe. Roused by curiosity Hôtaku at once went up to him and addressed him, asking him the name of the place. The *samurai* replied "This is Tomo in the province of Bingo. For myself I am a man who makes his living off travellers, so at once hand over to me all the money you have." Hôtaku, finding that the man was a robber said, "Do you only want money? Surely a very simple matter. Here are a hundred *riyô*, take them." With this amount the fellow did not seem to be content, for he caught hold of Hôtaku and attempted to take from him the dagger and the stolen certificate. But Hôtaku in a firm and determined voice said, "You must fight and kill me before you can rob me of these things." Perplexed by the haughty bearing of the youth, the robber said, "It is very plain that you have not gained by honest means what you appear to prize so highly." Hotaku replied, "I stole these things when I was but twelve years old and ever since I have been pursuing a certain plan." In reply to the robber's questions as to how he came in such a place and what he was doing, Hôtaku related to him all that he had accomplished and the true object of his ambition.

Now this robber, whose name was Akagawa Daizen, was a son of the ex-*Karô* (Minister) of the Lord of Mito, and having on one occasion killed a girl in a tea house on the Tôkaidô for the sake of a hundred *riyo* that she had in her purse, had turned *rônin*. He was astonished at the capacity for evil which Hôtaku displayed, and promised to become his follower. He then proceeded to inform Hôtaku that he had an uncle in the province of Mino whose name was Tenchiu, who though a priest was a man of infamous character. To him he suggested that they should go at once and consult with him as to the best means of carrying out Hôtaku's plans. To this the latter agreed and thus together they made their way to the province of Mino. Here they informed Tenchiu of their project, and at once induced him to enter into the plot. The first step was to contrive some plan by which it should be made to appear that Hôtaku was in

Original from UNIVERSITY OF CALIFORNIA

some way connected with the priest. Tenchiu was not at a loss, for stating that he had a pupil living with him named Tenichibô, who came from the island of Sado, he proposed to kill him and put Hôtaku in his place. There were also two other pupils, whose knowledge might prove dangerous, whom it would be necessary to dispose of. Hôtaku and Daizen therefore took them to walk on the hills, and siezing their opportunity flung them over a cliff. During their absence the priest killed the other pupil Tenichibô, and Hôtaku took his name and place.

(To be continued.)

From private letters from London we learn that the English passengers wrecked on the *Meikong* privately met Cap. Gulland of the *Glenartney* at Messrs McGregor, Gow's offices, and presented that officer with a silver tea service as a mark of their gratitude for the services and kindness shown to them while on board the vessel under his command. A balance of £55 was handed over to be distributed among the crew. We understand that to Mr. Thomson, of the Oriental Bank at Yokohama, was mainly due the credit of giving shape to the wishes of his fellow-passengers.—*China Mail.*

Correspondence.

MR. ASTON'S GRAMMAR.

To the Editor of the "Japan Weekly Mail."

Sir.—Your Reviewer now declines further discussion on the main points at issue between us, and in default of a reply to my arguments, avowedly contents himself with a retort. But under the guise of proving a side issue, the insubstantiality of what he calls my own speculations, he contrives to slip in a good deal in defence of his original position. It seems desirable, therefore, to point again, as briefly as possible, how completely, he has failed to establish any connection between his three new facts and Mr. Aston's hypothesis.

First, then, as regards his contention that the Loochooan *nomun* is a more original form than the Japanese *nomu*. This he has now tacitly abandoned in favour of the far more scientific, but equally unsupported, conjecture of his unnamed authority, put forward in the foot note to his letter. That conjecture might be worth testing by a closer scrutiny of the Loochooan dialect; but your Reviewer's I have shown to be refuted by the canon to which he had himself appealed.

Secondly, as regards "the archaic future in *na*." Your Reviewer, when first brought to book, virtually gave this up as unavailable for the support of the hypothesis; but he still seems reluctant to surrender it altogether. I need not waste space over his provisional suggestions, and it will be time enough to discuss his settled opinion when he has formed it. His latest remarks on the point, however, are wholly irrelevant. For the question is not about the meaning of such forms as *taworana*, but about their derivation, which is a widely different matter. If it could be shown that the final *n* of the ordinary future, *taworan*, is primitive, a confirmation would be given to Mr. Aston's hypothesis incomparably stronger than anything which either that gentleman or your Reviewer has adduced; for then the Japanese future would seem to be formed in much the same way as the Latin and Greek future, for example in *τυπ-σ-ω* and *ama-bo*, is formed; that is to say, by the addition of the verb to be (*as-* and *bhu-*) to the root of the main verb. But we know very well that the *n* of the future is not primitive; that it is a product of phonetic decay, the original of which is *mu*. With regard to the signification of the forms in *na*, there never has been, so far as I am aware, any difference of opinion among Japanese grammarians; and the paragraph in which your Reviewer arrays his authorities to prove, what no one ever contested, that they are interpreted as simple futures, is so much labour wasted. But on the altogether different question of the etymology of these forms, no such unanimity of opinion prevails. Motowori's opinion was that *taworana* is, as regards its derivation, simply *taworan*, the *na* permuting with *n*. In this opinion he stands alone. And if your Reviewer has any doubt as to its being opposed to the analogy of the language, let him try to find a single incontestable instance of the permution of *na* with *n*.

Thirdly, as regards the independent evidential value of the Loochooan form *noman* by the side of the Japanese form *nomanu*. On this point your Reviewer shall answer your Reviewer.

"With regard to the negative verbs *noman* and *nomanu*, I must still hold that the presence of the former in Loochooan, which, though doubtless a dialect of Japanese, is yet so distinct from it as to necessitate the use of an interpreter between individuals of the two nations, tells in favour of Mr. Aston's opinion attributing to the vowel *a*, and not to the termination *nu*, the negative force." (September 22nd.)

"* * * The fact that, in so many languages the letter *n* is an essential part of words implying negation, seems to us to have but little force; for, although Latin, Spanish, German, English, etc., are from one point "many languages" the comparative philologist can only consider them as essentially one, and will carefully guard against allowing their literary and practical importance to mislead him into giving them more than one place in the discussion of a question of this nature."—(August 25.)

The recent decisions of the two law-courts in the matter of the Tsukiji land-rents are not more irreconcilably at conflict than the dicta above contrasted. The illustration, however, does not hold good throughout; for your Reviewer, in both of his judgments, happens to be wrong.

I shall now notice very briefly the other points in your Reviewer's letter. He condemns the employment of a principle of Aryan philology as an instrument of research in languages of the Tartar group, forgetting, apparently, that this is precisely what he himself has done; for from no other source but the examination of the Aryan tongues was derived his favourite formula that the longer form of a word is generally the more original. His former practice was better than his present profession. His assertion, that "between the Tartar languages and the "Aryan lies a gulf which no science has yet been able to "bridge," is untenable. The science of comparative philology has bridged the gulf by demonstrating the agglutinative origin of inflections. The fact that no genealogical connection between the two families has yet been traced in no degree impairs the relevancy of the phonetic analogies pointed out by me. That the euphonic insertion of *n* obtains in at least one Tartar language may be seen by turning to p. 35 of Mr. Aston's Grammar. And, ridiculous as it may seem to your Reviewer, the scientific philologist does not disdain to take notice even of such a vulgarity as Mariar. Both it and its more genteel counterpart, Mawia*h*, are as much phenomena of English speech as the most unimpeachable literary forms. And 'troublesome' letters, both at the beginning and the end of words, in literary as well as 'out-of-the-way' tongues, have over and over again been found to owe their origin simply to common mispronunciations. To refined Roman ears, accustomed to *spatium, sperare, status, stella*, such common Latin mispronunciations as *ispatium, isperare, istatus, istella*, seemed, and no doubt were, abominable vulgarities. Yet the comparative philologist eagerly welcomes the evidence of the prevalence of that mispronunciation; for it explains to him, when examining the phenomena of French, the origin of the initial vowel in *espace, espérer, état, étoile*. And we know that the two vulgarities, that of St. Giles's which says "Mariar" and that of the Suburra which said "*i*spatium," in common owe their origin to the same phonetic law; a law as operative in the Tartar languages as it is in the Aryan.

In his rejoinder to my remark on the only one which he specified of the alleged difficulties in Japanese that Mr. Aston's hypothesis would clear up, namely, the appositive use of the genitive, your Reviewer has,—no doubt unwittingly—distorted my reasoning; and he has misunderstood the hint I threw out to him in the conclusion of my last letter. Correctly stated, my reasoning is as follows: 'The same phenomenon, namely the appositive use of the 'genitive, presents itself to us equally in the Japanese 'and the English languages; in both cases this seeming 'anomaly would be explained if the Japanese and English 'genitive particle be derived, in their respective languages, 'from the verb 'to be;' but in the case of the English 'particle that explanation is known to be untrue; therefore it is probably untrue in the case of the Japanese 'particle also.' The logic of the inference is beyond cavil, and the probability is strengthened by every additional case in which it can be shown that the appositional use of the genitive is due to a cause other than connection of the genitive particle with the verb 'to be.' It is so strengthened by the two additional instances which your Reviewer

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

cites in his vain endeavour to weaken it. For the very same phenomenon, declared by your Reviewer to be 'really strange,' meets us not only in French and Italian, but in all the Romance languages; and the genitive in those languages is formed, not as it is imagined to be formed in Japanese, by the verb 'to be,' but as it is known to be formed in English, by a preposition indicative originally of the ablative case. To show that the genitive is sometimes formed in other ways, notably from the locative, is simply beating the air. A number of instances in which it is so formed might be easily adduced. But your Reviewer has hitherto failed to adduce a single instance in any language in which it is formed from the verb 'to be.'

Seeing that your Review has misunderstood it, my allusion to the argument from the locative ought, perhaps, to have been more explicit, for it touches closely Mr. Aston's hypothesis. The idea of locality is prior in language to the idea of simple existence. There are whole families of languages which are without any verb 'to be.' In thought and in language the specific, the concrete, the objective, precede the general, the abstract, the subjective. To suppose that '*in* the street' *(machi-ni)* originally meant '*being* the street' is to invert the order of the evolution of human intelligence.

On questions of Japanese philology I share to the fullest extent your Reviewer's profound respect for Mr. Aston's authority. But an hypothesis which derives prepositions from the copula, and denies to the negative termination *nu* of Japanese verbs the negative force, will require to be supported by much stronger arguments than those put forward either by its originator or your Reviewer before it can be considered as entitled to even the temporary and provisional acceptance of scholars.

I am, Sir,
Yours truly,

SHOSEI.

Law Reports.

IN H. B. M.,S COUCT, TOKIO.

Before H. S. WILKINSON, Esq., Acting Law Secretary.

Monday, September 24, 1877.

TOKIO FU *vs.* BLOCKLEY.

The claim of two per cent. monthly interest on the arrears of ground rent from the lot No. 17, Tsukiji, which claim in the judgment rendered on the 29th ultimo was reserved for further argument, and had been set down for hearing to-day, was settled in the following manner:

"It is ordered, by consent, that the case be discontinued, and that each party pay its own costs."

IN THE U. S. CONSULAR-GENERAL COURT.

Before H. W. DENISON, Esq., Vice-Consul General.

Monday, September 24, 1877.

J. GARGAN *vs.* NORMAN WIARD.

(Adjourned from the 12th instant.)

In this case was to-day delivered the following:—

JUDGMENT.

In this case the plaintiff claims $50.00 house rent, $2.15 moneys advanced to defendant's servant, $150 salary, rent for furniture at the rate of $20.00 per month from May 27th, 1877, to date of its return, and the return of the furniture, or in the event the defendant elects to keep the furniture, rented by him from the plaintiff, the defendant be ordered to pay the sum of $185.06 therefor.

The defendant in his answer admits indebtedness in the sum of $2.15, which amount he deposited in court. He denies that he is indebted to plaintiff in any other or further sum for the following reasons. That plaintiff did not perform more that 10 days' labour for him; that that labour was of no value to him because plaintiff did not continue in his service, that plaintiff agreed to wait for wages and rent until defendant received a certain instalment on his contract; that he was deprived of the use of the premises No. 52, Bluff, and is therefore released from the obligation of paying rent from June 19th to July 19th; and further that the furniture used by him at Yokoska was taken by consent of the plaintiff from the rooms rented by him from the plaintiff at No. 52, Bluff, and that consequently he should not be compelled to pay rent for the rooms and at the same time be called upon for payment for the use of the furniture taken therefrom. The defendant asks that the case be dismissed at the costs of the plaintiff, and that the court determine a reasonable amount as rent for the furniture from June 19th to date of its return.

The plaintiff testifies that defendant engaged him May 10th, 1877, and told him to hold himself in readiness to proceed to Yokoska; that on May 26th, he went to Yokoska with the defendant; that previous to this latter date he was employed several days in trying to obtain furniture for defendant, and that on the 8th June he informed defendant that he was going to leave because he could not get his wages; that the defendant rented rooms from him at No. 52 Bluff, April 19th, 1877, for the period of three months, and that he was only paid two months' rent; that defendant took the furniture to Yokoska May 28th and agreed to pay for its use and also to return it when he was able to obtain other furniture.

All this is admitted by the defendant with one exception: he denies that he agreed to pay for the use of the furniture.

Miss Gargan testifies that defendant was not refused admittance to the rooms rented by him, and that defendant still has the latch key to the house in his possession.

The only evidence opposing this statement is the testimony of Mr. Reimers, who states that July 14th he made an entry in a journal kept by himself for defendant (which journal was not produced in court) to the effect that defendant's servant had informed him that he had been refused admittance to the rooms.

The averment of the defendant, that plaintiff agreed to wait for his rent and wages until defendant received a payment on his contract, is not borne out by the evidence, and indeed I am at a loss to discover exactly upon what ground the defendant bases his evidence.

The lease of the rooms No. 52, Bluff, which is an exhibit in Court, provides for payment of rent monthly, in advance.

The defendant attempts to prove in his evidence that the plaintiff was ill-natured, incompetent, and discourteous. These charges are not set up in the answer, and should not therefore properly be considered as a defence; but, giving them due consideration, the fact remains that the plaintiff left the defendant's employ of his own motion, and that, subsequent to his so leaving, defendant gave plaintiff a writing to the effect that he had employed him.

From all the evidence, I am of opinion that the plaintiff is entitled to recover from the defendant: For rent of rooms No. 52, Bluff, from June 19th to July 19th, $50.00; amount advanced by plaintiff to defendant's servant, $2.12; salary during the time he was actually under defendant's orders, viz. from May 10th to June 8th, 1877, inclusive, less the four intervening Sundays and one day absent without leave, 25 days, at $5 per day, $125.00; rent of furniture from the date the lease of rooms at No. 52, Bluff, expired to date, viz., from July 19th to September 24th, 1877, $15.00 per month, $32. 50; and also that the plaintiff is entitled to the return of his furniture.

It is therefore ordered, adjudged, and decreed that plaintiff have and recover from the defendant the sum of $209.65 and costs of Court; and that the defendant return to the plaintiff, at his own cost within ten days from the date hereof, the furniture in his possession belonging to the plaintiff.

H. W. DENISON,
U.S. Vice Consul-General.

Thomas Thomson, a sailor from the American barque *Annie Weston*, was charged with being drunk yesterday, and destroying property to the value of 50 cents.

Ordered to pay the damages, and sent on board.

Thuesday, September 25, 1877.

Robert White, a sailor from the American ship *Messenger*, was charged with using abusive language on board to the captain.

The accused said that the whole trouble arose from the food; he could not complain of the quantity, but this morning the crew wanted some hash, and the captain would not give the steward orders to prepare it.

Captain J. F. Gilkey, master of the *Messenger*, was sworn, and said: This morning accused came aft, and asked to have hash for breakfast and supper. I told him that I should not give any different provisions from what I gave now, unless I put the crew on the regulation scale. He then said that he would put a head on the steward. I told him he had better not to try to do that. His reply was that he did not care a ——— for me or anybody in the ship; he said he knew it was of no use to come to me, and that I was a ——— hog. In this strain he went on, and I went ashore and reported him. The chief officer was present during the scene, which took place at the gangway, just as I was going to leave the ship. Accused has asked me to discharge him, and he told me this morning that he would try to run away.

Accused admitted the charge, but pleaded that he had occasion for abusing the captain. He said that the cook, who calls himself a steward, sits the most of the day on a chair on the poop, instead of attending to the meals of the crew, who are fed on any slops that come to hand. He had not made any complaint in the Consulate, because it was his intention to leave the ship in this port. Otherwise he should have complained of the flour which, is quite musty and unfit for eating.

The captain admitted that the flour had become musty, but said it was his intention to buy other in this port, and he had sent samples ashore to try to dispose of his own without total sacrifice.

Chinton Antony, steward of the ship, was sworn, and said, with regard to the flour, that since the 18th of July he had been obliged to use the musty flour. It was mixed with the cabin flour. The other provisions have all been good, and no man on board has hitherto complained of them.

Andrew Baden, chief officer of the ship, was sworn, and said that he overheard the conversation this morning between the captain and the accused. When the captain came out of his cabin to go ashore, the accused stepped up and said he wanted to speak to the captain about the food. He said that what the steward gave them was only grease and slush, and that he would pound the steward with

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

his own pan. As the captain would not agree to change the scale of provisions, accused said at last to the captain: "You took me out of New York, but you won't take me out of this place; I want you to understand that."

His Honour told the accused that he was not going to assist him in getting away from the ship; if he had anything to complain of he knew where to carry his complaint, and it would have been looked into. His behaviour towards the captain was inexcusable.—which the accused knew well himself. The order was, that he should be kept in jail for three days, be fined four days' pay, and pay $5 costs.

Wednesday, September 26, 1877.

TÔKIÔ FU *vs.* BATCHELDER.

Mr Dickins, on behalf of the Tôkiô *Fu*, applied by motion for leave to withdraw the record in this cause, the defendant having paid up the rent due for the land held by him in Tsukiji.

Upon proof of the consent of the defendent to this course being produced, an order was made in the terms of the motion.

IN THE IMPERIAL GERMAN CONSULAR COURT.

Before E. ZAPPE, Esq., Consul.

Saturday, Sept. 22, 1877.

AARON COHEN *v.* E. A. SANDERS.

E. A. Sanders, chief officer of the German brig *Wilhelmine*, was charged by Aaron Cohen, a Russian subject and resident of No. 183, Yokohama, with having on the 20th instant, struck plaintiff, whilst on board, with his fist on the eye, inflicted a kick on plaintiff, as the latter was leaving the ship by the gangway, and, when plaintiff had reached his *sampan*, levelled a double-barrelled gun at him, with the words, "You—Jew, if you again come on board, I shall shoot you."

Defendant admitted the charge, but pleaded provocation. Both plaintiff and defendant appeared personally.

Defendant said: On the 20th instant about dusk plaintiff came on board and asked for the captain, and when he was informed that the captain was not on board, he said, "I am sorry, because I come to quarrel with him." He then uninvited took a seat in the cabin I had already in the morning forbidden Cohen to put his feet on board, because I suspected him of having assisted two of our sailors to desert. The rest of the crew had been drunk the whole day in consequence of Cohen having the night before brought them some spirits that were more like poison than schnapps. In the cabin, Cohen commenced to speak against the captain, because the captain had said in the Consulate that Cohen had enticed his sailors to desert. I ordered Cohen out of the cabin and from on board. He left the cabin but remained on deck talking to the crew. I told him again to leave the ship, and as he did not do so, I took hold of him and transported him to the gangway, giving him at the same time a blow in the face. At the gangway he continued to argue, and I gave him a kick,—but I had neither shoe nor boot on my foot, only my stocking When he had arrived in his sampam, he indulged in abusive language, and to frighten him, I raised a gun that was lying on the deck. Perhaps I called him as he has said. I shall here remark, that the landsman George Schultze heard him whisper to one of the sailors that the two deserters were now well hidden, and the ship would not catch them. The cook has also heard him say that the mate had offered him 20 marks if he would bring the deserters back, but that he would not do it. I mention this to show that I had good reason to be angry with Cohen.

The landsman and the cook gave evidence on oath which corroborated the deposition of the chief officer.

His Honour ordered the defendant Sanders to pay a fine of $1 and costs, at the same time authorising him, if ever plaintiff should reappear on board the *Wilhelmine*, to have him removed by force.

Monday September 24, 1877.

Albert Anderson, a sailor from the German barque *Fetisch*, was this afternoon fined 57 marks for insubordinate conduct last night, towards his captain. In default of payment, he was ordered to be imprisoned for 14 days.

Albert Andersen, a sailor from the German barque *Fetisch*, was charged with disorderly conduct and insulting behavior towards the captain, on board the *Fetisch* last night.

Accused said: Last night about 8 o'clock, the mate came in a *sampan* to the ship and had some dispute with the *sendos*. I told the *sendos* to be off, and the captain ordered me to shut up. I then abused the captain, I do not remember to have called him a "schweiningel," but I believe I otherwise abused him. I had been drinking in the afternoon with some strangers, who were visiting on board.

Captain Claus Luders, master of the *Bernhard Carl*, deposed. It was about half past eight when I came to the *Fetisch* last night on a visit to Captain Schmidt. There were then high words between Captain Schmidt and the accused. The latter followed the captain aft, and when he was told to go forward, he called the captain a "schweiningle" and told the captain that he might shoot him. The captain had him removed with help from the crew, but he returned and again made scandal.

Heinrich Ohl. Friederich Bode and Carl Hansen, all belonging to the crew of the *Fetisch*, testified to the insulting behaviour of the accused towards the captain.

The Court considered the charge proved and fined the accused 75 marks, one month's wages; in default of payment the Court ordered him to be imprisoned for 14 days.

Messrs. CARL ROHDE and R. REIFF, Assessors.

Thursday, Sept. 27, 1877.

SHIMIDZU SEIKICHI *vs.* P. BOHM.

This was a claim for $107.00 with interest, for carpenter's work done by plaintiff to defendant's houses on lots Nos. 114 and 119, Settlement.

Defendant pleaded that the work had been done in a very unsatisfactory and unworkmanlike manner, nor had it been finished in time. He demanded that the claim be dismissed at the cost of plaintiff.

Both parties appeared personally.

At the suggestion of the Court, they agreed to arrange their differences out of Court.

ALFRED DE MUSSET.*

(*The Spectator.*)

Twenty years after the death of Alfred de Musset, his brother—an author himself of some reputation—has given the world an account of his life. If it loses, after this interval of time, some of the interest which always attaches to the biography of a person who was prominent among the leading men of the day, it gains, on the other hand, for the chief figure of the work, a much calmer and maturer judgment than if published soon after his death, and we cannot but think that biographers in this country might very well follow M. Paul de Musset's example, and publish, with a little more deliberation, their friends' or relatives' lives.

Alfred de Musset was born in December, 1810, in the centre of old Paris, in what was then the Rue de la Noyers, close to the Hôtel Cluny, one of those streets which the improvements of the Second Empire have completely erased. His father, Victor de Musset, was a very capable military official, high in rank, who during his life occupied several important posts in the administrative departments of the Army. He was a man, too, of considerable literary cultivation, having at one time published an edition of Rousseau's works, as well as a lengthy criticism on the life and writings of the philosopher. In fact, at one period of his life, in 1821, he so far put away the sword for the book as to become Librarian of the Chamber of Peers. Moreover, his family could be traced through a long line of ancestors to one Rodolphe de Musset, in the twelfth century, and boasted among the past of their race a poet and musician in the thirteenth century, Colin de Musset, the friend and contemporary of Thibaut, Count of Champagne, out of the first and most celebrated of the Troubadours. His mother was one of the Desherbiers, an old family of Champagne, so that Alfred de Musset was by birth, and certainly by his tastes, what would have been called an aristocrat, born of a family proud both of their birth and their personal qualities. De Musset's early years were passed partly in Paris and partly in the country, and he was early noticeable as an imaginative and sensitive boy, and for his alternating fits of vivacity and depression. Yet it is impossible to find in his short life any of those prominently-marked occurrences which often render it possible to give a general and comprehensive outline of a man's career. All the leading incidents of de Musset's career were essentially literary, though the tenor of his life was frequently interrupted by the course of his various loves, which certainly failed to run smoothly. He was never married; it is true that he fell in love, but he was constantly doing this, sufficiently thoroughly too to produce a very considerable impression upon the tone of his literary work, according to the state, whether of success or disappointment, of his passion. From time to time he left Paris, but he always returned thither, and looked upon it, much as he certainly appreciated country life, as his true home. Great national events happened, but these, again, affected him no more than as giving a slightly different tone to his thoughts for the time, and a slightly sterner cast to his poetry. He never at any time like Victor Hugo and other great literary Frenchmen, concerned himself actively with politics. Decidedly his were of a liberal stamp, but both his birth and his education, as well as his intimacy with the family of Louis Phillippe, inclined him rather to the Orleanist than to the Republican side. The second main landmark, therefore, of his life is the date of his death, April, 1857. De Musset's first attempt to put his thoughts into poetry, was, if we except a boyish copy of verses to his mother, when he was only fourteen years old, a short narrative and descriptive poem of an antique character, written in the spring of 1828; and at the end of the following year appeared his first publication of any importance, *Contes d'Espagne et d'Italie.* At this time he formed the youngest of a group of able men who, under the lead of Victor Hugo, were setting themselves up as a kind of romantic school of writers. Among them were numbered Prosper Merimée, Alfred de Vigny, and Sainte-Beuve. Often it was their habit to take long evening walks to watch the setting sun, or to ascend the towers of Notre Dame and gaze over Paris, and then return to the house of Hugo, and pass the night in literary discussions and in the recitation of poetry. It is noticeable that the leader of this band has survived followers, and is still in the energetic use of his powers when they are no more. In Sainte-Beuve, the ablest critic of his time, de Musset found a sympathetic critic, who quickly discovered his talents. After reading one of his very earliest pieces, he wrote to a friend, "Il y a parmi nous un enfant plein de génie," and from that time he was in no slight measure the means of making Alfred de Musset known to the Parisian and consequently to the whole literary world. We find, too that Alfred de Musset had an early desire to distinguish himelf as a dramatic writer, but his want of success

* *Biographie d' Alfred de Musset: sa Vie et ses Œuvres.* Par Paul de Musset. Paris; G. Charpentier. 1877.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

at first for many years prevented him from making a second attempt. So far back as 1830 a piece called *La Nuit Vénitienne* was played at the Odéon Theatre. It quite failed, however, to hit the popular taste, and de Musset was so disheartened by this failure that for seventeen years no piece of his appeared on the Parisian stage, though from time to time, he wrote and published in the *Revue des Deux Mondes* some of his now best-known comedies, such as *Il ne Faut Jurer de Rien*, and others. The story of a second appearance of a work of de Musset's on the stage is not a little singular. In 1837 he wrote a short comedy, called *Caprice*, which appeared as usual in the *Revue des Deux Mondes*. About 1845, M. Bocage, director of the Odéon Theatre, was desirous of putting *Caprice* on the stage, but for some reason it was decided at that time not to represent it. But an actress, Mademoiselle Allan-Despréaux, had become very popular with the theatre-goers of St. Petersburg. Being desirous of playing some new and small piece at the Royal Theatre, the saw a short Russian play acted, which was so suitable that she desired to have it translated into French. She was told that it was a French piece which had been translated into Russian, and was from the pen of Alfred de Musset. It was played before the Russian Court, and the actress, when engaged in 1847 to appear in Paris at the Comédie-Francaise, chose one of her first two *rôles*, the character of Mademoiselle de Léry; and Alfred de Musset was henceforth, after this successful and singular re-introduction of his works, one of the most popular of French dramatic writers.

For a brief period, de Musset, rather for the purpose of bread-winning than for the pleasure of composition, wrote a few novels, which, like most of his work, first made their appearance in the *Revue des Deux Mondes*. Indeed this connection of his with this periodical reflects a good deal of credit on the steadfasteness of De Musset to those who were the first to appreciate his gifts, and on the forbearance and good-nature of M. Buloz and his colleagues. In January, 1833, an article appeared by Sainte-Beuve, the most appreciative that had hitherto been published on his works, which, from the reputation of the writer, naturally drew a good deal of attention to the object of it. Accordingly he was chosen by M. Buloz to write also for the *Revue*, and in April of the same year appeared de Musset's first contribution, the drama of *Andrea del Sarto*, and from that time forth not a year passed without the *Revue* containing a drama, a poem, a novel, or a critical essay from his pen. During the first part of his connection with the *Revue* he contributed several novels, but after he left off writing prose he could never be prevailed on, however strongly pressed by M. Buloz, to take up this kind of writing again; and in spite of the regard which existed between them, the editor would often have to wait for several months for a short poem,—the fruit at last of some sudden impulse or suggestion. This very Review was the cause of one of his most popular compositions, which all exemplifies, too, the suddenness of his work. One number contained a song of the German poet, Becker, insulting to the patriotism of Frenchmen, with, as De Musset thought, an insufficient answer, the "Marseillaise de la Paix." The family were at breakfast, chatting together, when De Musset took up the new number; his face suddenly brightened, his eyes sparkled, he struck his hand on the table, and rushed off to his own room. Two hours after he returned, and recited "Le Rhin Allemand," a song which became so popular that it was set to music by more than fifty composers, and caused de Musset to receive a challenge from some Prussian officers. His heart, in fact, was never in his prose works, and in 1839 he abruptly declared that he would write no more romances. Having counted the pages of the *Croisilles*, he exclaimed, "Finis prosæ!" and henceforth never wrote more prose. "Everybody," said he, "could write, with more or less grace, a love-story, and therefore he should remain a poet only." The fact of a popular dramatic author being also a poet naturally did much to attract people's attention to his shorter pieces of poetry, hence the year 1847 is perhaps one of the most marked in de Musset's literary career. In 1850 another event occurred of some note in his life, his election to a chair in the Academy. He had long hesitated to offer himself as a candidate, fearing that the style of his work would scarcely be appreciated by the electors. At length, however, M. Merimée, whose classical studies and official position rendered him an admirable patron, prevailed upon him to offer himself as a successor to M. Dupaty. From his brother's account, he was chosen rather from a desire to avoid disappointing a man loved by all who knew him, than from any strong appreciation of his merits by those who had to choose a successor to the vacant seat.

If we turn to a different point in his life, the various temporary attachments to which he succumbed, they seem to be evidence of a want of truth and depth in his character. He was deep in love for the time; he seems to have felt none of the kind of devotion which goes deeper than passion and means something infinitely better, and after being plunged into the depths of despair when the lady abandoned him, he always, after a period of depression, consoled himself afresh. The most serious of these love-affairs was that with the great novelist, George Sand. The writer of this biography does not directly mention Madame Dudevant by name, but he devotes some space to the prelude and the consequence of this attachment,—one of more than ordinary interest, from the celebrity of the person who was the object of it. De Musset and this lady had determined to make a tour in Italy in 1833, a project greatly disapproved of by his mother. But one morning, the "dame inconnue," as M. Paul de Musset is pleased, with unnecessary mystery, to call her, alighted at de Musset's house, and persuaded his mother to trust her son to her "motherly care." All appeared to go well till the travellers reached Venice, when de Musset's letters to his friends ceased for six weeks; then news arrived of a severe illness, and of his approaching return, told in a most depressed tone,—"Je vous apporterai un corps malade, une âme abattue, un cœur en sang, mais qui vous aime encore." For a good many months de Musset remained weak both in body and mind. He gave no details of his rupture with the distinguished novelist, and five years after, in describing, not the facts of the case, but his later feeling, he simply says, with epigrammatic terseness, that she was dark, with large eyes, "I loved her, she left me," though in a short dramatic piece which he afterwards wrote—"On ne badine pas avec l'amour"—some traces of this affair are to be found in the characters of Camille and Perdicace. Had de Musset found some lady to whom he could have been bound by a nobler and more sacred tie, and one with a mind full of sympathy and power, in all likelihood many of the troubles of his life would not have overtaken him. There is one connection which he formed, however, which in some respects compensated for his ignobler loves—with the lady whom he called his "marraine." She was both a friend and, it may justly be said, a mother to him, and though his own mother long lived with him in Paris, this lady and his elder brother, the writer of this book, seem much more thoroughly to have occupied the place of a large-hearted mother and father. Except that this lady acted so completely the place of friend and guardian, the incident is not at all unlike the friendship of Prosper Merimée for his "Inconnue," and shows that the latter attachment, very singular in English eyes, was by no means extraordinary in France, or entitled to be wondered at, as it was a few years ago, when his now well-known letters were first published. That de Musset's "marraine" did great service to him in his general life and in his literary work no one who reads these pages can doubt. For in many respects, de Musset was little more than a child, with its impulses and its weaknesses, and its capability of being guided by soberer minds. His impulsive nature is well shown, indeed, by the way in which, after beginning to reflect on philosophial subjects and the wonders of Nature, he suddenly, with astonishing ardour, set to work to read through ancient and modern philosophical works, from Plato to Locke. The end of this attempt was eminently characteristic:—"Souvent rebuté par l'outrecuidance dogmatique des uns, l'indecision et l'obscurité des autres, il fermait le volume, et reprenait ou il avait laissé, l'historie de la pauvre Bernerette. Mais le jour même ou il coucha son héroine dans la tombe, comme les larmes lui venaient aux yeux, en écrivant la dernière page, sa défaillance avait cessé. Il me dit ce mot, que je n'ai jamais oublié. 'J'ai assez lu, assez cherché, assez regardé.' Les larmes et la prière sont d'essence divine. C'est un Dieu qui nous a donné la faculté de pleurer, et puisque les larmes viennent de lui, la prière retourne à lui.' Dès la nuit suivant il commence *l'Espoir en Dieu*" (p. 193). All Alfred de Musset's poems, and indeed all his work were essentially "sentimental" in the proper sense of the word. Some little incident touched his sensitive feelings, and instantly, if in the vein, he composed or began to write a poem. For instance, he imagines that a lady intends to make him become her lover, and the comedy of *Chandelier* is at once suggested. Thus in many respects his works contain the story of his life, all his sorrows and his joys bubbled out in verse; so that whilst there is much that is attractive to all, there is much that is purely egotistical. For certainly the characteristic of de Musset's poetry is its frankness; every feeling and thought were thrown into poetry, it became almost personified to him, to go back to it was to return to his dearest companion. As he wrote in "La Nuit d'Août":—

"Salut à ma fidèle amie.
Salut, ma gloire et mon amour.
La meilleure et la plus chérie,
Est celle qu'on trouve au retour.
L'opinion et l'avarice
Viennent un temps de m'emporter.
Salut, ma mère, et ma nourrice,
Salut, salut, consolatrice!
Ouvre tes bras, je viens chanter."

Thus the nature of his poetry is very varied; the gravest and the gayest subjects he touched with a charming simplicity, and a suggestive line of thought lies by the side of trifling descriptions. This same brightness and openness no doubt caused de Musset to be so popular with his contemporaries. He numbered among friends, as has already been seen, many well-known men—Sainte-Beuve, Prosper Merimeé, M. Buloz, were his most intimate associates—but the brightness, and even the sorrowfulness at times, of his nature led him rather to make boon companions of the light-hearted lovers of pleasure than of the severer intellects of France; and when his health by degrees grew more and more delicate, he to some extent permitted pleasures to degenerate into excesses, in order to drown the melancholy which his physical weakness caused. In consequence, his "marraine" on one occasion wrote to upbraid him for it. Thereupon he wrote a sonnet, asking for her pity, instead of reproaches:—

"Dans ce verre où je cherche à noyer mon supplice,
Laissez plutôt tomber quelques pleurs de pitié,
Qu'à d'anciens souvenirs devrait votre amitié."

As will have been seen, de Musset's character wanted the higher qualities, and his poetry reflected his character. He was always a graceful, though never a consistently powerful writer; he was essentially the poet of human nature, Parisian life, and intellect. He neither analysed life, like Mr. Browning, nor idealised it, like Hugo, but collecting its joys and its sorrows within his own large-hearted and sympathetic grasp, he poured them forth in stormy poems and sparkling verses. Those powers with which he was gifted he used to the uttermost, and in later years under considered physical disadvantages. When he quietly died whispering, "Dormir . . . . . enfin je vais dormir!" his dying moments were in singular contrast to the general mental tenor of his life. He had made a considerable name to which it is doubtful if a longer life would have added more lustre, for his gifts were not such as improve greatly in

maturer years; they were fit for the spring-time of life, with its eager aspirations and its warm feelings,—they early reached their full strength. As we have said, de Musset's writings contain much of the story of his life, and to them this kindly and pleasant narrative his elder brother will form an appropriate companion and guide.

WILDBAD.

(Saturday Review.)

There are baths which are cheerful, not to say gay, and baths which even verge on the dissipated, while others have an air of solemn business about them that must be excessively depressing to nervous invalids. Thus at Hamburg and Baden Baden, even now that the gambling administrations which conducted everything so magnificently have been legislated out of these places, have you still a sense of light and cheerfulness. There are rows of gay houses with blooming flowers and gorgeous sunblinds, whence you hear the strains of pianos, lively with the *chansonettes* of Offenbach; people sip their cups at the springs in the gardens, as they might refresh themselves with an ice, or hock and seltz-water; while those who lounge along in bath-chairs seem to do so rather from listlessness than necessity. There is plenty of pleasant talk at the *tables-d'hôte*, and a conspicuous absence of care-worn faces. The hours of the foreign visitors, at least, are far from being unconscionably early. You are not disturbed by the brusque movements of your next-door neighbour while yet in the middle of your beauty sleep; and there is no general eclipsing of the lights just as you begin to feel wide-awake in the evening. And there are baths, on the other hand, which we do not care to particularize, where impressions of disease and death-grapples are irresistible. Patients in each stage of dilapidation and decay shock your eyes at every turn; and if you take a stroll along the paths in the crowded cemeetery, you move among lines of elaborate tombstones, erected to the memory of the strangers who have remained there. But, between the two extremes, are the baths that combine these opposite characteristics. The waters are guaranteed sovereign specifics for certain grave complaints and critical cases; there is no mistaking the heart-wearing anxiety with which patients are devoting themselves to bathing and drinking; yet, at the same time, there is a strong infusion of the lighter element, which increases the chances of successful treatment by throwing rose-coloured streaks across the invalid's horizon. There are baths for which nature seems to have done nothing but provide the waters that may be medicinally invaluable, while it has left all the surroundings as gloomy as possible, offering not even a semblance of healthful distraction. You find yourself buried alive in the depths of some little valley, or locked away into some sombre gorge, where lowering woods or frowning precipices shut out the sunlight save for an hour or two at noonday. Or you must lead the life of a lizard on a sunburned, stone-strewn plain, which suggests the notion of an Arabia Petrea rather than of any landscape in Europe. While on the other hand, you may find all you have gone in search of in mountain valleys like that of the Upper Engadine, where your hotel is in the very ante-chamber of the grandest Alpine sceney, and the breezes that sweep down off the snow peaks and the glaciers come laden with all that is most invigorating.

Perhaps, for the mere passing stranger, the waters which hold the middle place between these extremes are the most interesting, if not actually the most lively. You have a country sufficiently attractive to invite you to agreeable walks; you need be at no loss for congenial companions who are eager to help you to kill the time and yet you are constrained to look on at a variety of those life dramas which read you most profitable though painful lessons There is Wildbad, for example. Wildbad is situated in what must once have been one of the most secluded valleys in the Schwartzwald, on a road that leads to nowhere in particular. Few people probably go there without a purpose, but the purposes that take them thither are manifold. The great *specialité* is the treatment of diseases that cripple the invalid or rack him with pains. It acts on gout and rheumatism in all their forms; it loosens stiffened joints, and splices and patches splintered bones; it makes the lame to walk, and the paralytic to hobble. It is supposed to help to set straight the most ghastly forms of distortion, the results of fever and severe illness of every kind. And at the same time, if you consult Dr. Granville and later authorities *passim*, you will learn that the properties of its springs are soothing and slowly invigorating. It is said to calm the fevered brain and restore the enervated vital forces. Insensibly it tranquillizes the melancholy which has deranged the overtaxed nervous system, and acts on premature exhaustion and old age like the medicated herbs that "did renew old Jason." Even if you have come to Wildbad in ignorance of what you were to except, before you are well established in your hotel you might give a shrewd diagnosis of the symptons of the great majority of visitors. A half-dozen of bath-chairs or sedan-chairs on wheels are drawn up side by side in the passage which leads to the courtyard behind. Singularly commodious and luxurious chairs they are, by the way, with an ingenious apparatus that raises the legs to the angle best suited to the need of the occupant. You pass knots of stranger attendants gossiping on the staircases and in the corridors; for many of the guests who are more or less helpless come accompanied by couriers or nurses, or at all events by body servants of some kind. If nature has blessed you with sound health or left you your pristine elasticity of frame, you find yourself insensibly growing ashamed of your own springiness of tread. For as you bound up and down from your apartment, you give the go-by to the maimed and the halt painfully dragging themselves up and down by the balustrades.

It seems the normal condition of humanity in Wildbad to have more or less of a limp; there is a strange variety of curious and solid walking-sticks on exhibition, more generally used in pairs than singly; and in the eating and reading *salons* on the ground floor there are crutches lying about in odd corners. When you take your seat at the *table d'hôte*, especially at the early one, you see ladies and gentlemen being helped to their places by no means as a matter of formal politeness. Not a few of them have more or less lost the use of their lower limbs; some are actually carried in arms; while here and there at corners places are reserved for those who must stretch their stiffened legs before them. It is one of the consolations of a resort of this kind that the unfortunate patients need show no false shame. However bad they may be, there is sure to be others to keep them in countenance. And the worse they are, they more they appear to be respected. Do they not embody a marvellous faith in the efficacy of the waters, showing an example which is the best of all encouragements to those less severely afflicted; and may they not leave after a season or two as living proofs of the miracles that may be wrought by single-minded perseverance? The conversation naturally runs on the course of the treatment, and on cures which are more or less matters of tradition. The gouty gentleman who has just completed his dozen of baths is congratulated on the improved action he displayed on the promenade in the morning, while condolences are offered to a victim of rheumatism on the slight, though obvious, relapse that, however, can be satisfactorily accounted for; a sceptic—for sceptics sometimes make their way even to Wildbad—or a fellow-sufferer who is labouring under depression or despondency is confronted or comforted with stories of those startling cures which can be brought in precisely as cases in point; and not seldom indeed their needs to be no small store of faith. It is all very well for anybody who arrives with a party of solicitous friends, and whose mind is diverted from his personal troubles by light and bright society. But you see sunken-cheeked solitaries who glide about spectre-like, never speaking and seldom spoken to. If they sleep tolerably of nights, appearances must be strangely deceptive; and it is hard to see how the waters are to work beneficially with them, since their familiar demon never leaves them for a moment. Yet almost worse off are those patients labouring under disheartening maladies who go in pairs. There is an elderly gentleman barely able to balance himself on his failing limbs, leaning heavily on the shoulder of a younger man, who wears the most ghastly and woebegone expression, who is himself staggering as if he might slip at every step, and whose bloodshot eyes are starting sadly into vacancy. Were you to follow them into their apartment while they are killing they weary hours—for they are equal to very little exercise—you could scarcely find yourself in more dismal company. Happily for them, however, as well as for others, there is a brighter side to the picture. Besides *malades imaginaires* and people but slightly ill, there are many who are really profiting by the treatment, and who are proportionately elated and exhilarated. And there are many more who show a most creditable fortitude and elasticity, and who can recover something of their earlier cheerfulness under the influences of cheerful society. Most people, whether musically disposed or not, acknowledge the inspiriting power of melody; and when the band plays in the morning or evening the Kurplatz before the Bath-house is almost as animated as the market-place at the other end, when the peasants have crowded in of a morning, with their baskets of poultry and fruit and vegetables.

Music is a matter of course, and a part of universal bath treatment; but it must be admitted that other amusements are scarce. There is a vast and scantily furnished café, where coffee is only to be procured up to an early hour in the afternoon; with a single billiard-table dropped in the middle that is chiefly patronized by couriers. There is a Hof reading-room, to which you, however, must subscribe There are occasional concerts, with mediocre performances; and there is a tiny summer theatre in the gardens, where the acting is more or less entertaining. These gardens, so far as they go, are pretty nearly all that can be desired, and the most has been made of the valley and the little stream that waters it. Ingenuity has exhausted itself in multiplying paths, and in leading them up to any eminence or opening that commands the semblance of a prospect. But there, as in the surrounding forest that stretches away indefinitely on all sides, the very density of the timber and the foliage is a drawback. Away from the well-kept carriages road that leads up and down the valley of the Enz, you are always sighing for sunlight or stifling in the absence of air. Here and there the sweep of the black firwoods encloses in bright green meadows on steep slopes, studded over with rude wooded châlets for housing the precious hay crops. There is a fresh scent of hay or grass in the air, while innumerable little rills trickle down from the woodlands, making a system of natural irrigation easy. But elsewere you are enveloped in the never-ending woods, bend your steps which way you will. Black ridge succeeds to black ridge; and, though at the bottom of each abrupt descent you come upon the inevitable water, these shallow streams are your only guides, and you are utterly abroad without a compass. There are forest tracks for hauling the felled timber; but then they lose you in a labyrinth, and there are steep slides grooved in the hill-sides, by which each single stem when it is cut down is sent by a short cut to the bottom. Nothing can be richer or more beautiful than the warm undergrowth of foxgloves among the pale green bracken and beds of bilbery, contrasting with the darkness of the pines above and with the bald patches of dark brown carpeting, thickly strewed with the dried pine needles. But these great woods are strangely silent in the daytime in the height of the summer; although at night you may listen to the cries of the night roamers and the hooting of the big Black Forest owls. The only sounds that come to your ear in your walks are the heavy strokes of woodmen's axes; the only vehicle you chance to meet is the long black waggon of some grimy charcoal-burner. To be sure, the primitive arrangement for floating down the wood is a sight that in itself is worth going far to see. In the bed of a dwindled stream, half the cast of a fly across, lies a long, narrow, snake-like raft, per-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

haps many hundred yards from end to end. Great stems of trees, sixty, seventy, or eighty feet in length, are secured from ten to twenty abreast in a succession of sinuous joints. Tree is knotted to tree, end-on, by rough ropes of twisted bark, passing through iron clamps driven firmly into the timber. The stream is dammed at intervals above and below; then, when all is in readiness, the upper locks are opened and the raft advances a stage of its downward journey with the sudden flush of a minimum of water power. Fishing there is, and fair fishing too, although the trout are small; and we should fancy their spawning places must be disturbed and their numbers thinned periodically by these unwieldy trunks which go ploughing up the bottom and undermining the banks. On the whole, the visitors to Wildbad, if he has the knack of amusing himself easily, may get on tolerably well; but there, at least as much as most places, he is sadly dependent on the weather. There is a very scanty provision of artificial cover where he can indulge in a promenade in defiance of the elements; and the forests, which are always sufficiently sombre, must more than neutralize the virtues of the warm springs, when they are dripping with wet from above and steaming with vapour from below.

REUTER'S TELEGRAMS.

London, 26th September, 1877.

Intelligence from the Seat of War.

According to official despatches the Turkish forces have occupied a stronghold in Roumania opposite Silistria.

The Russian and Roumanian loss before Plevna is estimated at twenty-seven thousand.

London, 24th September, 1877.

Intelligence from the Seat of War.

The *Daily News* states that the attack on Plevna by the Russian Forces has been abandoned.

According to information received from Constantinople, the Porte will refuse to entertain proposals for mediation while a single Russian remains in Turkey, and refuses any armistice unless accompanied with proposals for peace.

London, 25th September, 1877.

According to a Russian Official Despatch the Turkish Forces resumed the bombardment of "Nicolas" (query "Nicopolis") and after several hours bombardment made repeated and unsuccessful attempts at assault, and in accordance with the same despatch Ismail Pasha has been defeated with great loss by General Tergukassoff.

London, 22nd September, 1877.

Intelligence from the Seat of War.

The blockade and bombardment of Plevna still continue, and thirty thousand Turkish troops under Osman Pasha are marching to its relief.

The Russian forces have been strongly reinforced at Schipka at which place the Turks have abandoned a fort they had previously taken.

London, 12th September, 1877.

At a banquet the Emperor of Austria proposed the health of his dear friend and ally, the Emperor of Russia.

London, 10th September, 1877.

News has been received that Nicsics capitulated on the night of the 6th instant. Turkish siege work have been constructed at Plevna, and have been advanced to within 1,300 yards of the enemy's entrenchments; a furious cannonade is now going on.

London, 9th September, 1877.

Lord Derby has stated that the situation is at present unfavourable for intervention with regard to the War, but that when the proper time arrives, which perhaps is not far distant, England will not lose the opportunity.

A Russian official despatch admits a defeat with heavy loss at Hazelvo (? Kazelevo).

The Russians have been compelled to raise the blockade of Rustchuk as the Turks are threatening the bridge at Pyrgos.

ARRIVAL OF THE FRENCH MAIL.

TELEGRAMS.

London, Aug, 23.—A Russian official despatch states that Suleiman Pasha, with forty battalions, renewed the attack on the Schipka Pass on the 21st inst. and was repulsed, the fighting proceeding until after dark. The Turks simultaneously advanced from Loftcha on Selvi. The result of the fighting is unknown. Germany has made diplomatic representation to the Porte respecting the treatment of the Russian prisoners and wounded, and has asked the other Powers to concur in it. The Russians are preparing for a winter campaign.

London, Aug. 23.—The Mansion House Famine Relief Fund now amounts to £24,000. The Princess of Wales has given £100 towards the fund.

Fighting in the Schipka Pass was still proceeding yesterday afternoon. A Russian official despatch states that repeated Turkish attacks were repulsed with heavy loss. A despatch from Osman Pasha states that on the 21st instant he repulsed a Russian reconnaisance to the westward of Plevna.

London, Aug. 24.—The lastest Russian official despatch states that all attacks on the Schipka Pass have been repulsed, and that the Russians have maintained their position and have received reinforcements. The fighting is continuous. The Turks have lost enormously, whilst the Russian loss is relatively slight, but many officers have fallen. According to Russian unofficial accounts, the Russians claim a victory at Selvi. Turkish unofficial accounts state that Mehemet Pasha has gained a brilliant victory at Eski Djuma. Austria and Italy have concurred in Germany's diplomatic representations to the Porte. Some Greek bandits, who landed at Thessaly, have been defeated. A Russian official despatch states that Tertukassow arrived at Guludji on the 20th instant, from Judyr.

London, Aug. 24.—The Bank of England has subscribed £1,000 and Earl Salisbury £500 to the Mansion House Madras Famine Relief Fund. Public sympathy in England with the famine-stricken has been thoroughly aroused.

London, Aug. 25.—Mehemet Ali Pasha reports that the Turkish left and right wings have repulsed the attack of fourteen Russian battalions at Eskidjuma. An official Russian despatch states that desperate fighting occurred in the Schipka Pass on the 23rd inst., from 4 o'clock in the morning until noon. The Russians maintained their ground, but lost heavily. Suleiman Pasha has telegraphed an account of the fighting on the 21st instant, stating that the Turks scaled the heights, fought fourteen hours, and retained the positions they had conquered. The attack on the Russian entrenchment's was unsuccessful, but he hopes to succeed ultimately.

London, Aug. 26.—General Raditsky, commanding the eighth Russian army corps, holds Tirnova, Grabova and Selvi, and has reinforced the Russians in the Schipka Pass. The vanguard of Suleiman Pasha's right wing which crossed the Balkans by the Hamboghaz Pass, is advancing towards Bebrova. A Russian official despatch admits a repulse at Eskidjuma, and that the Russians fell back upon Sultankoi. The statement that an insurrection has broken out in Crete is denied, although agitation exists there.

London, Aug. 26.—An official Russian despatch states that continuous fighting took place in the Schipka Pass from the morning of the 24th until the 25th instant. A despatch from Suleiman Pasha states that on the 23rd instant he rupulsed several Russian sorties and that a general assault was made by the Turks on the following day, when the Russians were completely surrounded. The Turks now command the line of Russian retreat to Gabrova. A late despatch received from Constantinople states that Suleiman Pasha captured the Schipka Pass and has attacked Gabrova.

Rangoon, Aug. 25.—The Krishna shoals lighthouse has entirely disappeared. It is supposed that a vessel has fouled it.

Kandy, Aug, 27, 12.26 p.m.—The differences between the Church missionaries and the Bishop are said to have been arranged satisfactorily, and all causes of disagreement, at least temporarily, are reported to be at an end. The question of the Bishop's ultimate authority is reserved. The Bishop and the Rev. Messrs Oakley and Clark are in Kandy. The Rev. Mr Clark's license has been restored. The result is highly satisfactory.

It is trusted that the differences between the Archdeacon and the congregation of Saint Paul's Church, Kandy, will be settled in a friendly manner.

London, Aug. 27.—The Russian General Doroschinsky has been killed in the Schipka Pass.

Ahmed Mukhtar Pasha telegraphs that he has gained a

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

brilliant victory on the heights of Kiziltepe, where he attacked and routed the enemy after severe fighting. The Russian loss was 4,000, including General Tchouchovassoff, and the Turkish loss was 1,200.

All the great Powers have concurred in the diplomatic repesentations made by Germany, at Constantinople, concerning the treatment of Russian prisoners and wounded.

Colonel Wellesley's report denies the alleged Russian cruelties.

London, Aug. 27.—No further news is to hand from the seat of war. The capture of the Schipka Pass is unconfirmed.

The French Government have resolved to prosecute M. Gambetta for a speech at Lille attacking the Government.

London, Aug. 28.—Dervish Pasha announces the capture of a redoubt upon the Russian left wing at Djianguir. A Russian official despatch states that the Russian loss on the 25th instant, at the Schipka Pass, was 30 officers and 400 men. There was continuous fighting throughout the night and until noon on Sunday. The Russians maintained their positions. Servia has resolved to militarily coöperate with the Russians in Bulgaria; commands were distributed before the declaration of war. A special meeting of the Skuptschina has been convoked.

London, August 28.—In a speech made by Sir Stafford Northcote at Plymouth yesterday, he said that England follows a peace policy, but that, if her interests required it, her strength would be equal to the occasion. Neutrality would be observed until friendly intervention was possible in order to end the war.

Obituary.—General Drought.

London, August 29.—An official Russian despatch states that the Turkish firing on Sunday afternoon and on Monday at the Schipka Pass was feeble. The Porte has sent a despatch to London complaining of the Greek armaments and threatening that, if the insurrection breaks out in Thessaly, Turkey will send troops to Athens. The British Government has remonstrated with Greece, which then sent a pacific communication to the Porte.

London, Aug. 22.—A despatch from Suleiman Pasha states that, after six day's continuous fighting with indicisive results, the Russians unsuccesfully attacked the Turkish positions on the heights to the left of the Russian positions (at the Schipka Pass) and commanding the Russian line of retreat. Suleiman Pasha estimates the Russian loss to be 3,000 killed alone. A Russian official despatch states that all was quiet on the morning of the 28th instant, and that the Russians still maintained their positions. The Turk hold the adjoining heights. The Russians are massing their troops before Plevna.

Unofficial Russian accounts state that Ahmed Mukhtar Pasha has unsuccesfully attempt to surround the Russian positions at Kurukdara, but that he has gained Kizeltepe. No official Russian despatch (on the state of affairs in Armenia) has been received.

London, Aug. 30.—A despatch from Suleiman Pasha states that his entrenchments are only 150 paces from the Russian positions (in the Schipka Pass) which are blocked on three sides, the route to Gabrova being the only one open. Seleiman Pasha is making efforts to complete the blockade. A Roumanian division has crossed the Danube to the westward of Nicopolis in order to operate in the rear of Plevna. An official Russian despatch confirms the unofficial Russian accounts telegraphed yesterday respecting the movements of Ahmed Mukhtar Pasha. Ahmed Mukhtar Pasha reports that he buried 1,064 Russians at Kiziltep.

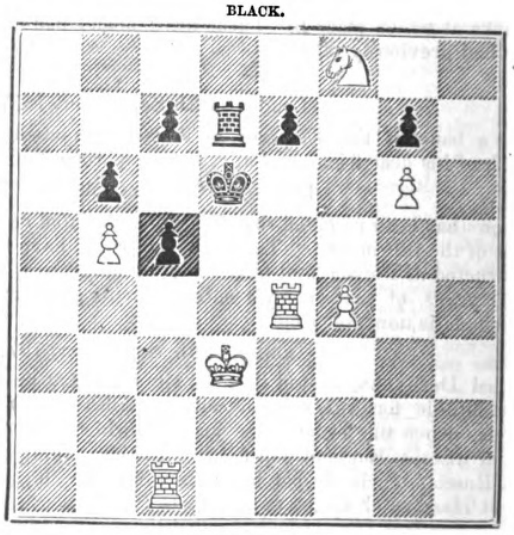
Alexandria, Aug. 30.—The Nile is still below its lowest level on the same date for the last eight years. There has also been a slightly downward tendency during the past four days.

London, Aug. 31.—Suleiman Pasha on the 30th maintained the blockade of the enemy in the Schipka Pass, and the artillery fighting recommenced. A Turkish official despatch states that the Montenegrin army has raised the siege of Nicksics.

Galle, Aug. 31, 2.37 p.m.—A box which contained five thousand sovereigns consigned to the Oriental Bank Corporation at Galle, per P. & O. steamer *China*, has reached its destination, but the contents are missing. The steamer has been searched by the police, but no trace of the perpetrators of the theft has been found. Three Arab passengers, horse dealers from Australia, having a large amount of money in their possession, have been examined on suspicion, but no clue to the robbery has been thus gained. The case in which box of sovereigns was enclosed was addressed to the P. & O. Agent, and was intact. It is suspected that the abstraction of the money was effected at Sydney.

Galle, Aug. 31.—The crew of the British ship Liffey, of London, 1,339 tons, were landed here to-day by a Maldive vessel. Their ship was wrecked on a reef called Candadu Atholi, (sic) off the Maldives, on the 3rd of August. She was bound from Mauritius to Calcutta in ballast. The crew succeeded in reaching the principal island, after being six days in their boats. They were hospitably treated by the King, and forwarded to this port in one of his own vessels.

London, Aug. 31.—Russian official despatches state that skirmishing has recommenced in the vicinity of Rustchuk and also that skirmishing has taken place between the force under Ismail Pasha and the force under Tergukassow. General Lilikoff's (? Melikoff's) troops are advancing.



A Turkish force from Eskijuma crossed the river Lom, near Jaslar and defeated the Russians, who were compelled to fall back from the Lom. A Turkish force from Rasgrad advanced on Torlak and repulsed the Russians, besides capturing two guns. A great battle is believed to be imminent, the Turks having resumed the offensive along the whole line.

London, Sept. 1.—The Turkish Commander-in-chief telegraphs that a strong force took the offensive on the 30th August, and that after nine hours' desperate fighting at the village of Karahassanler on the right bank of the Lom, which was repeatedly taken and retaken, it remained in the hands of the Turks. The Russians retreated in disorder, pursued by another Turkish force until evening, and were compelled to abandon Haidarayaz. The Russian loss was 4,000 men and an immense booty. The Turkish loss was 3,000 men. Prince Charles has assumed the command of the combined Russo-Roumanian Corps in the West (of Bulgaria).

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabrics & Yarns.—In some articles we have to report a fair business with improvement in prices. *Yarns* again took the most prominent position ; large transactions have been reported and prices for 16/24 and 28/32 low and medium qualities have slightly advanced, whereas other spinnings are firm at former rates. *Shirtings*:—At one time a slight demand was perceptible, but lately they have again relapsed into their former dulness; quotations are unchanged but nominal. Some sales of *T. Cloths* and *Velvets* are reported, but quotations remain unaltered. For *Drills* and *Turkey Reds* there is some demand and *Taffachelass* maintain their former position.

Grey Shirtings:—						
7 lbs.	38½ yds.	39 in.	per pce.	...	$1.40 to	$1.75
8 lbs.	38½ yds.	44 in.	,,	...	1.80 to	2.20
8 lbs. 4 to 8½ lbs.	38½ ,,	39 in.	,,	...	1.57½ to	2.30
9 lbs.	38½ ,,	44 in.	,,	...	2.05 to	2.55
T. Cloth 7lbs.	24 ,,	32 in.	,,	...	1.40 to	1.60
,, 6lbs.	24 ,,	32 in.	,,	...	1.10 to	1.25

White Shirtings:—						
60 to 64 reed 40 yds.	36 in.	per pce.	...	...	2.20 to	2.40
Turkey Reds 24 yds.	30 in.	2—3 lb.	per lb.	...	0.67½ to	0.85
Black Velvets	...	...	...	...	...	7.25 to 8.35
English Drills 14/15 lbs.	40 yds,	30 in.	...	...	2.40 to	2.65
Taffachelass	12 yds,	43 in.	...	...	2.00 to	2.35

Yarns.—

No 16 to 24	...	...	per picul...	$28.25 to	31.25	
No. 28 to 32	...	...	per picul...	$32.75 to	35.00	
No. 38 to 42	...	...	...per picul...	$36.00 to	39.75	
Reverse Twist 16-24	...	...	,, ...	—		

Woollens.—There has been rather a better feeling in this market since our last, and transactions have taken place on a larger scale, although prices are still unsatisfactory, the more so owing to the present low rate of exchange for sterling. A fair demand for *Shimagoros* and *Plain and Figured Orleans* has been experienced, and *Blankets* and *Union Cloth* continue to find buyers at quotations. *Plain Mousselines de Laine* are quiet and have declined in value, while new patterns of *Figured Goods* are in demand at slightly higher prices. *Italian Cloth* remains neglected.

Plain Orleans	...	...	40—42 yds.	32 in.	... 5.60 to	7.00
Figured Orleans	...	...	29—30 yds.	31 in.	... 4.25 to	5.50
Shimagoro	...	...	30 yds.	30 in.	... 3.75 to	5.25
Italian Cloth	...	...	—30 yds.	32 in.	... 0.25 to	0.32
Camlet Cords	...	...	29—30 yds.	32 in.	... 5.75 to	6.00
Camlets Asstd.	...	...	56—58 yds.	31 in.	...	—
Lastings, Japan	...	...	22—30 yds.	32 in.	...12.00 to	13.00
Plain Mousselines de Laine			—30 yds.	30 in.	... 0.16½ to	0.18

Figured Mousselines de Laine			...30 yds.	30 in...	0.25 to	0.28½
Multicolored ,,			...30 yds.	30 in...	0.28 to	0.37½
Cloth, all wool plain or fancy			...48 in. to	52 in...	0.80 to	1.20
Presidents	...	...	...54 in. to	56 in...	0.60 to	0.65
Pilots	...	...	...54 in. to	56 in...	0.45 to	0.55
Union	...	...	...54 in. to	56 in...	0.60 to	0.80
Blankets, scarlet & green			6 to 8 lbs.	...per lb	... 0.40 to	0.45

Sugar.—The market continues in the same depressed condition as last reported, and prices remain unchanged. Stocks consist of about 80,000 piculs of all kinds.

Sugar:—Takao in bag	...(nom.)...	per picul...			$4.75	
,, in basket	... ,, ...	,, ...			$4 65	
Taiwanfoo in bag	... ...	,, ...			$4.60	
do. in basket	... ...	,, ...			$4.50	
China No. 1 Ping-fah	... ...	,, ...			None	
,, No. 2 Ching-pak	... ,,	... $8.20 to	$8.50			
,, No. 3 Ke-pak	... ...	,, ... $7.60 to	$8.00			

China No. 4 Kook-fah	... ...	... per picul...	$7.20 to	$7.50		
,, No. 5 Kong-fun	... ...	... ,, ...	$6.30 to	$7.20		
,, No. 6 E-pak	... ...	... ,, ...	$5.50 to	$5.90		
Swatow Brown	... ...	... ... ,, ...	None.			
Daitong	... ...	... ... ,, ...	$3.80			
Japan Rice	... ...	... ... ,, ...	$2.30 to	$2.50		
Kerosene Oil, nominal	... ...	... ,, ...	$2.80 to	$2.90		

Kerosene Oil.—The market is in an unsatisfactory condition, dealers offering lower prices than have ruled lately.

EXPORTS.

Silk.—The following was our report by the American mail, which left at daylight this morning:—

Since our last report on the 8th instant, a good business has been done. Prices, on the whole, have undergone very little change, but lately buyers have demanded concessions which dealers are unwilling to make, on account of the high prices they still are compelled to pay in the up country markets, and transactions are, in consequence, somewhat restricted at the close.

Settlements are 1,150 bales of Hanks, 150 bales of Oshius and 50 of Filatures; in all 1,350 bales. Arrivals are 2,250 bales, and stocks fully 1,500 bales. The total export from 1st July to date is 4,134 bales, against 12,695 bales for same period last year. The next P. & O. steamer will probably take over 600 bales.

		In London at 4s. 0d. per lb.	*In Lyons at f. 5.05 per kilo.*
Hanks,—Superior	—	—	—
,, Best No. 1 & 2	$520 to 540	18/9 to 19/5	52.00 to 53.00
,, Good No. 2	$490 to 510	17/9 to 18/5	49.00 to 51.00
,, Good all round No. 2½	$460 to 480	16/9 to 17/5	46.00 to 48.00
,, Medium No. 3	$440 to 450	16/1 to 16/5	44.00 to 45.00
,, Common to inferior No. 4 & 5	$400 to 420	14/9 to 15/5	41.00 to 43.00
Oshius,—Extra	—	—	—
,, Best	$500 to 510	18/1 to 18/5	50.00 to 51.00
,, Good	$460 to 480	16/9 to 17/5	46.00 to 48.00
,, Medium			
Hamatski,—Good to Best	$450	16/5	45.00
,, Common to Medium	$420 to 430	15/5 to 15/9	43.00 to 44.00
Kakeda,—Extra	$580 to 600	20/9 to 21/5	57.00 to 59.00
,, Best	$550 to 570	19/9 to 20/5	55.00 to 56.00
,, Good	$520 to 540	18/9 to 19/5	52.00 to 54.00
Filatures	$560 to 700	20/1 to 24/9	56.00 to 59.00

Since the above was written extensive rejections have taken place, and prices close very firm.

Silk-worm's Eggs.—Arrivals are 190,000 cards, but we hear of only one or two small transactions, at 80 cents for good Tchitchibu cards.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Tea.—A better feeling is perceptible in our Tea market and more business generally is doing.

Settlements since the 23rd instant to date amount to 4,100 piculs, mostly comprised of *Common* to *Medium* grades. Prices are at the present decidedly stronger, and though we do not alter quotations given below, the market closes firm, and stocks in native dealers' hands are only moderate.

Common	$ 9.00 to $13.00	Fine	$28.00 to $27.00
Good Common	$14.00 to $15.00	Finest	$28.00 to $32.00
Medium	$16.00 to $18.00	Choice	$34.00 nominal
Good Medium	$19.00 to $22.00	Choicest	—

The cargo of Japan Tea taken by the P. M. S. S. *City of Tokio* was exceptionally small, being only 1,927 packages from all ports in Japan.

EXCHANGE AND BULLION.

Exchange.—During the past week a fairly large demand for Bank Bills caused a drop in the rates, which, however, have somewhat recovered, and close firm at quotations.

Rates close as follows:—

STERLING—Bank 6 months' sight	3s. 11⅝d.	ON SHANGHAI—Bank sight	73½
„ Bank Bills on demand	3s. 10⅞d.	„ Private 10 days sight	74½
„ Private 6 months' sight	4s. 0d. to 4s. 0⅛d.	ON NEW YORK—Bank Bills on demand	93½
ON PARIS—Bank Sight	4.00	„ 30 days sight Private	95½
Bank 6 months' sight	4.97½	ON SAN FRANCISCO—Bank Bills on demand	94
„ Private 6 ms. sight	5.05	„ 30 days sight Private	96
ON HONGKONG—Bank sight	1½ % dis.	Kinsatz	424½
„ Private 10 days' sight	2 „	Gold Yen	391

NOTICE TO MARINERS.

No. 67.

China Sea.

NINGPO DISTRICT.

Rock to the Eastward of Pootoo Island.

NOTICE is hereby given that Captain PETERSEN, of C. M. S. N. Co.'s Steamer "*Ho-chung*," has reported a Rock, unmarked on the Charts, to the Eastward of Pootoo Island, and he gives the following magnetic bearings as determining its position:—

West Nine Pin Rock.....N. 33° E.
Half Tide Rock .....N. 12° E.
N. W. Point of Isthmus Island...N. 14° W.
Northern end of Pootoo E. Bluff..N. 49° W.

The Harbor-Master at Ningpo has verified the position of this pinnacle rock, and reported that there will probably be only 6 feet of water on it at low water spring tides, with from 7 to 13 fathoms round it.

See Admiralty Charts Nos. 1,199 and 1,969.

W. & C. SCOTT & SON.

FIRST PRIZE MEDAL and DIPLOMA OF HONOUR awarded, CENTENNIAL EXHIBITION, Philadelphia, 1876. For excellence of Materials and Workmanship in their PREMIER QUALITY and medium grades. Their New PATENT TRIPLEX action and COMPENSATING LUMP.

CHOKE BORES ON GAME.

WE have received numerous letters testifying to the excellence of our Guns. The following are a few extracts.

The W. & C. SCOTT & SON No. 10 choke bore "is all its name implies." I have killed stone dead grouse flying at 92 yards, and at 50 and 60 yards it will kill every time. At duck shooting it is perfection.
Brainherd, Minnesota. T. P. C.

I have just returned from North Carolina (Currituck Sound). I cannot say too much in praise of my choke bore. I have killed ducks at 60 yards, dropping dead out of the bunches at that distance. I consider I have an extraordinary gun, and deem it my duty to speak in the highest praise of guns of your manufacture. Wishing you all the success you deserve.
Red Bank, N.J., 1877. G. A. W.

From Captain BOGARDUS, Champion Shot of the World.—The Breech-loader you furnished me with is the best *proportioned* and most *effective* gun I ever owned or used. Its shooting is perfect, and I have won every contest since receiving it including my late English matches. I fully recommend the Scott as the gun.

I have carried guns of your make from Nova Scotia to Florida, and from the Adirondacks to the Pacific, and find them all I could wish for.
Cazenova, N.Y. L. W. L.

The guns for myself and friends have safely arrived. I have now great pleasure in acquainting you that I am extremely glad in possessing them. I have tried them and they give me great satisfaction. My friends are also very pleased too.
Yedo, Japan, March, 1876. V. E. B.

I have just received the Two fine guns ordered for me by Mr. B. F. Stevens, London, and desire to express my entire satisfaction of them. Such fine weapons which while they do credit to a reputation already so well known as to need no establishing, deserve from me some expression of my appreciation of the manner you carried out my wishes. A more substantial evidence of my estimation of the gun is to be seen in the fact that I have this day directed Mr. Stevens to order another for me.
G. R. W.
Paymaster U. S. Navy.
United States Flag Ship *Omaha*.
Callao, Peru, 14th June, 1877.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omisson to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

Notes of the Week.

Her Majesty's Minister, Sir Harry Parkes, left in H. M. S *Modeste* this morning for a trip to Hakodate and Niigata When Sir Harry boarded the *Modeste*, salutes were fired by that vessel and by the Russian flag-ship *Boyan*, while the band of the U. S. flag-ship *Tennessee* played the British national anthem as the corvette steamed slowly out of the harbour. Sir Harry will be absent about a month.

It is doubtful if the world will ever know any more about the causes which led to the outbreak of the recent rebellion, which has been so disastrous to the country, and which has resulted in the untimely death of many brave and noble, if mistaken, men, than can be learned from the published confession of Oyama Tsunayoshi, the late Governor of Kagoshima. It is quite clear that he was guilty of great treachery to his Government, and it is not too much to believe that had he arranged a meeting between Kawamura and Saigo, when the former came to Kagoshima with the intention of seeking an interview, some pacific arrangement might have been entered into and all the miserable waste of life and property and sorely needed money have been spared. There can be no doubt that Saigo believed that a plot existed to assassinate him, and the prominent members of the Private School. The mission of Nakahara and his associates has never been explained, and over this portion of the sad history, a veil of mystery hangs, which in all probability it is better not to attempt to lift. Oyama was a man who had rendered considerable service to the cause of the Emperor, having been commander of the Imperial troops in Oshiu, in the war which led to the overthrow of the *Bakufu*. He was a man of dauntless personal courage, and for his meritorious services he had been rewarded by a pension of 800 *koku*. For the part which he has taken in the late rebellion—and by his confession it would seem that he has played no unimportant part—he has paid with his head. The sword was swift to fall, as he was beheaded within two hours after his sentence had been pronounced. Full allowance must be made for the difficult part the Government has had to play, and the natural desire to make an example of one who has done so much toward bringing on the recent deadly strife, but we cannot think that by his death the Government has gained any additional strength. While we hardly wonder at his fate, we cannot but believe that the Government would have risked no loss of respect either at home or abroad had it exercised clemency toward a man who, however misguided his late actions may appear, at one time rendered signal services to the Imperial cause. Ill weeds often spring from the graves of men who are executed for political offences.

There is a very wide spread and sincere feeling of grief among the staunchest upholders of the Government at the death of Saigo and the brave men who died with him. And this feeling finds its expression among those who have so lately been his opponents, and who successfully crushed him and his followers. In speaking to an officer of the Imperial army, it was touching to hear of the universal regret that existed throughout the army at the sad fortune of war which had deprived the country of many of its best and noblest soldiers. These regrets are the more keenly felt, inasmuch as the men whose lives, as a Japanese writer says passed away with the morning mists on the heights of Shinohara" were the very men to whom the Emperor owes his restoration, and the Government its existence. The Government has successfully destroyed its enemies, but at the cost of depriving the Emperor of many a true and loyal friend.

The *Hochi Shimbun* states that in a recent engagement between the Imperialists and insurgents near Nobeoka, a Captain and a Sergeant were captured by the latter. Believing that all was over with them, they asked that, as a favour before they died, they might be permitted to have an interview with Saigo. Permission was accorded, and Saigo asked the Imperialist Captain what he had to say. He replied "I have come in obedience to the Emperor's orders to inflict chastisement upon you." The rebel General, who it appears had known the man in former times, laughed and said "I see you are as ever an honest *samurai*." At this moment the attendants brought in Saigo's luncheon, when he at once ordered that refreshments should be served to the prisoners saying that it was probably the last time they should ever eat together. The officer refused saying that he would never eat with a rebel, but commenced to eat some food that he had with him. Saigo then asked him if Kido was really dead, and was told that he was. He then inquired what had become of the Emperor and was informed that His Majesty had returned from Kiyoto to Tôkiô. After reflecting for some time Saigo said "There is one thing that I should like to say to the Emperor before I die, "and his face became very sorrowful; "It is sad to think that Kido should die, while I, a far older man, should still be living. I have been intending to put an end to myself, and thus relieve the mind of the Emperor, for my followers are all young men, and refuse to listen to my advice. Thus has the war lasted until the present time. We

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

are so nearly exhausted that we cannot turn the tide of war by taking the lives of men like yourself. You are at liberty therefore to return at once to your camp." Kirino then came in and gave them the passes necessary for their safe conduct.

From the San Francisco papers received by the last mail we learn of the illness and death of the head of the Mormon Church and its peculiar institutions, Brigham Young. On the 23rd August, says a telegram to the *Bulletin*, he was siezed with violent choleraic symptoms after eating heartily of green corn. The attack was continued during the following Thursday and Friday. He slightly rallied, but on Saturday inflammation set in and he died on the following Tuesday. His funeral was announced for the Sunday after his death. His death appears to have caused profound and sincere grief to the most devoted Mormons, upon the doors of whose places of business crape was tied in mark of respect. Many Gentiles and unbelievers look upon his death as likely to break up the whole system of Mormonism, but the New York papers think that though dissensions may take place in the church, and disputes arise as to who shall succeed to the leadership, it seems probable that the Twelve Apostles, of whom John Taylor is the leader, will assume temporary control of the Saints. It was Brigham Young's request that one of his children, either Brigham Young, Jr. or John W. Young should succeed him. A latter despatch states that a meeting of the Apostles was held on the 5th September. Daniel H. Wells and John W. Young, counsellors to Brigham, were present to take, steps for the future management of the Mormon Church. It was arranged that if the counsellors were willing, a quorum of Apostles should assume the control. The meeting was perfectly amicable and it is supposed that the arrangement will be satisfactory to true Mormons generally. The virtual head of the Mormon Church is John Taylor, the first of the Apostles. A Committee has been appointed to manage financial matters until October 6th, when the semi-annual church conference will be held and trustees elected. Two of the twelve apostles who are at present in England supervising the publication of the book of Mormon in that country, have been summoned to return at once. It is stated that the Mormon dissenters at Polo, Illnois, who have chosen for their leader a son of Joe Smith, the founder of Mormonism, and who have always refused to acknowledge the divine authority of Brigham, claim that the Prophet's death was suicidal.

Brigham Young the deceased Prophet was seventy six years of age at the time of his death, having been born in 1801 at Whittingham in Vermont, New England. His father was a farmer in humble circumstances, and his son received little or no education. Brigham commenced life as a painter and glazier, and in 1832 joined the then small sect of the Mormons. He quickly rose to eminence and became one of the twelve Apostles, going in 1835 on a tour in search of proselytes to the new religion. He was remarkably zealous and successful, and received increased honours, accompanying the Saints who had increased to several thousands, in their exodus from their original settlement in Kirkland, Ohio, to Jackson County Missouri, then considered a point in the Far West whence they were not likely to be driven by advancing civilization. As the Saints increased in numbers they became aggressive and anxious to extend their territory, and hence arose those difficulties between them and the settlers which caused the former to retreat to Nauvoo in Illinois. In 1844, Joseph Smith the original Prophet and founder of the Mormon Church died and Brigham Young was elected to the position of "Prophet, Seer and Revelator." Troubles occurring at Nauvoo, Brigham Young announced that Providence had revealed to him that Salt Lake was to be the Promised Land of the Saints. Here therefore they made their way across hundreds of miles of frightful desert, harrassed by all the trials that hunger, thirst and hostile savages could inflict. Their journey was a terrible one and their passage was marked by the bones of the dead. In 1847 the foundations of Salt Lake City were laid. In 1847, a State Government was organized under the direction of Young, and application made to Washington for admission to the Union under the title of the State of Deseret. Congress refused the request, but when the Territory of Utah was organized in 1860 Young was appointed Governor for four years. In 1854, on the appointment of a Governor who was not a Mormon, Young refused any longer to acknowledge the authority of the Federal Government. A military force of 2,500 men was despatched to Salt Lake to coerce him into obedience, but the fact and ability of Young baffled all attempts at control. In 1858, a compromise was effected, and it was agreed that the Federal Government should be respected, and Young retain his power as President and Ruler of the Mormon Church. On the 8th of April last, he was 're-elected Prophet, Seer and Revelator of the Church of Jesus Christ of Latter Day Saints in all the World, at the conference of the Mormon Church in Southern Utah. A recent writer in one of the New York journals thus describes the head of the Mormon hierarchy.

"He is six feet high, and uncommonly compact and well-muscled. He measures forty-four inches around the chest, and such is his breadth in mid-person that strangers who see him for the first time in his short, gray business coat, imagine him a rather "stumpy" man several inches shorter than he is. His head is of moderate size, with strong development of the basic and posterior regions of the cranium, and it is by no means lacking in anterior breadth. His hair is chestnut if not colored, abundant in growth, and combed in a pedantic style into a foretop to the right side, with somewhat of the lop of a rooster's comb. As regards his marital arrangements, the same writer says: He has nineteen wives; fifteen of these are his own for time and eternity; the other four are proxy wives, being widows of Joseph Smith. The children of their union with Brigham are credited to Joseph Smith, and go to swell his kingdom. All plural wives are known by their maiden names, to distinguish one from the other. The following is a correct list of Brigham's wives, in the order of their marriages: Mary Ann Angel, Lucy Decker, Emeline Free, Lucy Biglow, Zina D, Huntington, Susan Snivly, Margaret Pierce, Mrs. Twiss Emily Partridge, Martha Boker, Eliza Burgess, Eliza R. Snow, Harriet Barney, Amelia Folsom, Mary Van Cott and Ann Eliza Webb, the nineteenth and last. Brigham Young has forty-five living children the most of whom are grown and married. There are twenty-nine girls and sixteen boys in his family. Seven of Brigham's daughters taste the sweets of plural marriages. Two of the seven call Hiram B. Clawson husband; two are allied to George Thatcher, and two to Mark Croxall; the seventh is the second mate of Thomas Williams. Amelia Folsom is the only wife Brigham lives with at present. He has forsaken all for her. Upon this favorite wife is lavished all the care and attention the most devoted monogamist could possibly bestow upon his companion. In the president's household they have what is called ration day." Once a month each family receives five pounds of sugar, one pound of candles, a bar of soap, and a box of matches. The rule with all the Prophet's wives—except the favorite—is that all food beyond the plainest fare, and clothing except what nature demands for the protection of the person, the wife is expected to provide for herself and children.

In the mean time, as may well be imagined, the death of its leader has been the inauguration of a series of disputes, intrigues and dissenting movements in the Mormon Church. Although Taylor is the chief of the Apostles his chances for the leadership do not appear to be very good as he is "a slow and stubborn fanatic;" while Brigham's son John, called familiarly "Apostate Johnny," seems to lack that sanctity of character befitting his position, as it is stated that if there is to be any contest for the successorship "he could be seduced from it by the blandishments of a woman or delayed to admire the fine points of a horse." Assuredly most undesirable weaknesses in an Apostle or Chief Priest. It is therefore thought that "George Q. Cannon, the smooth, oily, shrewd delegate in Congress, undoubtedly stands the best show, because he is not only unobjectionable to the masses personally,"—we presume the writer means the feminine portion who are to be sealed to him,—"but because of his ability to figure and manipulate an election;" evidently a most necessary element in the training of a saint elect. It is very edifying to learn that on the day of the Prophet's funeral but little change was witnessed in the business portions of the city, and no more demonstrations of grief made than on the occasion of the death "of any other prominent business man." Every effort was made to bring to the city an immense crowd on the occasion of the funeral, railroad fares being reduced so as to afford opportunity to the poorest saint to attend the ceremony. On the occasion of the funeral the Tabernacle was draped and profusely decorated with flowers, the body being placed on an elevated platform. The hymns were sung by the Tabernacle choir of two hundred and fifty picked voices, and special prayers were offered, in the course of which Apostle Franklin D. Richards took occasion to thank God "that when He took Joseph Smith, He gave the Saints for a leader Brigham Young, one of the noblest and

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

purest of the royal family of Heaven" which will be to most people an entirely new revelation of regality. Thousands were unable to obtain admission and altogether the Saints may be congratulated on having made the funeral as great a success as they desired.

The *San Francisco Bulletin*, from which most of the above facts are gleaned, has the following remarks on the death of the Prophet and its probable effect on the future of Mormonism :—

"The history of Brigham Young is the history of Mormonism. He made the Church a living and powerful community. By introducing terror and superstition, by adopting the arts of modern civilisation and the devices of mediæval tyranny, he succeeded in establishing a compact, self-supporting, bigoted and loyal community. As head of that band of assassins called the Danites, he is credited with mercilessly removing all suspected persons from his path. Treason against the Church he made a capital crime. Young introduced the doctrine and practice of polygamy, and employed it to strengthen his hold upon his fanatical followers. Through his missionaries he invited immigration from all parts of the earth, and by enforcing frugality and inculcating industry and perseverance he carved a paradise out of the desert, and instituted a distinct nationality, with ideas, and faith, and habits, and aspirations, all its own, and which must be pronounced as alien to the principals of republican government.

* * *

If Mormonism should go on increasing as rapidly in the future as it has in the last twenty-five years, it would be the dominant religion of the world in a few centuries. In a social point of view, it may be pronounced one of the most violent reactions that has ever taken place. It has not gone back a century or two, but two or three thousand years. It enlisted in its service the most brutal instincts. It was projected on the lust of man and the weakness of women. To secure the rank of a religion it provided itself with a sacred Book. All religions have inspired volumes. The Bhuddists have their Vedas, the Mohammedans the Koran, and Christians the Bible. So the Mormons have the Book of Mormon, said to have been found on a holy mountain, and to have been inscribed on plates of gold.

But the contrivance was not as clever as it might have been. The volume from a literary point of view, is beneath criticism If anything, it is a parody on the Bible, badly executed. It would perhaps be unfair to say it contained nothing of value in a moral point of view. Smith was more of a fanatic than an imposter. There are consequently many devout and religious sentiments in it. But though a certain amount of historical shrewdness and not a little knowledge of human nature were manifested in the establishment of this strange *cultus*, two points were left unguarded, which cannot fail to work its speedy overthrow. No provision was made for the succession. The caliphs followed in a long line from Mahomet, ever increasing in power and magnificance. Mormonism, because of this defect, is bound to go on splitting into fragments, until nothing is left of it. During the life-time of Brigham Young there was a claimant in the person of the son of Joseph Smith, the real founder of the creed. Now three or four factions, each demanding the supremacy, are becoming distinctly visible.

If the Mormons were relieved of the outside control of the General Government the regular outcome under these circumstances would be a civil war in which one aspirant would gain the victory, and having extirpated his rivals, would found a ruling house. But nothing of the kind is possible for the Mormons. The General Government will allow no internecine strife either in Salt Lake or anywhere else. The second error was in locating in the midst of a powerful and strongly antagonistic people. But when the valley of Salt Lake was reached the wildest fancy would never have dreamed that in a few years thereafter the great republic would extend from ocean to ocean, enveloping the nascent religion in its almost miraculous growth.

On the discovery of gold in California the Mormons should have moved to some island or group of islands in the Pacific. There they would have had a chance to grow up unmolested; to develope a commerce and consolidate their strength. There is reason to believe that the heads of the Mormon Church have for a long time been casting about for some escape from the geographical trap into which they have fallen. Rumor had it that at one time they had their eyes turned toward the Sandwich Islands; at another to Northern Mexico, but nothing ever came of it. Perhaps the dead prophet could not bring himself to part with the rich possessions which he had acquired in the centre of the Continent. His religious enthusiasm was restrained by his avarice. But all the questions which he left unsettled must now seek an immediate solution.

We commence in to-day's issue, to be concluded in our next number, the publication of the report on Japanese Finance by Mr. Mounsey, Secretary to the British Legation at Yedo, which has appeared in a Blue Book. Mr. Mounsey has thoroughly investigated the condition of the Finances of the country, and his Report is the most complete that has appeared. Indeed, as he himself says, no one has ever before attempted to present the facts of Japanese Finance as they actually exist. It will possess especial value for all who have dealings with this country, showing, as it does in detail, the methods of taxation, the particulars of expenditure, the amount of the public debt, and general position and prospects of the national income. We now merely call attention to it, as we intend shortly to notice it at length.

While Tôkiô is suffering nightly from the depredations of armed marauders, Yokohama is at present the happy hunting ground of petty thieves. We are speaking of the native town. On many of the side streets, in fact any where off the line of gas lit and much frequented thoroughfares, have these rogues inaugurated a reign of terror. An old woman, trudging home with her little bundle and lantern, is tripped up and robbed of whatever she may be carrying, some of her outer garments also probably being snatched off. A child going for a pot of *saké* is waylaid and made to give up the few cents it may have. So bad has it become in some parts, that women and children are afraid to move out after nightfall. But the most elaborate piece of petty swindling that we have heard of for many a day was told us recently by a Japanese friend. A well dressed Japanese took up his quarters at a tea-house in Kanagawa a few days ago, giving out that he was a road contractor and that he had obtained the contract to repair the roads near the railway station, and therefore required a number of coolies to work upon them. As it was known that these roads were to be mended and the rate of pay promised was good, thirty five cents a day, there was no lack of applications from all parts. About sixty men were engaged and told to present themselves at the tea-house at daylight on a certain morning. This they did, and the worthy contractor than ordered them to proceed to the Railway Station there to wait until he should come and set them to work. He likewise promised them each a *shirushi-banten* (working coat with the contractor's badge marked on the back) and intimated that if those who had any little bundles, or small amounts of money, or changes of clothes, liked to leave them at the tea-house, he would see that they were properly taken care of, and that it would be safer than leaving them at the road side or at any unknown house. As many of the poor fellows had come from a distance, they joyfully accepted this offer and thanked their lucky stars for giving them so thoughtful a master. So leaving all their little belongings behind them, they trustfully went to the appointed place, and patiently waited for the appearance of the contractor. Hours passed in weary waiting and he came not. It was therefore deemed advisable that some of their number should go to the tea-house and respectfully enquire the reason of the delay. To their earnest questions they received answer that the gentleman had left shortly after his workmen, and had gone away in a *jinrikisha* with a large bundle. "And the clothes?" "He had taken everything away with him." And so it was. The dastardly scoundrel had bolted with all the poor wretches' clothes, and left them half naked, penniless and hungry to find their way home, sadder and wiser men, as best they might. We trust the fellow will be caught and meet with his full deserts. He has, so far, successfully carried out a trick by which he may possibly have made ten or fifteen dollars, and which it must have required many a long hour's deliberation to perfect.

We are authorized to state that the Ladies' Tennis and Croquet Club has made an arrangement with the Cricket Club, by which they obtain the use of the Cricket Ground for Tennis on Mondays, Wednesdays and Fridays during the three remaining months of the year. Play will commence on the ground for the first time on Wednesday next, the 10th instant.

We are glad to be able to state that the cases of cholera for the past day or two have shown a marked decrease in Yokohama. The following is the latest official return of the progress of the disease in the Kanagawa *ken* :—

October 5.

New Cases.....	21	16 male, ...	15 Yokohama,
		5 female ...	6 elsewhere.
Died	11	7 male, ...	10 Yokohama,
		4 female ...	1 elsewhere.
Recovered.....	7	4 male, ...	6 Yokohama,
		3 female ...	1 elsewhere.

The total number of cases up to the present time have been 574, of which 233 died, 181 recovered and 160 remain under treatment. Unfortunately, while there are signs of decrease in Yokohama, the disease appears to be extending through the country. So far it seems to follow the sea line, and makes itself most felt in many of the coast low-lying districts, where influences are most favourable to its develop-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

ment. Still there is every ground for hope that we shall be spared any more serious cause for alarm than we have already experienced. In the settlement the excellent measures that have been carried out and the excessive sanitary precautions taken cannot but be productive of the best effect. It is all very well for some of us to indulge in nervous laughter over the immense expenditure of chloride of lime, and carbolic acid, and other disinfectants, with which the whole air of the settlement and bluff is redolent, but the community can afford to be laughed at for exercising common sense, and for taking sound measures for prevention instead of trusting to the doubtful chances of a cure.

Shooting licences will be issued to applicants by the *Kencho* about the middle of next week. The season extends from the 15th October to the 15th April inclusive, and the fee for a licence is the same as it was last season, viz, ten *yen*. A personal application at the *Kencho* is requisite for those who desire to obtain a licence, as the covenant required by the authorities has to be signed.

Admiral Semmes, the famous commander of the Confederate cruiser *Alabama*, whose acts during the American civil war led to difficulties between England and the United States which were only settled by the Geneva Conference died at Point Clear, Alabama, on the 30th August.

Owing to the great amount of other matter which must find a place in this week's issue, the concluding portion of "Another Chapter of Japanese History," commenced in our last number, must stand over until next Saturday.

From the "Japan Mail Daily Advertiser."

Monday, 1st.

From 12 p.m. on Saturday, the 29th instant, to 12 p.m. on Sunday, thirteen deaths occurred from cholera in Yokohama, and eight deaths in other localities in Kanagawa *ken*.

The O. S. S. steamer *Ulysses* left Singapore for Hongkong on the 20th instant. She brings the passengers of the *Agamemnon* and *Anchises*.

The Imperial Prince was named Yukihito on Saturday last, but he will more commonly be called Také-no-Miya, as he was born in the palace of Také.

From the *Chôya Shimbun*.

Amongst the various reports as to the way in which Saigo came by his death is the following:—On the defeat of the rebels at Shiroyama, their commander attempted to make his escape in a *kago* with a body guard of ten men, but they were soon surrounded by the Imperial troops so that flight was impossible. Upon this Saigo committed suicide, and his guards cut off his head and hid it, but the Imperialists soon after discovered it.

From the *Akébono Shimbun*.

It is reported that all the large entrance gates of the Tôkiô castle which still remain standing will be shortly removed.

From the *Nichi Nichi Shimbun*.

In all 62 cases of cholera have been reported to the Tôkiô *Fu* as having occurred from the 18th to the 27th instant, 17 of which cases have proved fatal.

The amount that the *Okurasho* has spent on the present war from its commencement to the 24th instant, is over 37,153,454 *yen*.

From the *Chôya Shimbun*.

Preparations are being made to render the castle moats from Shiwodome at Shinbashi to Tameike (near the *Kobusho*) passable for boats.

From the *Hôchi Shimbun*.

Police sergeant Matsuyama will be sent to Kôchi *ken* with fifty policemen.

The Government has notified to the Departments of the Navy and Army, and Bureaus of Police and History, that they are to make known the names and particulars of all those who fell in the cause of the Government at the time of the Restoration, and in all the subsequent engagements that have since taken place.

Tuesday, 2nd.

The M. M. Co.'s steamer *Tibre*, with French Mails on board to the 26th August, will leave Hongkong to-day at noon.

The U. S. S. *Tennessee*, from Hakodate, arrived in the Bay during the night, and has anchored a few miles outside the lightship.

The M. B. Co.'s steamer *Atago Maru* arrived in port yesterday at noon. She left Uwajima, a port in Kochi *ken* on the Bungo channel, with a body of 1,200 men, part of the Tôkiô police force which was stationed in Shikoku, and after calling at Kobe proceeded to Shinagawa where she landed the men.

From an eye-witness we have obtained some particulars of the battle fought on the 24th ultimo against the rebels at Kagoshima, which resulted in their total defeat.

The Imperial forces, numbering some 15,000 men, made a simultaneous attack on their opponents, and capturing some of their batteries, turned the guns on the rebels, who, thus taken between a cross fire were almost annihilated, and although fighting against overwhelming odds made a desperate but unavailing resistance before they finally succumbed. The day after the engagement the dead were brought in from the battle field for identification, and then it was that the bodies of Kirino, Beppu and Hemmi were recognized, as they were laid out side by side near a large trench which had been dug for the reception of the fallen. Kirino's body bore evidence of his personal share in the bloody encounter of the previous day, as it was covered with wounds, his death having apparently been caused by a dreadful wound on the right temple from the fragment of a shell. The bodies of the other rebel leaders were likewise covered with wounds. Close to the body of Kirino lay the headless trunk of a tall well-formed man, with a bullet wound near the heart and a sword stab in the stomach. The clear white skin indicated that the body was that of a *samurai*, though it was clothed in the garb of a labourer or coolie. While some discussion was taking place among the officers of the Imperial Army as to whether the body was that of Saigo or not, some soldiers came in carrying a head, which fitted this trunk. The face showed signs of having been recently shaved, and the eyes were bound with a red cloth. Many were inclined to think that the head and trunk were those of Saigo, but still some doubt was expressed by those who knew that the rebel leader was in the habit of adopting many disguises, and that on several occasions during the war he had been personated by others.

Few rebels escaped from the sanguinary engagement of the 24th. About 125 prisoners were taken, the most of whom were badly wounded.

The *Akébono Shimbun* says that a telegram has been received from the Special Court at Nagasaki, announcing that Oyama Tsunayoshi, the late Governor of Kagoshima *ken*, was on the 29th ultimo at 6 a.m. sentenced to decapitation, and we have since heard that the sentence was immediately carried out.

From the *Nichi Nichi Shimbun*.

The troops now in Kagoshima *ken* will first be returned by the Government transports to Kobe, whence they will be forwarded to their respective destinations either by land or by sea.

From the *Hôchi Shimbun*.

A telegram has been received announcing that H.I.H. Arisugawa-no-Miya, having now completed his duties, will, after paying a visit to the Special Court at Nagasaki, and staying for a time at Osaka, shortly return to the capital.

The insurrection having been suppressed, all the troops and police will be withdrawn from Kiushiu, but in order to garrison the Kagoshima *ken*, three regiments of infantry and two thousand five hundred policemen will be sent down for that special duty.

H. I. H. Arisugawa-no-Miya, the Commander-in-Chief of the Imperial Army, has notified the Governor of Kagoshima *ken* to the following effect:—

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

"It has already been made known, that all those who through thoughtlessness joined the rebel cause and resisted the Imperial authority, but who, on repenting of their actions, had given themselves up to the Imperialists and confessed their crimes, were either to be treated with clemency or acquitted altogether. Now it appears that some of the rebels who had concealed themselves, have given in their submission on seeing that they could no longer elude detection. You are hereby authorized to make known throughout the *ken*, that those rebels who fail to make their submission or or before the 30th September, will be treated with the utmost rigour of the law."

Wednesday, 3rd.

THE REGATTA.

The Yokohama Amateur Rowing Club were most fortunate in the weather yesterday for their Autumn regatta, which was more favourable than can generally be expected for aquatics at this port. We are pleased at being able to congratulate the Club on a marked improvement as regards punctuality, as on this occasion there was only a delay of three-quarters of an hour in starting the first event, the interport race for Canton fours. This was, of course, the race of the day, and was more especially interesting as being the first time that Tôkiô has figured as a "port." A good start was effected, Tôkiô getting a decided advantage, the rival boat obtaining a lead of nearly a couple of lengths. The Tôkiô crew were rowing 37 strokes a minute from the start, which rate they maintained over half the course, and then fell to 36, whereas the Yokohama crew kept steadily to 33 strokes throughout. When the Yokohama crew had settled down to work it became apparent what the result of the race would be. Shortly after passing the P. M. Co.'s wharf they put on a spurt and at once lessened the distance between themselves and their opponents. Without distressing themselves they drew level off the French hatoba, and shortly afterwards passed the Tôkiô boat, and with a final spurt to show what they could do if necessary, finished easy winners by two lengths. Stroke is by far the best oar among a crew who all row well. The style of No. 3 might be improved with great advantage; if he does well as it is, he might do better if be tried. Bow and No. 3 were the best men in the Tôkiô boat. The stroke was evidently not in such good condition as he ought to have been. The distance was a full nautical mile, and the race was rowed in 7 mins. 41 secs.

YOKOHAMA.

	st.	lbs.	
Bow.—A. Milsom	11	3

Cox.—G, Bachelder	8	10	

The crews were nearly equal as regards weight, Tôkiô having a slight advantage. Judging from what has been effected by the Tôkiô Club during the short time it has been in existence, we expect they will put forward a crew next spring which will make the task of Yokohama more difficult of repetition.

The pair-oared race between Yokohama and Tôkiô had to be given up owing to the collapse of the Tôkiô stroke, so that a scratch race for double sculls was got up instead.

DOUBLE SCULLS.

C. P. Hall, 1 J. J. Dare, stroke A. H. C. Haselwood, cox.	2

The start was from the P. M. Co.'s wharf, and almost immediately Hamilton took such a lead that he had the race entirely his own way and won easily by several lengths. Time 6 mins., 11½ secs.

From the *Chôya Shimbun.*

The *Kencho* of Kôchi has notified that whenever any persons under that *ken*, whether *samurai* or *heimin*, are discovered in possession of firearms, swords or other arms, the same should at once be made known to the authorities.

From the *Mainichi Shimbun.*

The Branch War Office at Osaka sent one million *yen* to Kagoshima on the 25th ultimo.

From the *Osaka Nippô.*

All the troops returning from Kagoshima will land at Shinagawa instead of at this port as it was expected.

Thursday, 4th.

Admiral Patterson, U.S.N,, arrived by the *City of Peking* yesterday, and hoisted his flag on board the *Tennessee* during the afternoon, under a salute from that vessel and the Russian flag-ship *Boyan.*

From the *Nichi Nichi Shimbun.*

Our reporter at Kiôto informs us by a telegram, despatched at 1 p.m. on the 2nd instant, that a collision occured between a special train proceeding from Kobe and an ordinary train running from Kiôto, and that the boilers exploded, wounding and killing many.

Police Inspector Hagiwara, who was in Bungo, has returned as far as Shimonoseki with eight hundred policemen, and will proceed to Tôkiô at the earliest convenience.

From the *Osaka Nippo.*

The Kumamoto garrison hitherto consisted of six regiments, but hereafter the force will be increased to the extent of nine regiments.

A branch of the Kumamoto garrison will be established at Kagoshima so soon as the troops now occupying the *ken* withdraw.

Of the sixty-five officers who belonged to the Imperial Guards at the commencement of the war there are now only three fit for duty, the rest having been killed or disabled by wounds.

From 21st to the 26th ultimo, eleven persons in all died of cholera at Osaka.

Friday, 5th.

By the *Tokio Maru* yesterday Generals Nodzu, Yamada and Oyama returned from the South, and proceeded to Tôkiô during the afternoon.

Major-General Saigo and forty other officers of the Imperial Army, are to be entertained to-day by the Department of the Imperial Household at a banquet at Hamagoten.

H. M. S. *Thistle* arrived safely at Ningpo on the 21st September.

From the *Chôya Shimbun.*

The number of officials on night duty at the Tôkiô *Fucho* had been increased from three to seven, owing to the prevalence of cholera in the city.

From the *Nichi Nichi Shimbun.*

H. I. H. Arisugawa no Miya will return to Tôkiô on the 6th. His Highness arrived at Kiôto from the South on the 3rd instant.

A building is to be erected for the accommodation of the *Okurasho* at a cost of 18,000 *yen.*

From the *Akébono Shimbun.*

Thirteen cases of cholera were reported to the various police stations at Tôkiô as having occurred on the 3rd instant, of which nine proved fatal.

Saturday, 6th.

Mr. K. A. Burnell, who is well known in America as an Evangelical preacher, arrived here from San Francisco by the *City of Peking*, and purposes holding a series of special religious services during next week, full particulars of which appear in our advertising columns.

A Cricket match was played yesterday which was supposed to be a return game of "Tall *vs.* Short," but partook more of

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

the nature of a scratch match. The "Short" could make no effective stand against their opponents, and only scored 59, a total which was beaten by "Tall" with only three wickets down.

From the *Chôya Shimbun.*

A telegram despatched from Kobe on the 4th instant, announces that about five thousand men among the troops are now suffering from cholera. Medical men were immediately sent down by the War, Educational and Imperial Household Departments, who had to proceed overland as there was no steamer leaving on that day.

[This statement is hardly credible.—ED. *J.M.D.A.*]

Four regiments of infantry will be left to guard the town of Kagoshima, under the command of Lieut.-General Tani.

As a garrison is to be stationed at Nobeoka in Hiuga, fifty-four carpenter have been sent from Osaka to construct barracks.

From the *Nichi Nichi Shimbun.*

Iwamura, the Governer of Kagoshima *ken*, has requested the Central Government to send down the remainder of the fifty thousand *koku* of rice, so that it may be paid to the *shizoku* in lieu of pensions.

The residence of Tokugawa Iyemichi at Akasaka, Tôkiô, is about to be purchased by the Department of the Imperial Household for twenty thousand *yen*, in order to serve as a residence for the recently born Prince Take-no-Miya.

From the *Hôchi Shimbun.*

After the return of H. I. H. Arisugawa-no-Miya and troops from the seat of war, a special service in commemoration of the success of the Imperial arms will be held at Yetchiu-jima, near Tsukiji, at which H. M. the Mikado will be present.

STUART ELDRIDGE, M.D.
Surgeon-in-charge.

A memorial from the Governor of Yunnan, in the *Gazette* of the 1st September, is curiously suggestive of the squeezing that may occur in China, during disturbed times. General Yang Yuh-ko, late commanding the province of Yunnan, has not only foregone a debt of Tls. 400,000 due to him by Government for pay of troops, at the close of the insurrection, but has founded and liberally endowed a college in Tali-fu, before retiring into private life. It can hardly be supposed that he had really disbursed Tls. 400,000 out of his private means, and has surrendered the claim to repayment. The inference, then, is that this represents the margin beyond which it was injudicious to press his claim for pay for troops supposed to be under his banner, and that he has succeeded in amassing a sufficient fortune without this sum.—*S. C. & C. Gazette.*

HEALTH-HUNTING ABOUT YOKOHAMA.

IT may be that a sound body is not absolutely essential to soundness of mind, but there can be no doubt that our pleasure in life depends in a very large measure upon the degree of health we may enjoy, and that man's capacity for brainwork even, so far at all events as quantity is concerned, is in direct proportion to the vigour of his physical organization. In a community such as ours there can be but few idlers; we are almost all workers, and since the multiplication of mails and the establishment of telegraphic communication with Europe and China that latter years have witnessed,—tolerably hard workers. The hours of business here are as long as—if not longer than—in London, and we have far fewer holidays than our more fortunate countrymen whose happy destiny keeps them within the four seas. In addition, a large section of the community have much greater responsibilities cast upon them than would be incurred in the routine of business in England, and difficulties have often to be faced and surmounted without the possibility of recourse to such aid and counsel as would commonly be at hand, or not far distant, in an English commercial centre. The monotony of existence, too, is extreme; the political and social changes that are taking place around us necessarily awake but a feeble interest in the major part of the community, while only far off echoes of the great events that are convulsing Europe reach us, and we can but now and then catch a faint footfall of the immense march of intellect and civilization—onwards, we may be sure, on the whole, though to an unknown and sometimes half-dreaded goal—so specially characteristic of the present century. The distractions of society increase rather than lessen its dullness. We move in an eternal circle of similar dinners, where a constant succession of similar dishes destroys the palate, while the everlasting outpour of similar talk interlarded with more than twice told jokes and stories, blunts the intellect with wearisome repetition. In public and private we see the same faces day after day, until beauty itself loses somewhat of its charm, and even official dignity declines towards the commonplace of ordinary men. In our theatre the same actors act and re-act the same pieces, and the same lyres are twanged by the same kindly artists in the ears of unchanged audiences. So runs our life from year to year, and every year is duller than the last, until at length we find ourselves metamorphosed into a callous race almost denuded of nationality by the waves of eventless time, and lulled into intellectual sleep by the absence of all healthy stimulus to mental exertion. Of course, the community is in no way responsible for this state of things; it is the sufferer by, not the creator of a monotony due almost entirely to the necessary isolation from the political, literary and social movement of Europe, in which we live.

Against the depression caused by this lethargic invariability, and the lowering of mental and bodily vigour and tone induced by it, and by the worry specially incidental to existence under the conditions of life in Japan, we seem to possess but one remedy—change of air and scene: and the sensible remarks of Dr. Burney Yeo, in an instructive and interesting article in the last *Fortnightly Review* upon the advantages of such a change, we cannot too strongly recommend to the attention of our readers. We can only regret that no such resorts as those which he describes in glowing colours are within our reach, but although we

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

cannot breathe the pure keen air of Engadine valleys or inhale the invigorating breezes that blow across Blankenberghe beaches, there are hills and shores within attainable distance that offer similar, if not equal, benefits to those who are jaded by the worry or wearied by the monotony of life in the East. We have, we may be sure, a choice of many places where a renewal of health and vigour might be sought with a fair chance of being found, but except to a few of the more adventurous among us, these remain for the most part unknown. It is a pity that visitors to unfrequented localities are so chary of imparting their experiences to the public, and we shall gladly open our columns to the reception of any notes of travel we may be favoured with. On the opposite coast, and between Uraga and Yenoshima, there are doubtless many pleasant seaside resorts, and Hakone and Ohoyama are, we may be certain, neither the sole nor the best hill stations where a refuge might be found from the heats of summer. The localities most frequented, too, such as Yenoshima and Hakone, might be turned to much better account than they actually are. The low sand hills that line the shores of the wide bay between Katase and the point where the path leaves the beach for Daibutsu, offer numerous excellent situations for seaside residences open to the south-westerly breezes in the warmer seasons and sheltered from the cold northerly winds of winter. In front the vast expanse of the waters of the Pacific for thousands of miles is hardly broken by an island, and with the beach of pure sand backed by a rampart of low dunes, we have the best possible combination of hygienic conditions, while landwards a succession of wooded glens and valleys includes an unending variety of pretty walks. A more salubrious or charming spot for residence during all but the hottest months of the year can hardly be imagined, and it possesses the additional recommendation of being within easy distance of Yokohama. If anything like united action were possible in the community, it would entail but little difficulty and expense to provide proper accommodation, better in every respect, and in the long run less costly than what is obtainable in the village of Yenoshima. So, too, the lake of Hakone might be made a much pleasanter place of refuge in the summer months, if the proprietors of the principal inns in the village could be induced to remove to the other end of the lake, where the broad open valley of Senkoku-hara would advantageously replace the closed hollow at the bottom of which the present village of Hakone lies, and which is too often nothing less than a trap to catch cloud, mist and rain. As a place of residence, however, the seaside is—in Japan at least, and so far as the requirements of the majority of the foreign community are concerned—preferable to any of the known hill stations, none of which are sufficiently elevated or sufficiently free from mist and rain, to offer any such advantages as are to be found in the Alps, the Jura, the Tyrol or the Pyrenees. The coolness, especially, of the nights in such places as Hakone during the summer heats, is, however, a great temptation. But the most sure way of turning the mountain districts in Japan to good account, is to make them the scene of excursions on foot, and the benefit derived from a trip to the hills will generally be found to be in proportion to the tale of climb peaks and passes recorded in the pedestrian's note-book. The merchant or the professional man, fagged with the multiplicity of daily cares, and unrelieved by any distractions in the monotony of social life, will find the irritation and depression of his nervous system calmed and removed as he surveys the varied aspects that nature presents to him in her wilder moods, toils up the rugged pass or steep mountain slope, hears the murmur of the wind among the forests that clothe the hill sides, or listens to the babble of the noisy stream that gives life to almost every narrow glen. The very physical labour will, if no unwise strain is put upon his energies, become a pleasure rather than a toil, the feeling of vigour engendered by the easy swing of a rapid walk is in the highest degree delightful, and the constant change of place and scene acts as a powerful restorative where bodily or mental tone has become impaired, through functional rather than organic change. To the naturalist, the artist, and the student of Japanese life and manners,—nay, even to learned lexicographers, the holiday is a still more real one, for they may each and all be sure of lighting upon more or fewer interesting novelties in their respective pursuits. We cannot, however, too strongly advise those who seek health and strength among the hills, to burden themselves as little as possible with impedimenta, especially in the shape of provisions. A little experience will soon enable the traveller to select among Japanese dishes what are most suitable to his European palate, and a small store of bacon, American corned beef or German army sausage, with, perhaps, a few biscuits or a piece of cheese, may easily be carried as welcome additions to the ordinary fare of country inns. Mountaineering, as Dr. BURNEY YEO well remarks, most benefits those whose nervous energies require restoration. Where the organic functions are interfered with either through change of tissue or otherwise than by the mere wear and tear of life, the seaside is the best resort. We ought, perhaps, to have prefaced our remarks with this distinction, but as PASCAL says,

"La dernière chose qu'on trouve en faisant un ouvrage
"est de savoir celle qu'il faut mettre la première."

The *Peking Gazette* of the 1st September makes amusing reference to derelictions of duty on the part of the late Acting Governor-General of Yünnan and Kweichow, and of Tso Tsung-tang, the Governor-General of Kansuh. Certain Censors seem to constitute a special Board, at Peking, to secure exact adherence to official routine and name penalties when faults are detected. But the absurdity of making these punishments real, in the case of high officials, seems to have been so self-evident that certain nominal salaries (which are never drawn), and nominal honours (which are conferred only as food for penalties) have been instituted, for the said Board to play with.—Accordingly, if ever Tsen Yuying is re-appointed to office, he is to be docked one year of this salary, for some technical error, and Tso Tsung-tang is degraded one step of honorary rank for some other equally flagrant wrong. And both culprits, we presume, will grunt and smile on receipt of the news, and feel very much as though the formality had been left out.—*S. C. & C. Gazette.*

Our Wuchang correspondent tells us what has been done by the mandarins in consequence of the recent outrage upon certain missionaries in that city. Twenty-nine men seem to have been arrested, of whom eight only cou'd be implicated; and these have since been kept in prison. No sentence of any kind has yet been passed against them; but, as our correspondent suggests, the mere imprisonment in a Chinese gaol is in itself a severe punishment.—*S. C. & C. Gazette.*

The *Foochow Herald* hears that the line of telegraph between Takow and Taiwan-foo is really about to be commenced. The entire *matériel* necessary to its completion has, it believes, been landed. A railway between these two places is also talked of, but there are innumerable difficulties in the way of its accomplishment which tax even the energy of Ting Futai.—*S. C. & C. Gazette.*

SPIRIT OF THE JAPANESE PRESS.

CONFESSION OF OYAMA TSUNAYOSHI, THE LATE GOVERNOR OF KAGOSHIMA.

("*Chôya Shimbun*," *October 2nd, 3rd, and 4th*, 1877.)

"A Mr. Honda Masazane of Nagasaki has forwarded us the following as the confession of Oyama Tsunayoshi, the late Governor of Kagoshima *ken*, and although we cannot guarrantee its credibility we publish it. Oyama's estate produced 136 *koku* per annum, and he was besides in the receipt of a pension of 800 *koku* as a reward for meritorious deeds. He was aged fifty-two years and seven months.

"After leaving Tôkiô for Kagoshima *ken* in December 1877, I reached the latter place on the 27th of that month in company with Hayashi, Junior Vice-Minister of the Home Department. When Hayashi again left Kagoshima I accompanied him as far as the district of Takayama, in the province of Osumi, arriving there on the 18th January, 1877. I parted from Hayashi on the 21st, and commenced my return to Kagoshima the next day, where I arrived on the 25th, and on the 26th resumed my at the *Kencho*. On the morning of the 30th January I received intelligence that on the previous night about thirty disorderly persons had broken into the magazine of the Army Department in the village of Kusamurota, and had seized the powder there. I at once sent Police Sergeant Nakajima Takehiko to investigate the matter with the officers belonging to the magazine. That same night, about 12 o'clock, a *Tai-i* (Captain) named Shinnô Gunpachi came to my house and informed me that about one thousand men had again visited the magazine and carried off more powder, and begged that I would take the matter in hand and send a force to protect the magazine. Shinnô then withdrew, saying that he would further consult with Nakajima Takehiko. I then immediately went to the *Kencho*, and saw on the road much powder being conveyed away by *jinrikisha* or by pack-horses. I sent the officials who were at the *Kencho*, that night, to summon 12 or 13 police sergeants. By this time Nakajima Takehiko arrived, called me into a room where we were alone, and then told me that on account of the discovery of a monstrous plot, the Private School party had taken up arms and were then engaged in carrying away the Government powder. He said that the reason of the outbreak was that Nakahara Hisao, and twenty-one others who were in the service of the Bureau of Police, and who had been in Kagoshima since December, had been discovered plotting to cause dissension among the Private School party, to assassinate Saigo and then call upon the Kumamoto garrison troops and utterly annihilate the members of the Private School. This plot was overheard by a spy while Nakahara Hisao was relating it to an old friend of his named Taniguchi Tôda, and information at once given to the Private School party. When this came to the ears of Kirino Toshiaki and Shinowara Kunitoshi, they immediately went to Takayama, in Osumi, where Saigo was residing, and after repeated consultations they decided to proceed to Tôkiô at the head of the troops formerly under their command. Then Nakajima and the police sergeants present said that it was their duty to arrest Nakahara and the others implicated, and immediately left the *Kencho*. Shortly afterwards the Kirino brothers and Shinowara came to the *Kencho* and informed me of the existence of this plot. They further requested, that as they would shortly call upon Saigo to proceed to the capital at the head of the troops, that they should be supplied with the necessary money and provisions. I, knowing that money would be the first necessity for Saigo to collect troops for this expedition, wrote a letter with my own hand to Hirata Toyoji, a member of a company called Shôkei-sha at Nagasaki, and sent the same to him by one Hatanaka Genzayemon. The letter was to the following effect :—"A plot to assassinate General Saigo has been discovered, and consequently he will at once proceed to the capital at the head of his troops. I have therefore to request that you will forward to me at once the twenty thousand *yen* which are deposited with Kasano Kumakitchi, to cover the expenses of the expedition. At all events, send at once as much money as you can procure, and borrow thirty or forty thousand *yen* from Kumakitchi. The people of the *Ken* are now as much excited as at the time of the Restoration. For further particulars I refer you to Hatanaka."

I told Hatanaka that the people were in a great state of excitement, as he himself could see, and that Saigo would probably start from Kagoshima about the 12th or 13th of February. I directed him to caution Hirata to be careful of the letter I had sent him, as it must be kept secret.

On the same day Sugeno, a Lieutenant of the Navy, came to the *Kencho* and informed me that a large number of armed men had made an attack upon the dockyard the night previous, and breaking into the several godowns had taken possession of arms, ammunition, etc. He therefore requested the *Kencho* to afford him the requisite assistance, and if this could not he done, he would apply for help to the Kumamoto garrison. I, thinking that if application were made to the Kumamoto garrison the Satsuma troops might be attacked unexpectedly, therefore informed him that I would render him ample assistance. After he had retired, I sent a letter to one Awoyama, ordering him to protect the docks. Awoyama answered, that as the remaining powder had been soaked with water by Sugeno, all was now safe. On the 2nd February the *Saibansho* sent a letter informing the Government of the seizure of the powder, and thinking that the *Kencho* should do the same, I ordered Shibuya Kuniyasu and Nakamura Kaneyuki of the *Kencho* to take a despatch to a vessel that was to leave that day, informing the Home Minister of the whole affair. I stated in this despatch that some men unknown had stolen Government property from the godowns within the dockyards at Iso, and that I was then engaged in strictly investigating the matter with a view to arrest those implicated.

I have been questioned about this despatch, but I was very busy at the time, and it was writen for me by one Iwafuji Hiroshi of the *Kencho*, and sent away immediately. The statement made therein, through press of business, was incorrect, but it was not written for the purpose of deceiving the Home Minister, or to prevent the Government from taking prompt steps to suppress the outbreak.

Although the 5th of the same month (February) was a Sunday, and therefore a holiday, I ordered Minoda Nagayoshi, Kamada Masanao and others to collect together all the Government monies then in the *ken*, which were the reserve funds to meet any extraordinary expenditure, the ordinary annual allowance, and the monies that the *Kencho* was in charge of for the *Mombusho* (Educational Department), the *Okurasho* (Finance Department), and the local taxes which had been collected. This was at once done. I also sent Terada Moriyuki, and Hamajima Shinsuki to the branch *Kencho* at Miyazaki, in Hiuga, with orders to do the same there. The result of these orders was that a total amount of one hundred and twenty or thirty thousand *yen* were collected, and adding to this sum twenty-one or twenty-two thousand *yen* that were placed in the care of the *Kencho* for the magazine and dockyard, I then handed the whole sum to Saigo and his party. On the 6th a letter came from Saigo announcing that he had arrived at his home in Kagoshima, and as he desired to see me, requested that I would meet him at the Private School. On the 7th I had an interview with Saigo, who said to me, "Had I been here I should, in all "probablity, have prevented the members of the Private School "from acting so recklessly as to take possession of the Government "powder by force. But now the die is cast, and matters must "take their course." Saigo further said that he had discovered that there was no mistake as to Nakahara and others having been sent by Kawaji, at the order of Okubo, to carry out some plot, so that he had decided to proceed to the capital with his former troops, and demand an explanation from Okubo. I then told him that some trouble might arise if his intention should not be made known to all the *Fu*, *Ken*, and garrisons on his route to the capital. Saigo replied by saying that he would send me a draft of the notification he intended to issue, and requested me to allow the *Kencho* to undertake the distribution of the same, and also to make known to the Central Government the confessions of Nakahara and others. All this I consented to do. On the 11th of the same month I sent Imafuji to the Private School for the draft of the notice, but Saigo did not give it, though he sent instead the confession of Nakahara and twenty-one others, with the intimation that they (Nakahara and others) would be compelled to affix their seals afterwards. On reading the confessions I perceived that they were not inconsistent with the plot related to me by Takehiko, and I became convinced of the truth of it. After correcting such parts of the confessions as was requisite, I sent them back to Saigo by Imafugi, and Saigo then forwarded certain drafts of documents, one of which was a despatch to be sent by the *Kencho* to the Government, stating that permission had been given Saigo and others to proceed to the capital. The other was the notification of Saigo's proceedings, which was to be issued by the *Kencho* to the *Fu*, *Ken* and garrisons on the way. Copies of these drafts were then immediately made out, and thirty-one messengers were appointed to distribute them, and money for their expenses given them by the *Kencho*. I told them that if they should meet with any obstruction upon their way, they should immediately apply for assistance to the police authorities of whatever *ken* they then happened to be in. These messengers set out on the 14th. This was done for the purpose of making known the state of feel-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

ing in Satsuma and to incite the sympathy of the people. For this reason messengers were sent to Kôchi, Wakayama (Shikoku) and Yamagata (in the north) *kens*, although these places were out of the route which Saigo was to take. On the 9th the *Takao Maru* came into Kagoshima, with Kawamura, the Vice-Minister of the Navy and Hayashi, the Junior Vice-Minister of Home Affairs, on board. They informed me by letter that they intended to land. But the Private School party guarded the coast, and as their landing seemed impossible, I went on board the steamer and had an interview with them. I was there questioned about the seizure of the powder, about the arrest and trial of Nakahara and others, and also about the state of Kagoshima *ken* since the occurrence of those events. I told them nothing about my connection with Saigo, but made answers which I thought were suitable for the occasion. Kawamura then said that he would like to land and have an interview with Saigo. I then landed, and ascertained that Saigo would consent to an interview, so I returned on board the *Takao Kan* to make this known. Just at this moment the Private School party put off in small vessels to attack the *Takao Kan*, so I landed again without having made any further communication and the steamer immediately left the coast. On the 12th the twenty thousand *yen* which I requested Hirata to forward were brought to me by Ishizawa Yatarô and Hashiguchi Kumajirô. I received this money, and gave the messengers five *yen* as a present. I then sent the messengers back with several letters. One was to the following effect:—"Your letter of the day before yesterday was received at 11 a. m. on the 12th, and I have also received what accompanied it." Another was to this effect:—"What I requested you to do through Hatano you have done promptly and I am in receipt of the sum I wanted. But this money, I wish it to be understood, is that which Kasano borrowed from me. As soon as Kasano returns, tell him, please, to get more money together. Under the present circumstances I shall not be able to afford much interest. As regards our condition, we are prepared to stand against the army of the whole nation. On the 14th about fifteen thousand men are to advance in two directions, towards Oguchi and Kajiki. So far large re-inforcements have arrived from various districts. I think that Shiba must have arrived by this time. Such is our condition. Whenever you hear any news about the state of Kumamoto, please inform me. Kawamura, the Vice-Minister of the Navy, and Hayashi the Junior Vice-Minister of the Home Department, arrived here by the *Takao Maru* and I interviewed them on two occasions, but they went away without any suspicion. I heard from them with pleasure about the state of affairs at Nagasaki. Many men have arrived from Hiuga, and we are troubled because we have only men and but few of the necessaries they require. I tell you all this in return for your kindness. Wait until the turn of affairs. I am now busy both night and day." Another letter was to this effect:—"Two large guns, 1,500 men, forming 24 regiments, march for Oguchi, 7,500 men forming 135 regiments, and other body of 6,500 men for Ishiuin. They are to enter Higo after resting two nights on the way. There is still a reserve force here of five or six thousand."

As soon as the plot of Nakahara and others was discovered, I stationed policemen on the frontier and the coast to prevent them escaping, and the news of our proceedings spreading, and for this reason the port was closed, and even officials were not allowed to pass to and fro. To all those who had to pass the barriers, passport were issued by the *Kencho*. But Nakajima and almost all the sergeants and policemen joined the expedition, and there were not enough policemen left for duty in the *Ken*. I think it was on the 12th of February that Kifuji Takeakira, Ise Sadamune, Tanimura Magohachi, and Kuroye Kagenori of the Kagoshima *Saibansho* came to me and said that they desired to assist Saigo, and requested to be appointed to the police, and therefore, although I did not give them their dismissal from their posts in the *Saibansho*, I immediately granted their request. At the time Saigo departed, I asked him what should be done with Nakahara and the others, and he replied that he intended to reach Osaka by the end of February or the beginning of March, and that he would let me know from there. They were kept under guard by the *Kencho*, but about the 21st of February an English man-of-war came into the port, and gave information that the Government was about to send some vessels to Kagoshima, so Nakahara and the others were confined in a new prison erected within the grounds of the *Kencho*. A *Daikiôshô* (High Priest) named Osu Tetsunen, with others priests who had been imprisoned by the Private School party, were also confined in the same prison. Kawakami Chigata, Osakabe Kio, and Hiwatashi Goro arrived at Iso on the 13th or 14th of February in the *Teibô Kan*, but they left Iso and proceeded to the bay of Sari, in the district of Sashishiku (13 *ri* from Kagoshima). They landed there and sent letters to Kirino and Shinowara, who were then in the Teikei district (Kawakami was formerly a soldier under Kirino and Osakabe under Shinowara). The letter was to the effect that on hearing that Saigo had inaugurated an expedition, they had returned immediately to Kagoshima and requested that they might be allowed to join Saigo. But Kirino, thinking that if they really intended to join the expedition they should have landed at Iso or appeared in person, and suspecting some plot, sent these letters to the *Kencho* just as he was about to start, with the request that the writers should be strictly examined. This examination was entrusted to Migimatsu Sukenaga, a 1st class Police Sergeant. After three days Migimatsu told me that the three men had arrived, and that Kirino had ordered beforehand that should they not confess by ordinary examination the reason of their return to Kagoshima, they were to be put to torture.

The names of Kawabata, Tajiri and Tsurakimo, three men who had already joined the expedition, were discovered in some papers in the possession of Nakahara, so they were ordered to leave the expedition. They then applied through Kodama Junnosuke, for passports to proceed to Hiuga, but fearing that if they left the *ken* they might cause trouble to Saigo's party, I ordered Migimatsu to arrest and examine them. After thorough examination police sergeant Kifuji announced that they were in no way connected with the plot. But still thinking that it would be dangerous to let them out of the *ken*, I kept them under surveillance.

Kishima Kiyoshi, a *samurai* of Satsuma, was one of the leaders of the Private School party, but he was discharged for certain reasons. He then asked Saigo for permission to join his expedition, but this Saigo would not grant. About the 16th of February Kishima came and begged me to request Kirino to intercede for him, so I got a letter from Kirino which I sent to Saigo. But still Saigo would not grant the required permission, saying that he would have no intercourse with Kishima. This decision I communicated to Kishima.

On the 3rd of March, 6th class police sergeant Tanaka Teisuke of Miyazaki, Hiuga, come with Ogura Shôhei, the younger brother of a *samurai* of Oita who was an official of Kagoshima *ken*, named Nagakura and I interviewed them. Ogara said that he was trying to assist Saigo with Arima Tôda and others at both Osaka and Kiôto, but that, unfortunately, his plot had been discovered and Arima arrested, though he, himself, managed to escape and reached Kagoshima. As the Imperialist force in Bungo was weak, if the expedition should advance through Hiuga into Bungo it would probably prove an advantageous move on their part. But as Ogura was a man whom I had met for the first time and did not therefore like to trust implicitly, I made indifferent answers to his information. Ogura then said he would himself join Saigo's expedition in the event of it entering Hiuga. After this our interview ceased. When Saigo was leaving Kagoshima he said that he would limit his adherents to the members of the Private School, so that I interested myself no more about military affairs. I did not set about enlisting recruits, neither did I inform Saigo of the advice which Ogura gave that it would be well for the expedition to march through Hiuga.

When I first heard the details of the plot of Nakahara and others, I took no steps to thoroughly investigate the matter, but took the statements of Nakajima and his friends for proof, and siding with them ordered the arrest of Nakahara and others, and permitted Nakajima and the Private School party to examine them, assisted by police sergeants Nakayama Yukitaka, Kôno Hanzô, Furukawa Gensuké, Miya-uchi Shunzô, Katayama Kiubei, Niré Kagemichi and others.

On receiving the confessions of Nakahara and others from Saigo I believed in them, had them printed and issued within the Kagoshima *ken*. At the time these men (Nakahara and others) were taken before the Board of Examiners, I sent police sergeant Kifugi to Kumamoto, where Saigo was at the time, to obtain proofs against them, but none were forthcoming. Again, at the time that I accompanied the Mikado's Special Envoy on board his vessel, I heard that those men had been put to cruel torture while under examination by Nakajima and his assistants. Judging from all these circumstances, I now believe that those confessions were extorted by means of threats on the part of the Satsuma men, in order that they might obtain a pretext for breaking out into rebellion.

Furthermore, at the request of Saigo, I established a commissariat within the *Kencho*, whence the Satsuma troops were furnished with supplies.

I am now thoroughly convinced that all my actions materially assisted Saigo in his treason.

REFORM OF THE PRESS LAWS.

("Kômin Shimbun" 26th, September.)

We have recently heard a rumour that the Government has had under consideration the reform of the newspaper laws. Although we cannot say for certainly whether their severity is to be increased or mitigated, we are of opinion that their action will be rendered more lenient.

Since the institution of the newspaper laws on the 28th of June 1875, writers for the press have been subject to continual punishments, the like of which have never been known in any country in Europe. This was not, however, owing to the severity of the laws, but owing to the bold and fearless manner in which the writers expressed themselves. The reason of this was that at that time they did not well understand the nature of the laws, and it was not for wanton violation of the statutes or that they found pleasure in doing so, that they suffered punishment. Neither did the Government carry out the laws in any spirit of hatred. The reason that punishments have decreased is either that writers have ceased to so express themselves or that the censors do not look so closely into what is written as heretofore.

The minds of men are continually progressive. Thus the law that is suitable to-day may not long continue so. In such a case I do not doubt that the Government intend to revise the Press laws. The present laws were made in 1875 and they were suitable to writers of that day. But nearly three years having passed the minds of men have progressed, therefore they cannot be suitable to writers of to-day, and thus the Government proposes to reform them.

If we undertake to answer the question as to whether their severity will be increased or mitigated, we must look into the minds of the people and see if they have advanced or not. In proportion as progress takes place, so does recklessness of writing cease. The writing of 1875 can scarcely be called anything but reckless, for the minds of men had not then progressed. When writers are reckless laws must be made to restrain them, but when expression takes a milder form laws must be modelled accordingly. Our good Government therefore has appreciated this necessity and will make the reform. In such a case the laws will certainly become milder.

Editors and writers should therefore rejoice and wait for the day of reform. As we have been much pleased to hear the rumour, we have merely given our opinion.

PUNISHMENT SHOULD END WITH DEATH.

("Akébono Shimbun," 1st October.)

I have heard the rumour that the head of one of the rebel Generals Kishima Kiyoshi was exposed at Kagoshima. So it was stated in the *Yomiuri Shimbun* No. 807. When I heard this news I could not readily believe it. Now this Kishima was above the ordinary rebels being one of the most prominent among them and classed with such men as Hemmi and Beppu. At the same time he was one of Saigo's officers, and of all the offenders Saigo is undoubtedly the greatest. If Kishima is made to undergo such cruel punishment (the heads of) Kirino, Murata, and all the others should be exposed in like manner; nor is there any reason why Saigo should not have to endure similar treatment. But I do not believe that our present enlightened Government would behave so barbarously to Saigo, and therefore I do not believe that it would act thus toward Kishima. This is a punishment of a savage nature. After a man has been beheaded, the exposure of the head is intended to add to the disgrace of the punishment. But it is not carried out in any civilized country. Moreover even in Japan under the old feudal laws it was only done in cases where an offender had been guilty of monstrous crimes. Since the Restoration milder penalties have come into force, and it is only in such cases as murdering a parent or husband that such punishments as the above are carried out.

In Japan we have no special law against treason. When men rise in rebellion, under the impression that the Government mismanages affairs, however wrong their ideas may be, I cannot see that such punishment is justifiable. Yeto and Shima, the two ring leaders of the Saga rebellion a few years ago, had their heads exposed after execution, and writers at that time criticised the action of the Government. Since then many outbreaks have occurred, such as those of Kayô and Uyeno at Kumamoto, Mayabara and Okudaira at Yamaguchi, and of the *samurai* of Akidzuki and and Fukuoka. But in these cases (the offenders) were merely beheaded, while nothing was done to those who died fighting. Although these rebellions differed much in extent (from the recent one) in the crime of opposing the Government, in placing the the people in a condition of misery they differed not at all. I was much pleased when I thought that the Government had ceased all such cruel punishments and that their lenity was extended even to the rebels.

In days long passed, when Minamoto no Yoshitsune defeated the house of Taira at Ishinotani, he captured two of the Taira commanders, Michimori and Tsunemasa, and brought them to Kioto, requesting that their heads might be exposed after execution. The Imperial Court at first refused the request, but finally consented, and the sentence was carried out at the gravel pits of the river Sanjo in Kiôto. All men who read history can see that Yoshitsune was moved by personal hatred and spite when he induced the Imperial Court to forego its merciful will, and caused it to put to exposure and disgrace in a place thronged with people the heads of two nobles who had once been numbered among its members. The mercy of the Imperial Court in former days can be seen by this. I therefore am of opinion that the officials of the the present enlightened Government would be acting unwisely if they were to resort to any such mode of Government.

Saigo rose against the Imperial Authority without cause, and his act is far worse than the private strife between the families of Minamoto and Taira. But at the same time he has done far more for the cause of the Emperor than ever Taira did. For very despair at being unable to do as he wished for the Imperial cause he attempted to commit suicide off the coast of Satsuma; he fought all the battles of the Restoration; he took the castle of the Shôgun at Yedo without the loss of a single man; all these were most meritorious deeds and as reward he received the rank of *Sammi* and the appointment of General-in-Chief of the Army. But he finally passed away with the morning mist on Shiroyama. The people rejoice at the termination of the civil war, but there is a general feeling of grief to think that so great a hero did not meet a happier end.

Now should the Government determine to expose the head of Saigo, the people would be displeased. I do not therefore think that it will do so. Neither do I believe that the head of Kishima was subjected to exposure.

TAKAGI KANZO.

THE NEW RAILWAY BRIDGE AT KAWASAKI.

As the new bridge across the Rokugo River at Kawasaki is now rapidly approaching completion, and passengers by the trains to and from Tôkiô will in all probability shortly be conveyed over it, a few words in explanation of the method employed in its construction, and descriptive of the bridge and viaduct in their present stage of progress, may be of interest to some of our readers.

The superstructure of the bridge proper consists of six spans, each of two wrought iron girders, of the kind called "Warren's girders," 100 feet in length and 12 feet in height, between which are laid smaller cross girders 27 feet in length, upon which again beams of timber are laid at right angles and parallel to the main girders, for carrying a double line of rails of 3 feet 6 inch gauge; leaving an intermediate space between the up and down lines of 6 feet, the whole width of roadway between the main girders being 22 feet.

The abutment upon the Yokohama side of the river, upon which the ends of the first pair of girders are laid, consists of four brick wells built together in a group connected by arches of brickwork and capped with massive blocks of granite, laid so as to form a solid pier of great strength. Each of the four brick wells is of 12 feet in diameter, the circular brick work being 2 feet in thickness, consisting of bricks specially made for the purpose and laid in Portland and Selenitic cement, with iron tie rods running through from bottom to top in order to increase the strength of the whole mass, and secure a firmer bond. This kind of foundation, which has been largely used in India for bridges where an unusually deep foundation was required, was introduced into Japan by the late Engineer-in-Chief to the Government Railways (Mr. R. Vicars Boyle, C.S.I.), and has been used with great success upon the section of Railway between Osaka and Kiôto, in the case of several bridges across rivers whose

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

bed consisted of a loose shifting sand extending to a great depth.

The bed of the river at Kawasaki differs but slightly from those above mentioned, and no strata sufficiently firm for the foundations to rest upon could be found at a less depth than from 80 to 90 feet, where a compact bed of gravel occurs; the strata above that consisting of sand and volcanic debris, evidently brought down by the annually recurring floods from the mountains, and deposited gradually during the lapse of ages, until the bed of the river has been raised many feet above its original level, as well as the adjacent country whenever the river overflowed its banks.

In the case of the four brick wells, which it has been previously stated form the abutment at the Yokohama end of this bridge, they have been sunk to a depth of 75 feet feet from the level of the underside of the girders; and in answer to the remarks which have been occasionally heard upon the alleged unnecessary length of time occupied in the erection of this bridge, it may be observed that in sinking these brick wells it is impossible (and even if it were possible, would risk the stability and permanance of the structure) to proceed except by regular gradations necessitating the expenditure of much time and patience. The process is as follows:—A few feet of brick-work commencing a well having been built, it becomes necessary to excavate from the centre in order to cause the well to gradually sink; and as the depth increases and water occurs, the difficulty is greatly augmented, necessitating the employment of excavating machinery and frequently of divers. After the first few feet, the well requires to be not only excavated from the inside, but also heavily weighted on the top to make it sink; and this process is sometimes extremely tedious, in consequence of a well sticking half way, and after being weighted as heavily with iron rails as it is deemed the new brick work can bear, refusing to budge an inch, but perhaps finally, after hesitating for days, going down 12 or 15 feet at a run.

This is sufficient to show the importance of not attempting to imprudently hurry the work, by placing too much weight upon the wells while they are new and hollow, and perhaps cracking the brickwork; or on the other hand, as those who could have built it all in six weeks would probably have done, stopping half way when they found a well obstinately sticking, and leaving it to go down suddenly some day when a train full of passengers was going over it.

The wells, having been sunk in the above manner to their final resting place, are carefully cleaned out, and having been weighted with the full test weight of 320 tons, are filled up with concrete from bottom to top, forming a solid pillar of 12 feet diameter.

On the other, or Tôkiô side of the river, are three piers of similar brick wells in each case, the two intermediate piers being carried up to the level of the underside of the girders with handsome blocks of dressed granite, forming columns 8 feet in diameter, and finished with granite masonry to match the iron capitals of the cylinder piers in mid stream. The last pair of wells which form the pier for the junction of the bridge proper with the viaduct, are connected with a brick arch of 9 feet span, similar to the Yokohama abutment, in both of which cases the springing of the arches commences several feet below the ordinary summer low water level of the river, being about 16 feet from the underside of the girders.

The three piers which form the supports to the girders in mid stream, are each composed of two cast-iron cylinders of 8 feet diameter, and $1\frac{3}{8}$ inches in thickness for the upper portions, and 2 inches for the lower portions. They are made in segments of 6 feet in length, four segments forming a complete circle; both segments and each complete circle being firmly bolted together, and cemented with iron cement to make them water-tight, while each pier is surmounted with an ornamental capital.

The process of sinking these cylinders was precisely the same as that pursued with the brick wells, the gradual sinking being accomplished by means of subaqueous excavation, and heavy weighting with iron rails, until the final resting place was reached at an average depth of about 85 feet; after which they were finally tested with a weight of 250 tons, and filled up with concrete.

The tops of these cylinders, as well as of the other piers and abutments, are fitted with strong cast-iron bed plates to receive the ends of the girders, which are bolted down at one end, and left sliding on gun metal plates at the other end of each girder, to allow for contraction and expansion; the bed plates being provided with lugs to keep the girders in proper position.

The diameter of the tops of the cylinders and granite piers being 18 feet, ample space for the utmost degree of contraction and expansion is provided.

The viaduct extending from the bridge to the new embankment at the extreme bank of the river on the Tôkiô side, consists of 24 spans of 40 feet, from centre to centre of piers, each span being composed of four wrought iron plate girders 3 feet deep, framed together with strong T iron ties, and arranged for a double line of rails; the longitudinal timbers, upon which the rails will be placed, being laid directly upon the girders. A foot way, with a hand rail supported by iron brackets, is attached to the outside girders on either side.

The foundations for these 24 spans forming the viaduct, are composed of strong granite masonery piers, with brick fillings, but were not required to be sunk to any great depth, a sufficiently firm foundation being obtainable at about 8 feet from the surface of the river bed. The abutment at the Tôkiô end is of similar formation, but of additional strength.

The total length of the bridge and viaduct from abutment to abutment is 1,656 feet of wrought iron superstructure, carried at a height of about 18 feet above the level of low water where it crosses the river. The bridge and viaduct were designed by Messrs. R. Vicars Boyle, C.S.I., Engineer in Japan, and W. Pole F.R.S., Consulting-Engineer in London, and the iron work was constructed by the Hamiltons Windsor Iron Works, Garston, near Liverpool, to whom great praise is due for the strong and efficient manner in which the work has been turned out. The construction of the bridge in Japan was commenced with the larger foundations in April 1876, under the immediate direction of Mr. T. Shann, Resident Engineer, who has continued in sole charge up to the present time, and by whose energy and unceasing attention, combined with unusual ability, this important work has been brought to so successful an approaching termination.

We are informed that the new bridge will be opened for traffic during the present month, which we are sure will be heard with much relief by those frequent travellers between Tôkiô and Yokohama who for some time past have crossed the present wooden structure with more or less trepidation. When this new bridge is completed it will be the longest in Japan, and in strength and general permanence of structure, may be almost termed everlasting, in which respect it is unsurpassed by any bridge of its class in the world.

REPORT ON THE FINANCES OF JAPAN, BY MR. MOUNSEY, SECRETARY TO H. M.'s LEGATION.

Sir H. Parkes to the Earl of Derby.

Yedo, March 5, 1877.

My Lord,

In forwarding to your Lordship, in my despatch of the 30th January, the official statement of the estimated revenue and expenditure of Japan for the fiscal year from the 1st July, 1876, to the 30th June, 1877, I stated that Mr. Mounsey was engaged on an investigation of the finances of this country, and that I trusted I should shortly be able to forward to your Lordship the result of his study of the subject.

I have now the satisfaction of inclosing Mr. Mounsey's report, in which he describes in detail the Japanese system of taxation, the particulars of expenditure, the amount of public debt, and the general position and prospects of the national income. The difficulty attending inquiries into this subject has hitherto been considerable, as the science of finance is new to the Japanese Government, and they have had to deal with a hard task in linking the present with the past, and in determining the date from which the liabilities of the new Government

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

should commence. The information, therefore, which is now supplied by Mr. Mounsey's report will, I trust, be found valuable and opportune, and it is gratifying to me to bring to your Lordship's notice the mention he makes, in his covering letter, of the assistance he has received in compiling it from the Vice-Minister of Finance, as this indicates, I think, a desire on the part of the Japanese Government to allow the true state of their finances to become known to the world.

I have, &c.

(Signed) HARRY S. PARKES.

Inclosure 1.

Mr. Mounsey to Sir H. Parkes.

Sir, *Yedo, March* 2, 1877.

HAVING with your approval selected finance as the subject of my report this year, I have the honour to inclose to you herewith, the accompanying report on the estimates of public revenue and expenditure of Japan during the period comprised between the 1st of January, 1873, and the 30th of June, 1877.

As none of my predecessors at this Legation have written on this subject, I have found it necessary to give a detailed description of the taxes and items of expenditure contained in these estimates, and thus my report has become more voluminous than I at first intended or desired.

In compiling it I have been much aided by Mr. Matskata, the Vice-Minister of Finance, who has furnished me with copies of all the laws relative to taxation, and given me a great deal of information on many important points, especially as regards the national debt, which I should have been unable to elucidate without his valuable and ready assistance. Though authorized to do so, I have not mentioned this gentleman's name in the body of my report, and I therefore think it right to state that it is to him that I owe all the information there mentioned as coming from the Ministry of Finance.

I must also add that I am greatly indebted to Baron Siebold, who is now employed in the Finance Department, for the courteous and able manner in which he has facilitated my communications with the Japanese authorities, and my inquiries into the financial position of the Empire.

I have, &c.

(Signed) AUG. H. MOUNSEY.

Inclosure 2.

Report by Mr. Mounsey on the Finances of Japan.

THE first official statement of the condition of the national finances was issued by the Japanese Government on the 9th of June, 1873. It was published in order to counteract the bad impression which it was apprehended would result in Europe from the publication in the Japanese newspapers of the contents of a Memorial addressed to the Mikado in the preceding month of May by Inouyé Kaoru and Shibusawa Shigékasu, who, as Under Secretaries of the Treasury had been a short time previously intrusted with the administration of the Finance Department during the absence in Europe of Okubo, Minister of Finance.

In this Memorial it was stated that the annual revenue of the country did not exceed 40,000,000 *yen*; whilst the expenditure might be estimated at 50,000,000, thus leaving a yearly deficit of 10,000,000 *yen*; that, besides the latter, there was a debt of at least 10,000,000 *yen* which had been expended since the restoration in excess of revenue on national works of urgent importance; that the liabilities of the Government in respect of their issue of paper currency and for the home and foreign debt, amounted to 120,000,000 *yen*, and finally, that the total debt of the country amounted to 140,000,000 of *yen* for the payment of which no provision had yet been made.

This statement was so much at variance with the only two notices on Japanese Finance which had up to that date been made public, namely, an article which appeared in "Blackwood's Magazine," in September, 1872, and evidently inspired by the Japanese Government, and a statement of semi-official character, put forward by the Japanese Commissioners to the Vienna Exhibition in the spring of 1873, both of which represented Japan as being in possession of a surplus revenue of about 3,500,000 *yen*, that the Japanese Government appear to have thought that the national credit would be most seriously and injuriously affected unless they afforded the public more detailed information relative to the revenue and expenditure of the Empire.

The Minister of Finance was accordingly ordered by the Mikado to draw up an exact statement of the condition of the Finances, and in June, 1873, he published the estimates for that year, based, according to his statement, on the revenue and expenditure of the previous year, together with an explanatory letter to the Prime Minister.

In this letter the Minister of Finance, after declaring the memorial of Inouyé Kaoru and Shibusawa Shigékasu to be founded on "rough calculations made merely from memory," ascribed the discrepancy between the "Blackwood" and Vienna statements, which estimated the surplus at 3,807,750 *yen*, and 3,459,787 *yen* (equal to 761,550 *l.* and 691,957 *l.* respectively), whilst he himself calculated it at 2,140,365 *yen* (equal to 428,073 *l.*), to the fluctuating price of rice, in which the greater part of the taxes were then paid. But he added that as payments in money were being substituted for payments in kind similar discrepancies would not recur.

He stated that though rice was then at its lowest price, and though the Government had been obliged to spend large sums on the construction of railways and telegraphs, the erection of lighthouses, barracks, public offices, and model factories, the annual income exceeded the expenditure, and that those works being completed, and being to some extent reproductive, there would in future be a decrease in expenditure and an increasing revenue.

As to the public debt, the Minister of Finance placed its total amount, both internal and foreign at 31,224,701 *yen* (equal to 6,244,940*l.*), or less than a fourth of the sum calculated by the memorialists. He briefly stated that provision was made for reducing the foreign debt by "fixing (reducing?) the allowance of the nobles and two-sworded men," that the money and rice lent by the Government to private individuals constituted a fund for meeting the internal debt, and that for the issue of paper money there was a special reserve fund deposited in the Treasury vaults. He concluded by promising that an "intelligible explanation" of these three funds should be carefully prepared and speedily published.

This promise does not appear to have been fulfilled, and nothing more was heard of the subject until June, 1874, when a second budget was published. It was followed by a third in May, 1875, but this document merely contained the estimates for the first six months of that year, as it was then found desirable to change the fiscal year. The necessity for this change was explained at the time by the Minister of Finance to arise from the fact that "the system of computing the fiscal year from January 1 to December 31, adopted in 1873, had proved inconvenient in consequence of the land tax being collected partly in one year and partly in another, thus rendering it difficult to adjust the accounts of each year, and impossible to depend implicitly on the estimates. It had therefore been decided that in future the fiscal year should end on the 30th of June, and it was with a view to inaugurate the new system that this budget was limited to a period of six months."

The fourth budget, covering the period from the 1st July, 1875, to the 30th June, 1876, was not published till January of the latter year, and the fifth, that for 1876-77, was only issued at the end of January, 1877, *i.e.*, nearly seven months after the commencement of the current fiscal year.

There are, as will be seen, many material points in which these documents differ from each other, and upon which it will be necessary for me to comment. But be-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

fore proceeding to this part of the subject, I must state in distinct terms that all Japanese budgets are nothing more than estimates. The revenue is estimated by the Minister of Finance, and the expenditure by the heads of the Government Departments. The latter forward detailed accounts of their requirements to the Financial Department, which either returns them for reduction, or passes them, according to the capabilities of the Treasury. They are then submitted to the Council of State, and if there approved, are laid before the Mikado and sanctioned. No official statement of the actual revenue and expenditure in any year has ever yet been published, and Japan being as yet neither endowed with nor fit for Parliamentary institutions, there is no public body which has the power to look into or control the national accounts. The public has therefore no guarantee that the figures of the Minister of Finance are correct, and can only derive confidence in them from the fact that the Government has hitherto been able to pay its way and meet the ordinary expenses of the Administration of the country without having recourse to loans.

I should also add, that I am informed by the Vice-Minister of Finance that the accounts contained in the first three Budgets, embracing the period from the 1st January, 1873, to the 30th June, 1875, are considered as definitely closed, and as having no connection with the accounts of the new era, commencing at the latter date. Hence, and also because reliable information even about the present, let alone the past, is only obtainable in this country with considerable difficulty, it would be an unremunerative as well as an arduous task to attempt an incisive analysis of these accounts. I insert two of them, Tables I and II (the third, for the six months from January 1 to June 30, 1875, is too involved to throw any light on the subject), chiefly as historical documents illustrative of the very gradual development of financial science in Japan, and indicative of the difficulties which must have been encountered and overcome in order to arrive at the intelligible statement of the financial condition of the Empire contained in the Estimates for 1875-76 and 1876-77.

(For Tables see page 878.)

TRAINING NOTES.

Although you do not call special attention to the fact, I am sure all your readers will hail with delight the news that "Triton" returned, from his trip round the world, per *City of Peking*, having left Yokohama on the 27th July last, and since then visited Canton, Singapore, Galle, Athens, Rome, Venice, Constantinople, St. Petersburg, witnessed the attack on Plevna and been foremost in three Turkish charges! I rather think I have outdone the U. S. Consul at Jerusalem, who only went round the world in 68 days, including a fast trip from Yokohama to Canton. But truth is stranger than fiction, and after all this exciting journey can you not guess how welcome to me was the placid calm of the Race Course paddock, where I found myself at about 5.15 a.m. (by the *mattie toki*) to-day. Alas! for the occupation of this well-known instrument. Mr. de Benter refuses longer to take an active part in the Races, either Club or Association. (*N.B.*—By active part I don't refer to his past performance on—or rather *off*— *Mongolian Lamb*). This was the first shock I received. The next news was that Mr. Morrison had gone home.—"Eureka!" I exclaimed, for visions of the heretofore existing difficulties between the opposing parties being amicably settled, flitted before me. But even this was not to be, and I soon found that the ridiculous party feeling ran stronger than ever among the malcontents.

I think there were assembled in the paddock, in various groups, rather less than 40 interested personages and spectators, and at one time there were no less than five ponies on the course! I can hardly yet say much about the ponies, but a few remarks now will lead up to my usual letters, which I hope shortly to continue.

Mr. Morrison's stable is under the very judicious management of Mr. Marlborough. *Tallapoosa* and *Braemar* are taken out in the 'wee sma hours', so I could not pick up much information about them. *Mavis, Hoosie* and *Lintie* I saw go round—the latter very round—and think that they are fully up to muster. The two Japanese ponies *Distemper* and *Copper Shipments*, as some call it, or *Crescent*, are in very fair condition, but would be better for a little grooming, of which they certainly do not get their proper portion since the departure of the *Tartan* veteran.

Mr. John Peel has a very small string this season, but *Bonny Doon* is already far more fit than he ever was in the spring. The latest addition to this stable is a young *half-breed*. If this style of animal is to be the *moko futuro* of Japan, we may verily congratulate ourselves on the introduction of what the Japs call the *Warabi-muma* (Arab). Mr. J. Peel's *Suleiman Pasha* is reported by the very knowing ones, to be by a well known Japanese stallion out of one of the best Arabian mares sent here in '65 by the late Napoleon III, as a present to the Shôgun. The success of the breed must be attributed to a *fluke*, as the usual couplings have proved utter failures. I hear that the late authorities at the Shimosa farm claim great credit for the breed of this very promising colt, but, apparently are forgetful of the fact, that *Suleiman Pasha* can boast of five Springs, while the late "powers that were" barely date back to '74.

Mr. Fairplay owns another half breed, which is much too young ($3\frac{1}{2}$) to do anything with the proper weight, and will probably be reserved for a future occasion.

Mr. Nicolas, of course, claims the ownership of a third one. Doubtless this is a half-breed, but I defy any one to say with accuracy what might be the component qualities of either sire or dam. A giraffe and a towel horse both have 'points' which may be found in Mr. Nicolas' bay colt, but I must wait for a few days—till I see him go—before I express any positive opinion as to his merits.

The Legal, Secretarial, and General Trading Company's stable are represented by quantity as regards the number of their stock and by quality as regards their riding representative. Mr. William's brilliant finish on *Crusader* at last meeting is still a topic of conversation among the sporting communists of Yokohama, and general opinion is that his services are now rather thrown away. *The Moor* and *Jim Hills were* good ponies last meeting, but during the interval have been let down to such an extent that, in my very humble opinion, they will see the greater part of the races in which they may compete. It is a pity that the proprietors of this large stable should not have been able to secure any better griffin than that they are at present training so darkly, and which I understand is to be appropriately christened *The Viaduct*. I have not yet seen any of the China ponies of this stable exercised, and therefore postpone my remarks about them till next week.

I should say something about Mr. Saville's ponies, but must wait until I have seen a little more of them.

I caught a glimpse of our corpulent friend this morning, but his stable was not represented. I hear, however, that he has profited by my former advice and feeds his ponies *more* and himself *less*. I hope to have a look at his stable in a few days, and will tell you more about it next week.

History repeats itself; and while destroying some old letters just now, I saved an incidental fragment to light a cigarette, on which appeared these old familiar lines :—

"Alas! I must train poor old "Dibsey"
In the Y. R. C. meeting to run."

Good morning Baron G.!

Colonel Forrester, of course, is very busy, having a string of six ponies under his command. I suppose, as usual, they will be good seconds or thirds. Well, if the ponies cannot gallop, it is not the fault of the trainer, for I have never yet been up to any "early morning's" work without seeing our friend doing what he calls *a training canter*; the pace may be rather fast, but that is only in accordance with his old habits. There appeared to be some difference of opinion between the Colonel and one of his mounts, which resulted in the former "squaring the circle," and I hear the pony *(Faust)* was rescued near the Wishing Bridge. There are, of course, the usual "stragglers," but I have not yet been able to pick up anything about them or their belongings, and must postpone that pleasure till next week.

Yours truly,

TRITON.

Yokohama, 5th October, 1877.

In commenting on the four preceding estimates, I shall divide my object into three parts, viz.:—

1. A description of the taxes and an explanation of the items of expenditure.
2. Remarks on the National Debt; and
3. General remarks.

(To be continued.)

THE TÔKIÔ ATHLETIC CLUB.

The first meeting of this Club was held on the open ground in front of the Naval College on Saturday last, where a course of a quarter of a mile had been prepared. The ground does not belong to the Club and was not therefore in such good order as it would otherwise have been, and somewhat militated against the competitors, but the Committee had done all that was possible under the circumstances to render the extemporized path fit for running. A pavilion had been erected for the accommodation of ladies, the band of the Japanese Marines was in attendance, and as the weather was beautifully fine the inauguration of the Tôkiô Athletic meetings could not have taken place under more favourable circumstances. Sir Harry and Lady Parkes were among the spectators, the latter having kindly undertaken to award the prizes at the conclusion. As the Club had thrown open their sports to members of the Yokohama Athletic Association, advantage was taken of their liberality, and as the result showed, no small share of the prizes fell to Yokohama competitors.

According to the programme, throwing the Cricket Ball should have been the first event, but as the Ball was not to hand the proceedings opened with

1st.—Flat Race. 100 Yards. Handicap.

F. Walker, 4 yards	...	...	...	1
A. T. Watson, scratch	...	...	...	2
W. Platt, 7 yards	...	...	...	3
E. F. Kilby, 7 ,,	...	...	...	0
W. Tempest, 6 ,,	...	...	...	0
G. Charlesworth, 7 ,,	...	...	...	0
W. B. Mason, 7 ,,	...	...	..	0
R. Ward, 2 ,,	..	...	...	0
H. J. Gorman, 4 ,,	...	...	...	0

Walker was too favourably placed and had the race entirely his own way, winning easily by a yard and a half in the slow time of 12½ seconds.

2nd.—Throwing the Cricket Ball, Handicap.

J. Hall, scratch	...	...	...	1
H. J. Gorman, scratch	...	...	...	2
F. W. Strange, scratch	...	...	...	3
F. Walker, 10 yards	...	...	...	0
R. Ward, 13 yards	...	...	...	0

Some rather wild throws were made, and in one instance the ball struck a small boy full on the head, but forcible as the blow apparently was it did not seem to cause the youngster any annoyance. For the future it would be as well to secure an entirely clear course for the throws, as the feat of Saturday cannot always be repeated with the same success. Hall eventually won by a throw of 93 yards.

3rd.—Throwing the Hammer, 16lbs. Handicap.

W. Tempest, 10 ft.	...	...	...	1
F. W. Strange, 9 ft.	...	...	...	2
H. J. Gorman, 3 ft.	...	...	..	3
R. Ward, scratch	...	...	...	0
J. Hall, 5 ft.	...	...	...	0
G. Charlesworth, 9 ft.	...	...	...	0

There was some doubt as to the actual winner of this event, which Gorman claimed, but Tempest was at the time declared to be first with a throw of 72 feet 6 inches.

4th.—Pole Jump, Handicap.

G. Charlesworth, 10 in.	...	...	...	1
F. W. Strange, 12 ,,	...	...	...	2

For this there were only two competitors who both did well. Charlesworth won by a jump of 8 feet 2 inches in excellent form.

5th.—Flat Race. 150 Yards. Two Prizes. Presented by the Railway Department. Handicap.

A. T. Watson, scratch.	...	...	...	1
W. Platt, 7 yards.	...	...	...	2
W. Tempest, 8½ ,,	...	...	...	3
E. F. Kilby, 8 ,,	...	...	...	0
R. Ward, 4 ,,	...	...	...	0

A very bad start was made, by which Watson contrived to get undue advantage, so that the effect of the handicapping was entirely lost. He almost immediately took the lead, and won without difficulty in 16¼ secs.

6th.—Long Jump. Handicap.

G. Charlesworth, 2ft. 9in.	...	...	..	1
J. Stewart, 2ft. 6in.	...	...	...	2
H. J. Gorman, 2ft. 9in.	...	..	...	0
J. Hall, scratch	...	..	...	0

Hall cleared the greatest distance, viz., 18 ft. 2 ins., but Charlesworth won by his handicap allowance, which brought him up to 19 ft. 4 ins., Stewart being second for the same reason with 18 ft. 8 ins.

7th—Hurdle Race. 120 Yards, 10 Flights. Handicap.

A. H. Dare, scratch	...	...	...	1
G. Charlesworth, 12 yards	...	...	...	2
J. Hall, scratch	...	...	...	0

Charlesworth had a good start of Dare but could not maintain the advantage, as he was caught at the fourth hurdle. Hall did not complete the course, so that Dare won as he liked in 19 secs.

8th.—Putting the Shot, 16lbs. Handicap.

R. Ward, 5ft. 6in.	...	...	...	1
J. Hall, scratch	...	...	...	2
G. Charlesworth, 8ft. 6in.	...	...	..	0
H. J. Gorman, 4ft. 6in.	...	...	...	0

Hall was again unfortunate, as Ward carried off the prize by 2 ins. only, his throw, with handicap allowance, being 37 ft. 3 ins., while Hall at scratch covered 37 ft. 1 in.

9th.—Ladies' Purse, ¼ Mile, for members only. Handicap.

W. Tempest, 22 yards	...	...	...	1
H. J. Gorman, 5 ,,	...	...	...	2
F. W. Strange, 2 ,,	...	...	...	0
W. Platt, 25 ,,	...	...	...	0
R. Ward, scratch	...	...	...	0

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

Tempest made the running throughout and was never headed, though Gorman was decidedly dangerous, and if the latter had waited a little longer before making his final spurt, might have altered the result. Time 58½ secs.

10TH.—HIGH JUMP. Handicap.

A. H. Dare, scratch	... 1
G. Charlesworth, 8in.	... 2
H. J. Gorman, 10in.	... 0

Three competed, but it was soon left to Dare, who cleared 5 feet 2 ins., while Charlesworth failed to jump 4 ft. 2 ins., and Gorman retired at 4 ft.

11TH.—FLAT RACE. 1 Mile. First Prize presented by Lady Parkes. Handicap.

F. Walker, scratch	... 1
F. W. Strange, 60 yards.	... 2
R. Ward, 120 „	... 0
E. B. Paul, 150 „	... 0

With Walker at scratch, Strange 60 yds., Ward 120 and Paul 150 yards ahead, this proved the best race of the meeting. It was generally believed to lie between Walker and Strange, and the result proved this supposition to be correct, as the other competitors did not finish the course. Strange started at a pretty good pace, and soon began to gain on the limit men, but did not lose any ground to Walker, who finished the first lap in 67 seconds. Their relative positions scarcely altered during the first three laps, by which time the limit men had retired. At the beginning of the fourth lap, however, Walker increased his pace, and gained considerably up the back stretch, though when the end of this was reached he was still some 40 yards behind. It thus seemed as though Strange could not be caught, and his backers were sanguine of his success, but Walker had, through experience and careful training, more left in him than some imagined, and although he was 30 yards behind at the commencement of the last 150 yards, was able to put on a tremendous spurt, and 30 yards from home passed his opponent with a rush and won a most exciting race by 10 yards in 5 min., 7 secs. Strange ran very well and showed good staying powers, and on some future occasion may, we hope, be more successful. Considering the condition of the path, and the fact that the turns were a great deal to sharp, the time made was excellent, and the best that Walker has ever done. It was a pity to see friends of both competitors running with them part of the last lap, as such is against all rules, and should not be allowed at future meetings.

12TH.—HOP, STEP, AND JUMP. First prize presented by C. De Boinville, Esq. Handicap.

G. Charlesworth, 4ft. 9in.	... 1
J. Hall, scratch	... 2
J. Stewart, 4ft. 6in.	.. 0
A. T. Watson, 1ft.	... 0
R. Ward, 6ft. 6in.	... 0
W. B. Mason, 3ft. 6in.	... 0

Again Hall was actually the best, as he covered 38 feet 10 inches, but owing to the handicap allowance had to give way to Charlesworth as the winner with 39 feet 9 inches.

13.—THREE LEGGED RACE.

W. Platt / R. Ward	... 1
W. B. Mason / W. Tempest	... 2
G. Charlesworth / F. W. Strange	... 0

This race caused great amusement, and was, strange to say, closely contested. Ward seemed to pick up his partner and carry him in, winning by about 6 inches only.

14TH.—CONSOLATION. One prize. Presented by the Committee. 200 Yards.

H. J. Gorman, ... w. o.

This was a walk over for Gorman, but he deserved the win for the gallant efforts he had made in previous events.

15TH.—FLAT RACE. 200 Yards. For Cadets of the Imperial Naval College.

Sakamoto, ...	... 1
Imai, ...	... 2
Makaye, ...	... 0
Arrai, ...	... 0
Shama, ...	... 0
Mori, ...	... 0
Saito, ...	... 0
Ijiche, ...	... 0
Matsumoto, ...	... 0
Takuche, ...	... 0

For this there were ten entries and the competition was very good, being a marked improvement on any previous attempt. There was a sharp turn just after the start, and at this point, in the impetuosity of his career, one young gentleman went clean out of the path and of course spoiled his chance. Time 27 secs.

At the conclusion of the races the fortunate competitors received their prizes from the hands of Lady Parkes, who had appropriate and congratulatory remarks for one and all, which gave an additional charm to the pleasure the winners felt at carrying off the various prizes.

We cannot too sincerely congratulate the Committee and Members of the Club on the decided success of the meeting. Some slight difficulties may have occurred, but not more than might have been expected of a newly organized Club. One thing is certain. Whether it is more advisable to start the races by pistol shot or by some other method, there should be but one mode of starting and but one starter, who should be vested with all due authority, for though variety is "the very spice of life" it is undesirable in starting foot races. But we have no doubt that the Committee will recognise the slight failings which were apparent at this meeting, and avoid them in the future. It is to be hoped that the members will not be discouraged by the success of the Yokohama athletes, which was no doubt owing to their greater experience, and the fact that they had trained carefully and steadily. No satisfactory result can be obtained without careful training, and no half measures will do. If the members of the Tôkiô Club intend competing at the meeting here at the end of this month, they have at least some advantage. There is ample time for training, and as they will be handicapped on the result of Saturday's meeting, they will meet their Yokohama opponents on decidedly better terms for themselves.

Law Reports.

IN H. B. M.'s COURT, KANAGAWA.

Before H. S. WILKINSON Esq., Acting Law Secretary.

Tuesday, October 2, 1877.

KOMEI SHINKICHI *vs.* WILLIAM CURTIS.

This was a claim for $32.50 for work done, but as judgment had already been rendered on the 18th May last, the case was now dismissed.

THE SAME *vs.* THE SAME.

The above claim was then re-heard.

Defendant was ordered to pay $2.00 a month until the whole debt has been paid, first instalment on the 1st November.

ARAI JOSUKE *vs.* WILLIAM CURTIS.

This was a claim for $75 for vegetables delivered, but as judgment had already been rendered on the 18th May last, the case was now dismissed.

THE SAME *vs.* THE SAME.

The above claim was then re-heard.

Defendant was ordered to pay $2.00 a month during five months, and thereafter $10.00 a month until all be paid, first instalment on the 1st November.

IN H. B. M.'s COURT, KANAGAWA.

Before H. S. WILKINSON, Esq., Acting Law Secretary.

Wednesday, October 3, 1877.

AH CHOY *vs.* JOHN GRIGOR AND JOHN PITMAN.

The plaintiff, a Chinese woman, claimed $1,050 from defendants as executors in the estate of the deceased Mr. John Rangan, viz., $500 given by plaintiff to the deceased for safe keeping, and the balance proceeds of property belonging to plaintiff, and sold by defendant, John Grigor, in his capacity as executor in the estate.

Mr Ness appeared for plaintiff, Mr Dickins for defendant John Grigor.

Mr Dickins said that as plaintiff is not a British subject he should ask that she give security for the costs of preceedings, and further remarked that one of the executors, John Pitman, had had no notice of these proceedings.

Mr. Ness replied that plaintiff is a native of Hongkong, and consequently a British subject; with regard to Mr. John Pitman, that gentleman is at present beyond the jurisdiction of the Court.

Mr. Dickins observed that the onus of proof that she is a British subject rested on plaintiff; Mr. Pitman had been made a party to the suit and ought consequently to have been served with a summons. Where there are several executors they must all be sued.

Mr. Ness said that there was no evidence that Mr. Pitman had not been served.

By order of His Honour, the name of Mr. Pitman was called b the usher of the Court, but not responded to.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Consular constable G. Hodges, sworn: I have not served Mr Pitman with any proceeding in this case. Mr. Pitman was not here at the time Mr. Grigor was served. To my knowledge he has not returned.

Mr. Ness remarked that Mr. Grigor is the only one who has acted as executor in the estate; besides, Mr. Dickins holds a power of attorney from Mr. Pitman, and he asked either that Mr. Pitman's name be struck out from the case, and the same be proceeded with against Mr. Grigor alone, or that a summons be served on Mr. Dickins as attorney for Mr. Pitman.

Mr Dickins insisted that, according to the rules of this Court, all parties having an interest in the suit must be sued as co-defendants, and that all parties to the suit must be served with notice of the proceedings. As Mr Pitman is in Shanghai, there was no difficulty in conforming with these rules.

His Honour ruled that as Mr Dickins had not shown that Mr Grigor would be damnified by the absence of Mr Pitman, the name of Mr Pitman is ordered to be struck out from the proceedings.

Mr Dickins then, referring to rule 253 of the Rules for the Court, demanded that plaintiff, not being a British subject, give security for costs.

F. E. White was sworn, and said: I know plaintiff; to my knowledge she is not a British subject. Her name does not appear in the index to the register kept in the British Consulate of British subjects in Yokohama.

Cross-examined by Mr Ness; I do not know that plaintiff is not a British subject. She has told me that she came from Singapore.

Plaintiff was then placed in the witness box, and said: I was born in Hongkong, I do not know anything about registering as a British subject. I have no papers to prove that I am a British subject. Mr. Rangan was my husband. I was not married to him. I was not married to any body before living with Mr. Rangan. I have not been registered in the *Sa bansho*. From Hongkong I came to Yokohama. I have been nowhere else.

Mr Dickins said that the whole evidence tends to prove that the plaintiff is not a British subject. The mere fact of her being born in Hongkong is not conclusive. Of course a negative cannot be strictly proved, and it is for plaintiff to prove that she is a British subject. He therefore applied that plaintiff be ordered either to deposit or give security for costs.

His Honour ruled as follows: The evidence does not convince me that plaintiff is not a British subject. The application is refused.

Mr. Ness then addressed the Court on behalf of the plaintiff. He said: Plaintiff sues for $1,050. Of this amount $500 is due on Mr. Rangan's promissory note, and the balance is for a carriage, pony, and harness, plaintiff's property, sold by defendant, Mr. Grigor, as executor in Mr. Rangan's estate. He called on plaintiff to make her statement.

Ah Choy was warned to speak the truth, and said, in reply to Mr Ness's questions:—I live at No. 159, Yokohama. In the year 1873 I was possessed of $500, which had been left to me by Mr Butcher, who had been living with me. I handed that money to Mr Rangan who said he would take care of it for me. He gave me his promissory note. (Paper handed in). That is the note, I saw Mr Rangan sign it. The text of the note is written by Mr Meldrum, who was Mr Rangan's clerk. The money has never been paid back to me, neither by Mr Rangan, nor by Mr Grigor, nor by Mr Pitman. It is still due to me. After Mr Rangan's death, Mr Grigor sold my four-wheeled carriage, with pony and harness. Mr. Rangan had a two-wheeled carriage of his own. My pony was of red colour. When Mr. Rangan came back from England, he brought the carriage and harness with him, and made me a present of them. The pony he bought in Yokohama, and gave it to me at the same time as he gave me the carriage. The carriage and pony remained in my possession and for my use until Mr. Grigor took them away. I did not consent to Mr. Grigor taking them. (Paper shown). That is Mr. Rangan's signature.

Mr Dickins objected to the paper being read, as the text is in another handwriting to that of the signature. In his opinion this objection was based on common sense; there was nothing to show that the latter had been read by or to Mr Rangan before signing it. Mr Rangan was notoriously not able to read or to write anything besides his own signature, which was, in fact, nothing more than a mere mark.

The objection was overruled.

The paper was then read, which proved to be a letter from Mr Rangan, written in London to plaintiff, in which he promised her to bring her a beautiful carriage from London.

Examination continued: Mr Rangan could only write his own name. Letters written in his name were always signed by himself, but his signature was not always uniform. Mr Grigor did not tell me what price he got for the carriage and pony; he only said it had been sold very cheap. (Mr Ness observed that the proceeds were $350.)

Cross-examined by Mr Dickins: When Mr Rangan signed the promissory note for 500, nobody was in the room besides him and myself. I cannot read the note, nor could Mr Rangan but Mr Rangan's clerk read it over to both of us; he was present when Mr Rangan signed. The note was signed in the year 1873, in the spring. Its contents are that Mr Rangan had borrowed $500 from me. The money was to be returned at the end of the year. I did not ask for the return of the money. Mr. Rangan died in April this year. I saw Mr. Grigor on several occasions after Mr. Rangan's death, up to the the 25th May. Mr. Grigor had told me that all claims against Mr Rangan's estate must be presented before the 25th May. I never showed the promissory note to Mr Grigor, and never asked him to pay the money.

Adjourned till 2 p.m.

On the Court resuming its sitting at 2 p.m.,

The cross-examination of plaintiff by Mr Dickins was continued: The promissory note was signed at No. 122; the money had been given to Mr Rangan by me in the same year, 1873. The money was in notes of different kinds. Mr Thomas Wallace had given me the money at three different times. The first time was in January that same year, the last time shortly afterwards. Altogether he gave me a little above $400. The balance I got by selling at auction some furniture left me by Mr Butcher. Mr Bourne sold the furniture. I have no account sales. The furniture was sold for about $150. The sale took place before I received the money from Mr Wallace. Mr. Rangan left me $10,000 by his will. I want these $500 besides. I cannot say how much money Mr. Wallace gave me the first time, or how much the last time. Until I gave it to Mr. Rangan, I kept it in my trunk. Mr. Rangan asked me for it. I never asked him to return it to me. My father died while I was a child; my mother sold Chinese ladies' dresses. I lived with Mr. Butcher as his wife, but I was never married to him; he was my first European husband. He died in June, 1872. I commenced to live with Mr. Rangan in January, 1873. I subsisted on money I received from Mr. Wallace; I was living with him.

Mr Ness observed that he did not see what these enquiries had to do with the case. His Honour said he trusted that it would appear subsequently.

Cross-examination continued: Mr Rangan did not give me the promissory note in order to induce me to come and live with him. I was already living with Mr Rangan when the note was given to me. I did not receive any ready money from Mr Butcher's estate beside the $400 Mr Wallace gave me, and the furniture. I was in Hongkong from January, to August, 1876. Mr Rangan paid me during that time $30.00 a month. While I was living with Mr Rangan he paid all my expenses, if I wanted money, I could have it. I never told anybody that Mr Rangan had $500 of my money. I left Yokohama for Hongkong on the 24th January, 1876. Mr Rangan accompanied me and paid my passage. I came back in August the same year with Mr Rangan, who in the interval had been in England. When Mr Rangan went to England, I asked him for my $500, but Mr Rangan said he had not got money enough for himself. Mr Rangan was not a poor man, but he had lent his money out. Mr Grigor owes him $10,000. My carriage was sometimes, but not always, driven by Mr Rangan.

Chief examination by Mr. Ness continued: No part of the $500 has ever been paid back to me. The $30 paid to me in Hongkong were not on that account. Mr. Abbott was Rangan's agent in Yokohama. He sent the $30 monthly to Mr. Barnard in Hongkong to be handed over to me.

F. E. White, Consular Constable, was sworn and said: I believe the writing of the promissory note is the writing of one Mr. Meldrum, who was deported from Yokohama for vagrancy some months back. I knew Mr. Rangan well. He was rather a careful man. I do not think that he would have paid his promissory note without recovering the note.

This was plaintiff's case.

Mr Dickins said that he should first treat of the claim of $500 with interest. It was evident that no loan had ever been made of $500, and consequently the claim of interest must fall to the ground. But he thought himself able to prove that there had not even been a deposit of the principal. The claim with regard to the carriage rested entirely upon plaintiff's own evidence, because Mr Rangan's letter, that has been produced in Court, proves nothing more than that Mr Rangan had bought a carriage for the use of the plaintiff. The claim embodied in the promissory note might properly be said to have been satisfied by the legacy; he should try to show that no consideration has been given for the promissory note, or if given, it was an immoral one.

Mr John Grigor was sworn and said: I am a British subject, I live at No. 216 Bluff. I am one of the executors of Mr Rangan. I have known him for the last ten years. He was in good circumstances in the year 1873. I think it exceedingly unlikely that he at that time should have borrowed $500 from plaintiff. Mr Rangan was an uneducated, but very shrewd and careful man. His books have been kept so as to admit of winding up his estate. They contain no entry of a loan or deposit of $500, nor did Mr Rangan ever inform me of such a transaction. If it had taken place, I think I should have known of it. He told me expressly that he did not owe any money. Mr Rangan had been very anxious to sell the four-wheeled carriage. He had offered it to me. He never referred to it as plaintiff's property. I have seen Mr Rangan driving it. After I had proved the will, I put the usual advertisements in the paper. The claims were all sent in by the 25th May. I received no claim in the interval from plaintiff, either with regard to the $500 or the carriage. I saw her repeatedly, as she sometimes sent for me and put questions to me about her legacy. She is, in my opinion, a very clever woman. I told her that I had advertised for debts to be paid and claims to be sent in within the 25th May, and that I then should be in a better position to judge how the estate stood. She said she wanted to get away. The first I heard about the two claims was on the 5th June in a letter from Mr Ness, but that letter does not mention a promissory note. (Letter handed in and read.) The existence of that was only mentioned to me within the last ten days. Plaintiff was present when I handed the carriage and pony over to Mr Cope for sale by auction. She made no objection. She said she should like to buy back one of the ponies and a basket trap. The plaintiff made a verbal claim upon me for the house and furniture, which I refused. I handed her some jewelry.

Cross-examined by Mr Ness: The books of Mr Rangan do certainly not contain any entries of store accounts or similar bills, otherwise they contain entries of all his transactions.

Mr Edgar Abbott was next sworn and said: I am a British subject, residing at No. 28, Yokohama. I was acquainted with Mr Rangan;

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

he asked me to find a person in Hongkong who would pay $30 monthly during his absence in England, and I did so. I made up an account; I think the whole amount disbursed for Mr Rangan in Hongkong was about $700.

Cross-examined by Mr Ness: I have no personal knowledge that the money was for Ah Choy. I never heard anything about a promissory note for $500.

Examination-in-chief continued: Mr Rangan accepted my account.

Mr F. A. Cope was sworn and said: I am an auctioneer. I knew the deceased Mr Rangan. I remember his four wheeled carriage. He showed it to me a few days after his return from England; he said he had brought it out for his own use, but if he could sell it for anything like what it had cost him, he would sell it. Afterwards he told me from time to time that he wanted to sell it. I took possession of the carriage, harness, and ponies from No. 133, Bluff, and sold them by auction. No objection was made. I took the carriage away on the 23rd of April, and told Mr Rangan's *betto* to bring the ponies on the 25th. The carriage was sold for $185, the harness for something like $75, one horse for $26, and another for $19. The plaintiff was present when I took possession of the carriage. At the auction the basket-carriage was bought in by Mr Plummer for plaintiff.

Mr A. Plummer was sworn and said: I reside at No. 17, Yokohama. I knew the deceased Mr Rangan well. I know both the plaintiff and the defendant. Mr Rangan would speak about his business with me; he never mentioned to me that plaintiff had lent him $500, or deposited that amount with him. I never heard him mention that he had made her a present of a carriage. After Mr Rangan's death, the plaintiff requested me and Mr Styles to act for her. I saw her several times. She asked me to request Mr Grigor to pay her legacy of $10,000 as quick by as possible, as she wanted to go to China. She did not mention the $500. On the morning of the auction she sent for me, and asked me to buy the basket-carriage, harness, and horse for her. She would give $60 for all.

Mr G. W. Styles was sworn, and said: I am a British subject, clerk at the "Grand Hotel." I have been doing bookkeeping for Mr Rangan. I commenced in June, 1873. I kept all his accounts. Since his death I have had nothing to do with his books. He never mentioned to me a loan or deposit made by plaintiff. Mr Rangan could write his name, nothing further. He was rather strict in seeing everything entered in his books. There was no entry in his books with regard to a transfer to plaintiff of a carriage with pony and harness, and I have heard nothing about it. I have not heard plaintiff make any such claim before this case was brought. After Mr Rangan's death she wanted Mr Plummer and me to act for her in promoting the settlement of her legacy, as she wanted to go to Hongkong.

This was defendant's case.

Mr Dickins then addressed the Court on behalf of defendant. He said that plaintiff was a woman that had been in the habit of living successively with different foreigners. He did not think himself that the argument, that the claim, represented by the promissory note, was satisfied by the legacy was a strong one, but it was his duty to call attention to it. At all events the omission of the words "or order" in the promissory note deprived the note of the character of a negotiable security. The next point of defence was that there was no proof that any consideration had been given for the promissory note. The plaintiff's evidence was entirely uncorroborated. Not only did she not prove that she really lent or deposited the money, but she did not even prove that she ever had the money. Why was Mr Wallace not called? Of course, because his evidence would not have corroborated plaintiff's evidence. The promissory note did not mention "for value received;" it might have been given as a present. Plaintiff said distinctly that the money was given by her to Mr Rangan for safe keeping; but that statement could not be reconciled with the wording of the promissory note, which stipulated payment within a year. The promissory note was undoubtedly given to plaintiff by Mr Rangan in consideration of her consenting to become his "housekeeper." The whole evidence given by defendant's witnesses proved that it was extremely unlikely that such a loan or deposit should ever have been made. There was no entry nor any mention of it. When the money became due, plaintiff did not ask for its repayment; after Mr Rangan's death she did not present her claim within the time advertised by the executor, and she made no mention of it either to Mr Plummer or to Mr Styles, whom she had asked to assist her. The only consideration which plaintiff had given for the promissory note, was of such a nature as no Court would recognize. Interest was demanded from the time the note become payable, but as no demand had ever been made for the money, interest ought not to be allowed.—With regard to the carriage, the only proof adduced by plaintiff in support of her claim, was Mr Rangan's letter from London, containing the phrase: "I have bought a carriage for you," but this meant nothing more than for "your use." Immediately after his return to Yokohama, Mr Rangan commenced offering that identical carriage for sale to different persons, nor was there after Mr Rangan's death any claim made by plaintiff for the carriage. If the carriage had been hers, she would certainly not have instructed Mr Plummer to buy another carriage for her at the same auction sale, at which the carriage now claimed was sold.—On these grounds he demanded a verdict in favour of defendant, and that plaintiff under all circumstances be ordered to pay costs.

Mr Ness replied, and said that it was unnecessary for him to refute his learned friend's arguments derived from the facts that Mr Rangan was in easy circumstances and consequently did not require a loan, and that Ah Choy had not gone about the settlement babbling that Mr Rangan owed her $500. The promissory note was there, and the signature to it was admitted by his learned friend. Although the promissory note was not to "order" it could have been endorsed by plaintiff and negotiated after a mere notice to the debtor. His learned friend said first that there was no consideration for the note, and then he said that the consideration was immoral, but for none of these propositions had he adduced any evidence. As the money had not been paid at the time stipulated in the note, it was only fair that interest should be paid on it from the day it became due. With regard to the carriage he could not agree with his learned friend that the phrase "I have bought a carriage for you" was synonymous with "I have bought a carriage for your use." That might be so between husband and wife, but the relation was different here. Very possibly Mr Rangan might have spoken to different persons in Yokohama about his wish to dispose of the carriage; he would undoubtedly then have made some other arrangement with Ah Choy. Neither was there anything inconsistent with her claim in her giving instructions to buy the cheaper carriage at the auction

Judgment reserved.

Thursday, October 4, 1877.

FELIX BEATO *vs.* W. S. THOMSON.

This was a claim for $376.78 damage done to cargo during its transit from London in the British steamer *Atholl*.

Mr Dickins appeared for plaintiff, Mr Ness for defendant, who is the master of the said vessel.

Mr Dickins stated that certain goods were shipped in the vessel of which defendant is the master; in the bill of lading the goods were acknowledged to have been shipped in good order and condition. When the goods arrived in Yokohama, they were found to be damaged; probably in consequence of being stowed in close proximity to some chloride of lime. A claim was made on the ship's agents, Messrs. Jardine, Matheson & Co., for damages, that is to say, the difference between value of the goods in their damaged state and their value if they had arrived in good condition. Similar claims have been proffered by other parties and been satisfied, but plaintiff's claim was refused on the ground that if damage had been done it was due to one of those causes that in the bill of lading are expressly excepted from ship's responsibility. He would call as witness—

Mr Anthony Johannes Cornelius Geertz, who promised to speak to the truth, and said: I am a Dutch subject. I live at No. 105, Bluff. I am a surgeon in the Dutch army, at present employed in the Japanese service. I have been five years professor of chemistry at a military college. Mr Beato handed me certain bales for examination (a carpet produced). This is a sample of the bales; I have cut a hole in the carpet in order to examine a piece. I found in it a certain quantity of chlorine and of lime. The carpet was spotted. I account for the presence of chlorine by leakage drops which must have been falling on the bales and penetrated into their texture. In the spotted part of the carpet was a larger quantity of chlorine than was found in the unspotted part. The chlorine would not exist in the dye of the carpet. The appearance of the carpet could have been caused by broken casks or bottles of chloride of lime.

Cross-examination by Mr Ness: It is impossible for me to explain in a popular way how I tested the carpet. I have no time to give such explanations. That cannot be done in a few words to non-professional men. I did not boil the piece of carpet; I extracted the matter first by water, and secondly by acids. I did not ascertain the percentage of chlorine; I could have done so. Through the reaction the quantity extracted was seen. I cannot tell the difference of quantity in the spotted and in the unspotted parts. Chlorine and lime are present through the whole carpet. I do not know whether any person had experimented on the carpet before me. The carpet was handed to me with the request to ascertain what could have caused the spots, and I was also told that there had been chloride of lime in the ship. I did not apply chloride of lime to the undamaged parts of the carpet, to compare its effects with the damaged parts. Bleaching powder is very apt to get damp in wet weather. The damage could have been caused by any chloride, but it is not probable that it was in the present case, as the reaction was acid. The chloride of lime may become liquid by attracting the humidity of air; in order to have dropped on the carpet, it must have been placed above the carpet. The damage is not caused by gas, because then the whole carpet would have been spoiled. I cannot tell when the damage was caused. It is not probable that the damage was caused by chloride of sodium. There is chloride of sodium in salt water and in sea air, but it is impossible that this damage could have been caused by sea air, because then the whole carpet must have been spoiled. There is about three per cent chloride in sea water. If the carpets had been stowed 100 feet from the chloride of lime, the damage could not have been caused by the chloride of lime. I cannot account for the black spots of the carpet, because I have not made a thorough examination. I have only ascertained the presence of a large quantity of chlorine, and a certain quantity of lime.

Examination-in-chief resumed: If the damage had been caused by sea water, I do not think I should have found such a large quantity of chlorine. I cannot state with certainty that the cause of the damage was chloride of lime, I can only state that it was a chloride. If the damage had been caused by sea water, I should not have found an access of acid. Chloride of iron or chloride of magnesium contain acid, and other chlorides may also, if not very exactly prepared, contain acid. If the emanations of chloride of lime could not escape freely, they might mix with the water in the air and drop down in a liquid state, but I do not think it would have caused this damage. There are many medicines which contain chloride, for instance, chloride of iron. I found iron in the spots. Also chloride of calcium, chloride of ammonium. I cannot tell the proportion of lime in sea water, it is very little. The damage must

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

have been caused by a chloride, containing a certain amount of chlorine and a certain amount of lime.

To the Court: I do not believe that sea water could have caused the damage. A continual trickling of sea water would make no difference in the result.

Mr John Hartley, sworn: I was consignee of 100 casks of chloride of lime by the *Atholl*. The chloride of lime was packed in casks. When I received the goods, 97 were found in good order and three had the heads out of them.

Cross-examined by Mr Ness: I saw the damaged casks on the hatoba. I made no claim for damage. I think it probable that the heads had got out during the landing; if they had been out for some time, the contents of the casks would have become humid, and that they were not.

Captain D. Scott was called. He claimed a fee for his attendance as witness, but His Honour refused to grant the same. He was then sworn and said: I am a master mariner and surveyor. I have surveyed the stowage and dunnage of the cargo on board the *Atholl* and found it all correct.

Mr Felix Beato was next sworn and said: I am a British subject, residing at No. 57. I am the owner of the goods mentioned in this bill of lading (Paper exhibited). The goods arrived in good condition, with the exception of one bale, the contents of which were all spotted. I discovered that the day after taking delivery. I made a claim on the captain of the ship. In good condition the goods would sell at 90 cents a yard; I think a bale contains about 400 yards. The goods would now have to be sold at auction and would scarcely fetch more than 40 cents a yard.

Cross-examined by Mr Ness: There are 8 rolls in a bale; I have inspected them all, and they are damaged. Laid down here the carpets cost me 81 to 82 cents a yard. I did not see the bale before opening it. I do not know whether a clean receipt was given for the goods. I know the bales were taken away from the hatoba without any objection. The complaint was made one day after I had received the goods. I had heard of the chloride of lime in the *Atholl* before I took delivery of the goods, and I told my bookkeeper to be particular in inspecting the bales before he took delivery. The goods belong to me. My Chinaman called my attention to the damage.

Mr J. H. Brooke was sworn and said: A short time ago I was at Mr Beato's office; he called my attention to some rolls of carpet, which were spotted. I received myself bales of paper by the *Atholl*, and these bales were very strongly impregnated with chlorine-gas, but the paper was not damaged. In my opinion the spots on the carpet were caused by chlorine-gas, for which water has an affinity.

Cross-examined by Mr Ness: My paper was undamaged, although impregnated with chlorine-gas. I consider it probable that the damage to plaintiff's carpet-rolls was due to chlorine in solution penetrating the bale.

Adjourned until 2 p.m.

On the court resuming its sitting at 2 p.m.

Mr Dickins called the attention of the Court to a slight inaccuracy in the petition: the amount claimed should be reduced to about half, say $203.50. He then proceeded to call as witness.

Mr Ernest Bavier, who promised to speak the truth, and said: I am a merchant in Yokohama residing at No. 76. When goods arrive here, the bill of lading is endorsed by the addressee without his inspecting the goods. The goods are not delivered until the bill of lading has been endorsed. After the bill of lading has been endorsed, it is countersigned by the agent of the ship and you proceed to take delivery. If the goods bear outside marks of being damaged, your shipping clerk will make no observations on board ship, but if there is no visible mark outside then claims for damages are generally admitted even after you have got the goods in your godown.

Cross-examined by Mr Ness: Sometime you take delivery on board ship, sometimes on the hatoba. In the absence of any observation from your shipping clerk who took delivery, it is persumed that goods are in good order.

Mr Henry Engelhardt deposed: I am a German subject, and am the clerk of the plaintiff. I remember taking delivery on the hatoba of the goods mentioned in this bill of lading. The goods looked to be in good condition. They were immediately taken to the godown. It was a fine day. The godown is perfectly day. There is no chloride of lime in our godowns. I did not examine the goods the same day, but the next day when I gave delivery of them. I then found the contents of one bale in damaged condition; the contents of the other two bales were sound. I wrote immediately to Messrs. Jardine, Matheson and & Co. (Copy produced and read.) As I got no reply, I wrote again the next day, again requesting Messrs Jardine, Matheson & Co. to appoint a person to examine the goods that had been spoiled by acid. In consequence of the last letter Mr Cobden came to our office together with the captain and saw the bale of carpeting: the captain recognised that the goods had arrived in his ship and had been damaged by chloride of lime. I claimed that he should take over the goods and pay us their market value; but he refused because I had already taken delivery. The custom in Yokohama is to endorse the bill of lading, send it to the agents of the ship and then take delivery of your goods. There was a notice in the papers to consignees of cargo per *Atholl*. I was surprised that while the wrapper of the bale was in good condition, the contents should be damaged (wrapper produced). The market price of such carpeting in good condition is 90 cents per yard. Now I would not take it at over for 40 cents.

Cross-examined by Mr Ness: Beato warned me to inspect the bales carefully because there was chloride of lime in the same ship. I did inspect the bales carefully, but I could not discover any marks. The goods were landed at the hatoba in the morning, and we took them away in the afternoon. Messrs. Jardine, Matheson and Co. advised us in the morning that the goods were on the hatoba; Messrs. Jardine, Matheson's Chinaman told our Chinaman. I have no personal knowledge when the goods were landed at the hatoba. The next morning our Chinaman called my attention to the damaged aspect of the contents of the bale. The wrapping had then been removed. I then also examined the wrapping. There were some spots on it, the same spots as I have pointed out here in Court. Nevertheless I call the wrapping in good condition. I did not mention the spots on the wrapping when I wrote to Messrs. Jardine, Matheson, and Co. because I did not think it necessary. I wrote to them that the wrapping was in good condition after I had discovered the spots on it. I have examined the other bales; as their contents were sound I did not examine their wrappings with the same attention. The wrapping in Court belongs to the damaged carpet. Both carpet and wrapping were carried from the godown to our office at No. 57. I do not remember the very words the captain used. He said the damage was caused by acid or what you call that stuff that was on board.

Mr W. G. Bayne said: I remember being asked by Mr Beato to examine some carpeting (carpet shown). This was the carpeting. He wanted my opinion whether the carpeting was damaged by sea-water or by some chemicals. I examined the carpeting and found that it had not been damaged by sea-water. I am not in a position to state by what chemical the goods had been damaged.

Cross-examined by Mr Ness: The test I applied to ascertain whether the damage was due to sea-water or not was the appearance and taste.

Mr Dickins here demaded an adjournment in order to be able to call Mr Cobden.

Adjourned to Tuesday, the 9th inst, at 10.30 a.m.

Friday, October 5, 1877.

A. Mingard *vs.* J. H. Wignall.

This was a claim of $66.00 with interest; $45.00 as balance due on a promissory note and $21.00 for travelling expenses, etc., $15.00 between Tôkiô and Yokohama and $6.00 deposited in the British Consulates in Tôkiô and Yokohama. Plaintiff appeared personally, but defendant did not appear.

G. Hodges, consular constable, sworn, deposed that he had served a copy of the summons on defendant personally yesterday. Witness went on board the *Massilia*, in which vessel defendant is chief engineer; he was not on board, and witness returned, but met defendant going to the steamer in a *sampan*, and witness then handed him a copy of the summons. He promised to attend.

Plaintiff was sworn, and said: I am a French subject, residing at No. 134, Yokohama. Defendant owed me $100.00 and gave me two promissory notes for $50 each; defendant has paid one of the notes and $5.00 on the other one. I received no summons to appear at the Consulate in Tôkiô. I further claim one year's interest.

Defendant was ordered to pay $45.00 with 8 per cent. annual interest from 1st May, 1876, until date of payment, and further $3.00 costs.

IN THE FRENCH CONSULAR COURT.

Before H. Pierret, Esq., Consul.

Messrs. J. Reynaud and A. Gerard, Assessors.

Tuesday, October 2, 1877.

Konnisaburo and Kawajiki *vs.* Jean Clataud.

Plaintiffs, who are residents of Tôkiô, stated in their complaint that defendant had made a contract with them to paint the inside of his house, No. 33, Tsukiji; that they were to give the house three coats of paint and receive an instalment on the payment every time a coat was finished; that on the 21st ultimo, in the forenoon, they went together to defendant's house to demand payment for the second coat of paint, but that defendant contended that the house had got only one coat of paint, and that during the dispute that arose defendant gave Konnisaburo a kick in the stomach, while a son of defendant's neighbour, the druggist, Mr. Thompson, appeared on the cries of defendant, and, without further ado, took up a piece of wood that was to serve as a bannister for the staircase, with which he struck Konnisaburo over the head and shoulders, and also struck Kawajiki on the body. The plaintiff Konnisaburo was taken to the Tsukiji hospital, and a certificate was produced in court from Dr. Faulds, stating the nature of his injuries.

He now demanded in damages for his loss of time and medical expenses the sum of 26 *yen* 41 *sen*, and both plaintiffs demanded that defendant be punished according to law for his assault.

Defendant denied the charge.

The parties were personally present in court, plaintiffs supported by Japanese counsel.

Defendant said that he had contracted for painting his house, not with the plaintiffs, but with a Chinaman, who had sublet the contract to the plaintiffs. On the 21st ultimo, they came to his house and demanded the 30 *rios* that were due when the house had got its second coat of paint, but as only the first coat of paint was finished, defendant refused to pay them, when they became importunate he ordered them to leave, and as they did not do so, he took one of them by the shoulders to push him out. Both plaintiffs then attacked him, and as he was alone in the house he called for for assistance, and the son of Mr Thompson arrived and struck his assailants with a piece of wood, after which they decamped. He denied having himself struck either of the plaintiffs, who had declared their intention to possess themselves of his watch unless he paid them. As for the certificate of Dr. Faulds, that gentleman was a missionary who was trying to make proselytes among the Japanese,

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

and he was singularly biassed in their favour. He would remark that on the plaintiff had sued the son of Mr Thompson in the British Vice Consulate in Tôkiô, where the young man had been fined $2.00 for assault.

The plaintiffs called as witness a Japanese mason, who deposed that on the 21st ult. he was at work on a neighbouring house, whence he could hear the dispute in No. 33. and as he approached the door he saw defendant kick Konnisaburo in the chest, and the other plaintiff take hold of defendant, who then called for help, upon which another foreigner came up and struck both plaintiffs with a piece of wood. When witness came up to No. 33, the plaintiffs, with defendant behind them, were coming downstairs from the first floor. It was when they had arrived on the ground floor that defendant kicked Konnisaburo with such force that the latter fell.

Mr. John Thompson, druggist, deposed that his residence is next to defendant's house. On the 21st ultimo he heard defendant call for assistance, and he could see in the passage of defendant's house that defendant was wrestling with two Japanese, one of whom had hold of defendant's body and the other of his legs. Witness immediately ran to the front door of defendant's house, while his son ran to the back entrance. His son took up a piece of wood, with which he struck the two Japanese, who immediately ran away; one of them shortly afterwards returned with a long bamboo pole, but was again driven away. Witness did not see defendant either strike or kick the Japanese.

The Court informed the parties that judgment would be rendered on the 6th inst. at 10 a.m.

IN THE FRENCH CONSULAR COURT.

Before H. PIERRET, Esq., Consul.

Messrs. J. REYNAUD and A. GERARD, Assessors.

Saturday, Oct. 6, 1877.

KONNISABURO and KAWAJIKI *vs.* JEAN CLATAUD.

(*Adjourned from the 2nd instant*)

The Court to-day rendered the following

JUDGMENT.

After having heard the statements of the plaintiffs and of the defendant, and the evidence of the witnesses, and after due deliberation, the Court thus decides in this case.—

Considering that the evidence of Kawai Massonjo, who was plaintiffs' own witness, shows that the work ordered by Mr Clataud was not properly executed by plaintiffs, and that Mr Clataud in consequence thereof had to transfer the work to a third party, as proved by the contract produced by Mr Clataud;

Considering that Yaki Konnisaburo, when Mr Clataud refused to pay him, should have applied to the proper authority, instead of insisting on payment with such obstinacy as made it necessary for the defendant forcibly to eject him from the house;

Considering that Mr Clataud would not have felt compelled to call for assistance, if he had not been attacked by the two plaintiffs in a corridor, the narrowness of which prevented him from getting rid of them;

And considering that if on the one hand it appears from the evidence of Kabayashi Minekichi, that Mr Clataud used violence in order to dismiss Yaki Konnisaburo and the other Japanese, it is on the other hand proved by the evidence of Mr Thompson and by the written testimony of his son, that it was the latter who inflicted the blows and wounds, for which acts he has been punished by another tribunal.—

The Court now dismisses the complaint of Yaki Konnisaburo and acquits Mr Clataud from the charge brought against him, but rejects the claim of the latter for damages. There are no costs.

The Futai of Hupeh died very suddenly last week. He went out on the 11th to pay his respects to the Commander-in-Chief of the forces in Hupeh and Hunan, who was passing through on his way to Peking, and died on the 13th. A fabulous sum, according to popular report, has been paid for his coffin, and priests are now engaged in the yamên offering up prayers for the repose of his soul. The funeral obsequies are likely to be conducted on a magnificent scale. The mandarins will escort his remains on foot to the river, whence they will be borne to his native province of Kiangsu.—*S. C. & C. Gazette.*

Reports are current of a disagreement as to the conduct of the war between the Czar and his brother and the military authorities generally. The Grand Duke and the generals are said to be of opinion that if the Emperor had remained at Moscow the recent disasters would not have occurred.—*Pall Mall Gazette.*

The Cape newspapers of the 17th of July, according to the telegraphic summary from Madeira, report that Sir Theophilus Shepstone continued to meet with a cordial reception everywhere in the course of his tour through the Transvaal. Secocoeni was paying the war indemnity. It is stated that the departure of missionaries from Zululand was not in consequence of any hostility shown to Europeans by King Cetewayo.—*Pall Mall Gazette.*

MR. PONGO.

(The Spectator.)

It is a speciality of places of public entertainment in England, that the approaches to them shall be made as deterrent as possible; that the persons whose duty it is to admit the public shall wear an aspect of gloom and grudge, as of men who know how mistaken one is in supposing one is going to see anything for the shilling entrance-fee, and would prefer to warn the public off the premises, but, such an act of charity being forbidden, would at least suggest by their grumpy carelessness the vanity of human expectations with regard to the particular entertainment beyond their respective doors or turn-tables. Who has not noted the surprise, the discomfiture, the sudden falling of the spirits of foreign visitors, when they face for the first time the bare-boarded backwoods'-hut like approaches to the temples of Art, Science, and Bric-à-brac at South Kensington, the insecure, slanting passages, like nothing but the improvised covered way to Mr. Myers's Circus-stable, which lead to the jocosely-styled Horticultural Gardens flower shows, and the squalid disorder of the Low-Level entrance to the Crystal Palace, which combines a ricketty and dangerous staircase from the outside with some dirty pens inside, through which the aspirant to the delights of the Palace hurries, over loose, filthy, unevenly-laid boards, but in which he is confined on his way back to the train, under conditions similar to those of a "lock-up," where the tenants are habitually disorderly. We have always put up with things of this kind—was not there a perceptible under-current of misgiving when decent entrances to certain theatres were "introduced," by managers whose minds had been influenced by foreign customs in this respect?—and we probably always shall put up with them, but still we must air our grievances concerning the entrances to the Aquarium at Westminister, the dreariest place by daylight,—that is, unless our experience was exceptional—within our knowledge. Not the gentle melancholy of which Dickens writes as mostly characteristic of places where one is encouraged by advertisement to expect "a happy day," but a stronger feeling, akin to dismay, takes possession of the visitor who has passed through the creaking turn-tables and the doors, with the rough handles which he is to "push" or "pull," according to circumstances, and finds himself in the dingy vastness of the Aquarium, where the tanks are thinly occupied by a few common specimens of fish, often not of the kinds indicated on the cards supposed to guide the visitor to their contents, and where the smaller cases, containing the tortoises, water-serpents, and baby-alligators, are exceedingly foul-smelling. Dust and dreariness—both of which, of course, may be accidental—are the pervading elements of the "entertainment," as of so many others; the floor when we visited it was as dusty as that of any Metropolitan station, the walls and pillars are disfigured with advertisements, the flowers and shrubs are of the commonest kinds; the galleries are narrow walks between dust-laden rails and tables, covered with ghastly models of fish, and specimens of the blighted hopes of the Zoological Gardens. A plaster cast of an infant hippopotamus, with one leg broken off short, and a "preparation" of monkey, are among the cheering objects which one encounters on one's dusty way to the inconvenient corner at which one finds the narrow door through which one passes to an audience of the distinguished gorilla, Mr Pongo. At a dirty table stands a boy, who distributes dirty cards of admission to a space in a gallery formed by a rough enclosure of boards, leaving a narrow passage,—exactly like the prisoners' way in a police-court, with the coarsely-papered wall of the gallery on one side,—which is fitted on three sides with rows of chairs, the two shilling seats being in front, and offering no advantage whatever over the one-shilling seats, except to persons of lively imagination, who discern some in the red rope at their back. A space, with a raised floor, enclosed within wirework, and furnished with a couple of chairs, a horsewhip, a ladder, and a brown blanket, forms the scene of the exhibition of Mr. Pongo, and his friends,—August, the chimpanzee, and the dog Flok. As the audience collect, the depression of disillusion is to be read in their faces. What was the necessity for stowing away the object of so much reasonably expected attraction in a dirty corner, and surrounding him with deterrent accessories? The outer edge of the gallery is shut up with a suffocating curtain, lest a glimpse of the bewildering delights below should be caught by the dismal assemblage who wait for the appearance of Pongo, and a boy, shrill and irrepressible as Dr. Ginery Dunkle (of Troy) himself, screams incessant admonitions about the taking of tickets, even while Mr. Pongo's German attendant is laboriously enunciating the few sentences in English in which he relates the history and describes the habits of his interesting charge.

Mr. Pongo is a very nice beast, but he is not so clever as August, nor so sympathetic as Flok, and one feels about him after a little

Original from UNIVERSITY OF CALIFORNIA

while as one feels about the heavy child in a nursery,—that he is good and safe, but hardly amusing. There is something disconcerting about him, too, though it is in one's own mind, not in him; it is the inclination to treat him rather as a human being of the unintelligent, than as an animal of the exceptionally intelligent kind. One speaks to him with marked distinctness and emphasis, and pets him, not with the flippant smartness one would bestow upon "Nature's Pulchinello," his companion, but gravely, and with an effort to make him understand, as one might pet one of the harmless "cases" at the Earlswood Asylum. In the quiet heaviness of his manner there is something that makes one feel patient and painstaking, as with a creature of slow brain and perception; and when he claps his dreadfully human hands, with the black skin in wrinkles on them like ill-fitting gloves, and pounds them on the floor, demanding notice and applauding himself, one claps and nods at him just as one would at a deficient child. He is singularly dumb, too, rarely uttering any sound at all, while one of his friends chatters freely, and the other barks in all the exuberant delight of games of play, of which Mr. Pongo is for the most part only a spectator, decidedly at a disadvantage where general liveliness is in question. When seated on the ground, with his grey back, his round, neatly-formed head, with comparatively small and close-sitting ears, turned towards one, his long arms folded, his spare small legs, so disproportionate in size to his powerful arms, hidden, his lean thighs tucked close to his thick, bulging, ridgy sides, he is wonderfully like a very strongly-built child to whom "rickets" has come unaccountably, and in contradiction of his apparent constitution. Mr. Pongo's face is amiable, and his attendant declares him to be 'very good-natured;" the eyes are serious and quiet, by no means so melancholy as the eyes of most monkeys with whom we have previously been acquainted; and when he hitches himself against the wires of his cage, his legs extended, one arm lying negligently ,across his lap, and the other indolently raised while he lazily scratches his head, he reminds one of Punch's pictures of an Irish Fenian, without the ferocity, the tattered tail-coat, and the brimless hat. He is not four years old, but he looks fifty, and there is not the contradiction between his face and his manners which exists in the case of most monkeys, for his demeanour is likewise middleaged. Not, perhaps, that he remembers the Gaboon, his captivity, and his slaughtered relatives, but that he thinks solemn spectators who don't talk to him a bore, and the corner of the Aquarium gallery dull. He is said to be fond of children, and he certainly brightened up when some came in, but they were shy of him, and did not respond to his hint that a little applause would be agreeable. He gravely climbs the ladder up which August skips with derisive ease, and tests the strength of the wire-work screen of his cage with nice attention; but he seemingly makes up his mind each time that it will not "bear," and relinquishes the attempt to follow the dauntless chimpanzee, who rushes about overhead doing daring trapeze feats, dangling himself by the ropes, just out of reach of the barking and jumping dog, and mocking the much superior strength of Mr. Pongo by his far greater agility. Sometimes he has a friendly rough and tumble with Flok, or gives August an admonitory cuff and roll-over; but for the most part he sits on the floor, watching their play, or arranging his blanket, in which he packs his feet up exactly as we have seen children pack their feet up in their blankets on winter nights, and he uses his hands in these operations in a thoroughly human way. Very like a man and a brother is he also when he drinks out of a bottle, grasping it in both hands, putting his head well back, and emptying the last drop down his throat. It is quite a pleasant diversion from the close resemblance, when, his attention being attracted to another chance of securing the much-disputed blanket, he transfers the bottle to his foot, holding it firmly with the toes. His slight, flat, small heeled feet are more like those of a man than the feet of any other monkey, we are told, but the likeness ceases with the toes; these are fingers, and have all the movements of fingers; nor is the face human below the brow and eyes. The absence of a nasal promontory, the wide, sunk black nostrils, like those of a hippopotamus on a very small scale, the semicircular sweep of the mouth; the thick, calf-like tongue, and something in the action of the jaw and throat when the animal lifts up his head and one sees him from the side which also reminds one of a calf, form an unlikeness to the human race as forcible as the resemblance in other respects is striking.

Mr. Pongo is in excellent health now, but has had two illnesses since he was sold to Dr. Falkestein, of the Prussian Natural History Expedition, for two gallons of rum, and exchanged his chain in an African village for the more tolerable conditions of his European career. Perhaps he was too young when the hunters took him to have any dreams now of the deep, cool, dark forest, the great luscious fruits, the glorious climbs, and bounds, and fights, the long migrating journeys of the grey-coated community, the booming, inarticulate speech which was the language of his tribe; and it may be that he is happy enough in his artificial life. It includes all the necessaries and many of the luxuries of civilisation. He goes to bed at eight every evening, "in a very comfortable bed, and sleeps till eight in the morning," his attendant told us, "always lying on his side, with his hand under his cheek on the pillow, like a man," and he eats numerous meals with unfailing appretite. Once a day he has an ample repast of roast meat and potatoes; and his breakfast, luncheon, and supper consist of milk, wine-and-water, bread, rice, eggs, fruit, and vegetables. He is on the best of terms with his attendant, and it was very funny to see him lying negligently on his back in a slanting-upwards position on the ladder, his eyes turned up to the ceiling, one hand dangling downwards, and the other thrown round the neck of his friend, as the latter repeated his brief formula to a freshly-arrived batch of spectators. Mr Pongo had quite an irresistible air of enjoying the proceeding; he rolled his tongue about, and when the sentence, "His present value is five thousand pounds!" was spoken, he withdrew his arm, gave the speaker a friendly cuff, as who should say, "What! you're at in again, are you? Fetch 'em with figures, my boy!" and dived rapidly over and under the rung of the ladder, looking at the audience upside-down from between his legs with a composed gravity infinitely comical. He never attempts to stand upright; he is too heavy, his attendant explained, and his legs are not yet strong enough to support his weight. But if is expected that he will grow to a height of six feet, and then stand upright, as the full-grown gorilla has been seen by travellers to do. At present his mode of progression is like that of a tumbler who is about to be picked up suddenly by a pinch behind from the clown in the ring He walks on his feet and his hands—the latter turned in, fist-shape, and looking like small club-feet—and his back slopes gently down from his broad shoulders to his thin, misshapen flanks. Mr. Pongo is an interesting, if not precisely a fascinating animal, and the strongest proof of his quaint suggestion of kinship with his visitors is that one is never free from a queer sense of bad manners in asking questions about him before his grave, black face; and that one leaves him with a wish that he might have something to do, or at least something to read.

REUTER'S TELEGRAMS.

Intelligence from the Seat of War.

Despatches report that it is semi-officially stated that Russia refuses to entertain proposals for peace under present circumstances, and is firmly determined to prosecute military operations.

According to a Russian Official Despatch, dated September 26th, Ismail Pasha and his Forces, together with those of Ahmed Muktar Pasha, gained a complete victory on the 1st October at Nedgevaw over ten thousand Russian Troops (? under Nedgevaw), which were driven over the frontier.

[There is evidently a mistake about dates in the above, but the message was so received at this Agency.—E. L. B. McM.]

The Russians are bombarding Plevna continuously.

Riot in the Straits of Malacca.

Kongsee riots have broken out in Malacca and Douglas (Query Capt., Superintendent of Police) has proceeded thither with a number of policemen.

London, October 2nd, 1877.

Despatches report that there are strong signs of an early and severe winter at the seat of war in Turkey in Europe, and that two inches of snow already cover the Schipka Pass.

It is believed that the campaign in Bulgaria is virtually ended for this season, and that the Russian forces will remain during the winter strongly entrenched in their present positions.

London, 1st October, 1877.

Despatches report that very bad weather has visited Bulgaria, in consequence of which it is very difficult for the Russian Army to obtain supplies, the roads being almost impassable.

Suleiman Pasha is coöperating with Mehemed Pasha.

A severely contested engagement has ensued between the forces under Ismail Pasha and those under General

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Terkugassoff, the result being indecisive, both combatants maintaining their positions.

LONDON, 30th September, 1877.

Despatches from Newspaper special correspondents announce, and the *Daily News* states, that the greatest discontent and discouragement prevail at the Russian Head-quarters and the officers regard the chances of success as hopeless, unless a change is made in the staff.

THE PENGE POISONING CASE.

All of the accused in the Penge Poisoning Case have been condemned to death.

LONDON, September 29th, 1877.

It is reported that the forces of the Russian Centre attacked Plevna on the 25th instant but were defeated with very heavy loss. No official confirmation of this engagement has, however, been received as yet.

The Russian troops attacked the Turkish positions at Southigdyr (*sic*), but were compelled to fall back, losing many killed.

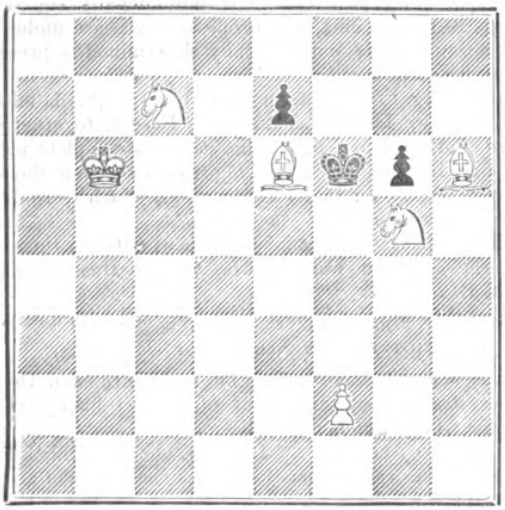
N. B.—In Telegram dated London, 26th September, please read "twenty-one" instead of "twenty-seven" thousand.

London, 20th September, 1877.

Prince Bismarck and Count Andrassy, the Austro-Hungarian Foreign Minister, have met in conference which lasted for four hours. The "Semi-official Provincial Correspondenz of Berlin" indicates the object to have been the furthering of European peace.

London, 18th September, 1877.

Suleiman Pasha has captured Fort Nicholas, at the Schipka Pass.



Mr. Stanley has crossed Africa, and arrived at the West Coast. He has succeeded in identifying the Lualaba with the Congo river.

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabrics & Yarns.—*Yarns* continue in moderate demand at firmer rates. *Shirtings* are quite neglected and nominal. Of *Taffachelass* some sales are reported, whereas *Drills* and *Turkey Reds* attract little attention, and in *Velvets* only a small business has been done.

Grey Shirtings:—							
7 lbs.	38½	yds.	39	in.	per pce.	$1.40	to $1.75
8 lbs.	38½	yds.	44	in.	,,	1.80	to 2.20
8 lbs. 4 to 8½ lbs.	38½	,,	39	in.	,,	1.57½	to 2.30
9 lbs.	38½	,,	44	in.	,,	2.05	to 2.55
T. Cloth 7lbs.	24	,,	32	in.	,,	1.40	to 1.60
,, 6lbs.	24	,,	32	in.	,,	1.10	to 1.25

White Shirtings:—							
60 to 64 reed	40	yds.	35	in.	per pce.	2.20	to 2.40
Turkey Reds	24	yds.	30	in.	2—3 lb. per lb.	0.67½	to 0.85
Black Velvets						7.25	to 8.35
English Drills	14/15 lbs.	40	yds,	30	in.	2.40	to 2.65
Taffachelass		12	yds,	48	in.	2.00	to 2.25

Yarns.—

No. 16 to 24	per picul	$28 25	to 31.50
No. 28 to 32	per picul	$32.75	to 35.00
No. 38 to 42	per picul	$36.00	to 39.75
Reverse Twist 16-24	,,	—	

Woollens.—The position of this market has not changed since our last, and prices remain very much the same. *Figured Orleans* and *Shimagoros* continue in fair demand, whilst *Plain Mousselines de Laine* are neglected.

Plain Orleans	40—42	yds.	32	in.	5 60	to	7.00
Figured Orleans	29—30	yds.	31	in.	4.25	to	5.50
Shimagoro	30	yds.	30	in.	3.75	to	5.25
Italian Cloth	—30	yds.	32	in.	0.25	to	0.32
Camlet Cords	29—30	yds.	32	in.	5.75	to	6.00
Camlets Asstd.	56—58	yds.	31	in.	—		
Lastings, Japan	22—30	yds.	32	in.	12.00	to	13.00
Plain Mousselines de Laine	—30	yds.	30	in	0.16½	to	0.18

Figured Mousselines de Laine	30	yds.	30	in.	0.25	to	0.28½
Multicolored ,,	30	yds.	30	in.	0.28	to	0.37½
Cloth, all wool plain or fancy	48	in. to	52	in.	0.80	to	1.20
Presidents	54	in. to	56	in.	0.60	to	0.65
Pilots	54	in. to	56	in.	0.45	to	0.55
Union	54	in. to	56	in.	0.60	to	0.80
Blankets, scarlet & green	6 to 8 lbs.				per lb	0.40	to 0.45

Sugar.—There is little or no business doing, and stocks and quotations remain unaltered since our last.

Sugar:—Takao in bag	(nom.)	per picul			$4.75		
,, in basket	,,	,,			$4 65		
Taiwanfoo in bag		,,			$4.60		
do. in basket		,,			$4.50		
China No 1 Ping-fah		,,			None		
,, No. 2 Ching-pak		,,			$8 20	to	$8.50
,, No. 3 Ke-pak		,,			$7.60	to	$8.00

China No. 4 Kook-fah	per picul				$7.20	to	$7.50
,, No. 5 Kong-fun	,,				$6.30	to	$7.20
,, No. 6 E-pak	,,				$5.50	to	$5.90
Swatow Brown	,,				None.		
Daitong	,,				$3.80		
Japan Rice	,,				$1.80	to	$2.40
Kerosene Oil, nominal	,,				$2.80	to	$3.25

Kerosene Oil.—The market remains much the same as before, dealers continuing to offer lower prices than importers are willing to accept. It is reported that some small sales "to arrive" have been made.

EXPORTS.

Silk.—There has been a very large business done during the week at advancing prices. The chief part of the transactions has been in Hank sorts, which have advanced 25 to 30 dollars per picul, and at the close native dealers are in a state of excitement, demanding in most cases exorbitant prices for the remaining stock, which is greatly reduced.—Oshius were a little easier at the beginning of the week, but are now firm at quotations. Filatures are $20 dearer.

Settlements are 1,000 bales of Hanks, and 300 bales of Oshius and Filatures, making a total of 1,300 bales.

Arrivals are 450 bales, and stocks consist of 700 bales. The total export to date is 4,753 bales, against 13,068 bales for the same period last year.

		In London at 4s. 0d. per lb.	*In Lyons at f. 5.05 per kilo.*

Per Steam-ship *Bombay*, from Hongkong.—Mr. C. F. Pollock, A.M.D., Mrs. Pollock, Lieut. Coker, R.A., Mr. R. Dunwiddie R.N.; and 4 Chinese.

Per Steam-ship *Sunda* for Hongkong:— Mrs. Rickerby and child, Messrs. Tempest, Waller, Ah Swee; and 7 Chinese in the steerage.

Per Steam-ship *City of Peking* from San Francisco:—Admiral Patterson, U.S.N., Dr. Kendleberger, U.S.N., Comd. Sumner, U.S.N., Lieut. Davenport, U.S.N., Lieut. Wainright, U.S.N., Mrs Wainwright and child, Mr. and Mrs. J. J. Enslie, Mrs. Taylor and 2 infants, Miss L. B. Pierson, Miss H. F. Parmelee, Miss Julia A Wilson, Miss Mary E. Baw, Miss S. J. Anderson, Mrs. E. J. Patterson and 2 child, Miss J. J. Flowers, Bishop Wiley, wife and child, Revd. Isaac Pierson and wife, H. H. Lowry, wife and child, Mrs. O'Kara and family, Messrs. Tozo Tonita, M. Yokoyama, F. C. Brenschort, D. H. Patterson, H. C. Leeds, Abbott Lawrence, Jr., Julius Stahel, A. P. Karns, John Tracy, G. T. Marsh, Yokoyama, W. Curtis, David Sears, D. L. Pickman, Fredrick Schejoth, R. D. Locke, M. S. Cooper, O. G. Sawyer, U.S.N., O. Fiji, and Revd. W. G. Bentow in the cabin; 7 Europeans, and 7 Japanese in the steerage. For Hongkong: Revd. J. Borgazzi, Fung Pak, and 638 Chinese in the steerage.

Per Steam-ship *Saikio Maru* from Shanghai and ports.—Mr. and Mrs. Heinemann and child, Mr. and Mrs. Arnot, Mrs. Morse and two children, Miss Center, Madame Labastie, Generals Nodzu, Yamada, and Oyama, Drs. Brown and Gottburg Messrs. Woods, R.N., Burchard, Holtham, Hildebrand Jubin, and 47 Japanese in the cabin; 1 European, 1 Chinese, and 1,544 Japanese (320 troops) in the steerage.

Per *Tokio Maru*, for Shanghai and way ports:—Bishop Wiley, wife, and child, Rev. Mr. and Mrs. Pierson, Miss Pierson, Mrs. C. Alexander, Miss Jennie Chisman, Mr and Mrs. K. H. Lowry, two children, and infant, Mrs. Stevens, Miss Flowers, Mr. and Mrs. Fitz Henry, and three children, Miss Remusat, Miss Parmelee, Miss Wilson, Mr. and Mrs. Focke, Mrs. Cornes, Baron Von Gutschmid, Mrs. Teraiya, Mrs. Larkin and two children, Rev. W. G. Benton, Sub.-Lieut. Afenaniff, Lieut. Koltchack, Messrs. Kelly, Foster, Aldrich, Itami, Muraizama, Kunesigi, Tukumoto, Nishikawa, Koca, R. D. Lock, A. R Hains, Stone, Sangster, Dick, Hatori, Honjo, Kishi, Mikadeya, Takane, M. P. Kemperman, T. Schjoth, F. Kilby, J. H. Gorman, Kunesiji, and Sena.

CARGO.

Per Steam-ship *Bombay*, from Hongkong:—

Sugar	1,594 pkgs.
Coffee	24 ,,
Yarn	160 ,,
Wine	40 ,,
Oil	80 ,,
Saltpetre	50 ,,
Sundries	226 ,,
Transhipment	434 ,,
Total	2,608 pkgs.

Per Steam-ship *Sunda* for Hongkong:—

Silk for England	..384 bales.
France	...122 ,,
Italy	... 45 ,,
Total ...	... 551 bales.
Silk-worm's Eggs to France	... 4 cases.

Per Steam-ship *Saikio Maru*, from Shanghai and ports.—

Treasure	... $40,200
,, ...	*yen* 88,150

Per Steam-ship *Tokio Maru* for Shanghai and ports:—

Treasure	$205,794
,, ...	*yen* 7,500

REPORTS.

The *City of Peking* reports:—Left San Francisco September 12th at 12 m. Experienced thick and rainy weather during the voyage, with moderate gale on 26th, 27th and 28th from North East.

NOTICE TO MARINERS.

No. 67.

China Sea.

NINGPO DISTRICT.

Rock to the Eastward of Pootoo Island.

NOTICE is hereby given that Captain PETERSEN, of C. M. S. N. Co.'s Steamer "*Ho-chung*," has reported a Rock, unmarked on the Charts, to the Eastward of Pootoo Island, and he gives the following magnetic bearings as determining its position :—

West Nine Pin Rock.....N. 33° E.
Half Tide Rock ....N. 12° E.
N. W. Point of Isthmus Island...N. 14° W.
Northern end of Pootoo E. Bluff..N. 49° W.

The Harbor-Master at Ningpo has verified the position of this pinnacle rock, and reported that there will probably be only 6 feet of water on it at low water spring tides, with from 7 to 13 fathoms round it.

See Admiralty Charts Nos. 1,199 and 1,969.

By orders of the Inspector-General of Customs,

DAVID M. HENDERSON,
Engineer-in-Chief.

W. CRAWFORD & CO.,

75, CARTER LANE, SAINT PAUL'S,

LONDON, E.C.,

Beg to state that they are open for any Commercial Transactions, as to Consignments, for Granting Drafts, and Presenting Commercial Bills for Acceptance and Payment. For Buying English Goods at a very small Commission and Forwarding Goods to any place in England or the Continent.

WE beg to draw your attention to avery important English Invention we have on hand, viz.:

WOOLLEN BLANKETS

OR

COVERINGS,

OF ALL SIZES COMBINED WITH AN

AIR PILLOW.

It will be found most necessary and useful for Military Men, Travellers, Invalids, for use in the Hospitals, &c., &c., possessing amongst others the following advantages:—

It is the finest substitute for a Bed.

The Pillow can be raised or lowered at any time with the greatest ease.

It will pack up in a very small compass, and can be carried about without any inconvenience.

Price from 15s. to 35s. each.

When ordering the above article, please remit the amount of your order to

W. & C. SCOTT & SON.

FIRST PRIZE MEDAL and DIPLOMA OF HONOUR awarded, CENTENNIAL EXHIBITION, Philadelphia, 1876. For excellence of Materials and Workmanship in their PREMIER QUALITY and medium grades. Their New PATENT TRIPLEX action and COMPENSATING LUMP.

The attention of Sportsmen is requested to the above new system of action. Its superior strength and solidity imparts greatly improved shooting powers. Hard hitting being the desideratum required is obtained by this powerful Gun.

Prices of the TRIPLEX: £22.10.0, £30.0.0, and £37.10.0, This latter is our highest quality and is marked "THE PREMIER QUALITY."

Excellent DOUBLE-GRIP BREECH-LOADERS at £8.10.0, £12.0.0, £16.0.0 and £20.0.0. Shooting guaranteed.

OUR PATENT TOP LEVER with PURDEY solid double bolt. Shooting guaranted. Sound plain finish £15/0/0. Well finished, good materials £21.0.0. Cases and implements £4, £6 and £8 extra.

In the New York International Gun Trial competition, 1873, the Committee awarded our guns the Diploma, being declared first for points of merit of action, materials, proportion and shooting qualities.

Extract from Forest and Stream, New York, December 26th, 1876. Contributed by one of the judges of awards of guns at the Centennial. "The crowning glory of the display was the case of W. & C. Scott & Son. This firm has sent more good guns to this country during the past few years than any other, and they especially commend themselves to American sportsmen from the fact that they furnish good guns, honestly made, and of high shooting powers at very moderate prices. Their TRIPLEX ACTION combines, in the highest degree, strength with simplicity, and it must rapidly secure the favor of all who test its merits."

OUR PATENT COMPENSATING LUMP strongly recommended; should be ordered on every gun (cost, 30 shillings extra). For the Sportsman abroad, this invention is invaluable, being secured against the joint becoming loose after several years wear.

CHOKE BORED GUNS.—Slight, Medium or Full.

BREECH LOADERS in all systems from lowest qualities.

SINGLE and DOUBLE MUZZLE LOADERS.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omisson to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

DIED.

At Yokohama, October 9th, EMILE MASSAIS, Doctor of Medicine of Paris, aged thirty-nine years.

Notes of the Week.

His Imperial Highness Arisugawa-no-Miya, the Commander-in-Chief of the Imperial Army in the South, returned in the steamer *Thabor* on the night of the 9th instant, being escorted by the Japanese men-of-war *Seiki Kan* and *Kasuga Kan*, having on board Admiral Kawamura, Adviser to the Commander-in-Chief, and Rear-Admiral Itô. Many of the ships in harbour were gaily decorated with flags after daylight on the 10th, and shortly before 8 o'clock His Imperial Highness and suite landed at the Admiralty jetty under a salute from the men-of-war and the Kanagawa fort, where they were met by the Prime Minister Sanjô Saneyoshi, their Excellencies Iwakura, Okuma, Itô, Terashima, and other high Government officials, and many of the nobles. After a brief stay at the Naval Yard a movement was made to the Railway Station, the road to it being kept by a large body of police, and the whole party proceeded to Tôkiô by the 9.34 train. At the Shinbashi Station a large escort of cavalary and infantry were waiting, and some members of the Imperial family were there to receive the Prince, who almost immediately proceeded in a carriage, accompanied by their Excellencies Sanjô and Iwakura, to the Imperial Palace at Akasaka, where His Imperial Highness, and Admirals Kawamura and Itô were received by His Majesty the Mikado, who graciously thanked them for the efficient duties they had performed in suppressing the Satsuma rebellion. After partaking of refreshments His Imperial Highness and suite left the Palace about 1 o'clock.

The next day His Majesty was pleased to raise H. I. H. Arisugawa-no-Miya to the rank of Field Marshal, so that the Prince now holds that rank which was previously held in Japan only by his late opponent Saigo, before the latter took up arms against the Government.

Lieut.-General H. I. H. Higashi Fushimi-no-Miya, and Lieut.-General Soga, both of whom have been actively employed in the Kiushiu war, returned from the South by the *Nagoya Maru* on Thursday last. So soon as possible they presented themselves at the Imperial Palace, where they were recevied by the Mikado, who thanked them for the services they had rendered. Yamagata, the Minister of War, is expected back here about the 15th instant, together with Lieut.-General Miyoshi.

The Imperial troops are being withdrawn from Kiushiu as rapidly as possible, but the outbreak of cholera amongst them at Kobe has prevented their immediate return northwards. Most alarming accounts were at one time given by the Tôkio papers of the condition of these troops, for which there seems to have been no real foundation. The *Hiogo News*, indeed, goes so far as to doubt the existence of Asiatic cholera amongst them at all, ascribing the sickness from which the troops have been suffering to "some bad form of diarrhœa arising from causes which might most probably have been prevented." The Government has established a quarantine station down the Bay for the special purpose of subjecting all transports carrying troops from the South to strict examination, and if necessary to detention in quarantine. By such measures it is to be hoped that any danger of the spread of cholera from these returning troops may be avoided, and as the official returns show that the cases of seizure or death in Yokohama and the vicinity have been greatly reduced in number, we hope soon to be able to congratulate ourselves on being entirely free from the dreaded epidemic which has visited us.

The dread of cholera seems to be very prevalent in the country, although there is no record of its having made its appearance in towns off the coast line. The first question asked of a stranger who has come from Yokohama is whether the disease is still prevalent there, and it is evident from the anxiety displayed that exaggerated reports of its fatal effects have found their way into the country districts. At the same time it would be well for the general health of the people if some of the measures so admirably inaugurated and carried out in Yokohama and Tôkiô could be brought to bear upon the inland towns and villages. If this cannot be done generally, it would at least be well to put all hotels and caravanseries under thorough sanitary inspection. The principle *Yadoya* at Haramatchida, for example, is one that sadly needs looking after. There is at that house an absolute disregard of health, decency and propriety which we have never seen equalled in the course of a long experience of country travel. It is a house largely frequented, and how human beings can sleep and eat in such a pestilential atmosphere without suffering serious ill effects is incomprehensible. It certainly cannot be impossible to insist that certain decent and sanitary arrangements should be carried out in houses of this class. By such a course the authorities would be doing much to eradicate what must be a fruitful source of disease, and to earn the gratitude of all travellers both native and foreign. In the tea-house in question we heard several Japanese com-

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

plaining that they were unable to partake of any breakfast, and no wonder, after a night spent in such an atmosphere. We warn all tourists against stopping in this village, or at least, in this house. At Hachoji, we believe, certain preventive measures have been taken, but still there is sad neglect in the town of the commonest precautions. One case only of cholera is said to have occurred here, a few days ago, the person attacked dying after a few hours' illness. As the authorities have shown themselves so earnest and thorough in the prompt measures they have carried out in the settlement and the capital, it would be well if they would continue and extend their labours, and bring about a system of sanitary reform that shall be thorough and permanent. Such a reform would no doubt be difficult, but all the trouble and expense would be amply repaid by the increased health and comfort of the people. Even plainly written and easily comprehended instructions, distributed officially throughout the country, would be better than nothing. It may take Herculean efforts to to bring about the desired reform, but it is an Augean stable that should be cleansed at once.

We are glad to observe that in the late case of "Beato *vs* the Master of the S. S. *Atholl*" the plaintiff was successful. The refusal of the defendant to pay a perfectly reasonable claim upon the mere ground that the damaged goods, in respect of which the claim was preferred, had been some twenty-four hours in plaintiff's possession before compensation was demanded, we are at a loss to comprehend the reason of, unless the circumstances were such as to give rise to some suspicion of improper conduct on the part of the latter. We need hardly say that no such circumstances existed. None such, indeed, were alleged to have existed by the defendant, who appears to have relied almost entirely upon the fact of the bill of lading having been endorsed and given up on delivery of the goods. There is a mischievous notion often current in a mercantile community that anything in the nature of a receipt is absolutely binding on the person giving it, and it is high time that the fact that, in most instances, such a receipt is merely a piece of evidence, should be recognised. We are equally glad to note the fact that the defendant did not attempt to avail himself of such a defence as was resorted to in a previous case of the same nature by a wealthy corporation, the defence, namely, that the damage complained of was caused by the *negligence* of their own officers, and that therefore they were not responsible, which is tantamount to a declaration that in return for the freight paid them for carriage, they undertake no duties and incur no responsibility whatever, and are not bound to provide officers of sense, knowledge, carefulness or honesty to take charge of their ships.

There seems to be some doubt as to the actual manner in which Saigo met his death, but the account most generally accepted is that, when Saigo was wounded and unable to escape, Murata Shimpachi performed the friendly office, in the old *samurai* spirit, of severing his leader's head from his shoulders, in order to spare him the disgrace of falling alive into the hands of his opponents. As Lucilius said of Brutus, so might it have been said of Saigo :—

> "I dare assure thee that no enemy
> Shall ever take alive the noble Brutus:
> The gods defend him from so great a shame!"

And to the brave follower who undertook the last act of devoted friendship for the fallen chief, might Saigo have addressed the words that Brutus used :—

> "Stay thou by thy lord:
> Thou art a fellow of a good respect;
> Thy life hath had some smatch of honour in it:
> Hold then thy sword, and turn away thy face,
> While I do run upon it."

A coolie, who had been in the service of the rebels, discovered to the Imperialists where Saigo's head had been hurriedly buried—so hurriedly, indeed, that some of the hair was exposed. Subsequently the disfigured head of the great Satsuma leader was reverently washed by Admiral Kawamura himself, as a mark of respect for his quondam friend and chivalrous commander in the war of the Restoration. Thousands of people daily visit the grave where Saigo lies surrounded by so many of his companions in arms, there to offer up their prayers.

In conclusion it may be appropriately said of Saigo :—

> "This was the noblest Roman of them all.
> * * * *
> His life was gentle, and the elements
> So mixed in him that Nature might stand up
> And say to all the world 'This was a man'!"

In the *St. Louis Republican* we find the following paragraph in a letter from a special correspondent, referring to the charges made by certain American newspapers against General Van Buren :—

I noticed in the Associated Press dispatches from Washington a statement to the effect that grave charges had been preferred by some returned naval officers against Gen. Van Buren, the U. S. Consul-General, Yokohama. He is accused of drunkenness, immoral practices, refusal to properly protect American citizens, cruel severity towards American seaman brought before him, &c., &c. Now I have no particular dsire to appear in the rôle of attorney for Gen. Van Buren or any other official of the state department out here, but I most emphatically declare that the party or parties who were responsible for the dispatches referred to have been guilty of a gross and cowardly libel. That the present consul-general is by no means perfect must be admitted, because he is human. But your correspondent, who has resided in Japan for upwards of ten years and has been a pretty scrutinizing observer of the conduct of four of the consul-general's predecessors, has no hesitation in asserting that Van Buren has filled his office with more general satisfaction to the American community than any one of those. He is the first one who has shown that he was possessed of legal knowledge sufficient to preside over a court where at times cases of grave importance have to be decided. And his decisions have been of such a nature that they have elicited the most favorable comments from the legal fraternity of the settlements. I have never even heard it whispered that he has made a dishonest dollar while occupying his present office. And if that idea were put forth it would be indignantly scouted by any American resident of Japan. The charge of drunkenness is made out of whole cloth. Upon diligent inquiry among Americans who have seen him daily, both officially and socially, at all hours of the day and night, I have failed to find one who has ever seen him under the influence of liquor. I write this refutation of these infamous charges not from any particular purpose to serve Gen. Van Buren, but because I consider it a shame and disgrace that men should have control of space in newspapers who would publish statements of the kind referred to, evidently without knowing the character of those from whom they obtain their information. Many of the appointments of the state department to official positions in China and Japan have by no means redounded to the credit of the department or to American citizens residing out here. But we are by no means anxious to swell the list of corrupt and inefficient appointees by adding thereto the names of men who have tried to do their duty honestly, intelligently and impartially.

For those who are fond of fishing there is capital sport to be had at the present time in the river that flows by Tana and Ichi-no-miya, and in the neighbouring streams. The fish called in Japanese *ai*, can now be caught in singular abundance and of large size, some of them weighing fully half a pound, and such would in all probability afford very good sport if fished for in English fashion. The modes adopted by the Japanese are various. One is to have an *ai* hooked through the dorsal fin so as to allow it to swim about, while attached to the line are several unbaited hooks. The fish come round the captured *ai* and are caught by the floating hooks. This mode of fishing may be successfully carried out, but the fish so caught are small, and the method seems somewhat barbarous and unsportsmanlike. Fishing with a hook baited with some kind of small grub is the most satisfactory, and by this means the finest fish are caught. Cormorants are also used by the native fisherman. These birds *(u-no-tori)* are carried down to the river perched on long poles, six on a pole, looking picturesque enough as they flap, and chatter and scold on their insecure foothold. Unpleasant birds are they, too, for a stranger to attempt any familiarity with, for they are extremely ill tempered, (which, considering that their life is made up of a series of constant disappointments, can scarcely be wondered at) and capable of inflicting a very ugly peck, while they smell most foully. They are placed in the stream from a boat, and immediately set to work to catch their prey, which, however, they cannot completely swallow, owing to their necks being confined by a ring, and which they thus compelled to disgorge. Their efforts are rewarded by a few small fish, but it would seem from their particularly "seedy" appearance that they are kept in a chronic state of hunger, so that they may seek their food the more keenly. The *ai* thus caught are not considered equal to those caught with the hook, and command a much lower price. The fishermen say that the peculiar odour of the bird is at once communicated to the fish, which can immediately be detected when the fish is eaten. A great many *ai* are sent to Tôkiô, the

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

Japanese esteeming them a great delicacy, and where they always command a good price. They should be eaten directly they are taken out of the stream, if their full flavour is to be appreciated, their peculiar delicacy being lost by ever so short a journey. They are seldom to be obtained here but in a dried state, when they are insipid and worthless, though still much appreciated by the Japanese. A trip to the neighbourhood of Tana, and two or three days sojourn among its wooded hills and sparkling streams in this delicious autumn weather, would amply repay the fisherman for the dreary and maze-like roads that he must traverse across the mulberry plains in order to reach his destination. By all means, if he make the trip, let him be sure to engage a trusty guide to pilot him across these plains, otherwise he may wander for hours among paths that present no perceptible difference, and without ever meeting a soul to whom he can turn for guidance or direction.

Both the *Hôchi Shimbun* and the *Akébono Shimbun* published a statement this week to the effect that the Osaka Mint had coined gold, silver and copper to the value of over seventy-seven million *yen* from the 1st January, 1877, to the 30th September last. This must clearly be a mistake, as according to the last Annual Report of the Commissioner of the Mint, the total value of the money of all denomination coined at the Mint from the opening of that establishment in the Spring of 1871, to the 30th June, 1876, was *yen* 69,605,383.26. The value of the total coinage from 1873 to September 30th last, may by this time have reached the value stated by the above papers.

There is, apparently, hope for the advocates of women's rights in Japan, if there is any truth in the statement of the *Mainichi Shimbun* that the *Kuazoku* contemplate allowing their wives to become active members of their Club in Tôkiô, and to grant them equal rights.

A rather quaint publication has been issued in Tôkiô which we give below. It is a list of all the newspapers published in the Empire, arranged in the form of the programme of one of the large displays of wrestling which periodically take place in the capital and elsewhere, by which the standing of the different journals is clearly expressed, those of equal ability being pitted against each other under different classes, precisely as the wrestlers are :—

Bummei Shinshi (formerly Hiôrôn Shimbun and Chiugai Hiôron,) Kôkô Shimpô (formerly Kokai Shimpô,) Sômô Jijô, Môeô Zasshi (formerly Sômô Zasshi) of Tôkiô ; Gakumin Shinshi of Osaka.

Oyama Tsunayoshi, the ex-Governor of Kagoshima *ken*, as might have been expected, met his death unflinchingly. When lead out for execution he was asked if he desired to make a final statement, to which he replied, it is reported, only by a laugh. After his decapitation ten Satsuma *samurai* applied for and were permitted to take away both the head and trunk. The last sad rites were paid by these friends, and the remains of Oyama Tsunayoshi were by them interred in the temple grounds of Kodai-ji at Nagasaki.

His Excellency Okubo has been unable to attend to his official duties since the 10th instant on account of illness.

Thirty-five persons were injured and four killed outright by the fall of buildings at Tôkiô, formerly occupied by the *Mombusho* and at the time serving as barracks for the *Shinsen-riotan*, during the gale on Thursday last. A letter which we publish from a correspondent in the country, shows that the gale was severely felt in the interior.

A private telegram received from Nagasaki to-day, announces that the Governor has died of cholera.

The Mitsu Bishi Company's steamer *Saikio Maru* arrived in Kobe yesterday (Friday) at noon, all well. She experienced rough weather on the passage down, but not to such an extent as to delay her, or necessitate her seeking shelter.

Monday, 8th.

The P. & O. steamer *Malacca*, with English Mails on board to the 31st August, left Hongkong yesterday, the 7th instant, at 10 a.m.

From the *Hôchi Shimbun.*

The *Okurasho* will shortly send eleven thousand *yen* to Paris to cover the expenses of the officials who will be commissioned to the Paris exhibition of next year.

A certain Lieut.-General said on meeting a newspaper editor at the seat of war:—"I have read some newspapers when I had time to do so, but they only mentioned the victories of the Imperialists as though they had been always successful. But I myself was severely beaten at the engagement at Takakuma in Osumi, and other generals have also been frequently beaten. Such newspapers are therefore unworthy of credit."

During the month of September two hundred and five civil cases were brought before the Tôkiô *Saibansho.*

The *Môshun Kan* is the only man-of-war now remaining at Kagoshima, and next month she will be relieved by the *Nisshin Kan.*

From the *Nichi Nichi Shimbun.*

Ex-*Sangi* Itagaki has sold his residence at Tôkiô, and all his family have returned to Kôchi.

The Department of Finance has given over to the Army Department 2,500,000 *yen* for the purchase of arms, etc.

From the *Akébono Shimbun.*

A telegram sent from Osaka by Major General Torio to Major General Saigo at Tôkiô, announces that in order to check the prevailing epidemic among the troops returning from the South, Lieut. General Shijô has been sent to Kiôto and Lieut. General Miyoshi to Kobe, to take charge of all matters relating to the troops. In order to prevent the epidemic from spreading, the troops will not, for the present, be allowed to proceed North.

Tuesday, 9th.

From the *Nichi Nichi Shimbun.*

A telegram despatched from Kobe at 10 a.m. on the 7th instant, says that Police Inspector Soga has embarked in the *Kôriô Maru* with two hundred policemen for the north. There is no sickness among them, but they will all undergo examination at the quarantine establishment at Kugatami in the province of Sagami, before the steamer is permitted to proceed to Shinagawa.

From the *Hôchi Shimbun.*

The *Daijôkuan* has notified the War Department that the following ceremonies are to be observed on the return of H. I. H. Arisugawa-no-Miya, the Commander-in-Chief of the Army of the South, and others of his staff. On the arrival of H. I. H. at Yokohama he shall be received by a commanding officer of both the Army and the Navy. Being a member of the Imperial family he shall be saluted with twenty-one guns from the fort at Kanagawa, and all the men-of-war in the harbour. Two battalions of infantry and one troop of cavalry of the Tôkiô garrison shall form his escort from Shinbashi. On the arrival of the Advisers of the Commander-in-Chief they shall also be received by a commanding officer of both the Army and Navy, and be saluted with fifteen guns. On their arrival at Shinbashi one battalion of infantry and half a troop of cavalry shall form their escort. Should they arrive at the same time as the Commander-in-Chief, only the addition of half a troop of cavalry will be made to the escort of H. I. H. On the return of Commanders of Divisions of the Army or Admirals at Yokohama they shall be received by an officer of the rank of Colonel in the Army or Captain in the Navy, and on their arrival at Shinbashi shall be provided with an escort of cavalry.

All the officers and men belonging to the Army are to receive a bonus of two per cent. on the amount of their pay, in commemoration of the suppression of the Satsuma rebellion.

From the *Akébono Shimbun.*

An epidemic is prevalent among poultry in Kiôto, and the Governor has notified the inhabitants that they are not to eat any fowl which they have not previously ascertained to have been free from disease.

On the 10th instant fifty police constables will leave for the Kôchi *ken* (Tosa), under the command of Sergeant Satô.

Mr. Katô, of the *Okurasho*, will shortly visit Germany and France to enquire into the system of banking in those countries.

From the *Nichi Nichi Shimbun.*

The branch office of the Army Department which was established at Osaka for conducting all affairs connected with the suppression of the rebellion, will be removed to Tôkiô on the 11th instant.

Wednesday, 10th.

The French mail steamer *Tibre* arrived on Wednesday morning, the 10th instant, from Hongkong, 44 hours late, owing to an accident to her machinery which occurred near Rock Island. About 2 p.m. on the 9th instant she was passed by the S. S. *Thabor* escorted by the *Seiki Kan* and *Kasuga Kan.* Admiral Kawamura signalled the *Kasuga Kan* to go to the Mail steamer's assistance, the *Tibre* then being under sail. A boat was sent and assistance offered, which, however, was declined, as the necessary repairs had been effected, but the *Kasuga Kan* was requested to stand by while the repaired machinery was tested. This request was courteously complied with, the engines of the *Tibre* were put in motion, and proving all right the *Kasuga Kan* rejoined her convoy, while the *Tibre* proceeded on to port, arriving the next day at 6 a.m.

From the *Hôchi Shimbun.*

The House of Shimadzu is one that was founded very many years ago, and could boast of territorial possessions in Satsuma at the time that Kamakura was a flourishing capital. Consequently there were many documents of historical value and other relics kept at the residence of chief of the family at Kagoshima, which were unfortunately destroyed by fire when the rebels made their second entry into the town.

The ex-*Daimio* of Owari has purchased for twenty thousand *yen* a large tract of country in Yezo, on which his former retainers may settle and thus gain a livelihoood by the pursuit of agriculture.

From the *Nichi Nichi Shimbun.*

The Yokohama *Koncho* has spent over two thousand *yen* in the purchase carbolic acid for disinfecting purposes.

Police Sergeant Udzu, who went to Awomori *ken* to enlist recruits for the police force, has telegraphed that he has succeeded in getting together five hundred good men.

From the *Osaka Nippo.*

On the 30th ultimo Shimadzu Saburo returned from Sakurajima to his residence at Kagoshima.

From the *Chôya Shimbun.*

Lieut.-General Miyoshi is now at Osaka. Lieut.-General Miura has arrived at Kobe, but is suffering from some indisposition.

Thursday, 11th.

The was no business transacted yesterday by the Members of the *Genrô-In*, on account of their return of the President, H. I. H. Arisugawa-no-Miya.

At a meeting of the Board of Health of Yokohama, Japan, October 10th, 1877, the following resolutions were unanimously passed:—

Resolved.—That in the death of our colleague Dr. E. Massais, brought about by cholera, the result of exposure to infection voluntarily incurred in his devotion to the public welfare; this organization and the community as well, have sustained a severe loss, as his professional skill and high personal qualities had endeared him to all who knew him.

Resolved.—That the members of the Board of Health tender their sincere sympathy to the family and friends of our lamented colleague.

(Signed) STUART ELDRIDGE, M.D.,
Secretary of Board of Health.

From the *Chôya Shimbun.*

All the bodies of the rebels who were killed at the last battle on Shiroyama were given over to the *Kencho* authorities, and buried at a temple in Kagoshima called Jôkô-ji. The bodies of Saigo, Kirino, Murata, Ikegami and Beppu were placed in coffins, but the corpses of the rest were merely wrapped in blankets. Saigo lies in the centre of the large grave in which all were interred, and the rest are placed in rows on either side of him. Over the grave stands a wooden post four inches square and five feet high, on which is inscribed the names of those buried, and the date on which they fell.

From the *Hôchi Shimbun.*

Our reporter at Nagasaki has forwarded us the following, being the sentence which was passed upon Oyama Tsunayoshi :—Oyama Tsunayoshi a *samurai* of Kagoshima *ken*. During the time you acted as Governor of Kagoshima *ken*, in violation of the laws of the Empire, you assisted Saigo Takamori and other in their treason. You received the confessions of police sergeant Nakahara Hisao and others, which were merely concocted by the Private School party, had them printed, and circulated throughout the Kagoshima *ken* a notification that a plot to assassinate Saigo and others had been discovered, and that Saigo was in consequence about to proceed to Tôkiô at the head of his troops. In order to excite the sympathy of the people of the country you despatched emissaries to various *Fu* and *Ken*. You further employed the *Kencho* officials in the service of the rebels, and handed over 150,000 *yen* belonging to the Government to Saigo. Furthermore you established a Commissariat Department within the grounds of the *Kencho* in order to furnish the rebels with supplies. For these crimes you are deprived of the rank of *shizoku*, and sentenced to undergo decapitation.

Nagasaki, Sept. 30th, 1877.

From the *Akébono Shimbun.*

From the 20th of last month to noon on the 9th instant, 204 persons were attacked with cholera in Tôkiô, of whom 67 died and 4 recovered, the remainder being still under treatment. Cholera is extending into the interior, and has reached Niigata *ken*, Saitama *ken*, the provinces on the Nakasendô, and Gumma and Fukuoka *ken*.

From the *Nichi Nichi Shimbun.*

On the 4th instant the Gumma *ken* was the scene of a violent storm of hail and rain. Enormous hailstones fell, and the rice and other crops in the district were utterly destroyed.

On the previous day a violent hail storm also took place in the Yamagata *ken*. Hailstones lay on the ground to the depth five inches, trees were uprooted, and the crops were greatly damaged.

SECOND NATIONAL BANK.

(Dai-Ni Koku-ritsu Ginko.)

	514,760	

Friday, 12th.

The strong gale which commenced yesterday afternoon did not moderate until nearly daylight this morning. The Bluff and Settlement present the usual appearance of fallen plaster, broken fences and trees, in some instances more damage having been done in a few minutes during some of the more violent of the squalls yesterday afternoon, than was effected by all the storms we have passed through this summer. The men-of-war in harbour made every preparation to ride out the gale safely by sending down topmasts and getting up steam, their example in the latter respect being followed by several merchant steamers. Some loss was occasioned to cargo boats, and more than one vessel dragged her anchors, among them being the German gunboat *Nautilus*, which lost a spar by drifting across the bow of the Mitsu Bishi Co.'s steamer *Nagoya Maru.*

A telegram was received yesterday morning from Kobe to the effect that there were indications of a typhoon threatening that port, but as the telegraphic wires were subsequently broken between this and Kobe, no further intelligence has been possible as yet.

The U. S. sloop of war *Alert* sailed from Hakodate for Vladivostock on the 5th instant, leaving the U. S. S. *Manocacy* in the former port. The American schooner *Almatia* was loading for Yokohama, and it was expected that she would be despatched in a few days.

His Excellency Yamagata, the Minister of War, is expected to leave Kagoshima for Shimonoseki very shortly, and after a brief stay at the latter place will return to the capital. H. I. H. Lieut.-General Higashi Fushima-no-Miya and Lieut.-General Soga, returned from the seat of war by the *Nagoya Maru* yesterday.

It is rumoured that Shimadzu Saburo will shortly visit the capital.

From the *Hôchi Shimbun.*

A fire broke out at Mita, Tôkiô, at 11 p.m. on the 10th instant, which destroyed fifteen houses.

Saturday, 13th.

It appears that during the gale on Thursday afternoon the German gunboat *Nautilus* dragged her anchors, and was driven across the bows of the M. B. Co.'s steamer *Nagoya Maru*, whereby the former lost a lower yard and carried away the boats on her port side, though the *Nagoya Maru* fortunately escaped without any serious consequences. A lighter which was alongside the *Nagoya Maru* at the time of the collision let go her lines and succeeded in getting away safely from the steamer and anchoring a short distance off. The *Genkai Maru* also dragged her anchors, and narrowly escaped a collision with the steamer *Thabor* by letting go a third anchor just in time. The sailing-vessels *Doris Brodersen* and *Parmenio* were flying light, and during some of the heavier squalls seemed in danger of capsizing, but fortunately rode out the gale in safety. A lighter lying alongside the *Glencarn* full of cargo sank, while two others were driven from alongside that vessel and washed ashore at Kanagawa. The roofs of some of the buildings in the settlement suffered considerably, notably that of the Y. U. Club and the boat-house.

The full force of the gale was felt at Tôkiô, and many of the hybrid and flimsy buildings which by no means grace the capital show how little they are able to withstand bad weather.

The building formerly occupied by the *Mombusho* collapsed, by which several persons were more or less injured. The Western Hall of the Uyéno Exhibition was unroofed by the wind. Other buildings there suffered severely and in some instances the contents were damaged, several person were injured, and the shrubs and trees much knocked about.

The Mitsu Bishi Co.'s steamer *Genkai Maru* was towed to Yokosuka this morning, where new boilers will be put into her, and the vessel receive a thorough overhauling.

The French Postmaster announces that he has now a supply of stamps of all denominations for sale to the public, and also postal cards available for all countries belonging to the postal union.

From the *Hôchi Shimbun.*

One hundred and forty seven of the rebels who have been sentenced to hard labour have arrived at Tôkiô, seventy-nine of whom have since been sent to Tochigi *ken* under a guard of police, and seventy-eight to Ibaraki *ken*, there to serve out their sentences.

From the *Chôya Shimbun.*

Police Sergeant Hiroyama returned from Kumamoto with

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

two hundred policemen by the *Nagoya Maru* on the 10th instant.

By a typographical error, the chess problem which appeared in the *Weekly Mail* of Saturday last is described as a 2 move problem, instead of a 3 mover.

Passengers, Parcels, &c.	$8,090.06
Merchandise, &c.	$1,220.67
Total	$9,310.73

It is nothing more than natural to suppose that with cholera and violent diarrhœa prevailing at Kagoshima the return of the troops would be hurried on as much as possible, but we were hardly prepared for the amount of energy which the Government has shewn. Some eight steamers arrived here on Sunday last, and altogether we are assured that about 14,000 troops have already arrived up from the South, and that before many days, are past the number will be doubled. The most notable arrivals have been H.I.H. Arisugawa-no-miya, and H.E. Yamagata, who reached here yesterday afternoon in the *Thabor*, escorted by the *Seikikwan*, and immediately proceeded by train to Osaka. H.E. Kawamura also entered and left the port in the *Kasuga-kan*, between Monday night and yesterday morning, having with him, as we hear, the head of Saigo—the body having been buried at Kagoshima along with those of the other eminent rebels leaders.—*Hiogo News.*

The cholera scare has been already accompanied by one or two of the amusing incidents which generally occur during times of panic, one of the most comical we have heard of being the case of a very well known keeper of a native hotel and restaurant. It seems that on one of the first evenings after the panic had set in he spent rather a convivial night and went to bed late. At the the usual hour for opening in the morning the servants were unable to wake him, and argued that he must be ill, deciding furthermore, under the impetus of their terrors, that he must needs be ill of cholera. They accordingly so reported to the police, who stationed a man at the house—which remained shut up—to prevent people going in or out. The proprietor, on waking some hours afterwards, was amazed to find that the house was still shut, and on trying to make his way out, was ordered back, as an infected and dangerous man. This was too much, and bursting past his jailer, he made his way to the police station, where the matter was presently cleared up, to the great amusement of the neighborhood.—*Hiogo News.*

"Cholera" cases are still reported amongst the soldiers arriving from the South, but there are no signs of the disease taking any hold of this locality and it so far is almost certainly not "Asiatic cholera," but some bad form of diarrhœa arising from causes which might most probably have been prevented. We hear nearly the same story from both Osaka and Kioto. The latter town has had such a cleaning, according to a correspondent, as has probably not happened to it since it has been a city, and the authorities seem thoroughly alive to the situation. The smell of carbolic acid is everywhere and the Fucho has ordered all places of amusement to be closed for 30 days, during which time it is expected troops will be passing through.—*Hiogo News.*

On enquiring yesterday evening as to the condition of the two engine drivers injured in the railway collision of Monday night, we were informed that it was about the same, and there appeared to be a fair prospect of their recovery, though it was as yet too early to say positively.

In this connection we may mention that it may perhaps be some satisfaction to the public to know that with regard to the natural enquiry to which we gave voice on Wednesday as to why the "train staff" system employed on the Kioto section was not employed also on the Kobe section, a practical comment, if not an exact answer, may be found in the fact that the system has been instituted on this section on and from to-day.—*Hiogo News.*

THE JAPANESE PENAL CODES.*

THE present Government of Japan lost no time after their accession to office in verifying the assertion of Sir HENRY MAINE, that "the earliest intellectual exercise to which a young nation devotes itself is the study of its laws." We apply the quotation advisedly, for the Japan of to-day is a young nation, the youngest on the face of the earth, and has abundantly shown its youth in the mass and crudeness of its legislative efforts since the civil war of 1868. As Mr. LONGFORD in his introductory remarks—the only fault we have to find with which is their brevity—informs us, the criminal law under the old *régime* was professedly, and we may probably add, to a great extent really founded upon the Chinese codes commonly known as those of the MING and TSING dynasties. But as each *Daimio* had right of *haute et basse justice* within his own principality, these codes were differently interpreted and administered in different parts of the realm, and when the reins of power were resumed by the Mikado, it became necessary, in order to complete the union of the more or less autonomous provinces into a coherent Empire, that the whole country should be brought under one system of criminal justice. One of the first acts, therefore, of the new Government called into existence by the events of 1868, was to take immediate measures for the preparation of a penal code, and so vigorously was the work pushed on, that in January 1871 the new code was completed and promulgated, and more or less supplemented and altered by an Imperial Rescript published in May 1873, and a notification issued in the early part of the present year constitutes the whole criminal law of the country applied to all offences except Press offences and certain minor infringements of administrative and police regulations and bye-laws.

The code is based upon the MING and TSING systems, being in fact a simple adaptation of these to the wants of modern Japan, differing from them principally in the far greater mildness of the punishments prescribed by it. In this respect it deserves the highest praise, and whatever faults posterity may find with the men who for the last nine years have held the destinies of Japan in their hands, it cannot but admire the genuine and altogether unexampled fervour with which they have embraced and put in practice humanitarian doctrines which Eastern statesmen have always shown an extreme disinclination to adopt.

But as a piece of scientific legislation the new code cannot be said to rank high. It would seem to be almost entirely a mere adaptation, so far as the strictly legal part of it is concerned, though it is difficult, without a complete translation before us side by side with a version of the MING and TSING codes, to estimate with any accurary how far, if at all, it is, in a legal sense, an improvement upon those systems. There can, however, be no doubt that it constitutes a step and a good step in the right direction, and we fully recognise its merits from a political point of view, though we feel ourselves constrained to condemn it as a legislative effort.

We shall now proceed briefly to examine the code itself, pointing out some of its principal defects, and calling atten-

* A Summary of the Japanese Penal Codes, by Joseph H. Longford, H. B. M.'s Legation. Read before the Asiatic Society of Japan on the 28th February, 1877.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

tion to those peculiarities in it which throw light upon the idiosyncrasies of social life in Japan. And first we shall take in hand the section on General Laws with which the code very properly begins. It would have been better, however, to have prefixed a short chapter explaining the object and scope of the code, and defining the principal terms used in it. It is true there are some definitions at the end of the section, but these are altogether insufficient and are for the most part far from clear, while some of them do not appear to be necessary. Thus no distinction is drawn (we are of course using Mr. LONGFORD'S summary and write under correction of the full text) between 'Participators' and 'Accessories,' while definitions that surely were not needed are given of such terms as 'family servant,' 'superintendent' and 'custodian.'

Twenty degrees of punishment are enumerated—a peculiar feature of Chinese and Japanese criminal jurisprudence—ten from 10 to 100 days' imprisonment, and ten from 1 year's imprisonment to ten years, and from ten years' imprisonment to imprisonment for life. Here is an utterly illogical jump from 100 days to a year, and from ten years to life as periods of imprisonment. Capital punishment is inflicted by decapitation or hanging, the latter mode, strange as it may seem to those unacquainted with the social history of Japan, being, in accordance with popular sentiment, the least disgraceful. No religious service is permitted to be used at the interment of the body of an executed criminal—surely an unnecessary and harsh addition to the punishment. Imprisonment without hard labour may be undergone in the offender's own house, under charge of his relatives, who are responsible for his custody.

Some curious provisions for the mitigation of punishment according to the rank of the offender, very distinctive of a state of society which appears to be somewhat rapidly passing away, follow. Thus, *samurai* guilty of offences not considered 'very disgraceful' (of which robbing is one) are not punishable by penal servitude but by domestic imprisonment only. For instance, a common man convicted of assault may be awarded twenty days penal servitude; a *samurai* guilty of the same offence would only get 20 days domestic seclusion, often a mere nominal punishment. Again, a common man embezzling not more than 20 *yen* finds himself condemned to penal servitude for 90 days, while a *samurai* for the same offence is simply degraded. If, however, the amount embezzled exceeds 20 *yen*, both *samurai* and common man are punished alike, except that the *samurai* necessarily suffers degradation, which the common man, having hardly any political rights whatever, cannot incur. Such an accommodation of the degree of punishment to the rank of the offender would, of course, be utterly illogical in any European country, but it may possibly be justifiable in Japan upon social grounds, the outcome of its history

Persons in the naval or military services are made amenable to their officers alone, even for civil offences. This is a most important provision, and if ever the army should get to know its own power, its exemption from all civil jurisdiction might prove to be a source of great danger to the state and afford perilous facilities for the establishment of a military despotism. Considerable tenderness is exhibited by the code in the case of female offenders. In many instances they are allowed to expiate grave crimes by payment of fines, which seem not seldom altogether inadequate in amount. Thus penal servitude for 10 years may be commuted for a fine of 80 *yen*; imprisonment for life for one of 90 *yen*, and capital punishment for one of 100 *yen*,—the difference between life and death being thus estimated at 10 *yen* only. According to the list of punishments and equivalent fines contained in the 1873 amendments to the first code, an extra year of penal servitude may be remitted on payment of a fine of 3 *yen*! One of the offences for which women are not allowed to escape punishment by payment of a fine is a violation of filial piety, such as disobedience of a parent's commands,—an indication of the important position held by the head of the family in the social system of Japan. A peculiar lenity, too, is shown to the young and the aged. Thus persons under fifteen or over seventy may commute any punishment except that of death by payment of a fine; under ten or over eighty shall not be punishable at all except for theft and wounding (including probably homicide), and under seven or over ninety shall not be punishable for any offence whatever. The same privileges are to a certain extent accorded to the maimed and the deformed, on what grounds it is not easy to understand. By a singular inconsistency—if the privileges allowed to very old and very young offenders are based upon age—a repetition of an offence exposes them to punishment, though mitigated in degree.

What to Europeans will appear a most extraordinary exemption from all punishment, is that accorded to those who voluntarily confess their crimes before discovery, or whose crimes shall have been revealed by any one sufficiently near a relation to be justified in concealing it. The confession, however, must be complete. Thus, a thief stealing 100 *yen* and confessing to or restoring the whole amount escapes punishment, but if he should confess to or restore only 60 *yen*, he will be punished as if he had stolen the difference, 40 *yen*. It seems only in cases of theft and of a similar nature that a voluntary confession enables the offender to elude the whole or part of the punishment due for the offence; crimes against the person and some others cannot be thus expiated or atoned for, and confession of these, apparently, does not even mitigate the severity of the punishment.

Another curiosity in criminal legislation is presented in the immunities granted by the code to relations living together, or, if within the third degree of relationship, living separately, who may mutually conceal each other's offences or act as accessories after the fact, and, perhaps,—the wording of the code seems not to be very clear on the point—as accessories before the fact not being accomplices. The same immunities are extended to retainers and servants concealing their master's offences. Lapse of time can be pleaded in bar or in mitigation of punishment. Thus a lapse of ten years gives a right to have a capital punishment reduced to penal servitude for ten years, and to an entire remission of sentences to penal servitude for ten years or less. Five years lapse involves remission of sentences to penal servitude for 3 years or less, and three years lapse to sentences for 100 days or less. The wisdom of these indulgences may fairly be doubted. At most the judge ought simply to have the power of mitigating the sentence when a considerable time has elapsed between the commission of the offence and its discovery,

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

and the exercise of this clemency ought to be left to his discretion unfettered by minute directions as to the circumstances under and the degree in which it should be extended.

MONTESQUIEU, it is true, tells us that 'tout châtiment dont la nécessité n'est point absolue devient tyrannique', but the maxim is not a good one, for the *absolute* necessity of hardly any punishment is strictly provable. We are not certain, for instance, that a system of rewards might not, if fairly tried, produce equal results by inciting to goodness of life, with those produced by the existing system of punishments which act simply as a deterrent from evilness. Nor is there any reason why a lucky or dexterous concealment of a crime should of itself absolve the criminal from the vengeance of society. The righteousness of the offender's life in the interval may properly enough be considered in awarding the punishment, and in some cases may even justify an entire remission. But the mere lapse of time without discovery does not entitle the offender to any remission or mitigation of punishment whatever. Punishment would lose something of its deterrent effect, if by concealment of a crime for a certain period of time it could be eluded. And society must not be baulked of its legitimate vengeance. The propriety, and indeed the necessity of social vengeance as an element in legal punishment, has been admitted by all writers on criminal jurisprudence, from the MARQUIS BECCARIA downwards, and an admirable essay published in *Fraser* some half dozen years ago, shows clearly upon what considerations and within what limits the revengeful feeling of society against the criminal is justified.

The remaining portion of Mr. LONGFORD'S summary we hope to make the subject of an article in a future issue.

SPIRIT OF THE JAPANESE PRESS.

A RETROSPECT.

("Akébono Shimbun," 10th October.)

In February last a large number of discontented *samurai* took to arms, and broke out into rebellion in Kiushiu. They frequently baffled the Imperial military forces sent against them, and at first it appeared as though they were powerful enough to be eventually successful, but after a time they lost ground to their opponents in battle after battle, and were driven from all the strong positions they had held, until finally men and leaders, on the 24th of September, vanished with the morning mists on the heights of Shiroyama.

When the news of the final defeat of the rebels reached Tôkiô all classes rejoiced. A feeling of joy filled my heart also, as I contemplated that nothing now hindered the nation in its progress towards civilization, but second thoughts reveal the fact that the time has not yet arrived when I can free myself from all anxiety as regards the future. This is caused by the fact that the country is ruled by a limited form of Government, and the people have no voice whatever in the administration. An absolute Government such as ours cannot be depended upon. It is like a small boat on the vast ocean. So long as the waters are calm the boat may ride safely, but when storms arise it may be swamped at any moment. Now it is well known that our officials are not only a men of sense but are benevolently disposed, and it is therefore certain that they would do nothing to imperil the state.

But history shows that the very best of Governments, if not constitutionally established, are apt to become tyrannical, especially after success has attended their arms in war, principally because the members of such Government are influenced by the pride, selfishness and ambition generated by success. For instance, although the Emperor Godaigo Tennô overthrew the powerful House of Hôjô, and secured supreme power by aid of Kusunoki Masashige and others, the pride of power caused him to relapse into luxurious indolence, so that he was eventually deposed by Ashikaga Takauji, and had to flee for his life into Yoshino. The same fate befell the House of Taira, who though they at one time enjoyed undisputed power throughout the country, had not retained it twenty years before they were annihilated on the eastern coast by the Genji. The same thing has occurred in China. There both the Emperor Fu of Go, and the Emperor Shikô of Shin, after a succession of brilliant victories over surrounding nations, lost the power they had thereby gained, by their subsequent lapse into unbecoming pride and negligence of their duties. So it was with the Napoleon I. and Napoleon III. Neither of them met with an honoured end by reason of their pride and ambition. Now, when we deal with men inferior in every way to the Napoleons, can we imagine that they will be better able to avoid the errors into which those great men fell. With such examples before us we certainly think they will not.

But republican and constitutional forms of Government are not so liable to fall into such errors. We have before us the example of the kingdom of Prussia, which defeated Austria, Denmark and France. Again the United States Government, after many years of desperate fighting, put down the rebellion in the Southern States. England defeated Russia in the Crimea and chastised the Ashantees in Africa, yet in none of these cases did the pride of triumph tend to make the victors tyrannical and oppressive, but rather were the bonds between the Government and the people cemented by the national success, to the advancement of the national prosperity wealth and strength. All this arose from the fact that the people had a voice in the Government, and that popular opinion guided the administration.

Let us take a retrospect of events in our own country. During the 1st year of Meiji the rebellious *Han* in the North were completely overthrown by the Imperialists. In the 2nd year of Meiji the numerous and powerful *Daimios* throughout the country resigned their feudal power and territorial possessions into the hands of the Mikado, and in the 7th month of the 4th year of Meiji the last remnants of feudalism were abolished. During the course of these events the people were troubled and anxious, fearing that a civil commotion might result, but fortunately all was arranged quietly and peaceably. A rising took place in the 2nd month of the 3rd year of Meiji, when the Chôshiu troops took to arms, but they were soon suppressed and gave in their submission. An agrarian riot occurred in Echigo in the 4th month of the 5th year of Meiji, and another rising of farmers took place in Hôjô in the 6th month of the following year, but in both cases peace was easily restored. In the 2nd month of the 7th year of Meiji, the Saga rebellion broke out, but the rebels were speedily put down by H.I.H. Higashi Fushimi-no-Miya and Okubo, the Home Minister. In the 5th month of the same year the Formosan Expedition was despatched, and by the 6th month the savages felt the power of our arms.

Then troubles arose in consequence with China, but Okubo having been sent to that country as a Special Envoy, so managed matters that China agreed to pay us an indemnity of 50,000 taels in consideration of our troops evacuating Formosa. During the winter of the 8th year of Meiji the man-of-war *Unyô-Kan* was fired upon by the Koreans, which event led to Kuroda and Inouyé being sent to Korea to demand satisfaction, with the result that a satisfactory treaty was concluded with that country. In the 10th month of the 9th year of Meiji the *Jimpu* party broke out into rebellion at Kumamoto, and shortly afterwards Maebara raised the insurrectionary flag in Chôshiu, but both revolts were speedily suppressed. All these events were followed by the Kagoshima rebellion of this year.

During the past ten years, as it will therefore be seen, we have had to contend with many internal troubles, besides complications with foreign countries, but from all we have come out succesfully, owing not only to the valour of the officers and men of our Army and Navy and our effective armaments, but also to the confidence which the people have had in the Government, and the knowledge they possessed that the Administration was striving hard for the national prosperity. Thus it was that the people did not oppose the action of the Government, but in all cases implicitely obeyed it.

But should the Government, having successfully disposed of all foes, become filled with pride and tyrannically deprive the people of their rights, it will forfeit the confidence of the nation, and we may see the same fate befall it which destroyed the Imperial power of Godaigo Tennô.

Such being the case, we trust the Administration will favour the establishment of a constitutional form of Government, whereby the people may have a voice in the all-important questions of the finances of the country, etc, so that, despite the destructive war which has just ceased, prosperity may be secured to the people by the Administration now in power.

SOME OTHER CHAPTERS OF JAPANESE HISTORY.

(*Continued from 29th September.*)

The plans for future procedure were laid down with admirable cunning, but there still remained the most necessary measure to carry out the plot successfully, the raising of men and money to make the journey to Yedo in princely style. Tenchiu was equal to the occasion. He gave out to all the country people that he had recently brought from Sado a young pupil, who, it was discovered, was the son of the Shôgun, and desired that they would all come and pay their allegiance to His Highness before he proceeded to the capital. The people flocked in crowds from all the surrounding districts to pay their homage to him whom they supposed to be the actual Prince. Tenchiu and the others were not idle. They got together a large number of men, mostly *ronin*, who assumed the dress and character of retainers of Tenichibô, the most prominent among them being a man named Yamanouchi Iganosuke.

In the 11th year of Kiôho (1726), Tenichibô and his followers set out for Osaka in the most splendid style, their progress equalling in every respect that of a territorial magnate. The number of retainers was very great, and everyone was ordered to pay the same respect as though the Shôgun himself were passing. On their arrival they put up at a tea-house, the keeper of which, not knowing what to make of the grand pretensions of his guests, went to the Governor Matsudaira Hinga-no-Kami, and informed him that a son of the Shôgun was staying at his house. This news created the greatest excitement. Hinga-no-Kami, after consulting with the Governor of the East and the Commander of the Castle, sent a messenger to Tenichibô, with the request that His Highness would present himself without delay at the office of the Governor. Tenichibô returned a message to the effect, that as the office of the Governor was a place where all the criminals were summoned, he could scarcely expect the son of the Shôgun to appear there, and that if Hinga-no-Kami had anything of importance to communicate he had better come and deliver it to the Prince in person. The Commander of the Castle also sent a messenger with an invitation to Tenichibô to visit his house. With this invitation the pretender complied, and producing the dagger and document gave unmistakable proof that he was that which he represented himself to be, the veritable son of the Shôgun.

The *Bakufu* authorities at Osaka immediately sent information to Yedo that the eldest son of the Shôgun, whose existence had been hitherto unknown, had made his appearance at Osaka, and this news created generally great joy throughout the country.

But Tenichibô and his followers had by this time exhausted all the money they had managed to get together, and it was absolutely necessary that more should be raised. They therefore had recourse to a cunning device. Tenichibô gave out that all the people who would supply his present needs should receive an annual income of a thousand *koku* of rice for every thousand *riyos* advanced. Many rich merchants came forward, tempted by this liberal offer and believing in the truth of his professions, so that he obtained as much money as he wanted. He and his retinue then proceeded to Kiôto and lived there in the same splendid style as at Osaka, obtaining also large sums of money. They then decided that they would proceed to Yedo. Tenichibô and his advisers, however, foresaw that their path would not be quite so easy in the capital, as they would be brought in contact with such men as Idzu-no-Kami in the Council of State, and Oöka the Governor of the city. A number of servants were therefore sent to Yedo, with instructions to have a large *yashiki* constructed at Takanawa for the accommodation of Tenichibô and his retainers.

On the 20th of September, 1726, the pretended Prince and his train left Kiôto for Yedo, passing along the Tôkaidô in a style of magnificence that astonished all who beheld it. On their arrival at Yedo Tenichibô took up his quarters at the newly built *yashiki* at Takanawa, where he was immediately waited on by all the high officials of the *Bakufu*. They subjected him to rigorous examination, but on his producing the paper signed by the Shôgun's own hand and the dagger, they could not doubt that he was actually what he represented himself to be, the veritable son of the Shôgun. All the officials were convinced of his right to the title, and Idzu-no-Kami lost no time in announcing to the Shôgun that his son had arrived in the capital. Yoshimune was overjoyed with the intelligence, and ordered that all the necessary preparations to enable him to see his son should be set forward without delay.

But there was one man who strongly suspected that Tenichibô was not what he proclaimed himself. He had carefully marked the actions of Tenichibô and his followers at Ôsaka and Kiôto, and everything seemed to confirm his suspicions that the claims of the would-be Prince were altogether false. The day after the announcement to the Shôgun, Oöka went to Idzu-no-Kami and requested that permission might be granted him to personally examine Tenichibô. This request was, however, refused, on the grounds that the highest authorities of the *Bakufu* had decided that this was the actual son of the Shôgun. Oöka than made similar application to the Shôgun himself, but not only did he refuse to grant him any such authority, but was so displeased by his persistence that he ordered that he should be kept in close confinement at his residence. This was done, and guards were placed at his gates by the *Bakufu*.

But Oöka was not to be outwitted. He therefore took the place in a *kago* of one his household, an old woman who had died, and whose body was to be carried out for burial, and by this means managed to pass the guards by night and escape from his confinement. He went at once to the residence of the Vice-Shôgun, the Prince of Mito, and said to him, "I have the strongest suspicions with respect to this self-styled Tokugawa Tenichibô. I have petitioned Idzu-no-Kami and even the Shôgun himself to grant me permission to examine him, but my request has in both instances been refused, and I have even been placed under confinement in my own house. I have secretly come to you to request that you will use all your influence with the *Bakufu* to procure me the necessary authority. If you refuse me, I have come determined to commit *seppuku* in your presence."

The Vice-Shôgun gave the necessary promise, and on the following day went to the *Bakufu*, and after much discussion the required permission was granted. Oöka then proceeded to summon Tenichibô and all his followers to his office. At first they declined to appear, but finally, thinking it best to comply, they obeyed the summons of the Governor. When the examination took place, Oöka, clever judge as he was, was completely baffled in his enquiries by the eloquence of Yamanouchi, who has before been mentioned as the most notable of Tenichibô's followers. Oöka was therefore compelled to admit that Tenichibô had fully proved his claims to be the son of the reigning Shôgun, and promised that immediate steps should be taken to bring him into the presence of his father.

But Oöka, though he was unable to prove the justice of his suspicions, was convinced in his own mind that Tenichibô was nothing but a pretender. Still, what was he to do, now that the examination that he had pleaded for had taken place without eliciting any thing against Tenichibô? If he should present himself to the *Bakufu* authorities he would be compelled to openly announce that there was no proof that Tenichibô was not what he claimed to be. And if he should admit this much, Tenichibô would certainly be presented to the Shôgun as his son, and so matters be made worse. Oöka, in this perplexity, therefore determined to remain at home on plea of illness, and thus postpone the preparations for the meeting as long as possible, employing whatever time he might thus gain in using every means in his power to find out whether Tenichibô's statements were true or false.

On the morning following the examination, Oöka sent word to the *Bakufu* authorities that he was suddenly siezed with illness, and that he was therefore unable to present himself before them. He then immediately went to the *Daimio* of Kii, and inquired of him if he knew anything of a girl named Sawano, but the only information he could obtain was the names of the employment agents in Wakayama, who had sent servants to the household of Kanô Shôgen as they were required. Oöka lost no time in despatching two trusty retainers, named Hiraishi and Yoshi-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

do, to Wakayama, to try and find out particulars of Tenichibô's former life. The faithful *samurai* travelled day and night until they reached their destination, a distance of a hundred and fifty *ri*. The Mayor of the town enabled them to find out the employment agents, but the latter could produce no books that could give any clue to the information they sought, as they had mostly been destroyed in successive fires. They succeeded, however, in discovering the residence of an aged woman named Kiku, who had been a servant of Kanô Shôgen many years before, who, it was thought, might be able to recall some important facts. To her house they accordingly went, and although Kiku remembered that there was a girl named Sawano employed in the household of the Lord of Kii, she could not tell what had become of her, or whether she was living or dead. She told them, however, of a certain Sôsuke, who used to bring Sawano letters, and suggested that he might be able to tell them about the girl. By the help of the Governor of Wakayama, this Sôsuke was found, but he could only tell his enquirers that he used to leave letters for Sawano at a tea house in a village called Itokirimura. The faithful and untiring *samurai* got Sôsuke to act as their guide to this place, and found there the tea-house where the letters were left. So many years had passed, however, since that time, that the people of the tea-house could not at first recollect anything about Sawano. At last they remembered that there was such a person for whom letters were received, and that her mother lived at the village of Hirasawa. Off they posted to this village, and caused everyone above the age of fifteen to be questioned if they remembered any such circumstance as a girl named Sawano going into the service of the family of Kanô Shôgen. One of the villagers was able to call to mind that such a person had once lived in the village, and that she and her mother both lay buried within the temple grounds of Kodenji. To the priest of that temple they accordingly went, and examining the record, they discovered that Sawano had given birth to a son who died on the 25th day of the 3rd month of the 2nd year of Hoyei, and that the mother had died a day or two after.

They had thus discovered that Tenichibô's pretensions were utterly false. The next step was to find out who he really was. They naturally suspected that it must be some one belonging to the village, and immediately set enquiries afoot to find out what children might have been born at the same date as the son of Sawano. After long research and apparently endless trouble, they managed to elicit the various facts connected with the birth and life of Hôtaku, and came to the conclusion that he and Tenichibô were one and the same person. Hiraishi and Yoshida therefore procured from the temple a copy of the records, to which was attached the seals of the authorities of Wakayama to testify to its correctness. They also obtained the clothes and hat stained with the blood of the dog which had been found after Hôtaku's supposed murder, and taking with them two men who stated that they could recognise Tenichibô if they saw him, started back in all haste for Yedo.

Now some days after Oöka had despatched his faithful retainers to Wakayama, the Shôgun said to Idzu-no-Kami, "Has not Oöka yet recovered from his illness. I am most desirous of meeting my son. Therefore tell Oöka that well or ill he must appear at his office to-morrow morning."

When this message was conveyed to Oöka he determined to commit *seppuku* on the following morning, as all his representations would be useless, Idzu-no-Kami and all the higher officials of the *Bakufu* believing that Tenichibô was the actual son of the Shôgun. When morning came he made all preparations for killing himself and his little son, who, he was determined, should not survive him, and he had even drawn his sword to commit the dreadful act, when a messenger arrived announcing that Hiraishi and Yoshida were on their way back to Yedo. Oöka stayed his hand on receipt of this intelligence, but then remembering that two days would probably elapse before his trusty messengers could arrive, he was again on the point of carrying out his intention, when Hiraishi and Yoshida rushed in, exhausted with their long and hurried journey, and prostrating themselves at the feet of their lord, showed the proofs for which he had so long and and so anxiously waited, and on the production of which he had staked the existence of his house and the honour of his name. He at once went to the *Daimio* of Mito, and informed him of all he had done and the result of his enquiries, and received from the Vice-Shôgun full authority to act as he should deem best to bring the pretender to justice.

Oöka therefore arranged that Tenichibô should be requested to attend at his *yashiki*, where the two men whom Hiraishi and Yoshida had brought from Hirasawa should be in waiting disguised as attendents, and who, if they recognised in the son of the Shôgun the boy Hôtaku, were to pull the sleeve of Oöka. The blood stained clothes were also to be hung up at the entrance gate, after Tenichibô had entered the *yashiki*. When all had been prepared, a message was sent to Tenichibô, requesting him to come to the Governor's *yashiki*, thence to proceed to the palace to be presented to his father the Shôgun. Tenichibô at once did as he had been requested, and came followed by all his retainers, with the exception of Yamanouchi, whose astute mind told him that all the preceding delays had not been without reason, and that probably the deception had been discovered or at least suspected. He therefore remained at Takanawa.

When the party arrived at the Governor's house, they were received in all state by Oöka, but no sooner did the villagers from Hirasawa see Tenichibô, than they pulled the sleeves of Oöka, and he knew that the would-be prince was no other than Hôtaku. Concealing his satisfaction at the discovery, Oöka told Tenichibô that he regretted that the presentation to the Shôgun must be postponed, as Idzu-no-Kami had for some reason been unable to attend.

Tenichibô had therefore no alternative but to return to Takanawa, when just as he was taking his leave, Oöka, pointing to the blood stained clothes and the hat which had been hung up at the entrance, called out in a firm voice "Hôtaku." All colour left Tenichibô's face, and he and some of his followers betrayed so much confusion that they were at once arrested and subjected to examination, when confession was obtained of the entire plot from the commencement.

Yamanouchi, who had been the most prominent upholder of the false prince, was at once sought, but on arrival at Takanawa, it was found that he had felt so sure of the discovery of the plot, that he had committed suicide shortly after Tenichibô had set out for the Governor's house. The rest were all sentenced to death.

Oöka's fidelity was well rewarded by the master he served so faithfully. He was made a *Daimio*, and granted an estate of ten thousand *koku* in the Province of Mikawa.

Dr. Conneau, private physician to the late Emperor Napoleon, died at Porta, Corsica, on the 16th August. Dr. Conneau was born at Milan of French parents in 1803. While a medical student he became secretary to Louis Bonaparte, the ex-King of Holland, and afterwards practised as a doctor in Rome. After the insurrection of 1831 he left Rome and became household physician to Queen Hortense, Louis Napoleon's mother. He took part in the abortive Boulogne invasion, was imprisoned with the Prince in the fort of Ham, and contributed materially to his escape He remained with the Prince in England, and returned with him to France after the Revolution of 1848. When the Empire was established Dr. Conneau was appointed principal physician to the household. In 1852 he was returned to the Corps Legislatif as a Government candidate for the Somme, and was made a senator in 1867. —*Pall Mall Gazette.*

The Sultan has given orders that the anniversary of his accession to the throne shall not be celebrated by any rejoicings, nor will there be any reception of the diplomatic body.—*Pall Mall Gazette.*

Mr. Cavill has accomplished the feat, which he attempted unsuccessfully last year, of swimming across the Channel. He started from Cape Grisnez at forty minutes past three o'clock on Monday afternoon, and arrived within fifty yards of the English shore about forty-five minutes past three on Tuesday morning, but could not land in consequence of the roughness of the water. He was therefore taken on board the boat by which he was accompanied and landed on Dover pier. After a short rest he is said to have appeared none the worse for his exertions.—*Pall Mall Gazette.*

From Pesth we learn that a great sensation has been produced by an appeal addressed by M. Kossuth to the Hungarian nation, whom he excites by enthusiastic words to take up arms with the Turks against the common enemy, Russia. He exhorts Count Andrassy to distrust the promises of the Czar, who, when victorious, will destroy Austria-Hungary as he will have destroyed Turkey. Kossuth calls upon the Premier to save the Imperial dynasty and his country by making an immediate alliance with Turkey against Russia before it is too late, for if Turkey is overcome Hungary will inevitably fall.—*Pall Mall Gazette.*

REPORT ON THE FINANCES OF JAPAN, BY MR. MOUNSEY, SECRETARY TO H. M.'s LEGATION.

(Continued.)

PART I.—*Description of Taxes and Items of Expenditure.*

In the explanatory notes attached to the estimates of the current year, the Minister of Finance states that he has lately introduced reforms in the system of accounts, and adopted the European method of book-keeping. The classification of the items of revenue and expenditure has consequently undergone alteration, and some taxes have taken new denominations. For the purpose of comparison the Estimates of the year 1875-76 have been assimilated to those for 1876-77, but the Minister states that this could not be done with the previous Estimates (1873 and 1874), on account of what he terms the "insufficiencies of their systems." It is, therefore, only necessary to notice here the following sources of revenue in the latter, which do not subsequently appear.

Taxes.

Servants, Carriage, Horse, and Pleasure-boat Tax.—This tax was introduced in 1874, but was at once found to be both unpopular and difficult to collect. It was therefore reformed in 1873. The tax on male and female servants, sedan-chairs, and saddle-horses was abolished and replaced by a tax on vehicles, whilst the tax on pleasure-boats was amalgamated with the ship-tax.

Tax on Oil Pressing.—During the feudal times taxes of various sorts were levied in several districts on the manufacture of vegetable oil. A uniform tax was introduced in 1871, but in 1875 it was altogether abolished, with a view to encourage this branch of native industry.

Tax on Sugar.—The explanation of this tax is that, in 1873, Loochoo was allowed to pay its tribute, and some other places where the sugar-cane grows, their land-tax, in sugar. In 1874 money payments were substituted in both cases.

Harbour Dues.—Previous to the Restoration of the Mikado's Government, taxes varying in amount, according to the species of merchandise, were levied on goods imported into harbours, inlets, and mouths of rivers. Proving injurious to trade they were reduced by regulations for the maintenance of harbours, and the transport of merchandise, issued in 1873, to a single tax or due. This was, however, found to be vexatious to the tax-payers and difficult to collect. It was therefore suspended in 1875.

Special taxes on Grain appear to have been a number of small dues levied according to ancient usage, in addition to the land tax, to meet the expenses of collecting the latter. They were abolished in 1875.

Taxes on Irrigation.—These existed in the feudal times, and were partly paid in money and partly in forced labour, but only in certain provinces. The Government of the Restoration adopted the principle of uniform taxation throughout the Empire, and abolished them in February 1875.

Imperial Household.—A contribution of the amount mentioned under this head is made annually by the Mikado to the military fund. It does not appear in the subsequent Estimates as it is now deducted directly from the appropriation for the Imperial household.

Coming now to the Estimates for 1875-76 and 1876-77, I proceed to describe their items in the order in which they are classified in those documents, commencing with the revenue sheets.

Customs.—The duties on imports and exports, to and from Japan, are fixed by Treaty at the rate of 5 per cent. *ad valorem* on original value.

The Land Tax.—From the most ancient time the Japanese appear to have been an essentially agricultural people. The geographical position of their country primarily, and in later times, the state of complete isolation from the rest of the world in which they were for centuries kept by their Government, debarred them from all trade and commerce with foreigners, and hence a careful cultivation of the soil must, at a very remote date, have been absolutely necessary for the maintenance of a population which, when we first hear of Japan, more than three centuries ago, seems to have been more dense than that of any European country at that date.

Kaempfer, who visited Japan in 1690, says:—"The Japanese are as good husbandmen as, perhaps, any people in the world. Not only the fields and flat country, which are seldom or never turned into meadows or pasture-grounds,* but likewise the hills and mountains afford corn, rice, peas, pulse, and numberless edible plants. Every inch of ground is improved to the best advantage, and hills and mountains, many inaccessible to cattle, which would be wholly neglected in other countries, are cultivated up to their tops." Subsequent travellers speak in the same strain, and at the present day there is nothing more striking for a European disembarking at one of the Treaty ports than the garden-like culture of every available patch of ground.

According to Japanese authorities, the whole soil of the country was, previous to the latter part of the twelfth century, actually the property of the Mikado, and they give the following as one of the systems of land tenure then in force. The land, they say, was divided into squares, each of which was subdivided into nine equal portions. Eight of these were leased to as many farmers on condition that they should collectively cultivate the ninth portion, always the central one, for the Mikado. Whether or not this or similar arrangements were general, or how long they lasted it is impossible to say, but it is certain that the feudal system introduced by the Shôguns, or temporal Emperors (as they have been erroneously termed by Europeans), in the thirteenth century, completely put an end to it.

During this and the following centuries, the country was constantly a prey to civil strife, the Shôguns and the Daimios, who had acquired possession of their respective provinces, and distributed the land amongst their retainers, being ever at war with one another. It was from the land that they drew the means of carrying on their wars and maintaining their state and hence it was that the land became burdened with taxation. At the time of Taikô Sama † (1585-89), whose authority was much more absolute and extensive than that of any of the previous Shôguns, four-tenths of the produce of the soil were exacted by the Government, six-tenths being left to the cultivator, and this proportion seems to have been retained in the territories of the Shôguns until their extinction in 1868. In the other provinces the tax or rent levied by the Daimios seems to have varied considerably, but it is said to have been everywhere greater than in the Shôgun's lands. In some parts of the country it was six-tenths, and Kaempfer says that in his time the Satsumese were taxed at two-thirds of their produce by their lord.

The maxim that the Mikado was lord paramount of the soil seems, however, not to have been forgotten or lost sight of during the six or seven centuries of his forced seclusion at Kiôto; and in the memorials presented to him by the Daimios, who were most instrumental in bringing about his restoration to power in 1868, we constantly find it expressed in the clearest terms. The Daimios of Kaga, Hizen, Satsuma, Chôshiu, and Tosa stated in their memorial: "By the conferring of rank and property the Emperor governs his people; it is his to give and his to take away; of our own selves we cannot hold a foot of land." And again: "The place where we live is the Emperor's land, and the food which we eat is grown by the Emperor's men. How can we make it our own?" and similar language was used by the 118‡ Daimios who then petitioned to be allowed to restore their fiefs to the Mikado.

* The Japanese appear to have always lived chiefly on fish and vegetables. Their domestic animals were originally only the horse, the ox, the buffalo, the dog, and the cat; sheep and goats were introduced by the Portuguese, and pigs by the Chinese; but none of these quadrupeds were used for food. The smallness of their number, perhaps, originated a distaste for animal food, and this was, no doubt, confirmed by the doctrine of the transmigration of souls, one of the most important tenets of the Buddhist religion, which is professed by a large majority of the Japanese people.

† Taikô Sama never bore the title of Shôgun.

‡ The total number of Daimios is 258, and of these 123 subsequently joined the above-mentioned 118 petitioners, whilst the remaining 17 were ordered by the Mikado to act in concert with them, and obeyed the order.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

The Mikado's reply, granting the request of the petitioners, was published in August, 1869, and it was then decided, in principle, that the Government should undertake the administration of the territories formerly in the possession of the semi-independent Daimios, convert their fiefs or "hans" into prefectural districts or "kens," and idemnify their previous owners, and their retainers, the Samurai, by fixed pensions.

This measure was not carried out until August, 1871, when the Daimios who had, in the meantime, acted as Governors of their respective provinces by direct appointment from the Emperor, were finally deprived of all administrative power, and received compensation in the form of fixed incomes, calculated at the rate of one-tenth of their revenues.

These incomes, as well as the salaries of the Samurai, the liability of which was at the same time undertaken by the Government, were to be paid partly in money and partly in Government bonds; and in order to provide for these payments, and for the growing requirements of a Government which was now assuming a centralized form, it was found neeessary to proceed to a reform of the land tax.

The tax, which constitutes nine-tenths of the revenue of the Empire, had hitherto been paid in kind. It varied in amount, as we have seen, in the different provinces of the Empire, and further, anomalies and inequalities in its incidence were almost universal.

The Japanese have a collective name for the principal crops, *Gogoku*, or the five fruits of the fields; and it is by the capabilities of the soil for producing one or other of these fruits that they have for ages classified it and estimated its value and the wealth of its possessor. These five fruits are, in the order of their value:—

1. Rice, the principal food of the people.
2. Barley and wheat, for horses and cattle.
3. Buckwheat, for cakes and bread.
4. White millet *(Panicum Italicum)*; and
5. Common millet *(Panicum crus corvi)*, and beans *(Oplysmenus frumentaceus)*, both much used for food by the agricultural classes.

A general survey, determining the classes to which each each plot of ground belonged, and the amount of taxation to which, under this system of valuation, it was subject, is said to have been made in that part of the country which was under the immediate jurisdiction of the Shôguns about two-and-a-half centuries ago; and though subsequent surveys have been made, they were of so partial a nature that this general survey continued to be the basis for calculating the land tax up to the time we are now treating of. During this long interval the relative value of much of the land must evidently have undergone great change. In some places floods had no doubt carried off part of a field; in others, irrigating streams had altered their courses. Farmers selling portions of their farms had agreed to pay the entire tax on the portion they retained, and thus brought untaxed lands into existence; whilst new lands, brought under cultivation subsequent to the survey, had remained free of all burdens.

Thus, in reforming the land tax the central Government had to convert payments in kind into payments in money, and at the same time to make a new assessment of the land. It had further to legislate on the tenure of the land, since, after the cession of their fiefs by the Daimios, it was uncertain whether the occupiers of the soil were tenants or proprietors.

With a view to attaining the first of these objects, the Government published a proclamation in 1872, permitting the payment of the land tax in money; but as few landholders availed themselves of this permission, a further Decree was issued in July 1873, rendering payments in money compulsory in each district as soon as the lands within its limits should be assessed according to the new system, and ordering the assessment to be commenced at once.

In this new assessment the old method of calculating the land tax according to the amount of produce is abandoned, and the basis adopted is the saleable value of the land. The tax on land is in future to be kept entirely distinct from that on buildings; and in computing the value of each property, the assessors are to take into consideration the capabilities of the soil, the expense of cultivation, the situation, the means of irrigation, the proximity to or distance from markets, &c., &c. A valuation is then to be struck, and on this valuation a tax of three per cent. is to be levied. This latter amount is not to be final; for the Decree goes on to state that as soon as the taxes on tea, tobacco, and other articles of produce to be presently imposed, yield a revenue of 2,000,000 *yen*, a further and gradual reduction will be made in the tax on the newly-assessed lands until it becomes 1 per cent. of their value.

At first sight it would be natural to infer that a reduction of the land tax from four-tenths or six-tenths of the of the produce of the land to 3 per cent. on its saleable value would create a large decrease in this branch of the State revenue. Such a result was not, however, apprehended by the Ministry of Finance.

I learnt from that Department in the autumn of last year that, on a rough calculation, three parts of the cultivated land in Japan is held by small peasant proprietors, and that the remainder is divided into large properties. The major part of the lands of the former being included in the old surveys, the amount of their contribution to the land tax will be considerably diminished. On the other hand, the large proprietors have in general paid far less than the sum to which their lands would henceforth be subject under an uniform tax of 3 per cent., and it was from them that the Minister of Finance calculated on recouping the deficit in the quota of the peasant farmers. He then estimated the annual revenue from the land-tax under the new system at 46,000,000 *yen*, and he argued that he could confidently count on the receipt of this sum, as the amount of the tax would no longer be dependent on the state of the harvest or the price of rice, which had caused the fluctuations observable in the Estimates of the years 1873, 1874, and 1875, viz., 40,000,000, 44,000,000, and 51,000,000 *yen*.

The new assessment was commenced in 1875, and at the close of 1876 two-thirds of the cultivated land of the country had been brought under it, whilst hopes were entertained of completing the survey of the remaining third in a few months. In the meantime many of the farmers opposed the introduction of payments in money. Repugnance to change, so common in the agricultural classes of all countries; an idea that the new form of payment would prove an additional burden; the difficulty in a country where roads scarcely exist of carrying their rice to market at a given date when the tax became due, and the still greater difficulty in the absence of banking establishments of obtaining advances on it; finally, the fear of depreciating the price of rice by throwing more on the market than was necessary for consumption; one or all of these reasons may have actuated them, and the result was that in November and December, 1876, agrarian riots broke out in several provinces of the Empire. In December they assumed a serious form, and it seems probable that these outbreaks hastened the further reduction of the tax contemplated and announced in the Decree of 1875. However this may be, on the 4th January, 1877, His Imperial Majesty the Mikado decreed that from and after that date the land-tax throughout the country was reduced to 2½ per cent. on the value of the land, and that the tax for local government purposes, also chargeable on the land, which had hitherto been equal to one-third of the land-tax, must not in future exceed one-fifth of the same.

It is supposed that this further reduction of the land-tax to 2½ per cent. will diminish the revenue of the country by about 8,000,000 *yen*, or about 1,600,000*l*.

As to the tenure of land, I am informed that, as soon as possible after the assessment of each property, titledeeds are issued for a minimum fee vesting the right to the soil in the owner, but reserving all the minerals under it to the Mikado, who thus remains lord of the manor of the whole of Japan.

Royalty on Mines.—According to the Mining Law of July, 1873, the holders of allotments from which metallic ores other than iron are raised must pay the Mining Department a yearly tax, irrespective of the land-tax, of 4s. per 2,000 square yards. Half of this tax is payable in allotments from which iron or non-metallic ores are raised. In addition to the above, an *ad valorem* tax varying from 3 to 20 per cent., according to the prosperity or the reverse of mining industry, is payable twice a year, viz., in

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

January and July, upon all prepared metals and other minerals. No one except a person duly registered as a Japanese subject can become either principal or partner in making trial-borings, renting a mining allotment, or in the business of raising and preparing minerals. All persons who receive a share of the produce or who possess an interest in the profits and losses are accounted partners. Any person who breaks this rule forfeits to the Government all his interest in the undertaking, and his further proceeding with it is prohibited. If any person establishing a mine wishes to engage a foreign mining engineer, he must apply for permission to do so to the Mining Department, and furnish a draft of the engagement. When the latter is reduced to the form of a contract, it must be approved by the Foreign Office and Board of Works before being sealed by the parties to it. These regulations entirely prevent the investment of foreign capital in Japanese mines.

Salary tax.—Government officials are divided into three classes :—

1. The heads of Departments, and the hightest officials, appointed directly by the Mikado.
2. Those who hold commissions from the Crown, but are not directly appointed by the Mikado, and—
3. Those who are appointed by the heads of Departments.

The tax on the first class is now 20 per cent.; on the second, for all salaries above 70*l.* per annum, 10 per cent.; and on the third, for all salaries below 70*l.* per annum, 5 per cent.

Tax on Allowances of Nobles and their former Retainers (Samurai).—The Ministry of Finance is unable to inform me of the exact rate in money at which this tax was levied, as a great part of it has always been paid in rice. It appears to have been 30 per cent. on the larger allowances, and to have decreased proportionately with the amount of each allowance. In consequence of the adoption in August, 1876, of a scheme (described below) for the capitalization of these allowances, this item of revenue will not appear in future estimates.

Tax on Produce of the Hokkaidô—Hokkaidô, *i. e.* Northern Sea Circuit, the official name of the island of Yezo, differs in most of its natural features and products from the rest of the Empire, it is consequently exempt from the taxes imposed in the latter, and a separate scale of imposts is there levied. The chief products and the taxes thereon which were fixed by the Colonization Department in June, 1874, and which vary a little in the different provinces into which the island is divided, are as follows :—

Herring *(Nishin)*, 10 to 16 per cent.
Salmon, 10 to 20 per cent.
Dried fish (cod, soles, herring, &c.), 10 to 20 per cent.
Fish manure, 10 to 12 per cent.
Fish oil, 10 to 20 per cent.
Dried shell fish. (Each fisherman pays from 15 to 40 lbs. per annum, to the Colonization Department.)
Bêche de mer, 10 to 20 per cent.
Edible seaweed, 10 to 25 per cent., or 50 cents for each fisherman per annum.
Timber in lengths of 4 yards, 5*s.* per hundred pieces.
Squared timber, 1*l.* per 100 *koku* weight.
Firewood, 2*s.* per 100 *shiki* (a measure 5 feet broad and 10 feet long).
Charcoal, 50 bags for every kiln, or 10 bags on every 100 produced.
Staghides and horn, 10 per cent.

Besides the above, each fisherman using a net must pay a tax varying from 4*s.* to 2*l.* per annum, according to the size of his net, and there are a number of other small dues leviable on the produce of sulphur, on gardens, pastures, &c., &c., as well as on the manufacture and sale of *saké*, on horses and cattle, carriages, the sale of ice, &c., &c.

Tribute from Loochoo.—Loocho is the chief of a group of thirty-six islands in the North Pacific Ocean, about 250 miles from the southern extremity of Japan, and about 350 miles from the coast of China. Intercourse between the principal islands of the group and Japan has existed since A.D. 1451, and an Embassy was sent from them to the Court of Taikô-Sama in 1580. After that date trade relations seem to have become frequent between them and Satsuma, and vessels came annually to Kagoshima, the capital of that Province, laden with presents for its Prince. In the beginning of the 17th century the Loochooans stopped all communication with Japan, in order to curry favour with the rulers of China. Thereupon (A.D. 1609), the Prince of Satsuma, with the consent of the then reigning Shôgun, invaded the islands, took their King prisoner, and confined him for three years at Kagoshima. From this date the Kingdom of Loochoo became subject to the Princes of Satsuma, and through them to the Shôguns. The homage exacted by the latter consisted in the submission of the Kings of Loochoo to re-investiture on the accession of each Shôgun, and fifteen Embassies, principally undertaken for this purpose, are mentioned in Japanese annals as having come to Yedo between 1611 and 1850. Similar homage has been at different times paid by the Kings of Loochoo to the Court of Pekin. It would seem, therefore, that China has often disputed the right of Japan to absolute authority over these islands. The Japanese say they have paid tribute to their country since the 24th year of the reign of Suikô Tennô, A.D. 616, but I am not aware that they have any good authority for this statement. The amount of tribute varies annually according to the result of the harvest.

Tax on Fermented Liquors.—The national drink of Japan is called Saké, and is fermented from rice, Taxes on the manufacture of clear and thick saké, on various sorts of liquors made from plums, &c., &c., as well as on Shoyu Soy, a sauce made from beans, were levied at various rates and in various methods in the time of the feudal system of Government. In some provinces exclusive concessions for this manufacture were granted to privileged firms, and thus monopolies became vested in certain persons whose good will had to be purchased by any one desirous of entering the trade. Under the Government of the Restoration these monopolies were abolished, and a uniform tax was introduced in 1871. A further reform took place in 1875, when the tax on thick saké and soy was abolished. There are five kinds of saké, and according to the regulations then issued and now in force, the manufacturer pays 2*l.* per annum for a licence to brew each kind, beside 10 per cent. on the total amount of his sales, whilst the retailer's licence costs 1*l.* per annum.

A Tobacco Tax varying in amount and manner of collection existed in the feudal times, and was unified in 1875 at the following rates :—

	Per annum.
Manufacturer's licence.....	£2
Retailer's licence.....	£1

All tobaccos most be sold by retailers in stamped paper.

For 2½*d.* worth of tobacco the stamp is 1 rin=$\frac{1}{10}$ of ½d.
5*d.* „ „ „ 5 rin.
10*d.* „ „ „ 10 rin.
And so on.

Stamp Duties and Stamps on Legal Deeds.—The regulations for these duties were compiled from European and American models, and first came into force in 1873. They were revised in 1874. They include receipt stamps, requisite for all payments above 2*l.*, land transfer stamps, and, generally, the same stamps as are in use in England and America in legal and commercial transactions.

Postage Stamps.—According to the latest report of the Postmaster-General (issued in December, 1876), the revenues of his Department have never yet covered the expenditure. This is not in the least surprising when it is considered that the first introduction of a postal system, based on our European model, dates from the year 1871, and that previous to that date correspondence by letter was of a very limited nature, postal communications being only provided by the enterprise of merchants, and being limited to certain localities.

In 1871 the first Government mail route between Yedo and Osaka was opened, and in the short space of five years (up to June, 1876) mail routes of the length of 32,902, English miles were brought into active service, and 691 post-offices, besides 124 receiving agencies, 836 stamp agencies, and 703 street letter-boxes had been established.

The number of letters, packets, &c., forwarded in 1876 was above 30,000,000, being an increase of 29 per cent.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

over the number carried in 1875, and 98 per cent. over that of 1874. The inference from these figures is that the use of the Government Post will each year become more extensive, and that in time a balance between receipts and expenditure will be attained.

The charges for postage are, for an ordinary letter, 1 cent (½*d.*) in all the large towns, and 2 cents (1*d.*) for the rest of the Empire, whilst postal cards are only half these prices. The service seems to be carried on very efficiently, considering its recent establishment, for though during the year 1875-6, 1,759 letters were stolen, 1,356 of them were regained and delivered intact, five were so defaced that they could not be forwarded, and only 398 were not recovered; whilst only 193 letters were lost in the course of transmission or delivery, and 79 of these were ultimately sent to their destination.

A money order system was added to the Postal Service in January, 1875, and there are now 310 offices where orders can be obtained and cashed. Post-Office Savings Banks were also established at the same time, and of these there are now 89 in operation. Any opinion as to their probable success would be premature at present, but it is only fair to state that the business transactions of both these institutions in the first six months of the year 1876 were treble those of the same period in 1875.

It will be remarked that there is no specific charge for the postal service in the expenditure sheets of any of the Estimates in this report, except in those for 1873. The charges in question are included in the sums apportioned to the Ministry of the Interior. The following table, extracted from the last report of the Postmaster-General, shows the actual receipts and expenditure of his Department for the fiscal years 1874, 1875, and 1876, as well as his estimates for the year 1877.

Year ending—	Expenditure.		Revenue.		Deficit.	Per cent
	Yen.	£	Yen.	£	£	
June 30, 1874...	353,875	70,775	292,362	58,472	12,303	21·1
„ 1875...	594,588	118,917	448,527	89,705	29,212	32·6
„ 1876...	713,244	142,649	595,201	119,040	23,609	19·8
Estimates, 1877...	786,096	157,219	654,517	130,903	26,316	20·1

As the actual receipts of the Post-Office in 1876 exceeded the Estimates by 25,201 *yen*, the Estimate for 1877 does not appear exaggerated.

Advocates' Licenses.—In February, 1876, a license fee of 2*l.* per annum was imposed on all persons exercising the profession of advocate.

Stamps on Silkworms' Eggs Cards.—The stamp for full-sized cards is 3*d.* for any fraction of the same ¾*d.*

Stamps on Raw and Floss Silk and Cocoons.—These articles must all be sold in stamped paper. Raw silk must be made into hanks of 2½ lbs. weight, and each hank must bear a stamp of 3 cents (1½*d.*), and another stamp of the value of the twentieth part of ½*d.* The stamp for floss silk is at the rate of 5*d.* for 75 lbs. Cocoons must bear stamps at the rate of 2½*d.* for 58¼ lbs.

Licenses for Silk Dealers cost 2*s.* for each person engaged in the trade.

The three immediately preceding taxes were not imposed with a view to obtaining revenue, but in order to control the silk trade and prevent practices which had resulted in the deterioration of the cocoons and silk, and threatened to do permanent injury to the Japanese trade in these articles. The foreigners engaged in the silk trade are much benefited by these taxes, and express great satisfaction with the control thus exercised by the Government. On the other hand, they complain much of a second tax which seems to be levied by a species of Guild, which has its head office at Yokohama, and branch offices in all the silk districts. This Guild attempts to exercise a further control over the silk trade, and to prevent all silk which has not paid its inspection tax from being brought into the Yokohama market. As the Japanese Government are considering the advisability of revising the silk taxes, it is to be hoped that they will abolish the Guild.

Taxes on Merchant-Vessels and Boats.—These were very unfairly levied previous to the Restoration, and were reformed in 1872, as follows;—

Japanese junk's licence, per annum, 4*s.* for every 100 koku (1 koku=about ¼ of a ton).

Steamers, 3*l.* for every 100 tons.

Sailing ships (foreign shaped), 2*l.* for every 100 tons.

Since 1874 boats under three fathoms in length pay 10*d.* per annum, above that length 7½*d.* for every additional fathom.

Taxes on Vehicles.—Since 1875 the taxes are:—

	Per annum.	
	s.	*d.*
For 2-horsed carriages.....	12	0
„ 1-horsed „	8	0
„ jinrikishas, for two persons.....	8	0
„ „ for one person.....	4	0
„ waggons drawn by oxen, or by more than one man.....	4	0
„ hand wagons drawn by one man.....	2	0

Previous to the year 1870, wheeled vehicles, with the exception of bullock waggons, were almost unknown in Japan. The narrowness of the streets in the towns, and the badness of the roads in the country, rendered the general use of European carriages impossible. Some speedy means of locomotion became, however, an absolute necessity in the increased activity of Japanese life under the Restoration. Accordingly, in the above-mentioned year an inventive Japanese genius imagined and constructed the jin-riki-sha, or man-power vehicle, the use of which has now become common for long journies as well as for town conveyance. The body of this vehicle—the diminutive of that of a London gentleman's cab without a splashboard—is placed on a pair of light wheels and furnished with shafts, and a hood of oiled paper for wet weather. It may be drawn by one man running between the shafts; a second man running ahead with a rope attached to the vehicle and his shoulder, can be added when the roads are bad; and when great speed is required one or two more may be employed in pushing.

Tax on Trading Corporations.—Rice, oil, &c. This tax was imposed in August, 1876, and is at the rate of 7 per cent. on the receipts of these Companies.

Shooting Licences.—During the feudal times licences were requisite for the pursuit of game in some provinces, but there was no general rate of fees. In 1873 uniform regulations were issued, making a distinction between those who make a living by the pursuit of game and those who shoot or hunt for recreation. The licence for the former costs 4*s.* per annum, that for the latter 2*l.* In January last an agreement was concluded between the foreign Representatives and the Japanese Government, rendering it obligatory on all foreigners, desirous of shooting in Japan, to furnish themselves with a licence from the Japanese authorities, the fee for which is 2*l.* Foreigners are only allowed to pursue game within the Treaty limits, *i.e.*, within a radius of about 25 English miles (in some cases much less) round the open ports.

Licences for Dealers in Horses and Cattle were imposed in former times, but there was no uniform rate for their collection until 1872, when regulations, still in force, were issued. According to them every dealer must have a license, costing 4*s.*, for every seven animals passing through his hands.

Licence for Manufacture of Weights and Measures.—Rules were issued in 1875 obliging the manufacturers to pay one twenty-fourth of their profits to Government.

Copyright Fees.—Since 1875 a Japanese author can secure his copyright by the payment to Government of a sum equivalent to the selling price of six copies of his work.

Fees for Passports for Foreign Countries.—A fee of 2*s.* is charged on all passports issued to Japanese subjects going abroad.

Druggists' Licences.—This tax was imposed in January last. It does not affect the drugs and medicines used and prescribed by the medical profession, and its object is to restrict the sale of medical compounds, partaking of the character of quack medicines, in which, as well as in the charms against every description of disease and misfortune sold at every temple, the Japanese seem to have great confidence. To obtain permission to make and sell these medicines, a minute description in writing of the nature and effect of each must be sent to the Ministry of the In-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

terior, and heavy penalties are attached to their unauthorized sale and manufacture. A licence for the manufacture of one such medicine costs 8*s.* per annum. A druggist's licence for their sale costs 1*s.* per medicine. Those of itinerant and other vendors 1*s.* for all sorts of these medicines. The latter licences are valid for five years.

Mineral Produce.—The estimated value of the produce of the Government mines in 1875-6 and 1876-7 was as follows:—

	1875-76. £	1876-77. £
Gold and silver	63,385	144,507
Copper	24,564	39,600
Coal	20,178	56,258
Lead	1,536	2,200
Total	109,663	242,565

The total expenditure of the Mining Department for the year 1876-7 is estimated at 243,983*l.*

Railways.—The latest returns of the actual receipts and expenditure of the railways and telegraphs, as supplied to me by the Ministry of Finance, are for the year 1875 (January 1 to December 31), and as follows:—

Tôkiô-Yokohama Line (18 Miles).

	£	£
Receipts		86,559
Expenditure—		
Railway offices	8,851	
Constructions	14,557	
Working expenses	47,986	
		71,394
Surplus		15,165

Kobe-Osaka Line (20 Miles).

	£	£
Receipts		50,611
Expenditure—		
Railway offices	19,556	
Constructions	4,523	
Working expenses	26,187	
		50,266
Surplus		345

With regarded to these returns, the Ministry of Finance remarks that the whole expenditure for railway offices should not have been included in them, as this item comprehends the expenses of the preliminary surveys of a trunk line from Yedo to Kiôto and of branch lines from Kiôto to Lake Biwa, and from Tanaka to Niigata, as well as many expenses connected with the Osaka-Kiôto line, which was then in course of construction. It is impossible to ascertain the exact amount of capital expended on the construction of the two railways mentioned in these returns, but whatever it may have been, the surplus of the year 1875 was manifestly insufficient to pay the interest on it. There is reason to believe that the surplus was larger last year and that the receipts are increasing.

Telegraphs.—

Receipts	29,448
Expenditure	76,909
Deficit	47,461

The Ministry of Finance explains this deficit by stating that the expenditure includes the whole preliminary cost of the telegraphic lines, which are being gradually laid down to the chief towns of all the Kens.

I have not been able to obtain any reliable information relative to the expenditure in the Government iron works, silk manufactories, printing office, dockyards, and mint.

The iron and silk manufactories were erected by the Government with a view to encourage the building of similar establishments by private individuals and not as a pecuniary speculation.

Refund of Estate-rated-paper-money Debt, incurred by former Hans.—When the currency was reformed, the Central Government advanced various amounts of the new paper-money to the Provincial Governments, which were at the time in the hands of the Daimios. This item represents the refunds of these advances.

The National Debt is treated in Part II of this Report.

Civil Lists and Appanages of Imperial Family.—These were hitherto included in the appropriation for the Imperial household, but will henceforth form a separate item.

Pensions for Merit and Allowances to Nobles and their former Retainers (Samurai).—The Census of 1872 gives the number of nobles at 459. They are of two classes, the Kugés, 201, and the Daimios, 258 in number. The Kugés are chiefly descendants of the Mikados, and appear to have been always essentially courtiers. In this capacity they rank above the Daimios. In general, they had no lands, and received allowances of rice from the Mikados. The Daimios, on the contrary, were of the military class, men who gained lands and provinces during the quasi abeyance of the Mikado's power, and for long ages were often at war with each other, or with the Shôguns and their party. The object of the Daimios was to gain and maintain their independence, that of the Shôguns to subject them to their own authority. This result was first obtained by a Shôgun of the Tokugawa dynasty about 265 years ago, and for the following two centuries the Daimios were compelled to render homage at Yedo, those of inferior rank forming the nobility of the Shôgun's Court. About fifty years ago, a few of the more powerful of their number again re-asserted their independence, and their hatred of the Shôgun's authority was an important factor in bringing about the Restoration.

After their subjection by the Shôguns the Daimios seem to have given themselves up to pleasure and luxury of all sorts, and to have left the interests of their respective clans in the hands of their chief retainers. Since the Restoration they have taken little part in the Government of the country, and, with few exceptions, are now seldom heard of, except in connection with their pensions.

The Samurai, or two sworded class, were originally peasant farmers cultivating their own lands. Some authors state that they were constituted into a separate military class as early as the end of the eighth century, and, however this may be, all seem to agree that this separation became more marked as the power of the Mikados became circumscribed by the increasing influence of the Daimios. As the latter gradually added to their privileges and attained to a state of semi-independence, bodies of military retainers became more and more necessary for the maintenance and service of each petty baron, and thus, at a very remote period in the history of Japan, the Samurai became a recognized and powerful class in the nation.

They probably at first devoted themselves exclusively to military life, and, in return, received pensions in the form of allowances of rice; and, in order to secure at all times a sufficient supply of fighting men, these pensions were granted in perpetuity. In course of time they applied themselves to letters and literature, and finally, by their monopoly of the pursuits of arms and learning became the *de facto* governors of the country. Besides these hereditary pensioners there were others at the time of the Restoration who had been rewarded with allowances for life for meritorious acts performed by themselves.

Under the old system of government in Japan these allowances were paid by the Daimios, but when, in 1868, the latter restored their provinces and administrative power to the Mikado, the Central Government assumed the responsibility of their payment.

It soon found that the services of the Samurai were not only no longer required, but also that the existence of bodies of armed men of their character and numbers, animated as they were by a strong feeling of clannish attachment to their Chiefs, was an encumbrance to the Treasury, and might become a danger to the State.

The Government therefore decided on their suppression. As, however, they had a clear right to some sort of compensation, should their allowances of rice be abolished, and as they formed a very powerful class, it was found necessary to use caution in dealing with them.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

The Government accordingly offered to all Daimios* and Samurai who voluntarily surrendered their hereditary pensions a sum equivalent to six years' income, and to those who held annuities a sum equivalent to four years' income payable in both cases half in cash and half in Government bonds, bearing 8 per cent. interest, saleable or mortgageable to any but foreigners, and redeemable after the lapse of three years at the convenience of Government.

This offer was made in 1873, but was apparently refused by the bulk of the pensioners. For the sum charged for pensions in the Estimates of that year is 2,522,763*l.*, whilst it is 3,896,982*l.* in 1874; 3,519,312*l.* in 1875, and 3,503,490*l.* in 1876, or on an average considerably more than one-fourth of the entire revenue of the country.

Great difficulty has naturally always been experienced in making provision for this serious charge, and the Government has each year become more alive to the impossibility of meeting it out of ordinary revenue.

In 1873 they were obliged to raise a loan of 2,400,000*l.* in London for the purpose of constituting a fund for the above capitalization scheme, and in 1874 they found it necessary to reduce the charge by levying a heavy income tax on the pensions in question. These measures not proving a sufficient relief to the Treasury, which had to expend yearly increasing sums on the creation and maintenance of a standing army whose chief duty has hitherto been to keep the Samurai in order, the Government finally decided in August 1876, on a compulsory commutation of the pensions. With this view a return of their number and amount was drawn up by the Government, and from it I extract the following statement:—

Amount.	Number of Pensioners.
Above 70,000 yen.....	16
50,000 yen to 70,000 yen	8
30,000 „ to 50,000 „	15
10,000 „ to 30,000 „	80
5,000 „ to 10,000 „	74
1,000 „ to 5,000 „	393
100 „ to 1,000 „	15,484
25 „ to 100 „	175,174
Below 25 yen.....	127,184
Total.....	318,428

These 318,428 pensioners are the heads of the Noble and Samurai families, and by reference to the last census taken in 1872, I find that, including their families and the junior branches of both classes, they represent an aggregate of 1,947,223 souls, viz., 972,123 males, and 975,100 females. At the same time a decree was issued fixing a scale of capitalization, commencing at five years' purchase for the largest pensions, and rising gradually as the amount of the pension decreases to fourteen years' purchase for the lowest class. The payment of the commuted capital is to commence in five years, and to extend, at the convenience of the Government, over a period of twenty-five years; so that in thirty years at latest this charge will entirely disappear from the budget. Meanwhile, as the pensions are commuted into Government bonds, which cannot be sold or transferred, their holders are to receive interest on their commuted capital at the rate of 5 per cent. for the larger pensions and 7 per cent. for smaller ones.

The large incomes are those most affected by this scheme. For instance, instead of an hereditary annual income of 70,000 yen, a pensioner of the first class will only be entitled to a capital sum of 350,000 yen, payable in the course of thirty years, and will, meanwhile, only receive interest at 5 per cent. on that sum, viz., 17,500 yen, or one-quarter of his former income. The small incomes are, on the other hand, treated less harshly. A 100 yen pensioner will retain two-thirds of what he formerly enjoyed, and the very numerous class below him —302,358—will suffer still less loss from the new measure.

As to the relief which will thereby accrue to the Treasury, I am informed by the Ministry of Finance that its amount is calculated at nearly 4,000,000 of yen, or 800,000*l.* for the coming year.

Council of State.—This body consists of the Prime Minister and two Vice-Ministers, and of all the "Kio" or effective heads of the ten great administrative Departments of the State. It is a sort of Cabinet Council which meets generally once a week in the presence of the Mikado, and which decides finally all matters of importance connected with the government of the country.

Senate is composed of eminent men, not necessarily officials appointed by the Government. It numbers between twenty and thirty members, and is presided over by a Prince of the blood. It elaborates all new laws determined on by the Government, and the reforms required in old ones, but it cannot initiate legislative measures without the consent of the Government.

Assembly of Local Officials consists of one superior official from each of three Fus and thirty-five Kens.† It is a strictly consultative body, its chief function being to advise upon those measures which are both imperial and local in their nature, such as roads, local taxation, local schools, &c., &c. This Assembly has only met for one session since its institution, viz., 1875.

Ministry for Foreign Affairs.—The charge under this head represents merely the salaries of the staff of the Ministry. The staff consists of the Minister and Vice-Minister, whose salaries are 1,440*l.* and 960*l.* respectively, and 140 officials with salaries varying from 30*l.* to 960*l.* per annum.

I may here mention that the official salary of the Prime Minister of Japan is 1,920*l.* Those of the other Ministers and Vice-Ministers are on the same scale as in the Ministry for Foreign Affairs.

Ministry of the Interior.—Besides the staff of the Ministry, 1,008 persons, this charge includes many other items of expenditure which it is unnecessary to mention in detail. The silk manufactories, the port and land survey offices are under the control of this Ministry.

Ministry of Finance employs 1,363 officials, and has charge of the State printing-office. It is divided into the Mint, Tax, Paper Money, Statistical, Audit, Loan, Record, and Paymaster's Departments.

Ministry of War.—Besides the salaries of the officials of the War Office, 699 in number, this charge includes all expenses connected with the army, the numbers and branches of which are stated in the following return:—

(For Table see next page.)

* It has been stated elsewhere in this Report that at the time of the Restoration the Daimios were allowed to retain one-tenth of their previous incomes.

† Reference made to this subsequently.

We are glad to be able to state that, so far as the immediate neighbourhood is concerned, all the signs of the recent epidemic seem to have passed off, and both Oura and Naminohira are now nearly free from sickness. But in the town there appear to be still numerous cases, and the police with a view of warning people of danger affix notifications to such houses as cases of cholera are assumed to have occurred in; and a square piece of paper pasted on the door with the characters for *den-sen-biyo*, written in large letters, certifies that an infectious disease is, or has been, present there. Meanwhile, the dread of this visitation is followed by ghostly tales in some quarters of the town of the manifest presence of the spirits of soldiers who have died here from wounds received in the late war, which are said to stalk about in the visible form of convalescents, in the usual hospital dress, with an additional covering of a blanket tied round the throat. The regimental *bakemonos* are supposed to follow people to the doors of their houses, and anyone so escorted is said to be taken suddenly ill on entering, and soon succumbs to the deadly malady which invariably results. This goblin yarn is evidently believed in with blind confidence by certain of the lower orders, who are very careful who they associate with in the day—with blankets on—and who dare not stir out of their quarters in the dusk of evening, and after dark, for fear of meeting with the unwelcome phantoms.—*Rising Sun.*

The Queen of Madagascar has by public proclamation liberated the whole of the slaves in the island. By a treaty with England in 1865 she engaged that the practice of buying and selling slaves should be discontinued, but her subjects having evaded the treaty to a great extent by pretending that their slaves were purchased before the treaty came into force, the decisive step taken by the Queen has been rendered necessary.—*Pall Mall Gazette.*

If the total number of the troops be compared with that of other countries, it will be found that the fact of the Engineers being in the majority, and the Cavalry in the minority, is owing to Japanese geographical formation, which is deficient in plains but abounds with mountains and precipices.
The names of places which are subjoined to the names of the Camps, indicate the places that are in after time, when the forces have increased, gradually to be formed into Camps.
As regards the casting of Marine Artillery, it is to be increased in after time, but at present the field-piece is substituted for it (i.e., for the heavy gun).
The forces for Yeso will be accurately defined hereafter.

The army is recruited from all classes of the people on the conscriptive system. The period of active service is three years; the men are then drafted into the reserve for five years, and are liable to be called out until the age of 40. The service does not appear a popular one, as a notification was published as lately as the 1st of February last, stating that the number of recruits often fell short of the requirements of the army in consequence of many persons evading the conscription by maiming themselves and by other means, and ordering the officials to prevent these practices. Besides their military duties, the soldiers are taught reading, writing, &c., and the establishment of trade schools for them is contemplated.

Ministry of Marine.—In like manner this charge includes all the expenses of the Navy, the force of which may be learnt from the following list:—

LIST OF JAPANESE SHIPS OF WAR.

Ship's Name.	Commanded by	Tonnage.	No. of Guns.	Horse-power.	Screw or Paddle.	Complement.	Remarks.
	Admiral Ito.

In addition there are three vessels building in England, and 1,000 boys are now in training for those ships.
Total number of officers and men, 3,500.

(To be continued.)

Correspondence

TRAINING NOTES.

TO THE EDITOR OF THE "JAPAN WEEKLY MAIL."

Yokohama, 12th October, 1877.

My notes of last week were so greatly appreciated and eagerly devoured at so many Sunday tiffins, that I am induced to commence my letter rather earlier this week, in order that I may give more mature consideration to the weighty subject I am about to treat of.

I omitted in my last to review the programme issued by the Y. R. C. which certainly merits to some extent the general dissatisfaction that is openly expressed by the majority of racing members. This may be attributed to the super-desire of the Committee to give every one a chance, and in endeavoring to do so, they have unfortunately allowed many mistakes to creep in which a little ordinary forethought would have prevented. I know it is a very difficult thing to make up a race programme, and no one should attempt it without being thoroughly conversant with matters appertaining to racing generally, and the former performances—not only here, but in China—of the ponies in particular. This has apparently been overlooked, and the first mistake appears in the first race; the present conditions of this race admit ponies that may have won any amount of races in China, and I think that many owners will feel disinclined to enter against such a pony as *Grey Friar*, whose performance in Hongkong must not be overlooked. It ought also to be expressly stipulated whether half-bred ponies will be allowed to compete in the races for Japan ponies *only*, especially in the griffins and maiden races. This point has evidently been overlooked by the Committees of both the Y. R. C. and Y. R. A., and I fear that this omission will effectually put a stop to the entries for both these events being sufficiently filled to make a race. No. 4 of the First Day will also probably fall through for want of representatives, and throughout the programme there is not *one half-mile race for China ponies*. Surely this is wrong? There is also much difference of opinion as to whether Race No. 8 on the First Day is for China Griffins of both the Y. R. C. and Y. R. A., or only the former. I have seen a note from the Secretary of the Race Club stating that it is open to all Griffins that ran at the *two* spring meetings, but the conditions of the race are worded otherwise than this, and I hear that some owners of "Club" Griffins object to the admission of "Associationists." Good second-rate ponies—such as *Vandal, Liddesdale*, etc., are very hardly treated and have positively nothing to run for unless they compete, at even terms, with the *Cracks*.

These are only a few of the mistakes which have crept into the programme, but which might even yet be rectified. The postponement of the Races, too, is rather severe on those who have been getting their ponies "well-forward" and whose calculations now are quite upset, while, on the other hand, it may suit some whose work last week, and the early part of this week was so severe that a few days rest will come in handy.

A wonderful rumour was circulated on Tuesday to the effect that an attempt had been made to poison *Tallapoosa*, or to administer a dose of disinfectant. I have not been able to ascertain that there was any foundation for such a rumour, although I traced in without much difficulty to the originator (who has always got hold of some wonderful tale about some one else's ponies). *Tallapoosa*, notwithstanding his bandage, is looking and going remarkably well, and is just as dangerous a pony as ever. Severe critics say he is *too big*, but it has been shown before on this course that old ponies run well for being rather *fleshy*. Much as it may be desired, I am afraid the "Tartan" ponies cannot be trained dark, even under the present management. There are still left a few among us who will get up in the middle of the night for the chance of seeing *Braemar let out*, or *Lintie* and *Hoolet* do the last three-quarters of a mile and half in 1.44¼! It is also well to know that *Distemper* and *Crescent* can both gallop for more than three-quarters of a mile, and that *Typhoon* is not quite screwed up; but one must get up very early to be initiated into all these mysteries.

Mr. Saville's ponies are not in so good trim as in the spring, and *Saracen's* day for racing is evidently over. *Not Proven* and *Talisman* are very regular in their exercise, but in my opinion might do equally well with the slightest bit less galloping. My advice is kindly meant, and I hope will be received "as such."

Mr. John Peel is working *Bonny Doon* up to his old Shanghai form, and the pony does great credit to the care and attention which he has received during the summer months. It does not follow, however, that because a three mile trot agrees with *Bonny Doon*, the same is suitable training for a young pony like *Suleiman Pasha*. An old proverb says "what is one *otoko's taberro* is another "*otoko's shindanji k'suri*," and although I forget the exact words I think it applicable in this case, especially if taken *cum grano salis*. *Sirius* and *Grey Friar*, who are both being trained by the same rider, are in very good fettle.

I think the most satisfied man on the course—Mr. Nicolas always excepted—is our friend "The Baron," and with good cause; his ponies are all in good trim. *Dibs* especially is looking younger and handsomer than ever, and so far as I can learn there have been no mistakes in the stable up to the present. Of course the wet weather during the week has prevented the usual galloping, and as the Club Races have been postponed this will doubtless take place during the early part of next week, when I shall try to find out if the *hopes* of the good performances of *Chance, Bravo, Sport*, etc., are likely to be realized.

Mr. Nicolas' Japanese ponies are looking very well, but the general public are not allowed to see them gallop. The L. S. and G. T. Co's string have, notwithstanding the bad weather, been very regular in their work. Wednesday afternoon *The Raven* and *Vandal* had a spin which could hardly be called satisfactory for the former. *The Consul, The Sheik, The Dwarf*, and even *The Minister*, have all been exposed to public view since my last, but I think the hopes of this stable must be based on the future performance of *The Moor* and *Jim Hills*.

The griffin referred to in my last as *The Viaduct* has apparently been discarded, and is now being trained under

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

Col: Forrester's management, being stable companion to the *Pony mit-te Körf*. *Faust* and *Wilhelm Tell* are hard at it, as also *The Snark* and *The Lamb*. The latter is certainly one of the best griffins that came over last spring, if he can only be ridden at the races without repetition of the accidents he caused last meeting. *The Boojum* has twice appeared on the scenes, looking very well, but has been completely spoilt in his temper, and is now anything but a safe pony to ride either on the course or the road. Mr. Riyoshi has added *The Doctor* to his stud, but this pony is only trained by a Japanese betto on the swamp, so I should hardly think he is intended to run at either of the coming meetings.

I must not forget to mention that there are eight Japanese owned ponies in full training at Tôkiô, for the Association Meeting, so there will be a good field of native animals, and as the troops have returned from the South there will doubtless soon be some *very high officers* at the paddock in the early mornings. *Skedaddle* is also being carefully looked after in Tôkiô, and it is stated on good authority that his owner has refused the long price of $500 for him. I *know* that something very near that figure was offered, without success, and can only hope that he will not disappoint his owner's *true sporting* feelings.

I have seen so little of Mr. *Fairplay* ponies that I may be excused for not mentioning them in this week's notes; by next Friday or Saturday they will be better worthy of attention.

Though every one misses the old Clerk of the Course, it is only fair to say that his acting-successors have got it into very fair order. There is a little needless party feeling about stabling, and one or two other minor arrangements which might be better looked after, but in any case the task is rather a thankless one.

Yours truly,

TRITON.

THE GALE OF THE 11TH INSTANT.

To the Editor of the "Japan Weekly Mail."

Ushinô, Soshiu,
Thursday, October 11th, 1877.

Sir,—I imagine that you must be having a severe typhoon in Yokohama, for it is blowing a fearful gale here. I came over the Kobotoki-togi this morning and the sky looked very threatening over the mountains, though occasional gleams of sunshine gave hope that after all the weather would clear. It had rained very hard during the night, and so there was good reason to think that the worst was over. I had no sooner arrived at the foot of the pass, however, than it commenced to rain, and came down with such violence that the roads were soon converted into mere watercourses, and it was as hard work to get along as it would have been to have stemmed a mountain torrent, the water rushing down in many places a foot deep, and rendering it very difficult to keep a footing. Still there was no wind to give warning of what was to come. On arriving at Ushinô a little after noon, I found it impossible to get on any further, and put up at the first tea-house I came to. About two o'clock a few gusts of wind showed that a more than ordinary blow was coming on, and the next warning that I received was the blowing in of the whole of the *shôji* of my room on one side, and their simultaneous disappearance on the other. My intended indulgence in a nap in the afternoon after my morning ducking was rudely disturbed by my finding myself suddenly smothered under paper slides, and having to pursue my loose baggage to various parts of the hotel. There was only just time to make things fairly fast, when the roof of the next house fetched away, and came thundering down on to my apartment. If you want to thoroughly appreciate the noise and riot of a typhoon, by all means try one in a country tea-house. I thought the whole place must go, as it is a large two-storied house, and rocked like a ship at sea, while on the ground floor the wind, entering under the house, blew up the planking and the mats as though they had been pieces of cardboard. Such consternation, such exclamations, such piling of things in one place only for them to be blown over and removed directly after! Children crying, girls chattering and screaming and men scolding, while the roar of the wind was almost defeaning. A native fellow-traveller, picked up on the road, did nothing but say his prayers in the loudest tone of voice, in which pious occupation he was cut short by the thunder and crash of a godown falling opposite. Altogether the house presents about as unfestive a look to any one, like myself, in pursuit of rural quiet, as can well be imagined. It is everything but topsy turvy, and during several of the gusts I had made up my mind to its complete overthrow. There is no hot bath to-night, and I feel very doubtful, unless the wind lulls, whether there will be any supper, on which point I am naturally anxious, as my supplies are limited to a tin of cocoa and a Bologna sausage, from which materials alone it would have puzzled Frascati himself to have prepared a decent meal. The wind is, I think, going down, but it is still raining hard, and flying roofs and reckless shutters make it anything but safe to go out and see what mischief has been done. I am writing this in a ray of light which comes through a chink in the wooden slides, and from what I can discern from this limited peep hole, the ruin is widespread.

5.30 P.M.

The rain has ceased and the wind has entirely died away, a lovely evening with a brilliant sunset succeeding the storm of a few hours. The wreck is terrible, and as far as the village of Ushinô is concerned almost complete. There is scarcely a house that is not roofless, while some are flat on the ground. An entirely new and extremely pretty tea-house at the entrance to the street, where I had a great wish to remain this morning, looks like a mass of wood for match making, it being competely demolished, and as it stood in a very exposed part the force of the wind is shown by the splintering of the beams. The street is strewed with wreck, and the whole village bears the aspect of a place that has been demolished, though not burnt, in the neighbourhood of a great fire. Indeed, in many cases the visitation must have been more distructive than a fire, inasmuch as the torrents of rain entered everywhere and saturated everything. Looking down into the valley I can see several houses completely overturned, while fallen trees and massive limbs torn off and showing the white splintering wounds, bear testimony to the fury of the gale. The people say that it is the first time they have ever experienced such a wind. It certainly was very strong, as it was not over two hours and a half from the time of its commencement to its dying away, the fury of the storm not lasting more than half an hour. To-morrow I shall see whether the gale has been felt with similar force in other places. To-night I cannot learn, as all traffic has ceased along the road. Although the gusts were extremely violent and resembled those of a typhoon, the wind scarcely shifted a point, blowing steadily from nearly due *west*.

P.

"Cleaning the bowels of an adopted son" is the literal heading of the following paragraph, which we take from the *Shen-pao* (26th September).

The other day a wealthy horsedealer at Nanking, a Mahomedan, who had reached forty years without having a son born to him, was advised to adopt an heir. He successively adopted two children who died after a few months. The Mahomedans have priests who attend to their rites and especially to cleanliness. At all domestic events these priests repeat prayers. Our horsedealer called in one and told him he wished again to adopt a child. The priest replied "You have adopted two children of outer religions. The people of these outer religions eat anything and their mother's milk is thus unclean. If you again adopt a child I will tell you how to cleanse his bowels." A few days later he adopted an eight month's child and called in the priest who recited imprecations, at which our horsedealer was much gratified, and invited his friends to a feast and received their congratulations. As the night arrived the priest gave the child a soup of soap and soda. The child vomited and died. But the priest said: "Put the child in an empty room; the spirits have called him away to cleanse him; after a while he will return:" and then left. On the morrow the child had not returned to life and the horsedealer had him buried. He has expended thirty odd dollars and has still no son. What a fool!—*Shanghai Courier*

Law Reports.

IN H. B. M.'s COURT, KANAGAWA.

Before H. S. Wilkinson, Esq., Acting Law Secretary.

Tuesday, October 9th, 1877.

Felix Beato *vs.* W. G. Thomson.

This was a claim for $376.78 damage done to cargo during its transit from London in the British steamer *Atholl*.

Mr Dickins appeared for plaintiff, Mr Ness for defendant, who is the master of the said vessel.

Mr A. J. Wilkin, who was sworn and said: I am a British subject, residing at No. 3, Yokohama. I received some goods by the steamer *Atholl*. I did not see the goods until they were brought to our godown. As to the condition of the goods, I can only speak of part of them: they were more or less *minus* the wrappers, which had rotted away and were hanging in rags. The goods themselves, which were blankets, were discoloured. It seems the damage was due to the action of chlorine. I do not remember having any conversation about the goods with the captain. There was a survey on the hatoba.

Mr Ness objected to the question: "What was the result of the survey?" and the objection was sustained.

Examination continued: I was not present at the survey. Mr Esdale, a clerk of ours, was present, and communicated to me the result of the survey. The buyer of the goods asked for $13.00 damages, which were paid by the agents of the ship.

Cross-examined by Mr Ness: I think the wrappers had been damaged by gas, and not by liquid. They were quite rotten.

Mr. Martin Burchard was next sworn, and said: I reside at No. 25, Yokohama. My firm, Messrs. Simon, Evers & Co, had goods in the steamer *Atholl*. The goods were manufactured cottons; when we received them, they were slightly stained, I suppose the damage was caused by chloride of lime. I suppose this because the obnoxious matter had penetrated the tin lining. The goods had also a strong smell of chlorine. We made a demand for damages, and we were paid. We made our demand before we took delivery of the goods. We made it on the hatoba.

Cross-examined by Mr Ness: The goods were in tin-lined cases. There were exterior marks of the damage. I think the damage was caused by gas and not by a liquid. The goods were discoloured. The damage could not have been caused by salt water.

Examination-in-chief continued: During the last four or five weeks I have had full opportunity in Yokohama to become acquainted with the smell of choride of lime. The smell of the goods was just like it.

Mr G Reddelien was sworn, and said: I am head of the firm of Messrs L. Kniffler and Co. I have received goods by the steamer *Atholl*. There were seven bales altogether. The wrappers of five of them had entirely rotted away. We made a claim of about $900 damages, and were paid. We made the claim on the hatoba, and subsequently the goods were taken to our godown, where they were properly examined.

Cross-examined by Mr Ness: The goods were externally in bad condition. That was admitted on all hands before they were taken to our godown. The goods were quite dry, they were evidently injured by gas. Our claim was paid at once.

Examination-in-chief continued: Two of the bales were clean and sound.

Mr Hugo Orth, a German subject, objected to take an oath, but promised to speak the truth: I am of the firm of Hecht, Lilienthal and Co., at No. 8, Yokohama. We received blankets by the steamer *Atholl*; five bales were damaged. We made a claim for damages, and were paid.

Cross-examined by Mr Ness: The goods were dry. I presumed the damage was done by gas from chloride of lime. The wrappers were burnt. There were no black stains. The captain's attention was called to the condition of the goods on the hatoba.

Mr Ness called as witness for the defendant –

Mr C. H. Cobden, who was sworn, and said: I am the shipping clerk of Messrs. Jardine, Matheson & Co. I remember the goods mentioned in plaintiff's bill of lading for the steamer *Atholl*. I saw the goods on the hatoba; there were seven or eight bales. They were in good condition. Mr Beato wrote to Messrs. Jardine, Matheson & Co., complaining of the condition of the goods; afterwards he came to our office, and said that he was going to sue the captain for damages. He said that his man had given a clean receipt for the goods, notwithstanding being particularly warned to look out carefully on account of the chloride of lime in the ship. Mr Beato's complaint was sent in two days after the goods had been landed. In the afternoon, after we had received Mr Beato's letter, the captain saw Mr Engelhardt at the office of the latter, in my presence, and I heard the captain tell Mr Engelhardt that he could not entertain the claim, as Mr Engelhardt had taken away the goods without objection. Mr Engelhardt then replied that he knew that he was wrong in that, but that the goods looked in perfect order, and it was not until he had opened them that he discovered the damage. I did not hear the captain admit that the goods had arrived in his ship and had been damaged by chloride of lime. I was present at the whole interview between the captain and Mr Engelhardt. I am positive that the captain made no such admission. I saw some carpets the other day. To my knowledge none of the goods ex-*Atholl* were damaged internally without being damaged externally.

Cross-examined by Mr Dickins: I saw the goods on the hatoba; they were apparently in good order, and I sent to Mr Beato to take delivery. I think the goods were landed on the morning of the 12th. I sent word to Mr Engelhardt about 11 a.m.; he took them away before 2 p.m. On the morning of the second day after that we received Mr Beato's letter. When I went to Mr Beato's store with the captain, I saw some carpets in another room. I had made up my mind not to examine the goods, as they had not been opened in the captain's presence and Mr Beato's bookkeeper had given a clean receipt for them. I do not consider that the captain's interests have been thereby damnified. I did not take any memorandum of what took place at the interview between Mr Englhardt and the captain. I have seen all the goods ex *Atholl* for which claims have been made here. I know that claims have been made and paid in Kobe. I know nothing of the properties of chlorine gas. I know there was a large quantity of chloride of lime in the *Atholl*. I know that the men who worked at discharging the cargo, were frequently unable to continue their work in the hold of the ship on account of the fumes of chlorine. I have never stated that the damage in this case was caused by chloride of lime and that the case was only defended as a matter of formality.

To the Court: The captain said to Mr Engelhardt, that if the damage had been caused by the chloride of lime there would have been outward signs of it. Mr Engelhardt said that he had examined the bales and found them in good order, and he took them away from the hatoba in consequence.

Mr Ness then addressed the Court and said:—The plaintiff has failed to prove that the goods were sound when shipped in London. The bill of lading says "received in good order," which means *externally* in good order, and it is on all hands admitted that the goods were externally in good order when landed. The spots might have been there when the goods were shipped in London. The plaintiff has further failed to prove that the goods were in unsound condition when they arrived. The fact of the wrapper being in excellent condition and the nature of the damage done, excludes the possibility of its having been caused by the chloride of lime on board. The damage may have been caused in the godown. It is a peculiar fact that the Chinaman who received the goods and opened them in the godown has not been called as witness. The goods have not been identified as those mentioned in the bill of lading. Mr Engelhardt's evidence cannot be credited with great weight, as it has been on several points contradicted by Mr Cobden's evidence. Further, the bill of lading excepts the ship from responsibility for leakage; now, the other side contends that this damage could only have been answered by leakage. The plaintiff has in no way proved that the damage was caused by chloride of lime. Dr Geertz expressly stated that the damage could not have been caused by chlorine gas, it must have been caused by chloride of lime in a liquid state trickling down upon the carpets. But there is no evidence that there was any liquid chloride of lime on board. The evidence we heard this morning went to prove that all the damage in the *Atholl* had been caused by gas, and in all cases there were clear external marks of the damage. Defendant delivered the goods in the condition in which he received them, and plaintiff's clerk, after being specially instructed to look carefully at the bales before he took delivery, did take delivery without making any objection, and only two days after he made his claim. There is absence of proof that the goods were received on board in an internally sound state; there is no evidence that they were in an unsound state when they were landed; the goods have not been identified as those mentioned in the bill of lading, and there is no evidence that damage was caused *in transitu*. I rely on the 1st exception in the bill of lading, "contents unknown" and "leakage or damage?"

Adjourned until 3 p.m.

On the Court resuming its sitting at 3 p.m., His Honour rendered the following, without calling on Mr Dickins to reply.

JUDGMENT.

In this case the plaintiff sues the defendant for the sum of $203.50 for damage to certain goods shipped on board the vessel, of which defendant is master. The petition alleges a contract by the defendant as a common carrier. The defendant in his answer denies that he contracted as a common carrier, and alleges that the goods were received to be carried upon the terms of a Bill of Lading there set out. He denies that the goods suffered any damage between the time when they were received by him, and the time they were delivered to the plaintiff, and he says further that, even if the goods were damaged between these two times, the damage was of a nature for which he is exempted from liability under the bill of lading. As the answer does not set out the particular clauses of the bill of lading, on which the defendant relies, I have asked his counsel to state them. Mr Ness informs me that he relies upon the first exception "weights, measure, quality, contents and value unknown" and upon the exception that "the ship is not liable for leakage." These are the exceptions on which he relies, and it is not necessary therefore for me to consider any of the other exceptions in the bill of lading. The evidence shows that the goods were shipped on the terms of the bill of lading, which are, as far as we have to consider, the usual terms in bills of lading. I find as a fact upon the evidence that the goods were shipped in good order, and that they were damaged when delivered. We have the evidence of Mr Beato and Mr Engelhardt that out of the four bales shipped under the bill of lading three were received in good order, only one was damaged, and there is the evidence that a great many other goods on board the ship were damaged. These other goods were damaged by chlorine, and I am satisfied on the evidence that the damage to the goods, now in question, was also caused by chlorine in combination with water, whether fresh at salt it does not appear to me necessary to determine.

The damage in the one case as in the other is accounted for by the large quantity of chloride of lime stowed on board. There is, on the other hand, the fact that the wrapper covering the goods was apparently in good order at the time the goods were taken delivery of. The wrapper was afterwards discovered to have spots on it, but not black spots, such as were on the carpet. The wrapper was pro-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

duced in court, and as counsel for the defence has contended that it was not identified, I may say that to my mind it was sufficiently identified. The spots are scarcely distinguishable, only a little whitening of the wrapping. Now the chloride of lime is spoken of as "bleaching powder," and it is not an unlikely thing that in passing through the wrapping it made the scarcely distinguishable spots, and in combination with other ingredients in the carpet produced a quite different appearance in the carpet. The fact that the carpet was black did not suggest to Dr. Geertz that it was not chloride of lime that produced the damage. In his opinion the damage might have been caused by chloride of lime. Then as to the question whether it was caused by any negligence of the master, Mr Ness contends that the exception of leakage throws the onus of proof on the plaintiff. Now, if leakage in a bill of lading means damage to goods by leakage from other goods, this condition is right. But it does not appear to me that that is what leakage in a bill of lading means. It is not necessary to determine this however, as on the facts I find that there was negligence by the master in stowing such a quantity of chloride of lime with other goods liable to be damaged by its action, either in form of gas, or in the form of liquid.

This case differs from the case decided some time ago in this Court, "Bento *vs.* the Peninsular and Oriental S. S. Navigation Company" in this, that the clause of the bill of lading exempting the defendant from damage by negligence is not relied on. Whether it could or could not have been successfully relied on, seeing that the defendant in this case is the master and not the ship-owner, it is not necessary to determine. There can be no doubt that the defendant has shown proper feeling in not attempting to rely on it.

I assess the damages at 45 cents a yard, and as there were 405 yards, the amount of the damage is $180.25. There must be a judgment for plaintiff in that amount together with the costs of suit, payable, as usual, within ten days.

IN THE U. S. CONSULAR-GENERAL COURT.

Before H. W. Denison, Esq., Vice Consul-General.

Wednesday, Oct. 10, 1877.

D. Morris, a sailor from the American barque *Cremona*, was brought up on a charge of being drunk and incapable.

Police constable Toms stated that prisoner was found last night asleep on the English hatoba, and was taken to the police station.

Prisoner said that he came ashore yesterday afternoon with leave, and got drunk.

Ordered to be locked up until sent for from the ship.

IN THE IMPERIAL GERMAN CONSULAR COURT.

Before E. Zappe, Esq., Consul.

Tuesday, October 9, 1877.

Theordor Wilhelm Holm was charged with unlawful shooting.

The accused pleaded guilty.

Mr E. Wiegand, brewer, deposed: From yesterday morning at 9 o'clock until noon there was a continuous shooting in the room of accused. I suppose that the accused was standing in the room and fired partly through the window, partly through the door. When I went to tiffin a shot was fired that made me run up stairs, and I think I heard the whistling of the bullet. I saw the Consular constable yesterday afternoon enter the house. After he had left, accused fired one shot more. My wife became so frightened that I had to take her from the dwelling house to the brewery.

This evidence was sworn to.

Accused said that he had only fired in the cellar.

Carl Heinrich Schmidt, Consular constable, said: I received orders yesterday afternoon to stop the accused shooting, and went in consequence to his residence. I met him there and communicated to him the Consul's orders. He replied that he had a right to do as he pleased in his own house; he knew the Consul before in Shanghai, and he then made an insulting remark respecting the Consulate. This morning, when I went to Holm's house to arrest him, I demanded the gun with which he had been shooting. It is the same that is now on the table. I asked whether it was loaded, and I was answered in the affirmative. Holm then drew the charge. The cartridge on the table is the one with which the gun was loaded.

The above evidence was sworn to.

The accused denied that he had fired through the window or after the constable had forbidden him to fire. He had only been shooting rats in the cellar. Mr Wiegand had shot his cat, and firing guns was no uncommon thing in the neighbourhood.

The Court ordered accused, as convicted of unlawful shooting, to be imprisoned for seven days, and to pay costs.

IN THE JUDICIAL COURT OF KANAGAWA.

Before Mr Asaina Kansui, Vice-President.

Thursday, October 11, 1877.

Whitfield and Dowson *vs.* Tajima Kiyemon.

This was a claim of $870.48 balance of account. On the 5th September, 1876 plaintiffs handed to the defendant 200 saws of English make but of Japanese pattern, with the understanding that defendant should pay plaintiffs $4.50 for every saw sold him. Defendant expressed his expectation to sell half the saws by the end of December, and the other half by the end of February, 1877, and it was arranged that until he had paid for 100 saws he should pay to the plaintiffs, as interest, the sum of $2 per month, and after the sale of the first hundred, and until the balance was sold, $10 per month. Defendant paid the interest as agreed up till the end of March last, when the plaintiffs consented to the interest being reduced to one half or $10 per month. At last plaintiffs, seeing that no saws were sold, demanded their return, when the defendant said that he had distributed them among workmen in the country, and would bring the money as soon as he was paid by his customers. Later on the defendant has, however, confessed to plaintiffs that he pawned 100 saws to a pawnbroker named Sakaiya, in Kanagawa, for 200 *yen*, and spent the money. The plaintiffs now demanded that the defendant be ordered to return the 100 saws pawned to Sakaiya, and as many of the remaining 100 as are in his possession, and further pay to plaintiffs $478.48 with interest from the 1st ultimo until date of payment, less $4.50 for each saw returned in good condition.

Defendant in his answer admitted the amount claimed, but denied malversation, stating that he had bought the saws in question, and had paid interest on the purchase sum. He added that he had now become a bankrupt, and demanded that plaintiffs' claim be included in the schedule of the rest of his liabilities.

Mr George Whitfield appeared for plaintiffs; the defendant did not appear.

Mr Whitfield stated that during the time the transactions above described took place he was away in England, and he would ask the Court to take the evidence of his bookkeeper, Mr Dallas, who had managed the affair.

Mr Dallas was then called and said: I reside at No. 69, Yokohama. I am not a partner of the firm of Whitfield and Dowson. I am the bookkeeper, and sign the name of the firm by procuration. The defendant has in his answer admitted all the facts alleged by the plaintiffs, except whether the saws in question were sold to him or only entrusted to him. We contend that the pawning of the saws to Sakaiya was fraudulent. When we entrusted defendant with the goods, we considered them to be security for our payment, that is to say, defendant was to pay us accordingly as he sold the saws.

The Judge ordered the plaintiff to forward a detailed statement in writing, and the case was adjourned *sine die*.

REUTER'S TELEGRAMS.

London, October 10th, 1877.

According to official despatches from Ahmed Muktar Pasha, dated October 8th, the Russian forces have evacuated their positions parallel to those of the Turks in Turkish Armenia, and are now falling back in the direction of Arpachai.

The Russian losses during the three days fighting is computed at fifteen thousand, that of the Turks at two thousand, five hundred men.

London, 24th September, 1877.

The Detectives implicated in the recent Turf frauds have been committed for trial.

Between 50,000 and 75,000 models in the American Patent Office have been destroyed by fire.

The War.

According to an official Turkish despatch, the Turkish Division and convoy of ammunition has entered Plevna.

Singapore, 26th Sept. 1877.

Ten sections of the Singapore Chinese Immigrants Ordinance have been put into operation. These provide for landing, for boarding and examining vessels, for opening dépots, payment of fees and examination of the Immigrant accounts.

London, October 6th, 1877.

Intelligence from the Seat of War.

According to an Official Turkish despatch, Ahmed Muktar Pasha gained a complete victory over the Russian forces on the second of October, defeating and compelling them to fall back, and pursuing them as far as Arpachai. The Russian loss in this defeat was five thousand men, that of the Turks being at present unknown.

The Turkish batteries at Plevna are not replying to the Russian bombardment.

ARRIVAL OF THE FRENCH MAIL.

(From the Straits Times Extra.)

Bombay, September 4th, 1877.—13,000 immigrants have entered Bombay during the last 10 days. The Government are protecting this city by forming relief camps at Sion, Tanua and Parell.

The last week's rain has quite saved the crops in Concan. Heavy rain is reported this morning from Broach, Burdwan, Ahmednugger, Bhownugger, Rajcote, Patan, Damaun and Baroda.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

Consternation has been caused among the Volunteers by a successful movement to elect tradesmen as officers.

London, Sept. 5.—According to a Russian official despatch the Turks temporarily occupied Kadikoi on the 4th instant, but were afterwards expelled with heavy loss, the Russian loss being 180.

The Servian Militia have received their marching orders. Prince Milan will assume the command.

Turkish unofficial accounts state that the Turkish army corps at Rasgrad is advancing towards Biela, and has already arrived at Obretnik. A great battle is believed to be imminent.

A Russian official despatch confirms the reported capture of Lovatz, after twelve hours fighting.

Abdul Kerim Pasha, Redif Pasha, and the commanders of Scutari, Sistova and Schipka have been banished to Lemnos.

Bangalore, Sept. 6.—The Viceroy and party arrived at 8.30 and were received by the Chief Commissioner and all the civil and military officials in full uniform. There was a large gathering at the station. The weather is pleasant.

Madras, Sept. 6.—The Viceroy and suite left here last night at about ten o'clock, by special train for Bangalore, where it is expected that His Excellency will remain until the 9th instant. His Grace the Governor accompanied His Excellency to the railway station, where a numerous gathering of civil and military officials had assembled to bid him adieu.

Paris, Sept. 6.—Madame Thiers has claimed to arrange the funeral cortege of her husband, and has expressed a wish for the presence of the Republican members of the Senate and the dissolved Chamber of Deputies. The French Government will not participate in the funeral, but will only pay military honours to the deceased.

London, Sept. 7.—In the speech by by Lord Derby at Liverpool yesterday, he said that the present time was unfavourable for the intervention of any third parties in the Turco-Russian war, but that when the time arrived, and perhaps it was not far distant, England would not lose the opportunity.

The Pope is very weak.

London, Sept. 7.—Mehemed Ali Pasha telegraphs that Eyoub Ali Pasha's corps, divided into two columns has driven the twelfth Russian army corps across the river Lom. The Russian loss was 3,000 and the Turkish 400 men. The garrison of Widdin has been reinforced.

Belgrade, Sept. 7.—The Servian Minister of Foreign Affairs, replying to the representations made by the British Diplomatic Agent and the Consul General here, against warlike preparations being made by Servia, has said that Servia must be prepared for every emergency.

An interview between Prince Bismark and Count Andrassy takes place shortly.

London, Sept. 8.—A Russian Official despatch admits that the Russians were defeated with heavy loss by Ahmed Eyoub Pasha's corps at Kazeleva, and had to fall back upon Ostriza. They are now concentrating on Biela. The Russians have been compelled to raise the blockade of Rustchuk. The Turks are threatening the bridge at Pyrgos. A battle was commenced at Plevna yesterday morning. The result at present is unknown.

The Mansion House Famine Relief Fund has reached £115,000.

Mr. William Ravenscroft has been appointed Auditor General of Ceylon. The Chief Justice of Ceylon has been knighted.

London, Sept. 9.—Mr. Thiers' funeral passed off quietly.

A Vienna despatch states that Nicksics has capitulated (to the Montenegrins). No further news has been received from Plevna, the Schipka Pass or Eastern Bulgaria.

London, Sept. 10.—The capitulation of Nicksics is fully confirmed. A Russian official despatch states that the Army of the Czarewitch has withdrawn to new positions. On the night of the 6th the Russians arrived before Plevna, and constructed siege works unobserved on the heights around. On the 7th they commenced a bombardment, which was continuous up to yesterday morning, when the Russian left wing occupied the southern height with a loss of 500 men. The right wing and the centre approached to within 1,300 yards of the enemy's entrenchments. A furious cannonade was kept up throughout.

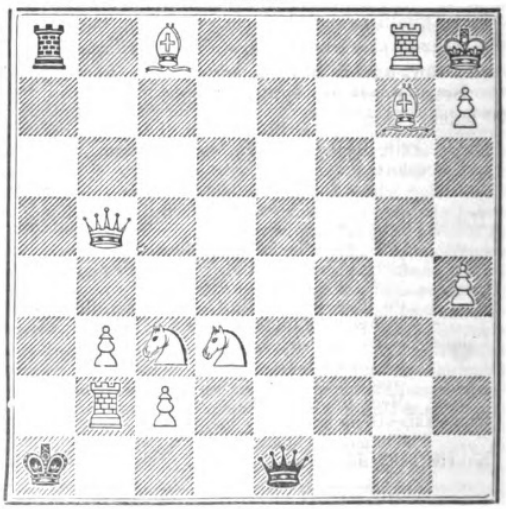
London, September 10.—The Russian headquarters have been transferred to Kudonica, between Bulgareni and Poredin. The headquarters of Prince Charles and the Roumanian army are at Poredin. No further news of the movements of Mehemed Ali or Suleiman Pasha has been received. The Russian siege artillery has commenced arriving at Kurukdara.

London, September 11.—The Czar, the Grand Duke Nicholas, and Prince Charles of Roumania are with the Russian and Roumanian army attacking Plevna. There is no further news from the seat of war.

Paris, Sept. 11.—The trial of M. Gambetta for a speech made last month at Lille, in which he attacked the Government, was concluded to-day. The defendant, who was not present in the court, was sentenced to three months' imprisonment, and to pay a fine of 2,000 francs.

Vienna, Sept. 11.—At a banquet to-day at which the Emperor of Austria was present, his Majesty, in proposing the health of the Czar, spoke of him as his dear friend and ally.

ENIGMA.



I float in the air and I creep o'er the earth;
I'm at home in the skies, yet a tear gives me birth.
I dance in the sunbeams, I sleep in the shade,
Yet the mightiest engines to me look for aid.
I'm simple in aspect, yet deep as a well,
And when ruffled in temper a terrible swell.
I run without legs, and I fly without wings,
No acrobat lithe so familiar with springs.
In swiftness my pace has been seldom outdone,
And no racehorse can equal me in a long run.
Though as I haste on I get many a fall,
Such mishaps scarce retard my great progress at all.
Like a lion I range through the woods with a roar;
Like an eagle high up in the sunshine I soar;
I am hot, I am cold, I am rough, I am smooth,
Though my anger affrights, yet my melodies soothe.
Art, Science, and Commerce to me bend the knee,
But o'er land, sea, and sky, I go fearless and free.
A traveller condemned through all nations to roam,
Yet I'm constant in charming and cleansing your home.
Great, glorious, ethereal, grand, mighty, and wild—
Still I'm merely a toy in the hands of a child.

do. in basket...	,, ...	$4.30	Swatow Brown	,,	... None.
China No 1 Ping-fah	,, ...	None	Daitong	,,	... $3.60
,, No. 2 Ching-pak ...	,,	... $7.80 to $8.50	Japan Rice	,,	...$1.80 to $2.40
,, No. 3 Ke-pak	,,	... $7.30 to $7.70	Kerosene Oil, nominal	,,	...$3.00 to $3.10

Kerosene Oil.—Dealers hesitate about paying present prices, but as stocks are getting low and holders are fairly firm, we do not expect to see much reduction.

EXPORTS.

Silk.—The following was our report for the American Mail to-day:—

Great excitement has prevailed in our market since the issue of last report, a very large business having been done at daily advancing rates, in consequence of better news from the European markets. The greater part of the transactions has been in Hanks sorts, and the advance on these is much larger than on other descriptions. Stocks are greatly reduced. We give settlements as they really are, but it should be mentioned that large quantities of silk are still in foreigners' godowns awaiting inspection. The late bad weather has, no doubt, interfered with the examination of purchases, but on the other hand there seems to be less anxiety to buy just now, and it may therefore be expected that a good deal will be rejected.

Settlements are 1,600 bales of Hanks, 500 bales of Oshius and 100 bales of Filatures, making a total of 2,200 bales. Arrivals are 1,200 bales and Stocks consist of about 600 bales.

The total export since 1st of July to date is 5,860 bales, against 13,947 bales for same period last year.

We quote:

		In London at 4s. 1d. per lb.	*In Lyons at f. 5.15 per kilo.*
Hanks,—Superior	—	—	—
,, Best No. 1 & 2	$580 to 600	21/3 to 21/11	59.00 to 61.00
,, Good No. 2	$560 to 570	20/6 to 20/11	57.00 to 58.00
,, Good all round No. 2½	$540 to 550	19/10 to 20/2	55.00 to 56.00
,, Medium No. 3	$510 to 530	18/10 to 19/6	52.00 to 54.00
,, Common to inferior No. 4 & 5	$470 to 500	17/6 to 18/6	48.00 to 51.00
Oshius,—Extra	—	—	—
,, Best	$550 to 560	20/2 to 20/6	56.00 to 57.00
,, Good ,, Medium	$500 to 530	18/6 to 19/6	51.00 to 54.00
Hamatski,—Good to Best	$460 to 480	17/2 to 17/10	47 00 to 49.00
,, Common to Medium	$430 to 450	16/1 to 16/9	44.00 to 46.00
Kakeda,—Extra	$600 to 620	21/11 to 22/7	61.00 to 62.00
,, Best	$570 to 590	20/11 to 21/7	58.00 to 60.00
,, Good	$540 to 560	19/10 to 20/6	55.00 to 57.00
Filatures	$600 to 750	21/11 to 27/0	61.00 to 75.00

Silk-worm's Eggs.—Arrivals are 1,097,000 cards and sales amount to about 200,000 cards. The supply is greater than the demand, and consequently prices have receded. Best Oshius are worth 40 to 80 cents, and other sorts 15 to 30 cents per card. Only a few choice cards have been bought @ $1.50.

Tea.—During the past week our market has been fairly active, and low grades continue in good favour. Settlements amount to 1,600 piculs, and stocks in Yokohama are only moderate.

Common	$10.00 to $13.00	Fine	$23.00 to $27.00
Good Common	$14.00 to $16.00	Finest	$28.00 to $32.00
Medium	$16.00 to $18.00	Choice	$34.00 nominal
Good Medium	$19.00 to $22.00	Choicest	—

REPORTS.

The O. & O. S. S. *Gaelic*, Captain W. H. Kidley, left Hongkong at 3 p.m. on the 2nd October; had light variable winds throughout the passage. Passed the *City of Peking* off Oosima, at 10 a.m. on the 8th instant; arrived at Yokohama on the 9th, at 10 a.m.

The German barque *Ta-Lee* reports: Left Hakodate on the 6th of October at 5 p.m, and shortly afterwards met with a severe thunderstorm, with heavy rain, lasting 20 hours, the wind being from North West. From the 7th to the 10th instant had fine weather and North Easterly winds. On the 10th instant experienced threatening weather and heavy rain, and a calm during the afternoon, but a fresh Southerly breeze sprung up which carried the vessel to Mississippi Bay, where she anchored during the night, arriving in port on the 11th October at 9.30 a.m.

The German barque *Christine* reports:—Left Hakodate on the 6th instant at 2 a.m. Experienced a heavy thunderstorm in the Tsugar Straits, the wind being from the N W with rain in torrents. This gale lasted until 4 p.m. on the 7th instant. Passed the German schooner *Friedrich* in the Straits inward bound. From the 7th instant had the wind from the North to North-East, veering round to the South-East, being light and moderate with fine weather to the 10th instant. When off Mela Head met with threatening weather and heavy rain, but a fresh breeze from the S. E. springing up at sunset, arrived in port at 8 a.m. on the 11th October.

W. & C. SCOTT & SON.

FIRST PRIZE MEDAL and DIPLOMA OF HONOUR awarded, CENTENNIAL EXHIBITION, Philadelphia, 1876. For excellence of Materials and Workmanship in their PREMIER QUALITY and medium grades. Their New PATENT TRIPLEX action and COMPENSATING LUMP.

CHOKE BORES ON GAME.

WE have received numerous letters testifying to the excellence of our Guns. The following are a few extracts.

The W. & C. SCOTT & SON No. 10 choke bore "is all its name implies." I have killed stone dead grouse flying at 92 yards, and at 50 and 60 yards it will kill every time. At duck shooting it is perfection.
Brainherd, Minnesota. T. P. C.

I have just returned from North Carolina (Currituck Sound). I cannot say too much in praise of my choke bore. I have killed ducks at 60 yards, dropping dead out of the bunches at that distance. I consider I have an extraordinary gun, and deem it my duty to speak in the highest praise of guns of your manufacture. Wishing you all the success you deserve.
Red Bank, N.J., 1877. G. A. W.

From Captain BOGARDUS, Champion Shot of the World.—The Breech-loader you furnished me with is the best *proportioned* and most *effective* gun I ever owned or used. Its shooting is perfect, and I have won every contest since receiving it including my late English matches. I fully recommend the Scott as the gun.

I have carried guns of your make from Nova Scotia to Florida, and from the Adirondacks to the Pacific, and find them all I could wish for.
Cazenova, N.Y. L. W. L.

The guns for myself and friends have safely arrived. I have now great pleasure in acquainting you that I am extremely glad in possessing them. I have tried them and they give me great satisfaction. My friends are also very pleased too.
Yedo, Japan, March, 1876. V. E. B.

I have just received the Two fine guns ordered for me by Mr. B. F. Stevens, London, and desire to express my entire satisfaction of them. Such fine weapons which while they do credit to a reputation already so well known as to need no establishing, deserve from me some expression of my appreciation of the manner you carried out my wishes. A more substantial evidence of my estimation of the gun is to be seen in the fact that I have this day directed Mr. Stevens to order another for me.
G. R. W.
Paymaster U. S. Navy.
United States Flag Ship *Omaha*.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omisson to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

BIRTH.

On the 19th instant, at No. 236, Bluff, Mrs. ARTHUR ANDERSON, of a son.

MARRIAGE.

On the 2nd August, at Sydney, New South Wales, by the Revd. Dr. McGibbon, JOHN SMEDLEY, of Yokohama, Japan, only son of of Samuel Smedley of Woodlands, Bulli, to ANNIE, youngest daughter of the late John Casement of Ballacarbarry, Douglas, Isle of Man.

Notes of the Week.

We publish elsewhere the translation of an article from the *Osaka Nippô* on the subject of the land-tax. We cannot agree with all of the writer's views, and think he has missed a point in not urging more forcibly, as the true remedy for the evils complained of, the making of good roads throughout the country. As we lately pointed out, the construction of good roads means an immediate increase of trade, and reduction in the cost of produce.

It would appear that the new assessment of the land has been made, and the tax levied in accordance, in all parts of the country with the exception of the Kagoshima, Kumamoto Kôchi, Nagasaki and Niigata *Kens*, and in the eight provinces of the Kuantô. In the *Kens* above named the new assessment is in course of being made, and when concluded the tax will be uniform with that levied in other parts. But some difficulty is experienced in settling the tax on the land in the eight provinces of the Kuantô, though the whole has been surveyed with a view to bring it under the new assessment. Certain privileges were long ago granted to the holders of land contiguous to the capital of the Shôguns, by which the land-tax paid by them was considerably lower than that levied in other parts of the country, and these privileges have been allowed to continue up to the present day. If, therefore, the Kuantô provinces are now brought under the same assessment as the rest of the Empire, the farmers of those districts will not proportionately participate in the benefit of the reduction in the rate which the Mikado ordered early in the year. That is, the value of their land would be so much increased by the last assessment, that even the reduction as above would not bring the tax rate down to the amount they have paid for many years past. Frequent meetings of the Governors of the various *Kens* in which these provinces lie have been held at the *Naimusho* to discuss the subject, but no definite result has yet been arrived at, though it seems likely that the Government will make some exception in favour of the land-owers of the districts in question.

The deplorable and unaccountable schism in our racing community still continues, to the detriment of all true sport and to the disadvantage of the public. Were racing men of one mind we might be able to look forward to a pleasant meeting this Autumn, the fields would probably be good, and the contests spirited. But what is there in reality for us to look forward to? A difference of opinion among a few of those who participate actively in racing, has been fanned—apparently through interested motives—into one of the most contemptible squabbles which ever disgraced a community seeking some relaxation from the cares of business by indulgence in the noble sport, so that we are condemned to put up with two indifferent meetings, when it is but too apparent that the combined forces of the two rival Racing Clubs would ensure a race meeting of which we might be justly proud. The entries of the Y. R. C. have closed, and the result is, unfortunately, far from satisfactory and seemingly otherwise than was expected. The racing will, apparently, be in the hands of one or two stables, and the meeting consequently devoid of interest. The members may indeed complain that some

"Sickness doth infect
The very life-blood of their enterprise."

The prospects of the Racing Association are, it must be acknowledged, somewhat more promising, as they will be numerically better supported, but they labour under the disadvantage of holding their meeting far too late in the year, which circumstance is bound to militate, to a great extent, against its success, and it is therefore more than probable that spectators not actually interested in the competing ponies, will find both meetings, if not "unfriended," at least "melancholy, slow."

Saigo Takamori was the first to recommend that the army of Japan should be recruited from the lower classes, and not reserved as a special employment for the *samurai*, so that the following, which is related of him by the *Hôchi Shimbun*, is strangely suggestive. After Saigo had unsuccessfully beseiged Kumamoto for fifty days, and had been defeated by the Imperialists in engagement after engagement in Higo, Bungo, Hiuga and Osumi, he is reported to have said to those around him, that during the early stage of the rebellion he looked for serious opposition from the Imperial Guards only, as their ranks were filled exclusively by *samurai*, and that he was then inclined to despise the other Government troops who consisted chiefly of *heimin*, but the results of the fighting had fully convinced him that he had been mistaken as to the fighting abilities of the latter, and fully confirmed him in the opinion he formerly held that the army of Japan could be

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

efficiently formed by conscription among the lower classes throughout the Empire.

We are glad to give publication to a letter from the agent of the P. & O. Company which will be found elsewhere, as it disclaims any reliance on the negligence of the Company's servants as a defence in actions for ship damage, though it is certainly a fact that such defence was relied upon by the Company's Counsel in the case of "Beato *versus* the P. & O. Company," as appeared in the answer to the petition, and the answer to the appeal, and was impliedly recognized by the Acting Law Secretary when giving judgment in that case, and again when referring to it during the course of the recent case of "Beato *versus* the master of the S. S. *Atholl*."

A little more than two months ago we called attention to the exceptionally fine weather with which we have been favoured for the past year, and noted then that during the month of June, which after September is usually the wettest month in the year, the total rainfall was only 2.47 inches. We now publish a table of the state of the weather last month compared with that of the same month in 1876, kindly furnished us by Dr. Veeder of Tôkiô, which will no doubt prove interesting.

	September, 1877.	September, 1876.
Highest Temperature.....	87° F. on the 2nd	... 91.1 on the 4th
Lowest ,, ...	56° on the 29th	... 54.9 on the 30th
Barometer Maximum.....	30.176 on the 22nd	... 30.189 on the 17th
,, Minimum.....	29.601 on the 16th	... 29.071 on the 17th;
Number of rainy days.....	8	... 17 [typhoon
Amount of rainfall.....	10.13 in.	... 14.13 in.
Most rapid precipitation.	3.26 in. in 5 hours in the thunder storm of the 14th	
Greatest velocity of the wind.....	18 miles an hour on the 4th	... 25 miles an hour ... on the 17th

It would thus appear that there was less rain, less wind, and greater uniformity of atmospheric conditions in September 1877 than in September 1876.

Elsewhere will be found the minutes of the first Asiatic Society's Meeting for the Session 1877-78, and we may undoubtedly congratulate the Society on the success of the inauguration at the Grand Hotel on Saturday last, when Professor Morse delivered a most interesting lecture on the "Early Traces of Man in Japan" to a large and very appreciative audience. We are happy to say that the lecture will be published, and form a valuable addition to the next volume of Transactions of the Society. The subject of the lecture was one which would appeal strongly to any foreign audience here, and was not only, as might have been expected, ably treated by the learned professor, but derived an additional interest from the wonderful aptitude with which the lecturer illustrated his subject by designs in chalk on a black board, convincing his audience without any difficulty that

"The proper study of mankind is man."

That the Japanese are becoming fully alive to the commercial advantage of advertising is shown by one at least of the Exhibitors at the Uyéno Exhibition, where the representative of a Tôkiô silk firm presents foreign visitors to his stall with a slip, neatly printed in English, calling upon the "honourable visitors to the National Exhibition, both from home and abroad," to "lend an ear" to the explanations given regarding the present and past establishment of the firm in question. Then follows a full description of the firm's filature works in the country, though the reader may be rather puzzled to understand what is meant by the statement that a certain plot of land is producing "100,000 sets of mulberry trees which are distributed equally among the farmers belonging to the local Government of Tochigi, without retribution." Full particulars are given of the extent of work performed by this firm and the number of men and women employed in the labour, and the whole concludes with the following disinterested statement, which is a perfect gem in its way, and which we give exactly as it appears:—

Now as to show the importance of silk it scarcely needs any other statement, but simply to say "No one denies it." Since the country has been opened to the foreigners, the art of silk reeling and the trade of manufactured silk have changed and advanced in quality and quantity. However there are still more ground before us, and we have really to exert ourselves.

Not only for our profit but for the general benefit of our country, all of our member have made a great deal of effort in clearing and tilling the ground to cultivate the mulberry trees, in breeding the silk worm, and in reeling the silk.

We are, all the time, anxious to do some goods if possible at least to all our Japanese brothers, if not to all mankind and are ready to sacrifice every thing in possession, if it only will benefit our people. We love our country more than ourselves, that is to say, "We don't love ourselves less, but we love Japan more." But alas! poor merchants only cared for their own profit, and finally brought down the value of our silk. Our member, however, are not and were not those poor people and endevoured much, notwithstanding at all our lose, to rectify such a false state of things and to change the poor condition of the silk trade; and, happy we are to say that "We have, by this time, successed to a certain extent in attaining our objects." In 1876, when His Majesty The Emperor of Japan visited the eastern provinces, we have been very happy noticed by The Emperor and honoured with a present of red and white crape which excited us to make greatest exertions in order to remain worthy of the honour which had been bestowed upon us.

I beg hereby the visitor to spend a few moments in examining the quality of our exhibits which we trust will be found of the finest kind, and after such examination, to favor ourselves more and more with his confidence.

Notwithstanding the mistakes constantly made by the Japanese in their use of the English language,—mistakes not to be wondered at—those natives of this country who indulge in it would seem to have a far better command of it than their neighbours in China who do the same, if we may judge from the following choice specimen. The *Shanghai Courier*, from which paper we extract it, explains that the document is in reality an appeal to steam-ship companies or owners to keep coffins on board their vessels, so that if a Chinese passenger dies on board his body may be reserved for burial on shore with all those rites so dear to Chinamen, rather than be thrown overboard unceremoniously. But without this explanation of the purport of the document in question, it is extremely doubtful if the reader would be able to arrive at its meaning.

MORAL USSAY KEEP FEW COFFEN'S STEAMERS.

As a far the navigate have so many days afraid by sickness on the 2 moon ultimo, the steamer *Amoy* from shanghai to canton a passenger died on board. Foreigner glad to sawing some plank make coffen to cover and kept but some bad smell be out because the plank slight obliged to throw in sea and on the 4 moon steamer *Ningpo* for canton also do same try to think whom no relationer and family sicking not attend death nor put in coffen throw the corpse to the ocean of glant water pity seen by Eyes and huurt the heart goodnesser of canton beg the "Wangweng dong" of the Tung wa Hospital and Siemssen and Co. and c. m. s. n. co. after any vessel from here to shanghai carry ½ coffens for any Gentlemen give so many hundred teals to Tung wa Hospital to manege. But any ports no less goodness men wherefore no do the same and afterwards the vessel for Foochow Teentsen and River ports any steamers previous to kept 1 or 2 good coffen for and don't let those Fishes to pull the Belly so the God will give same as to hold a Bill to got.

The *Hôchi Shimbun* has given an account of the manner in which the *Taihei Maru* escaped capture by the Satsuma rebels, when the troubles first broken out in that province. It appears that while the steamer was lying at anchor in Kagoshima harbour, but with steam up ready to leave, she was boarded by a number of *samurai* who had the design of taking possession of her, but were stopped in their career by the appearance on deck of the foreign captain, armed with an axe, who informed them that he was responsible for the safety of the vessel, and if they persisted in their endeavour to obtain possession of her, he would blow up her boilers and destroy the ship and all on board. The rebels were completely cowed by the undaunted behaviour of this man, and disclaiming all desire to be suddenly launched into eternity, withdrew from the steamer and allowed her to make her way unmolested from the port.

We received notice to-day from the Agent of the Great Northern Telegraph Company, that the cable between Singapore and Penang was interrupted.

We regret that press of matter compels us to defer for the present our further remarks on Mr. Longford's Summary of the Penal Codes.

The *Nichi Nichi Shimbun* says that returns show that throughout the whole country 2,606 persons have been seized with cholera, of whom 1,119 died, 263 recovered, 758 remain under treatment, and the result of 466 cases is unknown.

From the "Japan Mail Daily Advertiser."

Monday, 15th.

At a meeting of the residents of Tsukiji, Tôkiô, on Saturday afternoon, October 13th, the following gentlemen were constituted a Board of Health, with power to add to their number:—

Henry Faulds, M.D.	Tsukiji,	No. 18.
W. Dönitz, M.D.	„	„ 28.
D. W. Stevens	„	U. S. L'tion.
Captain J. M. Batchelder	„	No. 1.
Charles Hargmeyer	„	„ 41.
J. Winckler	„	„ 41.
J. Clataud	„	„ 33.
Rev. George Cochran	„	„ 4.
Rev. Jas. L. Amerman	„	„ 10.

All communications may be addressed to the Board, care of J. Thompson, Tsukiji, No. 33.

JAS. L. AMERMAN,—Secretary.

The O. & O. Company's steamer *Gaelic* left for San Francisco on Saturday afternoon, taking 334 bales of Silk, 162 of which were shipped from this port, and the following cargo of Tea:—

From	San Fran.	N. York.	Other cities.	Total.
Shanghai	119	2,066	2,089	4,274
Nagasaki	—	60	—	60
Hiogo	—	—	3,385	3,385
Yokohama	3,790	935	1,142	5,867
Hongkong	248	—	845	1,093
Total	4,157	3,061	7,461	14,679

According to the *Hôchi Shimbun* 500,000 *yen* are to be devoted to cleaning out the canals in Tôkiô and making them more available for boat traffic. The work is to be commenced next month, and if properly carried out a great boon will be conferred on the residents of the capital.

From the *Akébono Shimbun.*

Lieut.-General Takashima is expected to return here in a day or two.

Both Shimadzu Saburo and his son, the ex-*Daimio* of Satsuma, are expected to visit Tôkiô shortly, and the latter will probably first arrive.

The Kagoshima *Kencho* is to be rebuilt on the same site.

Some disease has broken out in Awomori *ken* among the horses. In a short time more than one hundred horses were affected.

From the *Nichi Nichi Shimbun.*

A few officers of the army are to be sent to observe the war now going on between Turkey and Russia.

Four hundred and fifty-eight police men of Tôkiô were promoted in rank on the 11th and 12th instant.

All the troops enlisted among the *samurai* of Chôshiu have been disbanded at Kokura.

Tuesday, 16th.

The Yokohama Racing Association have been compelled to postpone their meeting for a week, as the departure of the American mail would interfere with the dates originally chosen. The time for closing entries has consequently been extended to the 24th instant.

From the *Nichi Nichi Shimbun.*

A person returning from Tosa informs us that about the middle of August much wild discussion was prevalent among the societies in Tosa, some urging that a truce should be entered into between the Satsuma and Government forces; others that the question as to whether the Government or the Satsuma people were right should be settled; others urged that opportunity offered to compel the Government to make some changes in its administration, while others, again, expressed a determination to join whichever side seem most likely to be victorious. The *Risshi-sha* still continues to uphold the cause of the peoples' rights, and its members are most devoted to their principles. Lectures are constantly delivered at public meetings, which are well attended. The people of Tosa say, that as Itagaki did not move in the risings of Yeto or Saigo, he must have determined to spend his life in advocating the cause of the peoples' rights and liberties. The *Seiken-sha* demands a general reform in the Government, but the minds of the members seem to be deeply imbued with feudalism. There is another party called *Oshishi-tô* whose members are vilifying the Government in order to creat discontent. The members of the *Chiuritsu-sha* are determined to assist the Government, so that they are dubbed sarcastically the Government office seekers.

The troops returning by land are to travel ten *ri* per day instead of six, which is their ordinary day's march, on account of the prevalence of cholera.

From the *Hôchi Shimbun.*

There will be an unusually fine display of crysanthemums at Dangozaka, Komagome, Tôkiô, next month.

H. E. Okubo has recovered from his illness, and attended to his official duties again on Saturday last.

Generals Yamagata and Takashima will return on the 16th instant.

The Governor of Kagoshima *ken*, some time ago, requested the Government to send down one million *yen* to be used in relieving the impoverished population, making necessary repairs, etc. Of this sum five hundred thousand *yen* were sent, but on the entry of Saigo into Kagoshima on the 1st of September, the *Kencho* and many other public buildings were destroyed, so that the Governor has now made application for a further 570,000 *yen* to meet the necessary expenses.

From the *Osaka Nippô.*

All the members of the *Risshi-sha* who held office in the local Government of Kôchi *ken* have been dismissed, and replaced by the members of the *Churitsu-sha.* More than half of the members of the *Kiôhô-sha* were in the police service of Kôchi *ken*, but as soon as their chief member, Midzuno, was arrested, they all resigned their posts.

A pedestrian named William Gale, of Cardiff, has commenced the hitherto unaccomplished feat of walking 1,500 miles in 1,000 hours at Lillie Bridge Grounds, West Brompton. For some years Captain Barclay's walk of 1,000 miles in 1,000 hours has been considered the greatest on record, but it remains to be seen whether Gale, who is forty-two years of age, stands 5ft. 3½in., and weighs 8st. 10lb., can put this feat in the shade. He recently, at Cardiff, covered 1,000 miles in 27 days 18 hours 44min., so that he commences his London task with very fair credentials. The time occupied in covering the distance will be six weeks less eight hours, finishing on the 6th October at 6 P.M. Although he has had indifferent weather to contend against, he neverthless displays great aptitude for his task, and walks with a fine elastic step, and very fairly.

The Ludgate Circus Offices, occupied by the *Echo* in former days, have been taken by Mr. Gordon Bennett, proprietor of the *New York Herald*, for his new London daily paper.

Wednesday, 17th.

Official instructions have been given by the Postmaster General to accept Japanese mails for conveyance by P. & O. steamers, which are either sent on board direct by the Imperial Japanese Post Office or forwarded through the British Post Office.

Major General Yamagata, the Minister of War, and Lieut. General Takashima returned from Kiushiu in the *Kokonoye Maru* yesterday. On leaving the vessel for the Admiralty jetty the Kanagawa fort and the *Raiden Kan* fired a salute. The two Generals proceeded to Tôkiô with as little delay as possible.

The German man-of-war *Elizabeth* left the harbour yesterday for a trip to the Bonin Islands.

The *Mainichi Shimbun* says that H. E. Enomoto, Japanese Minister at St. Petersburg, is expected to arrive here to-day

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

from Hakodate, which would indicate that the journey from Russia has been made viâ Siberia.

From the *Mainichi Shimbun.*

The 1st battalion of infantry returned to Tôkiô by the Tôkaidô yesterday. The 2nd battalion is expected to-morrow.

Yesterday, the 16th, was the day appointed for the opening of the *Kuadzoku* School, at which His Majesty the Emperor was to have been present, but on account of the return from the South of His Excellency Yamagata, the Minister of War, the ceremony has been postponed until the 18th instant.

From the *Chôya Shimbun.*

One thousand and eighty-one police men received on the 15th instant from the Bureau of Police, sums of money to pay their expenses to their respective homes, with a notice that they were disbanded as their services would be no longer required.

From the *Akébono Shimbun.*

On account of a female servant in the employ of H. E. Mayejima, the Junior Vice-Minister of the Home Department, having been attacked by cholera, H. E. has not appeared at the office since the 13th instant.

The annual allowance of the Bureau of Police has been increased by a sum of eight thousand *yen*, in order to meet the extraordinary expenses caused by special grants made to those members of the force who have returned from service in the South.

From the *Hôchi Shimbun.*

The family of Mr. Kitajima Hidetomo, the Governor of Nagasaki *ken*, who died of cholera on the 10th instant, has received the sum of one thousand *yen* in acknowledgement of his services during the war.

From the *Nichi Nichi Shimbun.*

Lieut.-Generals Miura and Miyoshi will immediately take charge of the garrisons under their command, without visiting Tôkiô.

Upwards of 233 cases of cholera in Tôkiô were reported from the 18th September to the 11th October, 112 of which proved fatal.

Thursday, 18th.

The native papers announce the death at Osaka, on the 13th instant, of the celebrated actor Bandô Hikosaburo. He was fifty years of age and for a long time had held a high place in his profession at the principal theatres of the capital and provinces, in the opinion of many very nearly rivalling the popular Ichikawa Danjiuro. Bandô's chief accomplishment was the *shosa* or stage dance, and he was an especial favourite with the fair sex. He always held a high character in private life, and was said to have been subject to epileptic fits, which in all probability caused his death.

From the *Mainichi Shimbun.*

The *Kanagawa*, *Taihei*, *Sumida* and *Toyoshima Maru* arrived at Shinagawa yesterday with return troops and munitions of war from the South.

The *Kiushiu Maru* is expected to arrive to-day with more troops.

From the *Hôchi Shimbun.*

The following sentences have been passed at the Kiushiu Special *Saibansho* at Nagasaki, up to the 29th of last month, on those who were accused of complicity in the Satsuma rebellion:—

To decapitation	10
,, ten years' penal servitude	17
,, seven ,, ,,	6
,, five ,, ,,	16
,, three ,, ,,	83
,, two ,, ,,	424
,, one ,, ,,	203
,, one hundred days'	107
,, seventy ,,	2
,, thirty ,,	2
,, deprivation of rank, etc.	9,197
Acquitted	67
Total	10,134

From the *Nichi Nichi Shimbun.*

Cholera lately spread to such an extent among the miners of the Takashima colliery that several hundred men fell victims to the disease, but such effective sanitary precautions have been taken, that at the present time only five persons there are suffering from the epidemic.

An increase of twenty-eight thousand *yen* is to be allowed in the annual expenditure of the Department of the Imperial Household for the period of fifteen years.

Friday, 19th.

The Am. barque *Annie W. Weston* returned to port early this morning, having met with a severe gale off the Shikoku coast on the 11th. She was on her beam ends for 12 hours, and has damaged much of the cargo of rice she was taking to Europe. Two of her crew died of cholera between the 8th and 11th instant.

The *Mainichi Shimbun* of this morning says that further changes in the *Fu* and *Ken* are contemplated, which will reduce the departmental division of the country into two *Fu* and six *Ken*.

H. M. S. *Kestrel* passed the barque *Kingdom of Sweden* on the morning of the 16th instant, in the latitude and longitude which appears in our shipping report, or about 45 miles to the Eastward of Oosima, so that her arrival may be looked for very shortly. She left London on the 27th May, and has consequently made a tedious passage.

Their Majesties the Emperor and Empress paid a visit to the Noble's School in Tôkiô early on Wednesday morning, where they were received by H. I. H. Arisugawa-no-Miya and several other members of the Imperial family, the principal Government officials and a large number of the *Kuazoku*. The wives and families of the Nobles were also largely represented. After partaking of refreshment Their Majesties were conducted to the large hall in the building, where the Mikado addressed the *Kuazoku*, congratulating them on having established this school. Following the example which had been set him by his grandfather, Jinkô Tennô, when a school was opened in Kiôto for the instruction of the children of the *Kuge*, His Majesty named the new school the *Gakusho-In*. His Majesty concluded his remarks by recommending special care being paid to the instruction of the girls. Her Majesty the Empress then addressed those present, and expressed her satisfaction at the opening of the school, and that the Mikado had graciously given it a name.

The Director of the School, Mr. Tachibana Taneyasu, suitably replied to both addresses, and expressed his deep sense of the honour done the School by the visit of Their Majesties. The Mikado then presented the school with the sum of 1,000 *yen*, and the Empress also gave 500 *yen*, while Mr. Tachibana received a present of 100 *yen* and a silken robe.

After examining the various parts of the building, luncheon was served, after which Their Majesties were escorted to their carriages by the officials and nobles present, and returned to the palace.

The Empress Dowager visited the school yesterday, and from 9 a.m. to 2 p.m. to-day it will also be thrown open to the public.

From the *Nichi Nichi Shimbun.*

A letter from Kagoshima, despatched on the 5th instant, says that the country is beginning to resume its former aspect. The town of Kagoshima had been so much destroyed by fire that it was like a plain, but rebuilding is being energetically carried on. The *samurai* and farmers of the Ishiu-in district are holding funeral services for Saigo and the other rebel leaders. At first the Satsuma people showed their hatred of whatever was Imperial, but now they have commenced to behave in a friendly manner towards the Government troops.

It was thought that the rebel leader Ikebe Kichijiurô died with Saigo on Shiroyama, but a telegram despatched from Kagoshima to the Bureau of Police, shortly after mid-night on the 16th instant, says Ikebe was recently killed by the police in the district of Kôriyama.

Sada, a *samurai* of Tosa, arrived at Tôkiô a few days ago, but was immediately arrested by the police.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

According to the return made by the Bureau of Police on the 15th instant, there were forty-three persons attacked with cholera on that day, of whom one died and one recovered. On the 16th there were twenty-six new cases, four deaths and one recovery.

From the *Chôya Shimbun.*

We hear a rumour that when the capital employed by the National Banks amounts to a certain sum to be hereafter fixed, the Government will prevent the establishment of any new Banks.

From the *Hôchi Shimbun.*

The Government is about to purchase a piece of land at Senji, Tôkiô, whereon to erect a woollen cloth manufactory.

Saturday, 20th.

The M. M. Co.'s steamer *Tanais*, with French mails on board to the 9th September, will leave Hongkong to-day at 5 p.m.

The *Hiroshima Maru*, on her arrival yesterday forenoon, was anchored outside of the shipping fully two miles from the shore, and it was some time before her European passengers were allowed to land, and considerably later when the Japanese passengers left the ship. The *Hiroshima Maru* has been selected on several occasions for the unpleasant task of carrying prisoners from Nagasaki, she having a secure compartment in the waist of the vessel which is shut off from all other parts between decks, and from which a staircase leads to the port guards. She brought up yesterday from Nagasaki 207 prisoners, who, when taken on board there, showed unmistakable signs of having been neglected during their confinement—perhaps unavoidably—as most of them were dirty and sickly looking. The space in which they were confined on board is too small for so many, and despite the efforts made by the officers and surgeon to ameliorate their condition, four died, from what we are assured was not cholera, but exhaustion brought on by privations previously endured.

One of the sailors of the vessel, who had been for sometime ill, died at half-past four yesterday afternoon, but at present there is no sickness whatever on board the steamer.

The *Hiroshima Maru* is still lying outside the shipping in a state of semi-quarantine. It is to be hoped that for the future the Government will be able to carry troops and prisoners by transports specially appointed for that service, so that detention to the mail steamers may be avoided as much as possible.

From the *Hôchi Shimbun.*

The finest rice in Japan is produced in the provinces of Higo, Harima, and Mino. That from the latter place can be kept in storage for a longer period than any other, and for that reason will be the grain exhibited at the Paris Exhibition.

Her Majesty the Empress Dowager presented the Nobles' School with the sum of three hundred *yen*, when she visited that establishment on Thursday last.

A telegram was received from Bungo on the 17th instant, requesting that some vacine matter should be sent there immediately, as small-pox had broken out in that province.

From the *Nichi Nichi Shimbun.*

Iron pipes are to be laid under the sea between Kanagawa and Yokohamafor the purpose of conveying fresh water to the latter place. These pipes are now being made at the Government Iron Works at Akabane, Tôkiô.

The sum of 150,000 *yen* was appropriated to cover the expenses of the Japanese exhibits at the Paris Exhibition next year, but on account of the increase in the number of articles that are to be sent there, this appropriation has been increased by the sum of 33,240 *yen*

From the *Akébono Shimbun.*

The Miyagi *Kencho* has requested permission of the Government to enlist fifty additional policemen, as the *Ken* is greatly overrun with robbers to the endangerment of the public peace.

From the *Chôya Shimbun.*

Of the 207 rebel prisoners sentenced to hard lahour by the Nagasaki Special *Saibansho*, and who arrived from the South a few days ago, 100 are to be sent to Niigata *Ken*, 53 to Miyagi *Ken*, and 54 to Ishikawa *Ken*.

We have to report some regular "typhoon weather" since our last, though Kobe itself, as has so often been the case before, has escaped the worst of the storm. It was known that a violent gale had raged at Shimonoseki on the 8th, but in Kobe, up to the afternoon of the 10th, there were few signs of any impending great danger; however, before dark, rain began to fall and soon increased to a torrent such as the oldest resident cannot recollect to have seen before, and this lasted with some intermissions and accompanied by some lightning (but little or no thunder) through great part of the night. On Thursday morning there was heavy rain with a rapidly increasing gale—very puffy—from the Eastward and a rapidly falling barometer till about 11.30 a.m., when the wind shewed signs of getting round to the Northwards and the barometer of rising. Soon after noon the sky cleared, the wind went round to N. W. and W. N. W. and continued to blow with much violence during the remainder of the day and at intervals throughout the night. On land we have heard of no damage in Kobe beyond the usual stories of plaster washed off and some injured drains.

From Osaka it will be seen below our correspondent sends us an account of what he was able to observe up there, and we have furthermore a hasty note from an occasional correspondent at Kioto, under date the 11th, stating that on the previous day they had experienced the worst gale since July, 1871. The early part of the storm does not appear to have been felt there with such extreme violence as the North West. The worst of it was over in less than an hour and a half afterwards, when the sky broke up and clouds were coming up from the South West, while the highest clouds were nearly stationary. Several large matsu trees were uprooted in the neighborhood of Kioto and plenty of branches strewed about, but no serious damage in the city had been heard of. The rice, which was partly gathered, was reported uninjured by the very heavy fall of rain.

On the sea there are but few serious casualties as yet to report, though it is far too soon to make up a tale. No accident of any consequence has been reported as happening to the shipping in the harbor, but as the *Saikio-Maru* was known to have left Yokohama at 4 p.m. on Wednesday and the typhoon—for such it undoubtedly was—appeared to be travelling to the North East, no one was surprised that she was some hours late, and there was a general feeling of relief when it was found that the amount of her damages was only the smashing in of the paddle-box guards and some damage to her internal fittings through a large quantity of water being taken on board. The steamer *Strathairly* left Yokohama 30 hours before the mail boat, and as she has not been heard of, gives some cause for anxiety, but she may easily have put in somewhere without any immediate information of the fact reaching Kobe. A breakdown to the telegraph wires near Shimonoseki had been mended about the same time the worst of the blow reached here, but communication remains destroyed between Kobe and Yokohama at the moment of writing. We have heard vague rumors of the loss of a good many junks in the Inland Sea, between here and Shimonoseki, but as it has been asserted, on authority which has made a study of these matters, that the centre of the typhoon must have passed within fifty miles of us, Kobe is certainly to be congratulated, on the whole, on a very lucky escape. The tide was very high at noon, but owing to the direction of wind there was no sea in the anchorage, or the damage would have been much greater; as it was, we have, for a wonder, not even the usual account of injuries to the bund wall to report.

Just before going to press the arrival in port of the *Strathairly* is reported.—*Hiogo News.*

Our Osaka correspondent, under date of yesterday, writes as follows; yesterday (Thursday) we were visited with a furious gale, almost worthy of being called a typhoon. The storm took the boatmen quite by surprise, and a number of cargo boats and junks came driving up the river at railway speed. As several of the former had no one on board at the time they broke adrift, numerous collisions took place and a great quantity of broken timbers came drifting up stream. Several fences were blown down on the Foreign Concession, the streets of which were strewed with branches of trees torn down by the wind. The usual quantity of broken tiles, stove piping and plaster was also sacrificed to "rude Boreas, blustering railer." It is reported that one or more corrugated iron roofs at the Mint took unto itself wings.—*Hiogo News.*

SPORT IN JAPAN.

IT cannot be denied, we think, that in Japan more than in any other country, the lovers of sport have reason to be dissatisfied with their position. Most of the regulations contained in the licenses do not, it is true, afford any serious ground of complaint. But regulations, harmless in themselves, may be insisted upon in an intolerably vexatious and irritating manner, and those which sportsmen in this country are obliged to submit to, are too frequently sought to be inforced under circumstances which seem to show rather an illnatured hope of catching the foreigner tripping than a vigilant discharge of duty. Instances are known, where the mere fact of carrying a gun has exposed the presumed sportsman, while passing in a *jinrikisha* through the streets of a large town, to the reiterated demands of a succession of over-zealous policemen to produce his license, and to the infliction of a series of most irritating delays while copies were taken, by men more familiar with the truncheon than with the brush, of the permit exhibited. It would be, we should imagine, no difficult matter to issue orders to the police not to ask for the production of licenses in places and at times when shooting was necessarily out of the question; we doubt, indeed, whether the mere carrying of a gun is sufficient to justify the demand, and whether, without some act indicating an intention to shoot, the production of a permit can properly be insisted upon.

The over-zealousness of minor officials results, however, only in a temporary and occasional inconvenience to individuals; the more substantial grievances we are about to notice are felt by all sportsmen—by all true sportsmen at least—and are of a continuous, not of an occasional character. Of these the principal one seems to be the insufficiency of the regulations creating a close season, and the want of vigilance shown in enforcing their observance. At present the shooting season opens in October and is prolonged to the 15th April. The latter date is too advanced in the year for pheasants, for in this country the pairing off of these birds begins earlier than in Europe, and the end of February is the latest period to which the season for them should extend. The above remarks do not apply to duck and wildfowl, nor to snipe and woodcock, which migrate to other parts of the country for the purpose of pairing and may well be shot until the 15th April. Were the close season to begin with March for pheasants as, indeed, so far as most true sportsmen are concerned, it does by voluntary arrangement actually begin, the interests of sport would be greatly benefited, and the generous spirit which has induced a number of gentlemen to attempt to improve the quality and increase the quantity of game in this district by importing foreign varieties, chiefly Shanghai pheasants and Colifornian quail, would meet with a well merited encouragement. The improvement in quality which might be thus effected is striking. The average weight of the Japanese copper pheasant is 2 lbs. 10½ oz., of the green pheasant 2 lbs. 9 oz., and of the Shanghai variety 2 lbs. 8½ oz., while that of the cross between the Shanghai and the green species is, we believe, close upon 3 lbs. The Californian quail have thriven well and multiplied, and young healthy specimens have been brought alive into Tôkiô. How far, if at all, and with what results they have crossed with the native breed, sufficient time has not yet elapsed to determine, but it cannot be doubted that their introduction will eventually have a beneficial effect both as to quantity and quality upon the Japanese bird.

It is not, however, sufficient to establish a close season on paper and enforce it exclusively, or almost so, against foreigners. Long after the end of the shooting season and up to the beginning of the summer heats almost, pheasants are to be found openly exposed for sale in the native markets, and the only class of persons against whom the close season is enforced with any vigilance is the small band of foreign sportsmen, consisting of a few dozen men at most (we believe last season not more than forty licenses were granted in this *Ken*, somewhere about thirty of which were to British subjects), the very class against which, with few exceptions, such vigilance is almost unnecessary. This practice of slaying birds wholesale out of season is absolutely ruinous to sport, and if allowed to continue will ere long convert the permits into valueless bits of paper. It would with the greatest ease be put an end to by forbidding the sale of game out of season, and instructing the police to enforce the prohibition, and we trust that the authorities may be induced to issue such regulations, establishing a close season from March for pheasants, and forbidding the sale as well as the killing of these birds after that date, with due provision for their enforcement upon Japanese purveyors and dealers as well us upon foreign sportsmen. The attainment of the end our observations have in view would also be greatly facilitated, if the licenses were annual instead of being issued for the season only, though of course permitting shooting only during the season. Such a change would prevent the great destruction of young birds that is now caused in the summer months by certain indiscriminate sport-spoilers rather than sportsmen, who prowl about the covers in summer and autumn killing everything winged that comes within the reach of their murderous weapons. These gentry, very few of whom we are glad to be assured can lay claim to British nationality, would be effectually restrained from pursuing their unsportsmanlike practices were they subjected to the conditions contained in the licenses throughout the whole year in lieu of the shooting season only. As it is, they are practically, during the summer and autumn months, free from restraint or interference. It is, we believe, contemplated to open the shooting season on the 1st November in place of the 15th October as at present. This would be an extension of the close season at the wrong end; by the 15th October the birds are of vigorous flight and there are no sporting reasons whatever why that date should not be kept to as the beginning of the open season. We have heard it asserted—but we can hardly believe the assertion to be founded on reality—that the Japanese authorities wish to defer the opening of the season to the 1st of November in order to obviate danger to standing crops and harvest-men and women in October from silly or malicious foreign sportsmen. In the first place there is as much harvesting done in November as in October, if indeed not more in the former than in the latter month, and the fear of harm in either month to crops or human beings is simply childish. No doubt firearms are weapons to be used with caution at all times and in all places. But the license fee entirely prevents their use by persons unfit to be trusted with them, and the

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

regulations on the licenses expressly forbid shooting in places where injury to crops or persons might be caused, so that only a wilful disregard of these could lead to the results said to be apprehended,—at any time, harvest or other.

The total prohibition of shooting outside of treaty limits we cannot at all understand. The Chinese are by no means distinguished for liberality, but they permit foreigners with proper passports to shoot without restriction of limits. Here, not only are we deprived of all sport outside of the ten *ri* radius, but the ten *ri* limit itself is illiberally construed, and the opposite shores, though much less then ten *ri* from Yokohama, are sacred from the tread of the foreign sportsman. It is of course possible that the Japanese authorities have good reason for the rule, but we have never heard and cannot imagine a single even plausible ground for the exclusion. No abuse of the privileges enjoyed within the ten *ri* can be alleged, for there are hardly any instances of transgression of the license regulations. Last year, we believe, not a single one occurred within this *Ken*. The passport would be a means of identification and a *prima facie* proof of respectability, and a bond or deposit might be required, if deemed necessary, to provide against any expense a transgression of the shooting regulations might involve the local authorities in, for escort of a delinquent to the nearest treaty port. Foreigners would not be more likely to infringe the regulations out of treaty limits than within them, and there are everywhere officials enough to prevent irregular or improper shooting by the few who would be able to avail themselves of the extended privilege. The Japanese Government has, especially of late years, given so many proofs of a desire to act liberally with foreigners, that we are sure its illiberality in this instance is more apparent than real, and is founded upon some misapprehension which a little patient discussion would remove, if stated. It seems an absurdity, that while foreigners are permitted to shoot within the comparatively thickly populated ten *ri* limits, a similar privilege should not be granted them of pursuing game over the desolate hilly country beyond. We earnestly trust that some effort will be made to induce the Government to withdraw this prohibition, at all events so far as—for a commencement and as a trial—the districts of Hakoné, Fuji and Nikkô and the opposite shores of the Bay are concerned. Shooting is a most healthful and inspiriting recreation for men jaded by the worry and wearied by the monotony of Yokohama life, and we cannot think that the Government will persevere in a policy rendering it singular among all the Governments of the world, for a somewhat inhospitable and ungracious curtailment of the enjoyment of the pleasures of sport by foreign residents within its territory.

We hear on all sides the most hopeful reports that all fear of a cholera epidemic is rapidly dying out. The Government deserves credit for the rapidity and energy of measures which it took to meet the emergency.—*Hiogo News.*

From the latest accounts received from Takashima, we are glad to be able to mention that there is little sickness now prevalent, and that no deaths have occurred since the 10th instant. The miners and other labourers are gradually returning to the island, and we hope soon to hear that operations have been resumed with the customary activity.—*Rising Sun.*

SPIRIT OF THE JAPANESE PRESS.

The Land Tax.

Précis.

(*"Osaka Nippô," 11th October.*)

Our thirty millions of population live principally on rice and other cereals, and it is therefore clearly evident that those who cultivate the precious grain which sustains the life of the whole nation, should find a return for their labours commensurate with the benefits they confer.

The farmers who cultivate rice, use it for food themselves just as others in Japan do, but are further dependant on the crops they raise and sell in the market, for the various necessities of life which they have to purchase from others. Such being the case, should the price of rice so decline as to be comparatively cheaper than other commodities, the farmers are placed at a great disadvantage.

Let anyone take a walk into the country and he will be able to see the laborious life the farmers lead, especially at present, when they are gathering the rice harvest. Now, although it is true that merchants, artizans and others pay taxes to the Government for the protection which is afforded them by the State, we think that the farmers who produce that which forms the principal revenue of the Government and the food of the people, should be placed at an advantage, rather than a disadvantage, compared with other classes in the Empire.

Up to the time of the Restoration, the land was held by the various territorial magnates, to whom the payment of the taxes in kind was made by the cultivators of the soil without appreciable hardship. But after the Restoration, the payment in kind to the Central Government was inconvenient and expensive, on account of the want of means of transport to the capital and other centres of commerce. The Government therefore decided to abolish the customs of paying the taxes in kind, and demanded instead a payment in cash throughout the country.

But lately agrarian riots have been frequent in different parts of the country, showing that the farmers do not appreciate the benefit the Government meant to confer by the new method of collecting the taxes. And when we consider that this class of men, who are naturally of a most peaceful disposition, have at various times taken up arms, fearless of death, we are led to suppose that they must have substantial grievances.

In the old days, when the Lords of the Provinces knew no will but their own and the farmers were but their slaves, riots occurred amongst the farmers when they were subjected, as they frequently were, to cruel and unendurable treatment. It constantly happened that they were taxed to as great an extent when the crop was a failure as when it was a good one, and their scanty gains extorted from them by force.

But agrarian riots at the present day are due to other causes. The Government, being fully aware that the farmers deserved liberal treatment, issued laws governing the levying of taxes which it was thought would prove most beneficial to those concerned, but, unfortunately, through ignorance of the true intention of the Government, the farmers have erroneously considered that they were hardly treated, and a many cases have broken the peace by disgraceful rioting.

Now although we admit that the present mode of levying the land tax is a great improvement on that of former days, it seems clear that it is not yet all that suits the people. The assessment is certainly lighter than it was in the feudal times, but it is apparently a hardship to the farmers that it must be paid in cash instead of in kind, as has been customary for hundreds of years past. Admitting that a payment in cash is more desirable in a financial point of view, it should yet be borne in mind that customs which have existed for a long time past, cannot, without some disatisfaction, be swept away in a day.

For a few years past only have we been exporting rice to foreign countries, where the grain has hardly yet established a satisfactory position. Our country is not by any means rich, and money itself is scarce. When the time arrives for the payment of the land-tax, the farmers are compelled to take their grain at great incovenience and expense to the few inadequate markets open to them, which are consequently at once overflooded with grain. An immediate fall in price is the result—a fall which makes the return for the rice out of all proportion to its value compared with the cost of other necessities, so that unmerited hardship is inflicted on a very deserving and naturally quiet class, who are thus driven to despair, opposition to the Government, and consequent trouble and even death. It is sad to think that the most industrious labourers in the Empire should thus suffer.

It is true that the Government instituted reforms at the beginning

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

of this year with the special object of so reducing the annual expenditure that some relief might be afforded to the agricultural classes, but riots have since occurred, which shows that something further is even yet required to remedy the disadvantageous position of the tillers of the soil, and which we think might be improved without any great trouble.

We would recommend that the farmers should have the option given them of paying the taxes in cash or in kind as suits them best, until such time as Japanese rice has established a recognized position in foreign markets, or until such arrangements can be made that no great fall is experienced in its value at the time that the payment of the tax is due. Should the local Government officials, thus authorized to accept payment in kind, find more grain accumulate on their hands at such times than they could readily sell, the salaries of the officials might be paid in rice, and the remainder gradually disposed of as opportunity offered, and the proceeds forwarded to the Central Government.

Such a course will no doubt entail some trouble at first, and the Government may be accused of vacillation, but when a necessity of this sort arises it is better to act boldly but rightly and challenge criticism, than to continue in wrong and to cause distress to a worthy class, to whom it may be said we owe our very existence.

We therefore urgently advise the Government to adopt our recommendation, which we think is the only way by which it can afford relief to the people and avoid trouble to itself.

How the Prospect of Famine should be met.

("Hôchi Shimbun," 17th October.)

During the ten years of Meiji which have elapsed, the harvests have been on an average fairly good, and no famine has, during that time, threatened us on account of a failure of the crops.

When great drought happens or destructive floods unfortunately occur, the people living on the hills and plains are reduced to roots and grasses to sustain life, while those living on the coast endeavour to derive their sustenance from the sea-weed they gather on the shore, and the privations thereby entailed are indescribable. History relates how often such miserable wretches have died of starvation, and the record fills us with sorrow.

Our intercourse with foreign countries has developed a trade which did not exist in former days, and if we were now threatened with a famine, we could immediately import rice from China, Annam and Siam, or flour from America, and so avert the calamity, so that the distress which would have been certain in the feudal times, would be relieved under our present circumstances. All this is reasonable enough, but it does not follow that we are thereby justified in neglecting to prepare ourselves to meet any impending famine.

At all events, if we were to import rice from foreign countries, the price of it would be higher than the home production on account of the additional cost of transport, so that after all it might be beyond the reach of the poorer classes who would most need it. Such being the case, the difficulty would only be of another nature. It would not be that there was a scarcity of grain in the country, but that, owing to its high cost, it would be out of the reach of the poorer classes. And while it is not impossible that we may be afflicted by a famine in a short time, it is certain that many now think that all such danger is passed, simply because we can obtain supplies from foreign countries, while they never consider that the people may be reduced to such a state of poverty that they may be unable to purchase such imported supplies. It is therefore a matter of vital importance that we should make such preparations among ourselves as are necessary to prepare for such an impending calamity.

It appears to us that such preparation could be best made by collecting rice, wheat, barley, etc, during years of plenty, and storing it against a probable time of famine. At first one would be apt to jump to the conclusion that it would be most advisable to collect large quantities of rice as a reserve stock, or create a reserve of cash, but the latter plan would not be really advisable. For instance, at the time of forming a cash reserve a certain sum of money might be sufficion to purchase one thousand *koku* of rice, whereas during a time of scarcity, the price of rice would rise to such an extent, that the same sum would perhaps only purchase one hundred *koku*. Such being the case, it would be more advisable to collect a reserve stock of grain, but as such grain would not keep for very long, it should be distributed for consumption in the country every two or three years, and replaced by new crop grain. Those who are experienced in such matters say that millet will keep well, so that a large reserve stock of this cereal should always be collected.

Early in the season the want of rain led us to dread a failure of the crops, but subsequent favourable weather relieved us of this anxiety, and the harvest promises to be a good one, so that the people generally are benefited. No inconvenience would therefore be caused if the collection and storage of grain as a reserve were commenced this year. But as the Government still persists in demanding the payment of the land-tax in cash instead of in kind, the farmers will probably complain that, owing to their having had to sell their rice at great depreciation in an overstocked market caused by the present mode of levying the tax, their produce has barely realized sufficient to pay the taxes, and quite precludes their laying aside any grain for storage against bad times to come.

In our opinion this clearly demonstrates that the Government should institute at once some reform in the mode of collecting the land-tax.

SOME OTHER CHAPTERS OF JAPANESE HISTORY.

YUI-NO-SHÔSETSU.

When Toyotomi Hideyoshi, better known by the name of Taikô Sama, had completed the victories which gave him absolute power over the entire Empire of Japan, and had retired to his castle at Osaka to enjoy his well earned repose, it was his desire that the people of his birthplace, the district of Aichi in the province of Owari, should come and settle in the wealthy city where he had taken up his residence and there pursue their several callings. Among the many who came was a certain dyer, named Yoshida Jiyemon, who was honoured with all the work required by the Court of Hideyoshi. This was in the years of Tenchô (1573-91).

On the death of Hideyoshi in the 8th month of the 3rd year of Keichô (1598), one of his five chief ministers, Ishida Mitsunari, made preparations at his castle of Sawayama, (now Hikone) to commence hostilities against Tokugawa Iyeyasu, who was also one of the principal ministers under Hideyoshi. The dyer Jiyemon went to the castle of Ishida, to dye cloths for the various banners and screens; but the castle shortly after falling into the hands of Iyeyasu, he with the rest was taken prisoner. On its being discovered, however, that he had taken no part in the fight, he was released. Deprived of his patron, Jiyemon wandered about from place to place and at last settled down in the post town of Yui in the district of Fuji in the province of Suruga. As he was an industrious and skilful workman, he soon laid by a little money, and finding that he was in a position to marry, he took to himself a wife, by whom he had a child born on the 1st of the 5th month of the 10th year of Keichô (1605), and whom he called Fujitarô. In the following year, however, the mother died.

Now from his earliest years Fujitarô showed a great love for anything of a military nature. When only five or six years old, it was his delight, when he could obtain his father's permission, to get a number of playmates and go with them to the bank of the river, and there constructing castles and fortresses, to carry on a mimic warfare, he invariably assuming the command. Jiyemon's wish, however, was that his son should become a priest, and at the age of seven Fujitarô was accordingly sent to a neighbouring temple called Seikô-ji, to be initiated into the profession. Hitherto the boy had only shown his aptitude for warlike sports, but now he showed that he was also possessed of extraordinary powers of memory. One day, shortly after his arrival at the temple, there was a debating assembly held at which some two hundred priests were present. Fujitarô listened attentively to all that went on, and that night astonished his guardian, the priest of the temple, by repeating to him the different views that had been expressed by the various priest, on the subject under discussion.

There happened to be living with the priest at this time a certain friend of his, a *rônin* named Takamatsu Hambei, who was an experienced soldier and an accomplished scholar in Chinese literature. Under his tuition the priest accordingly placed Fujitarô, and in both branches of learning his progress was equally rapid and astonishing.

In the 19th year of Keichô (1614) Iyeyasu came marching through the province of Suruga at the head of an army,

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

on his way to Osaka to wage war against the son of Hideyoshi and his followers. Certain old men in the village expressed great doubts whether Iyeyasu would be successful, as the Castle of Osaka was known to be the strongest in the country and was garrisoned by near upon a hundred and seventy thousand men. This was said in the hearing of Fujitarô who told the old gossips that they had better be going about their business of planting carrots instead of talking such nonsense. The men were angry at those remarks from a boy, but Fujitarô said, "No castle, however "strong, nor garrison however numerous, can stand long if "their commanders are incompetent and fools." And this saying of the boy's proved true, for in the following year the Osaka troops were utterly defeated, and the son of Hideyoshi in despair committed *seppuku*.

One day Fujitarô asked his teacher what kind of man Hideyoshi had been. Hambei told him that he was nothing but the son of a farmer in the Aichi district, and that it was only by his abilities, his wisdom and his valour that he had been able to become the ruling power of the Empire. This set Fujitarô thinking, that though he was but a dyer's son, yet if he possessed the mental power of Hideyoshi there was no reason why he should not attain equally as eminent a position as that renowned warrior. Feeling that he needed to ally himself, at least by name, to some noble ancestry, he asked Hambei whom he considered the greatest general that Japan had produced. Hambei replied that Kusunoki Masashige was certainly entitled to that position, inasmuch as he combined the qualities of wisdom, valour and mercy. So Fujitarô, because he had been born in the village of Yui, called himself Yui Minbunosuke Tachibana-no-Shôsetsu, this making his family name the same as that of the illustrious general.*

Shortly after this Jiyemon was siezed with a fatal illness, and as he lay on his death bed he sent for Fujitarô—now called Shôsetsu—and said to him, "As I am about to "die, I leave with you a precious heirloom which has been "in my family for many generations, having come to me from "my brother Jirobei, who was a skilful fencer." He then produced a famous classical Chinese work in eight volumes, on the art of war and military tactics, and gave them to his son as his parting gift. He also requested that in seven days after his death the boy's head might be shaved and that he should be devoted to the priesthood, so that by his holy life he might atone for the sins of his ancestors and appease their spirits, and he earnestly desired of the priest to see that his instructions were carried out.

To the astonishment of all, however, Shôsetsu, three days after the death of his father, suddenly became deaf and dumb. His guardian the priest took him to all the doctors of the village, but their remedies, instead of being of any service, only seemed to made him worse. He seemed to have completely lost his senses. He teased and struck the priest's child until it was nearly mad; he destroyed the sacred relics in the temple; he placed himself upon the alter among the holy idols of Bhudda, and so conducted himself that the good people of the village were grieved at the sad change in one who had been noted for his good qualities and great promise, and looked upon him as one stricken by the curse of the Gods. Be that as it may, his conduct became so uncontrollable that the priest was forced to send him away from the temple, and place him under care of his uncle, a man named Seibei, who was a blacksmith by trade. After Shôsetsu had remained some twenty days in Seibei's house, his madness seemed to depart, but he still remained deaf and dumb. When the weather was fine he made the household understand that he wanted his midday meal prepared for him, and off he would go into the country, and return no more until nightfall. But to this Seibei made no objection, for he could be made to render no service in the house, and this was the only way to keep him out of mischief. This state of things lasted for five years, when one day Shôsetsu coming to his uncle's side, astonished him by saying, "Uncle Seibei, "it was my father's dying request that I should, seven "days after his death, have my head shaved and become "a priest. Now having heard stories of the great Hide-"yoshi from Hambei, my teacher at the temple, I deter-"mined that I would attempt to rival the deeds of that "hero, the more so that I detested the priesthood. For "this reason I have for five years pretended to be deaf "and dumb, while I have been living under your roof. "But you must not think that I have been wasting these "precious years. While I have gone out into the country "daily, it has not been for the purpose of fishing or idly "spending my time. I have been learning to swim, to "run, to jump, with bamboo stick I have been acquiring "the knowledge of fencing and spear exercise. I "have learned to ride on horses left by the farmers "in the fields, and every leisure moment I have em-"ployed in studying the books presented to me by my "father on his death bed. I have also observed the "country and its natural advantages in time of war. I "now intend to go on a *musha-shigiyô*† for a period of five "years, and learn all the arts of fencing and other military "qualifications from such good masters as I shall meet "during my wandering." With much reluctance his uncle gave him permission to follow his desires, and bidding him farewell gave him a fine sword as a parting gift.

The first steps that Shôsetsu took after leaving his uncle's house was to pay a visit to a neighbouring shrine, and after having performed his devotions, he wrote on a neighbouring cherry tree the following words:

"Never again shall here my vows be paid,
Unless in richest silks I come arrayed."

He then proceeded into the province of Kawachi; visited the birth place of Kusunoki Masashige, and also his castle on the Honzô-yama, which the great general, with but comparatively few men, had successfully defended against the overwhelming forces of Hôjô, numbering a host of many thousands. Thence he went to the famous temple dedicated to Hachiman at Tsuboi, and at the root of a large pine tree at the back of the temple he buried a banner resembling the one Masashige had used, together with a family record of the great warrior which Shôsetsu had made out when he was twelve years old. This he placed in a strong box with the characters Kusunoki Kawachi Hanguan Tachibana-no-Masashige. Then leaving Kawachi he came into the provinces of Kaga and Echizen.

One evening as he was passing through a place on the sea coast called Sabai, he found himself benighted, and was therefore compelled to enter a temple for a night's rest. Before he fell asleep some one came to the shrine, and having prayed and made an offering, went away. Anxious to see what the stranger had offered, Shôsetsu arose and found that a freshly severed head had been placed before the altar. He took it up and hid it, and then went away into a corner of the temple to rest. Without the moon was shining brightly, but the interior of the shrine was buried it pitchy obscurity. Shortly after the stranger returned, and finding the head that he had offered was no longer where he had placed it, commenced to search for it or hands and knees over the floor of the temple. Shôsetsu, making no sound, remained crouched in his corner. At last the stranger approached the spot where he was, and touching him with his hands commenced feeling him to see if he were a being. Shôsetsu bore the inspection without a movement for a moment or two, but finally unable to restrain himself any longer, he burst into a loud laugh. The astonished stranger hurriedly demanded who he was and what was his business in the temple, and both went out into the moonlight. Shôsetsu then told him that his name was Yui, that he was a descendant of the famous Kusunoki Masashige, and that he was now travelling on *musha shigiyô*. In reply to the inquiries of Shôsetsu, the stranger replied that he was a *rônin*, formerly a retainer of the house of Hôjô, by name Kanai Hambei. Shôsetsu then asked him for what reason he had offered the head. He replied that he himself was also on *musha shigiyô* and that the head was in pursuance of a vow, to make *kubi tsuka*‡. Shôsetsu at once challenged him, saying,

* Kusunoki Masashige was descended from the ancient and famous family of Tachibana, hence the boy's wish to called by that name.

† In those days it was the custom of a young men who wished to become famous as soldiers to travel through the country and take lessons in fencing and military accomplishments from all famous masters. They sometimes assisted those who were engaged in carrying out any *rendatta*, but their principal object was to excel in all those qualities most admired in a *samurai*.

‡ In those days the most reckless of the young *samurai* would sometimes take an oath before a certain God that they would cut of the head of a man in each of the sixty-four provinces of Japan, while or their *musha shigiyô*. These heads they buried under small mounds in each province in order to propitiate the God, and cause them to become famous warriors. Hence the term *kubi tsuka*,—head mound.

"We are both pursuing the same end, the attainment of military skill; let us see which is already the better man." The challenge was at once accepted and each drew his sword. There they stood face to face, these two youths, the bright moonlight flashing on their skilfully wielded blades, whose clashing alone disturbed the silence of the lonely place. For several minutes the combat waged desperately, when at last Hambei, receiving a slight wound, lowered his sword and said, "Sir, I yield the victory to "you. I am by a great deal your inferior. In future I "shall consider myself as your pupil and retainer." Shôsetsu at once put up his sword saying, "Now we must "go each his separate way, but some day or other we shall "meet again in Yedo." Thus they parted.

Shôsetsu now made his way southward and went to Shikoku. Thence he crossed to Kiushiu and went on to the island of Amakusa, everywhere taking lessons in fencing from whatever famous masters of the art he might meet, or trying his skill against all who had achieved distinction in swordmanship. After a while, crossing again to the main land, he went to the province of Kii, and made the acquaintance of Sekiguchi Hayato, in the castle town of Wakayama, who was the most renowned fencer in the whole province. Shôsetsu lost no time in having a trial with him, and succeeded in holding his own against him. Hayato accordingly engaged him as his chief assistant, and by the time he had held that position for a year or two, his fame became so great that the Lord of the Province desired to enrol him as one of his retainers. On account of some jealous interference, however, the intentions of the Prince were frustrated, and Shôsetsu, leaving Wakayama, turned his steps northward. As he was passing across the plain of Awano in the Province of Mino, he met a young man dressed as a *komusô*.§

Entering into conversation with each other, Shôsetsu proposed that they should sit down on a stone by the wayside for a while and rest. There not being room for both on the stone, the young *komusô* with his left hand bent over a young tree which grew by the road side and rested himself upon it, while he related his history, which was briefly that he was a *rônin* from Osaka named Katô Ichiyémon, whose father had been killed by Sakai Sanuki-no-Kami, but as this man now held the office of regent (Tairô) of the Shôgun, he had been unable to avenge his father's death. At one time, when Sakai went as representative of the Shôgun to preside at a festival at the Temple of Zôjôji in Shiba, where only women were permitted to be present, he had disguised himself as a woman, and gone to the festival with the intention of avenging his father's death by slaying his murderer, but he had been discovered and barely escaped with his life. His intention now was to perfect himself in swordmanship during his travels through the country, and to seize the first favourable opportunity of accomplishing his revenge.

Shôsetsu was in no slight degree moved by what the youth told him, and said, "I see that you are no ordinary "man. What you do is right and just in thus pursuing the "object of your revenge. I, too, have certain wishes to fulfil. "Let us have a bout in fencing and see how we stand "in respect of skill. He that wins shall be master, and "he that loses shall be follower, but however the match "may result we will both promise to assist each other in "accomplishing our plans." Ichiyémon agreed to this, and breaking branches from the tree to serve in the place of swords they set to. Shôsetsu overcame his adversary, and the latter acknowledging himself his follower they travelled on together for three days, when Shôsetsu being informed by his companion that a certain Kusunoki Fuden, a lineal descendant of the hero Kusunoki Masashige, was the most famous military tactician of the day, they parted company, promising to resume their acquaintance at Yedo on some future day.

Shôsetsu pursuing his journey northward, was passing over Iyahiko-yama, when he was attacked by a band of robbers numbering some seven or eight men. Shôsetsu managed to disarm five of them, without however doing them much harm, when they begged for mercy, which was granted them. One of their number then stepped forward and said, "My name is Kumagai Saburobei. I was "formerly a retainer of the House of Takeda, the *Daimio* "of Kai, but I am now a *rônin* and the chief a band of "highwaymen, who number three hundred and eighty." Shôsetsu advised them all to return to some honest calling, and proceed to Yedo, where he promised to find employment for them all.

Shôsetsu then set out for Yedo, where on his arrival he immediately called upon Kusunoki Fuden, the famous military professor of whom Ichiyémon had told him, at his residence at Ushigome, and found that he had about three thousand pupils, many of whom were sons of *Daimios*, and *samurai* of influence and position. He introduced himself, saying, "I am Yui Shôsetsu of such "and such a province, and having heard of your great "fame during my travels, I have for some years past "been desirous of being numbered among your pupils, and "hence on my arrival in the capital, have I come at once "to apply for any vacant position, however humble, to "which you may be pleased to appoint me." Fuden replied that no one could remain in his house without a surety, but that if it pleased him to do so, he might remain under his for roof a few days and rest from the fatigues of his journey. Shôsetsu, determined to let no opportunity slip, gratefully accepted the offer, and did whatever was required of him in the most diligent and skilful manner. So much so, indeed, that by the time he had been a week in the house, Fuden, recognising his splended abilities, told him that he might remain in his school, and that he would in his case waive the question of surety.

Shôsetsu therefore applied himself to his studies with extreme deligence, so that in a few years he surpassed his master's most famous pupils. During that time Fuden introduced him to most of the *Daimios* and *samurai* of rank, informing them that Shôsetsu was equal in all respects to himself both in literature and in warlike accomplishments, and that henceforward their sons could receive their lessons from him. Indeed, in a short space of time the impression became general that Shôsetsu was superior to his master.

(To be continued.)

§ This was a kind of fraternity in Japan, the members of which were distinguished by wearing deep hats reaching down to the chin, so that the face of the wearer could not be distinguished. They were mostly *samurai* in search of some enemy, and thus their peculiar headdress served to protect them against detection by the foe whose life they sought. The *komusô* were also provided with fifes, and on meeting each other exchanged recognition by a few notes on the instrument. A want of knowledge of the meaning of such notes was held to be proof of inferiority.

For the third time within two months we have to notice the effects of the flood tide coming up with a bore. In the first the *Glenroy* got adrift, and did serious damage to the P. & O. S. *Hindustan*; in the second, on Sunday, 9th September, the *Loudoun Castle* broke from her moorings at the P. & O. buoy, fortunately only just shaving the *Gleneagles*, and was then brought up with her own anchor; and the third time was yesterday afternoon, Sunday, the 7th instant, when the *Glenartney*, which was moored at the same buoy as that to which the *Glenroy* had been previously, similarly broke adrift, and although she immediately let go her anchor, it failed to bring her up. A tug quickly came to her assistance, but could do nothing against the strength of the tide, and the huge vessel, nearly laden with a cargo of tea, was driven towards the Hongkew Associated Wharves. Moored to the wharf was the Holt's line steamer *Ulysses*, and ahead of her the French mail steamer *Ava*. The *Ulysses* had some cargo boats alongside, against which the *Glenartney* drifted, and two of them were sunk. Four of the men on board of them are believed to have been drowned. The *Glenartney* then ran into the *Ulysses* doing considerable injury, and then swung against the *Ava* doing some damage to her stern. She was, however, brought up here, and made fast. On the turn of the tide two tugs took her in tow, and she anchored below the shipping. It is remarkable that on each of these occasions a Glen steamer is mentioned, but neither of them received much damage. These particulars we have collected from various sources; but we regret to say that the chief officer of the *Glenartney* to whom our reporter applied, was not one of them. We would suggest to that gentleman, that there are times in the lives of seafaring men, when the press is useful to them, and the *Glenartney* and its officers are among those who have lately felt the benefit of it.—*Shanghai Courier.*

A forcible illustration of the inconvenience arising from the Woosung bar is afforded in the case of the British ship *Taitsing*, Captain R. G. Johnston. She left Nagasaki on the 7th ult., and arrived at the Red Buoy on the 14th ult., where she was detained for nine days, owing to insufficiency of water for her to cross the bar. This is no isolated case, for few vessels are able to enter without being delayed for a longer or shorter time at Woosung.—*S. C. & C. Gazette.*

REPORT ON THE FINANCES OF JAPAN, BY MR. MOUNSEY, SECRETARY TO H. M.'s LEGATION.

(Continued.)

Ministry of Public Instruction.—Letters and learning came to Japan from China and Corea in very remote times, mention being made in Japanese annals of scholars from both these countries being brought over to impart a knowledge of the Chinese language, and books to the Mikado's Court as early as A.D. 300. The object of education was not, however, either at that period, during the dark ages, or under the régime of the Shôguns, the diffusion of knowledge amongst all classes of the people. It tended only to the preparation by means of special training, of a sufficient number of men to carry on the Government service. Thus, though the Shôguns and many of the great Daimios founded and maintained educational institutions of a high order, these were designed solely for the use of the Samurai class. The children of the common people were not admitted to Government schools, and all the education they received was at private schools or from private teachers. In spite of this exclusion, a very large proportion of the merchants, farmers and artizans are said to have been able to read, write, and keep their accounts.

Under the Government of the Restoration, the diffusion of knowledge of all kinds, amongst all classes of the people, was early recognised as essential to the advance of the country, and all the schools, both the old ones, which have been reorganized to suit the new system of education, now universal throughout the Empire, and the new ones, which have been and are being added to their number, are now open to scholars from all classes of society on equal terms.

The Ministry of Public Instruction was established in 1871, and the last report issued by it is for the year 1874. From it I extract the following data and figures :—

For educational purposes the Empire is divided into seven districts, and in these there were in the year referred to 20,017 elementary schools, an increase of 7,459 over the number open in 1873, 32 middle schools, 53 normal schools, 91 foreign language schools, and 2 Government colleges for special sciences.

The total number of pupils in these establishments was 1,730,179, 1,312,141 male, and 418,038 female, or 5·15 per cent. of the total population. This percentage is no doubt a small one, but if the increase in the number of pupils in 1874 as compared with 1873 viz., 568,966, is maintained for a few years, Japan will in this respect soon be on a level with the most advanced European nations.

The quality of the tuition being a subject beyond the limits of this report, I confine myself to remarking in regard to it that all special sciences are taught in foreign languages. Medical science is taught in German, but the report states that in future English, which has been used for all the other sciences, will eventually be substituted for it.

Of the 103 foreign instructors employed by the Ministry of Public Instruction 45 (40 male and 5 female) are English, 19 (17 male and 2 female) American, and the remainder are German 22, French 14, Russian 1, Swiss 1, and Chinese 1.

The total expenditure on elementary schools in 1874 was 639,055*l.* of which 216,169*l.* was raised by voluntary contributions, 291,722*l.* by School District rates, and 60,320*l.* by school fees. The Government aid to these schools was 60,000*l.*, and it also expended 128,628*l.* during the same year on the colleges and higher schools, as well as a considerable sum on the education of young men in Europe and America.

This Ministry employs 170 officials.

Ministry of Public Worship has 108 officials.

Ministry of Public Works is divided into seven Departments for Mines, Railways, Telegraphs, Lighthouses, Mechanics, Mechanical Science, and Repairs; and employs 889 officials.

Ministry of Justice, inclusive of the Central Tribunals at Yedo, has a staff of 1,370 persons.

There are 23 Provincial Courts in the country. Appeals from them can be carried in the first instance to one of the four High Courts at Yedo, Ozaka, Nagasaki, and Miyagi, and finally to the Supreme Court of Justice which sits at Yedo.

Ministry of the Imperial Household, 292 officials.

From the foregoing it appears that in nine of the ten Ministries (the last published list of officials does not contain those of the Ministry of Marine) there were up to January last, 6,039 officials, enjoying salaries varying from 960*l.* to 30*l.* per annum. The employment of such a large body of men in this way was probably one of the consequences of the Restoration. It was then found necessary to reward those who had fought in its favour, and this was at the time the easiest manner of doing so. Everyone was aware that there were far more hands in the Ministries than were needed for the work, and it is quite possible that the Ministers were only awaiting an opportunity to reduce their numbers when the Mikado's Decree of January 4, reducing the land tax to 2½ per cent., and the revenue by 8,000,000 yen, rendered this measure absolutely imperative. A curtailment of expenditure of a similar amount was ordered at the same time, and in consequence of this order, all the officials of all the Departments were dismissed, and only a portion of them re-appointed. I have not been able to ascertain the extent of the reduction, but there is no doubt that is has been very considerable.

Colonization Department.—This Department was established in 1871, primarily for the purpose of developing the resources of the island of Yezo, and secondly, for that of improving agriculture throughout the Empire by the introduction of foreign crops, stock, implements, and fruit trees.

Previous to 1862, the island of Yezo appears to have been a sort of *terra incognita* to the Japanese of Nippon. They had, it is true, carried on mining operations there at intervals from remote times, as long indeed as 620 years ago, but they knew little or nothing of the general resources of the island. In the above-mentioned year a preliminary survey of it was made by a foreign Engineer and geologist, engaged for the purpose by the Shôgun, but nothing further seems to have been done until 1871. The survey was then recommenced and was continued until the close of 1875.

From the reports of the surveyors, published by the Department, it appears that Yezo contains 35,739 square miles, and that it is very sparely inhabited, the principal part of the population being Ainos,* or "Hairy Men," who are supposed to be the last remnants of the aborigines of Japan, and who are described as a muscular, active race, docile and gentle, and living by hunting and fishing. The island contains coal, silver, sulphur, gold, and other minerals. The three first might, it is said, produce a considerable revenue, if properly worked, but the richest veins of gold appear to have been exhausted.

Besides its mineral resources, the island possesses petroleum wells, large forests of excellent timber, and a fertile soil, especially adapted to the growth of wheat, barley, and hemp crops, whilst the rivers and adjacent seas abound in salmon, cod, herrings, sardines, &c., and the sea otter. The climate, which is said to be healthy, is considerably colder than that of Nippon, and the winters are rigorous.

The Colonization Department has fixed the capital of Yezo at a place called Sapporo, which appears to be a well-chosen site, and has connected it, by means of a waggon road ninety miles in length, with the Bay of Mororan, where there is said to be excellent anchorage. About 100 miles of road have been made in other parts of the island. It has also established model farms and nursery gardens in Nippon, where foreign stock, grasses, fruit trees, &c., are acclimatized before being sent on to Yezo, and where scientific farming and the construction and use of European agricultural implements are taught.

A long time will, however, probably elapse before the island becomes a valuable property for Japan or its revenues cover the expenditure of the Colonization Department. For the inhabitants of Nippon show great reluctance to emigrating to it, and, according to the state-

* The census of 1872 gives the entire population at 163,668,—63,031 males and 60,637 females.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

ments of the surveyors, the Department has not yet attempted to counteract this reluctance by offering land on liberal terms. The fisheries, which if properly regulated might no doubt be a source of much wealth to the island, are now farmed out to Japanese, chiefly resident in Nippon, to the prejudice of the settlers, and the fish is cured in such a manner that it is unfit for any but the Chinese and Japanese markets.

Land Tax Reform Office was instituted in 1873 for the reassessment of the Land Tax.

Administration of the three Fus and thirty-five Kens.—The Fus are the cities of Yedo, Kiôto, and Osaka, and the Kens are the districts into which the Empire was divided for administrative purposes soon after the restoration.

There were originally sixty-eight Kens, but the number was reduced to thirty-five early in 1876, and a further reduction to twenty-three is spoken of. Each Fu and Ken is administered by a Governor and Vice-Governor appointed by the Mikado.

Police.—The entire police force of the Empire numbers 18,473 men; of these 6,000 are stationed at Yedo, 895 at Kiôto, and 606 at Osaka, the remaining 10,972 being distributed in the thirty-five Kens. The force at Yedo is maintained at the above strength, because, being the seat of the Central Government, bodies of men can be most easily detached thence to any part of the country where their services may be required.

The Shintô Shrines of Isé and other Shintô temples supported by central and provincial Governments.—The Shrines of Isé, a province about 200 miles south-west of Yedo, have the same importance in the eyes of Japanese as has Mecca in those of Mahommetans. Thousands of pilgrims annually flock to these shrines to purchase the charms against disease and misfortune of all sorts, which are there sold by the priests and are considered more efficacious than those dispensed at any other temple in the Empire.

Reconstruction of the Imperial Palace.—The Mikado's Palace at Yedo having been destroyed by fire in 1874, it has been decided to build a new one for His Imperial Majesty. The entire cost is estimated at 200,000*l*, and the construction of it is to be spread over five years.

The remaining items of expenditure either explain themselves or will be referred to in Part III of this report.

PART II.—*The National Debt.*

The uprooting of old institutions and the substitution in their stead of new governing and administrative bodies and forms, appear to have had one trait, at least, in common in all countries of the world; they have always resulted in the creation or augmentation of National Debt.

Japan has been no exception to the rule, though to a much smaller extent than is generally supposed.

During the feudal times the Shôguns and a great majority of the Daimios issued paper money of all sorts and values, even for sums as small as one-fifth and one-tenth part of a cent., which circulated within the limits of their respective provinces. In theory, this paper money was convertible; in practice, the issuer seldom held himself responsible for the payment of its equivalent in coin.

Soon after its establishment, the Central Government abolished these various currencies and substituted for them a uniform paper currency, handing over to each "Han," as the provinces were then called, a quantity of the new paper money, proportionate, more or less, to the amount formerly in circulation, and to its supposed wants. At the same time the Government assumed the responsibility of the debts which the Shôguns and Daimios had contracted during their administration of affairs.

The amount of these debts and the amount of paper money issued by the Shôguns and Daimios may consequently be said to have formed the national debt of Japan up to 1868; and the difference between the sum total of this debt in the year first mentioned and the sum total of the debt at the present day will show, to a great extent, the price which the Japanese have paid for the changes which have taken place in their Government and country during the last nine years.

The accompanying table contains the official statements of the debt, as published with the estimates of the last four and a half years. I insert the statements for the years 1873 and 1874, as well as that for the first six months of 1875, principally because they show even more clearly than do the estimates to which they are appended, the crude ideas regarding finance entertained at the time of their publication.

And loans repayable to Government.....	9,382,485	1,876,497
	37,723,901	7,544,780
Uncovered debt.....	111,200,823	22,240,164

With regard to the first of these statements, it is only necessary to remark that all mention of the rate of interest payable on the debt, as well as of the amount of paper currency in circulation, is omitted, and that the foreign debt there referred to is a loan raised in London in 1871 for the construction of the railway from Yokohama to Yedo.

The statement for 1874 is more specific. It mentions the rate of interest on the various loans, and makes the public acquainted with the existence and amount of the Reserve Fund. In it there appear two additions to the foreign debt, viz., 2,342,800*l.* and 303,000*l.* The first of these sums is a loan raised in 1873 for the purpose of capitalising the allowances and pensions of the Nobles and Samurai, and the second is the last instalment of the Shimonoséki indemnity. As this latter sum was not borrowed, but is mentioned in the Estimates of Expenditure for the year 1874 as having been paid out of the Reserve Fund, it ought not to have been inserted as an item of foreign debt.

In the third statement, that for the first six months of 1875, an account of the paper currency is given, but as the Vice-Minister of Finance informs me that this account is faulty, and that in general the three documents above referred to are incorrect, I pass at once to the statement attached to the Estimates of 1875-76, which, he says, contains a correct account of the public debt on the 1st July, 1875.

It will there be seen that there are four items of internal debt.

The 1st of these, bearing 4 per cent. interest, represents the debts contracted by the Daimios during the period which elapsed between the Restoration and the abolition of the Hans, 1868-71, *i.e.*, whilst they retained the administration of their provinces by appointment from the Mikado. His Majesty's Government assumed the responsibility of these debts in 1871, when the administration of the whole Empire passed into its hands.

The 2nd item of internal debt, bearing 6 per cent. interest, is the result of a financial operation of the Government commenced in 1873, and still continued, with the object of restricting the amount of paper money in circulation and preventing a deterioration of its value. The operation consists in allowing holders of fifty yen and upwards to purchase Government bonds bearing 6 per cent. interest, a certain number of which are annually drawn by lottery, and are then paid off in gold.

The 3rd item, bearing 8 per cent. interest, results from the scheme propounded in 1873 for capitalizing the allowances and pensions of Nobles and Samurai. It will be remembered that the Government then offered to all of these two classes, who voluntarily surrendered their hereditary pensions, a sum equivalent to six years' income, and to those who held annuities a sum equivalent to four years' income, payable, in both cases, half in cash and half in Government bonds bearing 8 per cent. interest. This item is nothing else than the amount of allowances and annuities capitalized under the above scheme.

The 4th item bears no interest, and represents the amount of debt contracted by the Daimios towards Japanese subjects during the fifty years preceding the Restoration. The Mikado's Government considered it an act of justice to assume the responsibility of this debt, and it was accordingly arranged that the period of payment should correspond with the length of the period during which the debt was contracted. It is consequently being paid off in instalments at the rate of one-fiftieth per annum.

The items of foreign debt having been already explained, I now come to the currency statement.

The Vice-Minister of Finance, who has furnished me with the above information regarding the internal debt, states that the amount of paper money issued by the Shôguns and Daimios, for which the Mikado's Government became responsible, was 49,000,000 yen (9,800,000*l.*). This paper money was, as above stated, replaced by an equivalent amount of Government paper money in 1868 and a further sum of the same currency of about 48,000,000 was issued between the years 1868 and 1870. This paper money is not convertible at present except in the way mentioned in my remarks on the 6 per cent. item of the debt; but as it is the avowed intention of the Government to render it convertible into specie as soon as circumstances will permit of their doing so, I do not hesitate to consider it as a part of the national debt.

The total amount of paper money issued by the Mikado's Government up to the present date is thus 97,000,000

Digitized by Google
UNIVERSITY OF CALIFORNIA

yen (19,400,000*l.*), and the amount in circulation on the 1st of July, 1875, was 94,803,819 yen (18,960,764*l.*).

From the foregoing it appears that the items of debt inherited by the Government of the Restoration from the feudal times are—

	£
1. The internal debt, bearing no interest and amounting on July 1, 1875, to the sum of	2,007,557
2. The paper money issued by the Shôguns and Daimios, amounting to the sum of	9,800,000
Total	11,807,557

It also appears that the debts incurred since the Restoration are—

	£
1. Internal debt, bearing 4 per cent. interest, contracted by the Daimios whilst administering the affairs of their provinces in the Mikado's name, and amounting on July 1, 1875, to.	2,408,313
2. The debt, bearing 6 per cent. interest, which is simply the temporary funding of an equivalent amount of paper money	447,710
3. The debt, bearing 8 per cent. interest, representing the amount of allowances and pensions capitalized up to July 1, 1875, viz	1,737,390
4. The amount of paper money in circulation on the same date, 18,960,764*l.*, minus 9,800,000*l.*, being the amount of the same inherited from the Shôguns and Daimios, *i.e.*	9,160,764
5. The foreign debt, raised for the construction of railways and the capitalization of allowances and pensions, amounting on July 1, 1875, to—	
(1) Construction of railways. 600,630	
(2) Capitalization of allowances and pension 2,295,552	
	2,896,182
Making a total of	16,650,359

As regards this total, it must be remarked, 1st, that item 3 and the second part of item 5 are self-redeeming loans, inasmuch as the interest paid upon them is compensated by the decreasing charge on the Treasury for the allowances and pensions of Nobles and Samurai; and, 2nd, that it is reduced by a reserve fund of 7,509,444*l.* in the hands of the Government, to 9,140,915*l.*

Hence the actual amount of debt incurred by the Government of the Restoration appears to be under 9,250,000*l.* sterling; and, considering the magnitude and extent of the changes which have taken place in this country during their tenure of office—viz., the reform of the entire administration, the creation of an army and navy, the adoption of an uniform system of taxation, involving the abolition of no less than 2,000 petty dues and imposts, the introduction of railways and telegraphs, the establishment of lighthouses and post-offices, the issue of a new currency, the extension of public instruction, and the initiation of a new code of civil and criminal jurisprudence—this sum does not seem disproportionate to the results obtained.

The sum total of the public debt on the 1st July, 1875, was 28,457,916*l.*, and according to the latest statement, that which accompanied the estimates of the current year, and gives an account of the debt on the 1st July, 1876, this sum has been increased during the year to 29,784,9·4*l.*

The items of debt in which there is an increase are the internal debt, bearing 8 per cent. interest, and the foreign debt, bearing 9 per cent. interest. As regards the former, the Vice-Minister of Finance informs me that it is entirely due to the settlement of claims arising out of the capitalization of allowances and pensions, voluntarily surrendered in accordance with the terms of the scheme of 1873. As to the foreign debt, he states that the increase (which is not absolute, but only apparent, as diminishing the amount of this debt redeemed during the year in question) is owing to the insertion in this statement of a small number of bonds bought in by the Government since the debt was incurred, and excluded from previous statements of the debt.

At the same time there is a slight increase in the reserve fund, which, as I learn from the same source, consists in round numbers of—

	£
Gold coin	4,000,000
Government paper money	1,600,000
Loans due to Government	1,900,000

The annual charge for the interest and redemption of the public debt was during :—

	1875-76. £		1876-77. £
Internal debt—			
Interest	378,848	...	380,733
Principal	124,388	...	366,630
	503,236		747,363
Foreign debt—			
Interest	218,167	...	211,689
Principal	147,727	...	151,236
	365,894		362,925
Total	869,130		1,110,288

Thus showing an increase in the latter year of 241,158*l.*, which is due to the addition made to the 8 per cent. internal debt.

Taking the average expenditure of the State during the two years 1875-76 and 1876-77, and the average charge for the interest on and redemption of the capital of the national debt during the same period, it will be found that the latter is under 8 per cent. of the former.

There will be a constant decrease in the charge for the foreign debt proportionate to the amount of capital annually paid off; the 9 per cent. item of this debt will be extinguished in five years, and the 7 per cent. item in 1895.

Part III.—*General Remarks.*

The following Comparative Table of the Estimates of years 1875-76 and 1876-77 was published, together with the Estimates of the latter year, in January last. The Minister of Finance then stated that a more retrospective comparison was impossible on account of the unsatisfactory manner in which the Estimates of the previous years had been drawn up, and the contents of this table must consequently form the basis of any general remarks on the financial position of the country, more especially as, until statements of actual revenue and expenditure are published, any speculation as to its future would be premature.

Comparative Table of Estimates of 1875-76 and 1876-77.

Revenue.

	1875-76.	1876-77.	Increase.	Decrease.
	£	£	£	£
Customs and other incomes from open ports	348,968	352,509	3,541	—
Land tax	10,301,193	9,311,349	—	989,844

Three Fus	110,772	90,504	—	20,217
Thirty-five Kens	749,278	741,996	—	7,282
Prefecture of Police in Yedo	200,000	239,000	39,000	—
General Police	120,000	150,000	30,000	—
Shintô Shrines	44,000	44,000	—	—
Repairs in Fus and Kens	274,000	327,800	53,800	—
Legations and Consulates	103,000	109,660	6,660	—
Miscellaneous	1,384,034	111,810	—	1,272,224
Fund for loans	300,000	100,000	—	200,000
Fund for contingent expenses	1,000,000	266,000	—	734,000
Total	13,699,701	12,598,769	—	1,100,932

According to this table the total decrease of revenue in the current year will be 1,118,525*l.*, and the total decrease of expenditure 1,100,932*l.*

The chief items of the former are :—

1. *The Land Tax*, the decrease in which is attributed to the introduction of the new system of levying it at the rate of 3 per cent. on the value of the land, as already described.

The effect of the further reduction to 2½ per cent. will not be apparent until the Estimates of the ensuing financial year are published, as the greater part of the tax for the current year had been collected previous to the promulgation of the Mikado's Decree of the 4th of January last. It is calculated that this measure will further reduce the Land Tax by about 1,600,000*l.*

2. *Tax on Allowances and Pensions*, where the decrease is due to the capitalization of the allowance, &c.

3. *Revenue of the Hokkaidô;* and

4. *Miscellaneous Receipts.*—The sale of Government property and the refund of loans.

The taxes which show considerable increase during the current year are those on fermented liquors and tobacco, and there is an increase in the revenue from the Post-office, Railways, Telegraphs, Mines, Mint, and Customs.

With regard to the latter, I may remark that the revenue from this source in 1873, exceeded that of any of the subsequent years, the receipts in the different Estimates being :—

	£
1873	364,782
1874	343,383
1875	348,968
1876	352,509

showing that there has been a slight decrease in the foreign trade of the country. The following figures, extracted from the Trade Reports of Her Majesty's Consuls, show the nature and extent of this decrease :—

	Imports.	*Exports.*	*Total.*
	£	£	£
1873	5,488,813	4,132,199	9,621,012
1874	4,844,726	4,000,327	8,845,053
1875	5,893,413	3,602,978	9,496,391

There is no doubt a general wish for a revision of the Tariff Clause of the Foreign Treaties on the part of the Japanese. They argue that it is illusory, inasmuch as it does not give them the stipulated 5 per cent. duty on many articles. On the other hand, the Yokohama Chamber of Commerce is, I believe, of opinion that it not only does this, but that in practice many goods pay as much as 7 per cent. It seems probable that an impartial examination of the working of the clause in question has not yet been made.

The items of expenditure in which there is an estimated decrease are :—

1. *Allowances and Pensions*, in consequence of capitalization.

2. *The "Fus," and "Kens,"* in consequence of the separation of their judicial and administrative functions, the control of the former being now placed in the hands of the Minister of Justice.

3. *Miscellaneous.* The large sum of 1,384,034*l.*, charged under this head in the Estimates of 1875-76, was accounted for at the time of their publication in the following manner :—

	£
Philadelphia Exhibition	50,377
Cost of refining gold and silver	8,990
Liquidation of allowances of Nobles and Samurai	1,019,240
Rebuilding of four bridges in Yedo	17,807
Advances for brick houses in Yedo	64,000
Loan to Mitsu Bishi Steam-ship Company	163,620
Loan to Bank of Yedo	60,000
Total	1,384,034

Some of these charges belong exclusively to the Estimates of the year in question. Those that occur in 1876-77 are provided for in the Estimates of the different Ministers, or, as in the case of the item, "Liquidation of Allowances of Nobles and Samurai," by an addition to the internal debt.

4. *Fund for Loans and Contigent Expenses.*—The decrease in these two items, which is merely apparent, is caused by the adoption of a new system in framing the Estimates for the current year. Instead of a lump sum being provided for contingencies, as was formerly the case, the expenditure of each Ministry is now calculated in such a way as to cover all its incidental and unforeseen expenses.

Amongst the items of expenditure in which there is an increase in the current year we accordingly find all the Ministries. The increase in their Estimates is, however, only partially due to the cause above mentioned, and the Minister of Finance attributes it, to some extent, to the enlargement of their spheres of action. In his explanatory letter he states, for instance, that the administrative functions of the Ministry of the Interior have become more comprehensive on account of the increased encouragement which it affords to industry ; that there is an increase in both men and armaments in the army and navy ; that the mining operations have been considerably extended by the Ministry of Public Works ; and that the establishment of more District Courts and the completion of the re-assessment of the land have caused additional expenditure in the Ministry of Justice and the Land Tax Reform Office.

A reduction of these Departmental Estimates has, however, already been decreed to meet the estimated decrease of revenue from the Land Tax, and it has been semi-officially announced that they will be diminished in the Estimates of the ensuing year by about 1,366,000*l.*

The other items of expenditure in which there is an estimated increase in the current year are the Redemption of the Public Debt, referred to in Part II of this Report, the Civil List, Council of State, Police of Yedo, and Repairs in Fus and Kens, none of which require any special notice.

Conclusion.

The tendency of Japanese financial legislation is to lighten the burdens on the land, which, besides the Land Tax, has to contribute considerable sums for local affairs. It was for this that the capitalization of the allowances of the Nobles and Samurai—a measure arbitrary, no doubt, but seemingly of absolute necessity—was decreed ; and it is also with this view that new taxes have been imposed, and that a desire is expressed for a revision of the Tariff

Digitized by Google
UNIVERSITY OF CALIFORNIA

Clause of the Treaties with foreign Powers and for the imposition of higher duties on the import of articles of luxury, at least.

The new taxes, with the exception of those on saké and tobacco, seem to be of a tentative nature, and it is difficult to foresee whether they will add materially to the revenue. It is equally difficult to say whether the Customs' receipts would be increased by raising the duties, whilst it is evident that time must elapse before manufacturing industry can become a source of much wealth to the country or of income to the Treasury.

The Land Tax must consequently long remain the chief item of the national revenue, and the encouragement and development of the agricultural resources of the country is a matter of the first importance. For the attainment of this end, peace at home and abroad, strict economy in all the public Departments, the establishment of easy means of communication by good waggon roads in the interior of the country, and the introduction of a convertible currency, are of urgent necessity.

If, as the Vice-Minister of Finance encourages me to believe, the Estimates for the last two years are tolerably correct, the financial position of Japan does not appear to be unsatisfactory, considering the progress already made, and should not discourage the Government of the Mikado in their endeavours to solve the problem which is before them, and which consists in the improvement of their country by the adaptation of all that is beneficial in Western civilization.

They have already shown that they are fully cognizant of one at least of the bases of national progress, by the importance which they have always attached to the diffusion of education amongst all classes of the population, and it would be unjust to suppose that they are not alive to the other causes of national prosperity.

Whilst closing this Report, I am informed by the Vice-Minister of Finance, that the Estimates for 1877-78 will be published before the commencement of the fiscal year —the 1st of July next, and that a statement of the actual revenue and expenditure during the last two years is now being prepared, and will likewise be published within a short time.*

(Signed) AUG. H. MOUNSEY.

Yedo, March 2, 1877.

---

* *Mr. Mounsey to Sir H. Parkes.*

Yedo, May 31st, 1877.

SIR,

With reference to the last paragraph of my Report on Japanese finance of the 2nd of March last, stating that I had learnt from Mr. Matzukata that the Estimates for 1877-78 would be published before the commencement of the fiscal year, the 1st of July next, I have the honour to inform you that, thinking the continuation of the Satzuma insurrection might have deranged the plans of the Minister of Finance, I called on Mr. Matzukata on the 25th instant to inquire if this were the case.

Mr. Matzukata told me that my surmises were correct, and that to his great regret, the Minister of Finance would be unable to carry out the intention which he had entertained up to the date of our last conversation on this subject. No one, he said, could at present foresee the date of the termination of the insurrection, and until an approximative calculation of the cost of its suppression could be made it would be impossible to frame the Estimates. He could not, therefore, fix any date for their publication, though he still hoped, notwithstanding the press of work in his department, that the publication of his statement of actual revenue and expenditure during the last two years (which is also referred to in my Report) would not be long deferred.

I told Mr. Matzukata that I thought the reasons he had given me for retarding the publication of the Estimates would be understood by all who had any knowledge of the difficulties with which the Minister of Finance had now to contend, but I remarked at the same time that it was very advisable in the interests of Japan to publish the last-mentioned statement at as early a date as possible.

Mr. Matzukata expressed his concurrence in this opinion, and thanked me cordially for the interest I take in these matters.

I have, &c.

(Signed) A. H. MOUNSEY.

ASIATIC SOCIETY OF JAPAN.

The opening meeting of the season was held in the Grand Hotel, Yokohama, on the evening of Saturday, the 13th instant, when the chair was taken by Mr. J. J. Keswick, Vice-President.

The Chairman having opened the proceedings and the minutes of the annual meeting of the 27th June, which are published in vol. v. of the Transactions, having been taken as read, the meeting elected His Excellency Monsieur De Struve, Professor Smith, Mr. Wilkinson and Mr. Dixon as a Committee of ordinary members to confer with the Council as to the desirability of amending the rules by charging an entrance fee to future members.

The Chairman then introduced to the meeting, Professor Morse of the Tôkiô Dai Gaku, recently Vice-President of the American Association for the Advancement of Science, who delivered a lecture on the Early Traces of Man in Japan. After rapidly describing the formation and the discovery of the best known shell-heaps of Europe and America, the lecturer related his own discovery of the shell-heap near Omori, and exhibited a large number of specimens that he had extracted from it.

The Chairman closed the proceedings by thanking Professor Morse in the name of the Society for his exceedingly interesting and instructive lecture, and expressed a hope that the meetings of the Society throughout the coming session might be favoured by as large an audience as were assembled on the present occasion.

Correspondence

TRAINING NOTES.

TO THE EDITOR OF THE "JAPAN WEEKLY MAIL."

Yokohama, 19th October, 1877.

Have you ever noticed, when listening to an eloquent lecturer, that the "firstly" and "secondly" makes your mouth somewhat water for the "thirdly," while from the "fourthly" to the "seventhly and in conclusion" your interest gradually wanders from the lecturer, and you begin to take more note of the hats, jackets, and faces by which you are surrounded. So is it with your readers and my letters, and for the past two days I have heard the probable contents of *Triton's next* far more eagerly discussed by Brokers, Bankers and Merchants than the price of silk and shirtings, or the rise and fall of "rates." You must, however, bear in mind that this is only my third letter.

The weather has been very much against training, and my notes, therefore, will not be so full of interest as they usually are during the week when the entries have closed. I heard on Monday that some prominent members of the Y. R. A. wished to have the Course set apart on certain days for trotting purposes, *vehicles of all kinds to be allowed.* I could hardly credit this, but on Tuesday afternoon, when seated at my usual post of observation, I was simply astonished to see a horse driven by an erst strong supporter of the Turf,—not either in a buggy or a sulky, but in a much heavier vehicle—apparently doing his mile against time, *on the Course,* while two others, well known in racing circles, were evidently taking time! This may be sport, but it is certainly bad taste to use the Course for such a purpose during training seasons, especially as the late rains have made it in such a state that it does not require the assistance of "wheels" to cut it up. All I can say to those it may concern, is, "*Don't do it again!!*"

The entries for the Y.R.C. were published on Wednesday, and are without exception the poorest that I have ever seen here, but notwithstanding this fact, I predict a pleasant meeting, and last, but not least, some good racing. It was generally reported that certain of the Y. R. A. ponies would have been entered, but I am told that this report was circulated as a *Sell.* If so, let me here congratulate the extremely clever originator of it (?) It reminds me of a somewhat similar joke that was proposed some years ago (on a 1st of April) at a *then* popular institution in Yokohama. "Let us, said B.," "make an

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

"April fool of S. *Sign for six tiffins and have none.*" If your readers work out the two cases they will find the result rather in favour of the parties on whom the *Sell* was to be perpetrated.

For the Tartan ponies I can only say it is a pity that they have not got better cattle and more of them to run against. *Bonny Doon* is really their only opponent, and he cannot go out every time against fresh ponies with any chance of winning.

Mr. Saville's *Not Proven* and *Talisman* are still very regular in their work, and will help to swell the fields, and this also may be said of Mr. Fritz' China ponies *Don Carlos*, *Wilhelm Tell* and *Faust*, notwithstanding the efforts of Col. Forrester to make them learn to gallop. The Japanese griffin is a good addition to this stable, and although rather weedy at present, will, in my opinion, be a good pony for next spring. He has been appropriately named *Fleur de Lys!* When I say *appropriately*, it occurs to me that this, and my former remarks about *The Viaduct*, may not be so comprehensible to all of your readers as they are to the favoured few who "cull the early worm," but now all shall be enlightened. It has occurred to some of our fellow residents that the settlement of Yokohama would be improved by the erection of some more ornamental buildings than those which we are now daily accustomed to gaze upon; what to build and where to build it, was for some time a question which greatly troubled those to whom the decision of this momentous question had been entrusted. At last, however, a brilliant idea has been put forward, which is, "to connect two of our principal streets by "means of an illuminated viaduct, fixed with steam lifts "for the convenience of light traffic and passengers, and "built in the shape of a "Fleur-de-Lys," the centre petal of "which will be so constructed that it may be utilized as a "clock-tower, while the outstretched petals on either side "will be brilliantly illuminated, and let out for advertising "purposes. I have to-day been favoured with an inspection of the plans for this building, and am authorized to say that it will be at the disposal of yourself and readers, early next week. You may think that I am digressing from my subject, but, for reasons I need not now explain, it is very desirable that your readers should be made aware of what is going on as regards the viaduct.

To resume, Mr. John Peel's *Ichi-roku* had a slight spin last Saturday, which I should think hardly satisfied his owner. He shows a strong propensity for the outside rails, which is a bad sign in so young a pony. *Grey Friar* wants more quick work if he is intended to carry off the Trial Plate, but even in his present condition he should be able to hold his own against his only two antagonists, *Wilhelm Tell* and *Satisfaction*. The latter appears to have quite lost his turn of speed, but I understand he is looked upon as a certainty for the Hurdles. *Exile* and *Professional*, which complete the new stable, go much better under their present trainer than they did last meeting.

Mr Mason has *Liddesdale* and *Silverspring* in training, but their attendance at the course and work is so very irregular, that I am afraid he must not expect too much of them.

I most not omit to notice *Vandal*, who has greatly improved during the last week, and I shall expect to see him justify the good opinion his owner has of him.

Mr. Fairplay finds fault with me for not making more mention of his stable. For the present I will only say that I think he might choose a more suitable day for galloping, and I promise him a fall paragraph next week.

In the early part of the week a notice was posted at the Grand Stand that the Y. R. A. meeting would take place some days earlier than had been advertised, and accordingly many of the ponies were set to quick work, but the Committee seem to have been moved by some unquiet spirit, and have now postponed the races till a *week after the original date fixed*. This augurs badly for the success of the meeting, and also for the number of spectators who will probably attend it. The Club races are quite late enough, but a fortnight later we may be expecting snow, etc., and will certainly be glad of Ulsters and rugs, not to mention other articles necessary to keep the cold out.

I have really no time to particularize the various stables of the Y. R. A. to-day, and since the postponement of the Races most of them have been conspicuously absent. I think that certain quadrupeds will be the better for a week rest, but on this point I should not like to speak positively without first taking "legal advice." Next week I will devote my letter specially to the interests of the Y. R. A., and the review of their programmes. *There's a treat!*

Yours truly,

TRITON.

P.S.—It might be as well if the acting Clerks of the Course would take the trouble to measure the various distances. The posts have nearly all been put up in wrong places. *Cui bono?*

THE KÔSHIU-KAIDÔ AND THE GALE OF THE 11TH.

TO THE EDITOR OF THE "JAPAN WEEKLY MAIL."

Kôfu, October 14th, 1877,

SIR,—The storm of which I wrote you on the 11th was unfortunately extremely destructive throughout the provinces of Kôshiu and Sôshiu. When I left the wrecked village of Ushino the morning after the gale, and proceeded towards Kôfu along the Kôshiu-kaidô, the fearful violence of the storm was everywhere perceptible in overturned houses and giant trees. Some of the groves of red pine on the hill sides looked as though they had been played upon by artillery. At Uye-no-hara, a large and flourishing village, I do not think there was a single house that was not partially or entirely unroofed, besides numbers that were flat on the ground. It was pitiful to see the poor folk searching for all their little belongings among the wreck of thatch and shingle. Here whole families sitting on a few planks with one or two joists and rafters to show where their home once was, with their broken furniture and drenched mats and clothes piled up in hopeless confusion. Here a poor old couple, who were too poor or too friendless to get any one to help them, struggling to set up a few planks and shutters that would serve as shelter for a few days. Others, again, standing in a kind of dumb despair doing nothing but looking at the mass of ruin which was once their house, and which now buried all they owned. And this not in single cases, but in every small town or hamlet the entire way to Kôfu—Sekino, Torizawa, Yayen-bashi—all have fallen under the same destruction. I have never seen so much discouragement on the faces and in the manner of the Japanese as I have witnessed since this storm. After a large fire it is always noticeable how cheerfully the people bear their losses and hasten to repair them, but this storm seems to have been so utterly strange to them, and to have brought loss and destruction from a quarter whence they never looked for it, that their general cheerfulness of disposition seems to have forsaken them. The really fine road which has been recently constructed to Kôfu, taking the place of the former Kôshiu-kaidô, was in some places so obstructed by fallen trees, mighty stems that crushed fully two and three feet into the solid ground where they fell, as to be entirely impassable except on foot and by scrambling over the trunks or through the boughs. At one village, a little off the main road, a fire broke out during the height of the gale, consuming about two thirds of the houses. Loss of life has not been so great as what one might have expected, as hitherto I have only learned of six deaths. Doubtless there are others off the main road of which I heard nothing. Kôfu seems to have escaped pretty well, probably from its being protected by the surrounding mountains. The extensive silk mills were, however, entirely blown down, the brick chimneys alone remaining standing. From what I saw of the ruins this morning I imagine that, although the buildings were supposed to be constructed in foreign style, they must have been put up in a singularly weak manner. I suppose like the rest of Japanese modern architecture, laths and beams were made to look very solid by a coat of mud and straw, but beautifully finished off with whitewash, which comes down with the first rain, and leaves hideous open wounds revealing the flimsy pretence of the whole.

Travelling after the storm was rendered trying to the

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

patience of any hurrying tourist—and all foreign tourists do hurry—by the almost utter impossibility to procure either coolies or horses for the transit of personal baggage, all being taken up in repairing damages. Thus to travel six *ri* required the time usually occupied in going twenty, and this in spite of the extreme politeness of the villagers and their wish to do all in their power to aid one in getting on. Delays are also caused by a very proper but irresistibly ludicrous precaution taken against the introduction of cholera into the Yamanashi *ken*. At Sekino, after crossing the Sagami river, on arriving on the high ground at the entrance to the village, I was called by a policeman seated at the door of a large farm house, and on my going up to him, was asked if I hailed from Yokohama. On my replying in the affirmative, I was politely told that as cholera was known to prevail in that unhappy town, I could not be allowed to proceed until I had been disinfected. I produced my passport, but was told that also, like its bearer, must be subjected to some deodorizing process. I of course said that I should be happy to undergo any precaution that would not end in my untimely decease, and my polite guardian of the peace begged that I would accompany him to the appointed place, which was a small boarded room, from whence as I approached emerged two natives who had just been pronounced disinfected. A chair was brought for me, and my faithful retainer and myself were shut in pitchy darkness, the shutters being hermetically sealed. Close to me was a large mud *hibachi*, on which was placed an iron pot containing a small quantity of some dark brown liquid. My conductor then left to call for more charcoal, and during his absense I took the liberty of inspecting the fluid. It was perfectly odourless. Urged by curiosity I dipped in my finger and tasted it, and found that it was only sweet like maple syrup. However, the charcoal was brought and the pan was put on, the policeman kindly keeping me company. I was quite thankful and happy when I found that there was to be no sulphur used, for my first fear was that I was going to be bleached in its fumes like a straw hat. After ten minutes of calm rest and peaceful conversation, during which time I could not detect the least vapour from the liquid, I was permitted to depart. I respectfully intimated that my baggage might contain some germs of the disease, but was informed that would receive attention elsewhere. So we parted with mutual polite salutations and good wishes, rendered the more profuse on my disinfector's part by a cup of brandy with which we had wiled away the ten minutes of imprisonment. At the further end of the village I was again politely arrested by another blue coated gentleman, who, pointing to a godown, told me that my baggage must there undergo fumigation. Of course I assented, and finding that I was not compelled to accompany my "traps," we sat at the door and talked cholera and disinfectants. This official told me that he did not know what disinfectant was used—it was called *sekitan-san*—and he very much doubted if it had the least efficacy, at least not in the way in which it was employed, and in this I quite agreed with him, but as the Government of the *ken* had ordered it, of course it was done. I asked him to give me a clean bill of health, but this he said he could not do, and that if I was again called upon to be fumigated in the course of my travels, I should have to submit. In about twenty minutes my baggage and two coolies came back, and here is the only cruel part of the treatment. Whether from mistake or from a desire to see what was going on, my two baggage bearers from a neighbouring village had been shut up in the godown with the baggage, and as flower of sulphur was a large component item in the stuff burned in the godown for disinfecting the belongings of travellers, their state was somewhat lamentable, and they came back smelling like old fashioned lucifer matches, and weeping bitterly brimstone tears.

P.

To the Editor of the "Japan Weekly Mail."

Yokohama, 16th October, 1877.

Dear Sir,—Commenting on the late case of "Beato *versus* the Master of the S. S. *Atholl* in your issue of the 13th instant, you state that you are glad to note the fact that the "defendant did not attempt to avail himself of "such a defence as was resorted to in a previous case of "the same nature by a wealthy corporation, the defence, "namely, that the damage complained of was caused by "the *negligence* of their own officers and that therefore "they were not responsible."

Your remarks are pretty conclusive that you do *not* allude to the case Beato *versus* The Peninsular and Oriental Steam Navigation Company, as on reference to the report (*Weekly Mail* of 11th November, 1876) you will find that no such defence was ever set up, nor is there any reason to suppose that the Company ever intended to take their stand on that clause, and my only object now in noticing your remarks is that they are calculated to mislead the public into the belief that this is the case you refer to.

Yours faithfully,

J. RICKETT, Jr.

Law Reports.

IN H. B. M.'s CONSULAR COURT, KANAGAWA.

Before Russell Robertson, Esq., Consul.

Monday, October 15, 1877.

John W. Price, a coloured seaman, was charged with assaulting the chief officer of the British barque *Clifton* with a bottle.

The prisoner pleaded self defence.

After hearing the evidence, His Honour sentenced the prisoner to one month's imprisonment, with hard labour.

On leaving the dock, the prisoner hit the captain of the *Clifton* a tremendous blow in the face, breaking his nose.

The prisoner was again brought before the Court, and received an additional sentence of two months' imprisonment, with hard labour.

IN H. B. M.'s COURT, KANAGAWA.

Before H. S. Wilkinson, Esq., Acting Law Secretary.

Wednesday, October 17th, 1877.

John Bradfield *vs.* John North.

The plaintiff claimed that the defendant entered into a contract with him to pay the sum of $3,000 in satisfaction of a promissory note given by Mr John Thompson (a partner in defendant's business) to the plaintiff for moneys had by Mr Thompson, and used in the business of defendant, the advances to Mr Thompson being secured by a bill of sale deemed by the parties to be enforceable against the property of Mr Thompson.

The defendant pleaded non-indebtedness.

Mr Lowder appeared for the plaintiff, Mr Dickins for the defendant.

Mr Dickins called attention to the fact that no cause of action was stated in the petition, and he therefore, under Rule 40, demanded that the petition be amended by stating facts amounting to a cause of action. On reading the petition, its gist would appear to be to compel performance of an agreement of sale. But in that case the defendant should be not John North, but John Thompson, and it did not appear that John Bradfield was the competent plaintiff.

Mr Lowder maintained that the petition was drawn in comformity with the rules, particularly rule 27.

His Honour ruled that the application was made too late by the defendant.

Mr Lowder then stated that this action was brought in pursuance of a contract made on the 1st June, 1876, between Mr Bradfield, of Shanghai, and defendant. Thompson's liabilities at that time consisted of $3,340 with interest since 1875, and this amount Mr North offered, through Mr Talbot, to pay to Mr Bradfield for Mr Thompson's interest and share in the business of North, Thompson & Co. As, however, Mr North experienced some difficulty, the total amount was reduced to $3,000, payable within 30 days, in return for which Mr Bradfield consented to transfer Mr Thompson's interest to Mr North, together with Mr Thompson's promissory note. The money, however, was not paid, and Mr North, when pressed, said he owed nothing.

Mr Lowder called as witness

W. H. Talbot, who was sworn, and said; I am a British subject and a public accountant. I remember receiving instructions in April, 1876, from plaintiff, in conformity with which I opened negotiations with defendant for the sale of plaintiff's share in the discount of a promissory note held by him (paper produced). That is the promissory note. I think it bears the signature of Mr Thompson; it is the same as that I have seen under letters from Mr Thompson. About the end of April I received an offer from Mr Brewer to buy plaintiff's one-fourth share of the business for $4,000. I sold the share for that price. I had told Mr North that I thought he ought to buy Mr Thompson's share, and he said he was anxious to do so himself. A meeting was arranged between Mr North and Mr Thompson on the 27th May, 1876. Mr North agreed to take over Mr Thompson's share. (Copy of letter, dated 23rd May, 1876, from Mr Thompson to Mr North, was read, to the effect that the former was willing to dispose of his share in consideration of the latter taking up the former's note to Mr Bradfield and paying himself $240 cash.)

Mr Dickins denied that the letter was ever received.

Examination continued: I wrote the letter by Mr Thompson's dictation, and saw it signed by Mr Thompson, and by him handed

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

to Mr North. Previous to 1874 Mr Thompson and Mr Bradfield were in co-partnership in Yokohama, and on the 13th March, 1874, their stock-in-trade was destroyed by fire. A new deed of partnership was then made out by me, and the little stock saved, together with some goods that were in process of landing, were transferred from the firm of J. Thompson & Co. to the new firm of North, Thompson & Co. The balance due to Mr Thompson when winding up the accounts of the firm of J. Thompson & Co. was found to be about $500.00, and Mr Bradfield then advanced $2,850.00 to make up the balance of Mr Thompson's fourth share in the new firm of North, Thompson & Co. This advance was secured by Mr Thompson's promissory note and a bill of sale on his share in the stock-in-trade. Mr Bradfield's share was finally transferred to Mr Brewer on the 31st May, 1876. (Letter, dated 22nd May, 1876, from Mr North and Mr Thompson to witness, produced and read, to the effect that they were agreeable to Mr Brewer taking over Mr Bradfield's share in the business, provided Mr Brewer paid up the whole of Mr Bradfield's share.) That share was paid up on the 31st May by Mr Brewer. Afterwards Mr North came to me and said he wanted to have Mr Thompson's share in the business, but that he could not afford to pay the whole amount due to Mr Bradfield by Mr Thomson. He said that if he knew where to find $3,000 he would settle the matter. (Letter dated the 27th May, 1876, from Mr North to Mr Talbot, put in and read, to the effect that the former was willing to pay $3,000 for Mr Thompson's share in the business.) I communicated this letter to my principal, and received his answer, which I communicated to Mr North. (Letter put in, dated the 1st June, 1876, and read, to the effect that Mr Bradfield consented to take $3,000, payable within 30 days, for Mr Thompson's share in the business, and, in consideration for that amount, endorse to Mr North Mr Thompson's promissory note for $3,340 with interest, discharge the mortgage registered in the British Consulate, and authorise Mr North to advertise the dissolution of the partnership.) Mr North told me it was all right, but did not accept it in writing.

Mr Dickins objected to the written evidence, produced by his learned friend, being supplemented by parole evidence. Being a contract, either for a sale over £10 in value, or of guarantee, involving an interest in land, the contract was bound to be in writing, and had, as a matter of fact, been put in writing, which excluded all parole evidence, unless on contemporaneous collateral matter; but what his learned friend wanted to prove by parole evidence was neither contemporaneous nor collateral, but posterior and principal matter.

Mr Lowder replied that the agreement, under which he was now suing, was not one that, under the Statute of Frauds, must necessarily he put in writing, and consequently parole evidence was not excluded.

Objection overruled.

Examination continued: I saw Mr North immediately after he had received my letter, and he said "it is all right." I saw an advertisement in the papers, dated the same day, the 1st June, in which North, Thompson. & Co. notified that the interest of Mr John Bradfield and Mr Thompson in their firm had ceased from that date. This I consider a proof of Mr North having accepted the agreement. I have since been in constant communication with Mr North up till the end of last year, endeavouring to comply with his request to borrow money for him to discharge some private bills of his own, some business matter and the $3,000 due to Mr Bradfield. It was between June and September 1876 that I tried to borrow the money. About the month of October, Mr Watson, who is assistant in Messrs. North, Thompson & Co.'s dispensary, called on me and told me that he wished to take over the liabilities to Mr Bradfield. Mr North asked me, whether I had any objection to that substitution. I told him that it made no difference to me who paid the $3,000, but Mr Watson never came near me afterwards. In the month of June, 1877, I was instructed by Mr Bradfield to close the matter, and I was obliged to press Mr North, whom I had hitherto forborne from pressing as he always told me that he was trying to raise the money. Mr North had never repudiated the agreement until the end of June this year. He said that he did not owe Mr Bradfield anything and was not going to pay him a cent. I then consulted counsel. I had no power from Mr. Thompson to sell his share, nor had I, as stated in the defendant's answer, frequently endeavoured to sell that share.

Adjourned until to-morrow at 10 a.m.

Thursday, October 18, 1877.

Mr Lowder said that the witness wanted to make a correction in his evidence yesterday.

Mr Talbot stated that he had said that the greater portion of the stock-in-trade of J. Thompson and Co. had been destroyed by fire. He should have said that the whole of the stock was destroyed by fire, and the goods transferred to North, Thompson and Co. consisted of those that were in process of landing.

Cross-examined by Mr Dickins: The letter from Mr North to the *Japan Gazette* ordering a certain advertisement, was obtained by Mr Lowder. I do not consider it a breach of confidence on the part of a newspaper proprietor to part with a letter addressed to him. I may have drawn up deeds. I have not drawn up documents in bankruptcy. I have acted as accountant to the firm of J. Thompson and Co. from 1870 to the time of the fire. At that time there was a balance due from Mr Thompson to Mr Bradfield of about $500. After the fire a claim was made for total loss. The value of the stock was $17,000. and it was insured for $10,000. The insurance money was paid almost immediately, and entered into Mr Thompson's accounts. The debt from Mr Thompson to Mr Bradfield arose partly from money overdrawn by Mr Thompson. On the day of the fire several cases of goods were landed on the hatoba. I afterwards paid $389 on account of those goods. I think that these particular goods arrived before the deed of partnership of North, Thompson and Co. was made out. I do not know that there is any entry in the books to prove this assertion of mine. All the goods that arrived before or after the fire and were taken over by North, Thompson and Co., were credited to Thompson and Co.'s capital account in the new concern. I consider these goods as included in the bill of sale from Mr Thompson to Mr Bradfield. I have read the deed of partnership. There is no reference in it to the bill of sale. When Mr Marks drew up the deed of partnership, I advised him of the bill of sale. (The 4th section of the deed of partnership read, according to which the capital was to be $11,400 half contributed by Mr North, one-fourth by Mr Bradfield, and one-fourth by Mr Thompson). Mr Bradfield's whole share was, however, not paid up until the end of May, 1876. I base my claim on the letters of the 27th May and 1st June, 1876, and on the verbal understanding arrived at on the 23rd May, 1876, and in a subsequent meeting either the same or one of the next days. I also refer to the letter written by Mr Thompson to Mr North on the 23rd May. Mr North did not offer to purchase Mr Thompson's share. I represented to Mr North that I, as acting for Mr Bradfield, held a security over Mr Thompson's share. Probably the discharge of this security was one of the objects of Mr North entering into negotiations with Mr Bradfield. His principal object was to obtain the transfer of Mr Thompson's share, but without the security being discharged he would probably not have bought the promissory note. Mr North did not directly tell me that it was his principal object to obtain Mr Thompson's share, but I presume it was. If Mr Bradfield had held no security on Mr Thompson's share, Mr North would naturally have transacted the business with Mr Thompson direct. The bill of sale was given as security for the $2,850 advanced by Mr Bradfield as Mr Thompson's share in the firm of J. Thompson & Co. There is no entry in the books to show that the money was paid by Mr Bradfield to Mr Thompson, but there is an entry crediting Mr Bradfield with $3,000 cash, $1,596 for goods, and cash paid by Mr Bradfield $1,104. The $3,000 were paid in 1874, the goods were transferred between 1875 and June, 1876, and the last entry of $1,104 was paid on the 31st May, 1876. Mr Bradfield paid in all $5,700. The bill of sale was given as security for capital advanced to the old firm, and in my opinion holds good against the new firm. Between June and Dec., 1876, I asked Mr North several times to fulfil the agreement. I never asked him in writing. I did not tell him that I held him responsible under the letters of 27th May and 1st June. I cannot mention any particular date on which I mentioned the matter to Mr North; no one was ever present. In June this year I told Mr North positively that I was obliged to have the matter settled. I was keeping the accounts for North, Thompson & Co. during the last year and was on intimate business terms with Mr North. His request to me to procure him money was not in writing He mooted the question of a loan to clear off all his liabilities, including the debt to Mr Bradfield. This latter debt was mentioned among his liabilities. At that time Mr North expressly recognized that he was to pay Mr Bradfield. That was about the time I wrote to you about money. I cannot recollect whether it was for that particular loan that I wrote to you. I have written repeatedly to you about money matters. I applied to Mr Kingdom and to Mr Grauert for money, without mentioning for whom it was. Mr North said that the money was required to pay off the liabilities of the business, and the security would be on his stock-in-trade. He said expressly that the money was wanted partly to pay Mr Bradfield $3,000. The demand I made upon Mr North in June last was not more formal than the demands I had made before, but it was the first time that he repudiated his obligation.

Adjourned until 2.30 p.m. when the

Cross-examination of Mr Talbot by Mr Dickins was continued: Between June and December, 1876, Mr North never repudiated his liability. I held a power of attorney from Mr Thompson when I made the agreement with Mr North. When Mr Watson saw me, it was with reference to the $3,000 due from Mr North to Mr Bradfield; it was not to purchase Mr Thompson's share. If there had been no security on Mr Thompson's share, and Mr Watson had come to me about its purchase, I should have declined to negotiate it.

Mr. Dickins asked witness whether he had written a letter to him, dated the 21st April, 1876, having reference to a loan?

Mr Lowder objected, as the question would make witness contradict his own evidence given this forenoon.

Objection overruled.

Cross-examination continued: (Paper handed.) This is the letter. (Read to the effect that Mr Brewer was desirous to purchase the shares of Mr Bradfield and of Mr Thompson, and for that purpose wanted a loan of $10,000.) That loan is different from the loan I spoke of this afternoon. I never mentioned to you that there was a bill of sale on the stock-in-trade. In the accounts of the firm there is no mention made of the bill of sale. In the accounts of a firm it is not necessary that securities given privately by a member of the firm should be mentioned. There was a report attached to the accounts, but the bill of sale was not mentioned in that either. About the 11th or 12th July this year, I wrote a letter to Mr Thompson, asking him to take up his promissory note for $3,440, with interest. I have not endorsed the promissory note to Mr North. The bill of sale has not been discharged. I should think Mr Bradfield had, in virtue of the bill of sale and by a clause in the deed of partnership, the power to prevent Mr Thompson to retire from the firm. There is no special clause in the bill of sale that gives Mr Bradfield any such power. Mr Bradfield's share was sold to Mr Brewer at the end of May, 1876. Both he and Mr Thompson were advertised on the 1st June, 1876, as being out of the firm. In my opinion, clause 10 in the deed of partnership ("neither partner shall dispose of his

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

share without the consent of the other partners,") gives Mr Bradfield the power to prevent Mr Thompson retiring from the firm.

Re-examined by Mr Lowder: I said this forenoon, under cross-examination, that the letters of the 27th May and the 1st June, 1876, and some verbal understanding arrived at on the 23rd May, were what I relied upon as forming the whole of the agreement upon which this case is based. I should have added Mr North's telling me that "it was all right," and the whole of the subsequent conversations. When Mr Dickins cross-examined me this morning with regard to my application to him for a loan, I was not aware of the date of the letter on which he cross-examined me. If I had been aware of that date, I should not have answered as I did.

Mr John Thompson was sworn and said, in reply to a question put by Mr Lowder; I am a resident of No. 33, Tsukiji, Tôkiô. I am very much opposed to giving evidence in this case. I remember an agreement being entered into in April or May, 1876, between myself and Mr North. The agreement was to the effect that Mr North was to pay to Mr Talbot the amount I owed to Mr Bradfield, and also $350, and the firm of North, Thompson & Co. was to give me credit for goods for my establishment in Tôkiô. I never knew the amount of my liability to Mr Bradfield. I admit that promissory note (paper shown). I am not still liable for that note. My liability ceased about April or May, 1876. My liability ceased because Mr North had made an arrangement with Mr Talbot, who was attorney for both Mr Bradfield and myself. The matter was arranged at a meeting where Messrs. Talbot, Brewer, North and myself were present. After my place was burned, in 1874, Mr Talbot made a deed of partnership, according to which I was not to return to Yokoham, but the firm of North, Thompson & Co. was to pay me a monthly subsidy. They did not pay the subsidy, and I returned to Yokohama, but could taken no active part in the firm. I did not sell to Mr North, in January of this year, my share in his firm. I was dangerously ill at that time. Mr North's assistant came up and wanted me to sign a paper. The date of the paper was not correct. He said they wanted to transfer the business to some other man. (Paper handed.) This is Mr North's handwriting.

Mr Lowder then produced a letter, dated 19th June, 1876, from Mr North to Mr Thompson, and read it. It contained a draught of a document, to be signed by Mr Thompson, acknowledging the liability of his establishment in Tôkiô for goods advanced by Messrs North, Thompson & Co., and also a demand that he would bind himself not to establish any druggist business within a radius of five miles from Yokohama.

Examination continued: I signed the documents demanded by that letter. I afterwards received an account from Messrs North, Thompson & Co., in which I was credited with $3,000, for which amount it appears I had sold them my share in the business.

Cross-examined by Mr Dickins: My agreement in Mr Talbot's office was partly in writing, partly verbal. I cannot tell the exact date, but it must have been in March or April, 1876. Mr North signed that agreement; it was made by Mr Talbot. (Paper handed.) That was not the agreement. (Letter of 1st June, 1876, produced.) I never saw that before. (A third paper handed in.) This is the agreement that was written by Mr Talbot, but it is signed by myself. It is dated the 23rd May, 1876. The verbal agreement took place on the same day. Under that agreement, I was to transfer my share to Mr North. From the date of that signature I consider myself as out of the firm of Messrs North, Thompson and Co. I do not think I owed Mr Bradfield a cent when I signed that promissory note in London. Mr Bradfield does not owe me anything, but in all probability, if the balance was properly rendered, he would owe me a great deal of money. I was the man who made the money for the firm, and he was the man who took money out of the firm. I received proper accounts from Mr Talbot; I did not examine them, I was sick at that time. The accounts were correct. Mr Bradfield was the most honest man I ever met in my life, too honest in fact to live.

Mr Dickins here appealed to His Honour to put a stop on the extravagant hilarity of the witness.

His Honour said he would order the cross-examination of the witness adjourned until to-morrow morning.

Mr Henry Cole was sworn, and said: My business place is at No. 85 Yokohama. I am employed on the *Japan Gazette*. It is our custom to publish annual hong lists. These are our hong lists, for 1876 and 1877. I did not personally receive from Mr North the information with regard to the *personel* of Messrs. North, Thompson & Co. I sent circulars to all the firms in town, requesting them to fill up and return the said circulars; the information contained in the circulars is transferred to a sheet, like that now produced in Court, on which eventual alterations are made, and which is then used as copy in the printing office. The proofs, when pulled, are sent into the office, and when there read the revises are again sent round to the firms for verification. This process was gone through with regard to the hong lists for 1876 and 1877. I produce the sheet containing the firm of Messrs North, Thompson & Co., and appertaining to the hong list of 1876. The corrections in that sheet are made by me from the circulars that had been sent round to the firm.

Cross-examined by Mr Dickins. I cannot swear positively that I got the circular returned from Mr North. I did not personally send the circular to Mr North. I cannot swear that the revise was sent by me to Mr North.

Mr Dickins called as witness

Mr John North, who was sworn, and said, I am a druggist; my place is No. 61. I cannot say whether I sent any corrected circular to the *Gazette* office in 1877. I do not remember any one coming to our place with a circular.

Cross-examined by Mr Lowder: I do not remember that I gave any information with regard to the hong list for 1877. (Paper produced). The name of "Morris" as assistant in my firm is in my handwriting. The partners mentioned here are Mr Brewer and myself. That information was supplied for the hong list, 1877, otherwise Mr Brewer's name could not have been there. Mr Thompson's name is left out, because he had retired from the firm as absent.

This concluded plaintiff's case.

The case was adjourned until to-morrow, at 10 a.m.

Friday, October 19th, 1877.

G. Hodges, Consular constable, sworn: I served a summons on Mr Thompson personally yesterday afternoon to appear here to-day. He has not appeared.

Mr Dickins then applied to the Court for a warrant to procure Mr Thompson's attendance.

His Honor complied with the request.

After the Court had waited some time, Mr Thompson made his appearance.

In reply to His Honour, as to why he did not appear at 10 o'clock, he said that he had left Tôkiô by the 9.30 train.

Cross-examined by Mr Dickins: I was perfectly in my senses when I was examined yesterday. I was not in the habit of overdrawing my account while I was in partnership with Mr Bradfield. (Power of attorney from witness to Mr Talbot exhibited.) This is my signature. I am not aware that that power of attorney was ever returned. I had a letter from Mr Talbot saying that the power of attorney was not in good form. I am not aware that Mr North ever signed any agreement, by which he took over my liabilities to Mr Bradfield, and consented to pay me $250.00, and give me goods on credit. Supposing my promissory note were endorsed to Mr North, I should not consider myself liable to Mr North. I would refuse to pay him. (Lease of premises for seven years from 1875, from Mr Kirby to the three partners, Messrs North, Bradfield, and Thompson.) This is my signature. The signatures of Messrs Bradfield and North look to me very much like theirs. No share in that lease has ever been assigned to me. Between March, 1874, the date of the promissory note becoming due, and June this year, Mr Bradfield's attorney has asked me for payment. That was about 18 months ago. Since that time and up till June this year I think I have not been asked for payment. In June or July this year I had some conversation with Mr Talbot and Mr Lowder whether I or Mr North was reponsible for the note. Previous to receiving a letter from Mr Talbot asking for payment, I had not been asked for payment during this year. (Paper exhibited.) That is a letter from me to Mr North, dated the 12th July this year, informing him that Mr Talbot had threatened me with legal proceedings to enforce payment of the note, and that I would come down and see Mr North about it. (Paper exhibited and read, to the effect that Mr Thompson transfers his share in the business of North, Thompson & Co. to Mr North, in consideration of $3,000.) This is my signature; that sale is dated the 8th January, 1877. I have since repeatedly verbally repudiated that sale. I repudiated it previous to my visit to Mr Talbot's office in July. Mr Lowder was there during my visit. There was no second promissory note from me to Mr Bradfield for $3,000.

Re-examined by Mr Lowder: When I said I "repudiated the sale," I meant that I looked upon it as no agreement. If the promissory note was endorsed to Mr North, I should refuse to pay, because I consider that he had purchased my share in the firm with its liabilities. (Paper exhibited). This is my signature; I put my signature to that paper, being solicited by Mr North's assistant and himself, to oblige Mr North, that he might be able to show to a third party that he had purchased my share. I was asked, first by Mr North's assistant, and afterwards by Mr North himself, to sign the document of January, 1877, in order that Mr North might be able to show to Mr Court that the business belonged to him. At the interview at Mr Talbot's office with yourself and Mr Talbot, I was not pressed for payment of the promissory note.

To the Court: I was not paid $250.00 by Mr North, because I have received goods from Messrs. North, Thompson & Co. From the commencement of my business in Tôkiô I have received several invoices from Messrs. North, Thompson & Co; the account now produced in Court, dated June, 1877, is the only properly balanced account that I have received. In the draught that was transmitted to me by Messrs. North, Thompson & Co., with regard our future business transactions it was stipulated that I should pay one-fifth of $2,000 monthly. I have not made that statement. With regard to my late arrival this morning, I have to state that I missed the first train, and I apologize for my late arrival.

Mr Dickins addressed the Court, and said: Previous to March, 1874, the defendant carried on business as a druggist, and a few doors from him was a rival establishment, the "Medical Hall," conducted by Mr Bradfield and Mr Thompson. About the 13th March, 1874, both establishments were destroyed by fire, and Mr Bradfield then proposed to defendant an amalgamation, which defendant accepted, much against the advice of his friends. Shortly afterwards Mr Bradfield went home, and by his improper conduct he brought the firm to the verge of ruin. Defendant, acting under a clause in the deed of partnership, consequently gave Mr Bradfield notice of dissolution of partnership Matters went on so until April, 1876, when Mr Bradfield sold his share to Mr Brewer. In fact Mr Brewer had become a partner already in March, 1876. Mr North also desired to get rid of Mr Thompson, and, acting on the advice of Mr Talbot, he opened negotiations with Mr Thompson for the transfer of his share. These negotiations were entirely verbal. These negotiations never became a final contract, and at all events the conditions were never observed by Mr Thompson. The promissory note was never mentioned during the negotiations. The only liability mentioned to Mr North was one of $3,000 on Mr Thompson's share in the stock-in-trade, secured by a bill of sale. The letter of the 27th May from Mr North, and

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

the offer therein contained was accepted by Mr Talbot's lette for the 1st June, 1876, but the latter epistle added certain conditions to the acceptance which were never accepted by Mr North. During the whole of 1876 no demand was ever made on Mr North to take up the promissory note, nor were the negotiations carried on during May and June looked upon either by Mr Talbot or Mr North otherwise than an offer. Wishing, however, to purchase the share of Mr Thompson, and knowing that nobody else than himself could, under the clauses of the deed of partnership, become purchaser of it, Mr North was during 1876 ready to enter into negotiations about that share. When he, towards the end of 1876, discovered that the bill of sale, held by Mr Bradfield, was no real lien upon the property, he broke off negotiations with Mr Talbot as attorney for Mr Bradfield, and opened direct negotiation with Mr Thompson, which resulted in Mr Thompson signing the document dated the 2nd January this year. Mr Thompson had tried in his evidence to insinuate that he had been the victim of fraud committed by defendant, but he trusted that he should be able to prove to the Court that if fraud there was, it was not on the part of defendant. The business relations between Mr Thompson and defendant went on swimmingly for a long time after, and it was only in July that year this Mr Thompson surprised the defendant by repudiating the sale.

Adjourned until 2 p.m.

On the Court resuming its sitting at 2 p.m.

Mr Dickins called the attention of the Court to the fact that the witness who was examined this forenoon had been to a gay tiffin yesterday with his learned friend and Mr Talbot.

Mr Lowder denied the assertion. Mr Talbot wrote to Mr Thompson yesterday to come down and give evidence, and wrote, "you had better tiffin with me," but as a matter of fact Mr Thompson did not come for tiffin.

Mr Dickins called as witness

Mr Arthur Watson, who was sworn, and said: I am assistant in the firm of Messrs North, Thompson & Co. At the latter end of September or the commencement of October, last year, I went to Mr Talbot with the intention to purchase Mr Thompson's share in the business. I informed Mr Talbot of the object of my visit, and he replied that he had already received offers from Mr North, but as Mr North had not come to terms, he considered himself at liberty to accept other offers. I did not offer to buy a promissory note, nor did Mr Talbot offer to sell me a promissory note of Mr Thompson's. Mr Talbot mentioned a bill of sale that was registered in the Consulate. In the latter part of December, 1876, I was requested by Mr North to go to Tôkiô to see Mr Thompson and ascertain whether he was able to pay what he owed to the firm, or, if not, whether he was willing to transfer his share in the firm. Mr Thompson said he was not able to pay, but he was quite willing to transfer his share, and if Mr North would draw up the deed, he would sign it. Mr Thompson was a little sick, but quite in his senses. Shortly afterwards Mr North requested me to accompany him to Tôkiô to witness Mr Thompson's signature to the transfer. We found Mr Thompson in his room; he declared his willingness to sign a deed of transfer and asked Mr North whether he had brought it with him. Mr North said, "No, but I can draw it up now." Accordingly he drew it up in pencil; Mr Thompson looked at it, said it would do and looked for pen and ink to sign. None was handy, and as Mr North was in a hurry to catch the train, he asked Mr Thompson to have it copied and sign it in presence of witnesses and send it down. Mr Thompson promised to do so the next day; but he did not, and the day after Mr North went up alone. Those times I have now stated were the only times I saw Mr Thompson on that business. Not the sightest persuasion was used either by me or by Mr North in my presence. Mr Thompson was perfectly sober. Mr North did not instruct me to say that the document was only wanted to show to a third party. I did not say so; if the share was to have gone to anybody besides Mr North, I should have liked to have it myself. In the latter part of June or the beginning of July, this year, Mr Thompson came one evening to the dispensary and said that he had had an interview with Mr Talbot and Mr Lowder, and that Mr Lowder wished him to transfer his share. I turned to him and said "You have transferred your share to us," and his answer was: "I did some transfer but it was no good? Mr North dared him to deny the transfer, which he had made with perfectly free will. Mr Thompson's answer was: "I do not know, they say it s no good."

Cross-examined by Mr Lowder: I called on Mr Talbot because I understood he had Mr Thompson's share for sale. Towards the end of 1876 I heard as a general rumour, that Mr North wanted to sell his share to Mr Court. I heard it neither from Mr North, nor from Mr Court. I do not know that Mr North wanted to sell his share. When I saw Mr Thompson in Tôkiô, he was according to his own account, suffering from pleurisy.

Mr John North was sworn and said: I am a druggist, doing business at No. 61, Yokohama. Previous to March 1874 I carried on business at No. 61. Mr Bradfield suggested to me after the fire that we should amalgamated the two businesses, "Medical Hall" and "Yokohama Dispensary." We came to terms, my capital, amounting to $5,700 was represented by the goods saved from the fire and other new goods. Mr Bradfield and Mr Thompson were to contribute the same amount. Mr Thompson was then in England. Mr Bradfield suggested that his and Mr Thompson's shares in the firm should be paid, partly in cash, partly in goods. Of these goods the first invoice arrived in April. These invoices were dated London, January and February 1874. No goods arrived for the new firm before April. Our private ledger was at that time kept by Mr Talbot (Ledger produced). When the new partnership commenced, in March 1874, there were no goods being landed on the hatoba. The above mentioned goods were credited to the account of Thompson & Co. in the new firm. There was some trouble in obtaining the cash payment from Mr Bradfield. I wrote to him in Shanghai, that unless something was speedily paid, I should consider the partnership at an end. This brought Mr Bradfield to Yokohama in August 1874, when he handed me a chque for $3,000. The remainder was not settled until May 1876, when Mr Brewer took over Mr Bradfield's share. No information was conveyed to me, when I entered the partnership, about the existence of a bill of sale or a promissory note. Mr Bradfield never mentioned that he had advanced Mr Thompson $2,850: he said he was acting agent for Mr Thompson and should pay Mr Thompson's money as well as his own. In September, 1874, Mr Bradfield went to England, where he remained consigning goods to the firm. He returned in September 1875. I consider that he paid for the goods he bought much too high. Whilst in England he drew on us for £197. He wrote that by the time the draft became due, he should pay it himself. When it became due he drew a cheque for the amount, with which he debited a grocery house in England instead of debiting himself. As I wanted to get rid of him as partner, I gave him notice of dissolution of partnership. I thought he charged the firm more for the goods than he had paid. For instance, he charged us 7s. for the ounce of quinine and looking into our price list I saw I could buy 100 ozs. at the rate of 7s. and as I had given an order for 2000 ozs., I should have been able to get it cheaper yet. After arriving at Yokohama, he said he should like to buy my share. Between his arrival in Yokohama and December the same year, he withdrew all the cash belonging to the firm from the Bank, and used it for his own private purposes.

Mr Lowder was of the opinion that all this matter was irrelevant to the case.

Examination continued: Mr Bradfield also sent orders home for supplies of goods in much larger quantity than required. A thorough supply of goods was ordered by him to arrive within three months. At the time the acceptances became due Mr Bradfield went away to Shanghai, and I had to meet our acceptances. At that time I fell sick and was sick for about three months. Mr Talbot and Mr Brewer came to me and mooted to accept Mr Brewer as partner. I told them that I would sooner have Mr Brewer as partner than Mr Bradfield. Mr Talbot told me that he thought he could raise what money I then wanted, but he did not succeed. Mr Brewer came from Shanghai in February 1876, and was an active member of our firm already in March (Bills, signed with Mr Brewer's name, produced). Mr Bradfield returned to Shanghai in February 1876. During all this time Mr Talbot was accountant for our firm and continued so until September, 1876. (Paper exhibited). There was a letter written in Mr Talbot's office on the 23rd May 1876, but I do not think it was this. There were negotiations between me and Mr Thompson to the effect, that I should provide him with goods on credit to the amount of $2,000 for his establishment in Tôkiô, and take over his share in the firm with its liabilities. Mr Talbot came to me and said that Mr Bradfield wanted Mr Thompson, and that Mr Bradfield held a bill of sale on Mr Thompson's share in the business, and as Mr Bradfield wanted money badly, he, Mr Talbot, would have to press the claim. He said that he thought Mr Brewer might purchase the share, but I said that I should like to purchase it myself.

Mr Lowder here objected to Mr Dickins prompting the witness. Mr Dickins denied the charge.

Mr Dickins eventually retracted the word "falsehood" but maintained the sense in which it was used, to wit, that it was a totally unjustifiable charge which Mr Lowder had brought against him.

His Honour was not quite satisfied with Mr Dickins retracting the word but maintainnig the meaning.

Examination continued: On the 27th May I wrote a note to Mr Talbot, stating that I thought I should be safe in offering $3,000 for Mr Thompson's share. Mr Talbot now for the first time mentioned that Mr Bradfield held a bill of sale on Mr Thompson's share. At this I expressed my surprise. I ought to have stated before that while Mr Bradfield was in Yokohama, he flashed a paper before me, saying: "See, what Thompson owes me" It was written in Mr Bradfield's handwriting. It was a promissory note for $3,000. (Promissory note produced). This is not the paper. There was no stamp on it. The present promissory note I never saw until the day before the yesterday. Mr Talbot said there was a promissory note, he did not show me the present promissory note. According to Mr Talbot, the purchaser of Mr Thompson's share would have to take up the promissory note, which was secured by a bill of sale. It was agreed on the 23rd May that in exchange for his share in the firm I should, besides giving him credit for goods, pay him $250. These $250 were never paid, Mr Thompson never asked for them. His share was transferred to me in January 1877. It was stipulated in my agreement with Thompson with regard to the goods furnished him, that he should pay me one-fourth of his receipts every month. He has never carried out that agreement. After I had written my letter on the 27th May, there was a meeting in Mr Talbot's office between Messrs. Brewer, Thompson, Talbot and myself. I made the offer that if I would get $3,000 I would purchase Mr Thompson's share. I was anxious to do so because of the bill of sale hanging over that share. Mr Talbot wrote me a letter on the 1st June, and called on me shortly after. He asked me whether I had received his letter. I said, "yes, all right." I meant that I had received his letter. I never accepted the conditions contained in that letter. I had offered that if I could raised the $3,000 within 30 days, I would purchase Mr Thompson share. I applied to you for a loan, and although you first thought you could procure it, you afterwards told me you could not. I looked upon my offer as having come to nothing. But I nevertheless said between June and December that if I could get the money, I would take over the liability. I was at that time in the position of a proposing purchasers with regard to Mr Thompson's share. That share could not be transferred to any one but myself. In September 1876 Mr Talbot made up an account; I did not ac-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

cept that account. I did not tell Mr Talbot that I would not sign it.

Mr Lowder called for the account; Mr Dickins denied having it.

Examination continued: Between June and December Mr Talbot repeatedly spoke to me about Mr Bradfield's money. I invariably answered that, if I could find the $3,000, I would buy the share, to which Mr Talbot answered that if I could not find the money he would have to sell the share to somebody else. I never contemplated buying the promissory note apart from the bill of sale. In October or November 1875, I told Mr Watson to see Mr Talbot about the purchase of Mr Thompson's share. The bill of sale I saw for the first time in the British Consulate about the latter end of November or the beginning of December. After perusing it, I came to the conclusion that I should take no further notice of the bill of sale, and I resolved to treat directly with Mr Thompson about his share. What made me go to Mr Talbot about the purchase of the share was that Mr Talbot had told me that there was a bill of sale hanging over the share. Before the transfer from Mr Thompson took place, I repeatedly asked him for money due to my firm. However he had no money, and after I had assured myself of the nature of the bill of sale, I asked him whether he had any objection to transfer his share to the firm on account of his indebtedness, I told him not to do so unless he was perfectly willing. This was in Tôkiô. He said he was perfectly willing and would send the transfer next day. He did not do so, and I went up again to Tôkiô and found him in bed between 8 and 9 p.m. I told him what I had come for, and he said, if I would write out the transfer, he would sign it. I wrote the document and he signed it. I never heard anything more about it until last July, when he came to my business place. He said he had just come from Mr Talbot's office. He had previously often told me he had received letters from Mr Talbot pressing him for Mr Bradfield's money. He now said that he had been in conversation with Mr Lowder, who had told him that he did not think the transfer of the share legal. I reminded Mr Thompson that I did not want the transfer, unless he was willing to give it, but now I should stick to its terms and I should not go and see Mr Lowder as I had been asked to do. With regard to a statement made by Mr Thompson this forenoon that he could not even get ten cents from the firm, while he was a partner, I am able to disprove it by written evidence. (The witness here produced several I. O. Us. for money, but the Court, on demand of Mr Lowder, refused to admit the evidence as Mr Thompson was not present.) On the 5th June, 1876, he borrowed $20; on 23rd May, $40, etc. For these sums I have Mr Thompson's I. O. U. which I am willing to produce. In the commencement of this year I went to Mr Talbot's office; he asked me when Mr Bradfield's money was going to be paid. I told him I had nothing to do with it. He then said "I know what you are referring to, you are referring to the bill of sale, but if you think that bill of sale void you are very much mistaken; the best legal authority in Yokohama has declared that the bill of sale still holds good over the share." No promissory note has been endorsed to me by Mr Talbot. No bill of sale over the share I bought has been discharged. Mr Thompson's share in the leasehold has not been signed by me. I consider that the transfer of the share carries the lease with it. Mr Dickins has produced an account between Mr North and Mr Bradfield, dated the 28th July, 1877, in which Mr North is charged with liabilities for Mr Thompson amounting to $4,400.

As it was now 5 p.m. Mr Lowder asked that the case he adjourned for cross-examination of the last witness.

Adjourned to Wednesday the 24th, 10 a.m.

IN THE U. S. CONSULAR-GENERAL COURT.

Before H. W. DENISON, Esq., Vice-Consul-General.

Monday, October 15, 1877.

JAMES R. ANGLIN *vs.* NORMAN WIARD

(Adjourned from the 17th September last.)

The Court rendered the following

JUDGMENT.

The plaintiff claims the sum of $129.65 as balance of account for work done and materials supplied. The defendant denies indebtedness.

The original claim of plaintiff against defendant was $279.65, and defendant, having paid $150.00 on account, the balance of $129.65 still remains unpaid.

All the items of the claim are admitted as correct by the defendant, with the exception of two, viz: "500 books, 28 pages, $158.00," "100 books (extra heavy paper) $42.00."

It appears from the evidence, that the plaintiff printed certain books for and delivered them to defendant, and also that defendant never returned them to plaintiff, and further that defendant made two payments to the plaintiff, amounting to $150.00, on account of the general claim, without at the time expressly disclaiming liability on account of the two items above named. It also appears that when defendant made the last payment, there was less than the amount of these two items due to the plaintiff.

These facts, in the absence of sufficient evidence to the contrary, raise the presumption that the work done was reasonably satisfactory, and also an implied admission on the part of the defendant that the amount charged therefor was reasonable and just.

Therefore, without going farther into the merits of the case, I feel compelled to allow the plaintiff's claim.

The judgment of the Court is that the plaintiff have and recover of and from defendant the sum of $129.69 and costs of Court.

(Signed), H. W. DENISON,
U. S. Vice Consul-General.

IN THE FRENCH CONSULAR COURT

Before H. PIERRET, Esq., Consul.

Messrs. A. CONIL and A. DEVEZE, Assessors.

Saturday, October 13, 1877.

HYVER *vs.* M. LABASTIE and TEISSIER.

Plintiff claimed that defendant, Miss M. Labastie, be ordered to make restitution to him of the property No. 42a, Nagasaki, called the "Oriental Hotel," and that defendant Mr Teissier be duly punished for having assaulted him with insulting language and violence.

Defendants demanded that the case be dismissed.

The parties were present in court.

Mr C. Michel appeared as counsel for plaintiff, Mr Montagu Kirkwood for the defendants Labastie, and Mr Houseal for the defendant Teissier.

Mr Michel, in opening plaintiff's case, stated that plaintiff, who was proprietor of the "Oriental Hotel" in Nagasaki, had for a number of years been living with defendant, Miss Labastie, although not married to her. In the year 1875 he found himself involved in debt, and to make sure against his creditors stripping him of everything, he in January, 1876, wrote and signed a document, by which he transferred his landed property No. 42a, to Miss Labastie, who had the document registered by the Acting French Consul in Nagasaki, Mr Marcus Flowers. Plaintiff, however, remained in possession and control of the hotel and paid the expenses incident to its administration. In July the same year he resolved to try his luck in Vladivostock, and he made a voyage thither with Japanese merchandize. The speculation proved successful, and be returned to Nagasaki in September. On his return he found the defendant, young Mr Teissier, installed in the hotel, and he did not long remain in doubt about the character of the relations between him and Miss Labastie. Although his own relations to that lady had for a length of time been merely of a platonic nature, he and Mr Teissier had frequent quarrels, and Mr Teissier went so far as to call him a thief and to break his head. Miss Labastie then threw off the mask and told him the hotel was hers and he must leave, and as she was supported by the Consul, he had to quit the house. He then rented for $25 a month a small house on the premises from Miss Labastie, but this also he had to leave on account of a quarrel that rose when he demanded his furniture, and to obtain the same had to apply to the Consul, who sent the constable to see that he got what belonged to him, but before the arrival of the constable Miss Labastie had made away with most of the furniture.

Mr M. Kirkwood replied on behalf of the defendants. He said, that the plaintiff, Mr Hyver, had been living for nine years with defendant Miss Labastie, and had always promised her marriage, but for want of some necessary papers the marriage had not taken place. In gratitude for her services, and in order to secure her against want, in case anything should happens to him, he had in January 1876 executed an instrument of donation, by which he transferred his hotel in Nagasaki to her, and he had that instrument registered by the French Consul, who had certified that the transfer had duly taken place. The transfer had been made in the same way which such acts are usually made. It had never been customary for the Acting French Consul in Nagasaki to send such documents to Yokohama for registration. Hyver remained in the hotel until he went to Vladivostock, but he often mentioned the satisfaction he felt at having secured her against want. In the meantime Miss Labastie acted as proprietor, she paid insurance, and she paid ground-rent. After plaintiff had returned from Vladivostock, he made himself disagreeable in the house and showed signs of being jealous of Mr Teissier. He repeatedly said that he knew very well that Miss Labastie could put him out of the house, but at all events the furniture was his. The learned gentleman here produced a certificate from the Consular constable, dated November 1876, that Mr Hyver had received all his furniture with the exception of a small bed with mattresses and a washstand, which he had given to Miss Labastie for her own use. Unless he had himself known that Miss Labastie was the real proprietor, he would certainly not have rented a house from her and paid her $25 rent a month. Mr Kirkwood further produced a certificate from several residents in Nagasaki as to the good conduct of Miss Labastie.

Mr Michel produced the last receipt for ground-rent of No. 42a, and pointed out that it was in the name of plaintiff.

Mr Kirkwood objected that the document produced was only a copy of a receipt, and naturally more attention had been paid to the amount paid than to the name of the person by whom it was paid. He produced a number of the *Cosmopolitan Press* for June, 1876, containing the report of an action brought against plaintiff before the Acting-Consul, Mr Flowers, in which plaintiff had stated himself that he was not the proprietor of the "Oriental Hotel."

The case was adjourned until Tuesday, the 16th instant, at 10 a.m.

Tuesday, October 16, 1877.

Mr Mitchel produced a number of bills that had been paid by Mr Hyver on account of the "Oriental Hotel;" and further produced a list of the furniture that had not been restored to his client, and said that the later had instructed him that he, besides the $4,300 which he had mentioned at the last sitting of the Court as spent by his client on Miss Labastie, had further furnished her with board and lodging, and pin-money during the last ten years, the total amount of which could be no less than $3,000, so that his client had in fact already paid her over $7,000 in return for her personal services. Mr Michel then proceeded to plead the cause of the plaintiff: He said that the transfer from Miss Labestie to Teissier of the property No, 42a was entirely void, and as the plaintiff had during the term of a

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

whole year been deprived of the use of his hotel, and thus been debarred from partaking in the profits arising from the continuous passage of troops throughout Nagasaki, and as his furniture had partly disappeared, he claimed, besides restitution of the property damages to the amount of $1 539, and that defendants pay costs.

Mr Kirkwood replied on behalf of the defendant Labastie. He said that Miss Labastie arrived from France with Mr Hyver in the year 1867, and had since cohabited with him. He had not fulfilled his promise of marriage, but instead of that he made her owner of his property the "Oriental Hotel." The act, by which that transfer had taken place, was not a *donatio inter viros*, because the transfer was by no means gratuitous. It was a contract, for the transfer had been made in consideration of past cohabitation and services rendered since 1867. While a transfer of property with a view to future cohabitation might be immoral, a similar transfer in consideration of past cohabitation was not, because it was an indemnity for the wrong done to the woman by the man. The transfer was not actually a transfer of property, it was only a transfer of a lease But even supposing the Court should consider the transfer as a *donatio inter viros*, it could scarcely in equity reject it. It might perhaps not hold good against the creditors of plaintiff, but it ought certainly to hold against plaintiff. Counsel for the plaintiff had stated that plaintiff had made the transfer with the object of depriving his creditors of their due. In that case both the litigants were in *mala fide*, and his client would have the advantage derived from actual possession. If the certificate of the Acting French Consul at Nagasaki was to be considered as of no value, then all similar transactions, formerly made in the presence of the Consul, would be null. The plaintiff ought to be ordered by the Court to make a transfer of the property in due legal form. French law declares a donation void in consequence of ingratitude on the part of the receiver of the gift, but as proof of such ingratitude it mentions refusal of food, not merely to put the donator in the street. If the Court should find for plaintiff, then his client demanded that time be given her to wind up the affairs of the hotel, and to find another house, and that plaintiff be made to repay his client what she had disbursed in ground-rent and otherwise on account of the "Oriental Hotel." But he cherished the hope that the Court would dismiss the claim of the plaintiff, because he had no right to make such claim, and did not come into Court with clean hands.

Mr Houseal, on behalf of defendant, Teissier, said that the Acting French Consul at Nagasaki had declared it impossible for him to enumerate all the complaints he had received against Mr Hyver whose commerical morality was notorious both in Nagasaki and Shanghai. To show what plaintiff's character was, he produced a notice that had been posted through Nagasaki, and of which plaintiff had acknowledged the authorship (The Court refused to take congnizance of the same). Plaintiff had engaged his client as cook for the hotel, and when plaintiff returned from Vladivostock, his client demanded his wages, but could obtain none. A fortnight afterwards his client made a contract with Miss Labastie, by which he consented to remain on condition that plaintiff must not put his feet into the kitchen. As plaintiff was ruining the custom of the hotel by constant quarrelling with the guests in the coffee room, Miss Labastie was persuaded by her friends to transfer the hotel in the name of his client, who accepted the transfer in good faith. The Acting Consul had declared this transfer to be in perfect good order. As to the restitution of furniture claimed by plaintiff, the Consular constable had certified that plaintiff had got all his furniture, and he, himself, had been informed how plaintiff had tried to persuade a certain person to sign a declaration about plaintiff having had certain pieces of furniture, which he in fact had never possessed. He demanded that the complaint be dismissed, and called as witness

Jean Videau, a French subject, resident of Shanghai, who deposed that he, in the course of last year, received under envelope from his brother, then at Nagasaki, an advertisement, cut out from a Nagasaki newspaper, in which Mr Hyver notified to the public that he had nothing further to do with the "Oriental Hotel," of which Miss Labastie was the sole proprietress.

M. Michel observed that plaintiff had always kept in his own hands the control and direction of the hotel. Teissier had not a cent when the hotel was transferred to him, and when he made the astounding promise to pay for it by his work during the next two years.

M. Houseal replied that the promise was not so astounding, as the whole property was not worth more than about $600.

Adjourned until 2.30 p.m

On the Court resuming its sitting

Miss Labastie was called by the Court. The different items of the accounts current handed in by Mr Hyver were read out to her. She protested against a part of them as incorrect. She denied ever having given Mr Hyver a contra-document to prove that the transfer of the property to her was only *pro formâ*. Mr Hyver and the Consular constable removed everything belonging to him. Mr Hyver did not pay any debts of the hotel after his return from Vladivostock. She made the transfer of the hotel to Teissier, because she was tired of the ill treatment she received from the hands of Hyver, and intended to run the hotel herself with the aid of Teissier. She had no doubts with regard to the perfect legality of the transfer from Hyver.

Mr. Michel said, in reply to a question from the Court, that he had caused to be summoned as witness M. Dury, who was Acting French Consul at Nagasaki at the time of the transfer from Hyver, and who would depose that he had told Miss Labastie that the transfer was not legal. However, his witness had not appeared.

Miss Labastie denied that the Acting Consul had told her any such thing.

His Honour said that he had received a letter from Tokio; in which M. Dury excused himself from attendance to-day.

M. Hyver addressed to the Court several explanations, which he wound up by feelingly appealing to the Court to order Miss Labastie to render him the chain belonging to a locket in his possession, which, he said, was an heirloom.

Mr Kirkwood, at the request of the Court, read the arguments which he had pleaded *viva voce* during the forenoon session.

M. Hyver was asked by the Court what he meant by the word 'transfer" in the documents? He replied that at that time he was sick in bed, and that Miss Labastie feared he might die, and asked him to transfer his property to her.

M. Michel remarked that Mr Kirkwood had said that the act of 1876 was not a donation, but he had not explained what, in that case, it was.

M. Houseal then addressed the Court on behalf of his client.

Judgment to be given on Wednesday, the 24th instant, at 10 a.m.

IN THE IMPERIAL GERMAN CONSULAR COURT.

Before E. ZAPPE, Esq., Consul.

Saturday, October 13, 1877.

Messrs. CARL RHODE and R. RIEFF, Assessors.

Theodor Wilhelm Holm stood charged with embezzlement from his employers, Messrs Copeland and Wiegand.

Accused, who is in prison for another offence, was brought into Court by the Consular constable, and after undergoing a detailed examination with regard to the beer-accounts of the messes of the man-of-war *Elisabeth*, received his sentence.

The Court found him guilty of the charge, and ordered him to be imprisoned for six months and pay costs.

The following is a translation of the sentence passed on Theodor Holm.

In the name of the German Empire.

In the criminal action against Theodor Holm, born at Billeverder, near Hamburg, at present in Yokohama and without occupation,

The Imperial German Consular Court at Yokohama, in its session the 13th October, 1877, where were present, E. Zappe, Esq., Consul, Messrs. R. Reiff and Carl Rohde, Assessors, has found the accused Holm guilty of a series of embezzlements, in concurrence with a further act embezzlement, and sentenced him to be imprisoned during six months and to pay costs.

THE REASONS.

Theodor Holm, who was beer seller for the brewery of Messrs. Copeland and Wiegand, at Yokohama, was charged with having during the month of August 1877, at five different times, disposed, for his own profit and to the detriment of his employers, of several quantities of beer, which had been handed to him for sale; further with having received and appropriated an outstanding debt, amounting to $205.77, which he had been ordered by his employers to collect from the several messes on board H.M.S. the *Elizabeth*. The charge was laid against the accused by the brewer Mr Wiegand on the 5th September.

From the evidence given it appears that Holm had to dispose of the beer handed to him in the following manner. He received every morning a certain quantity of beer into the beer-waggon, of which he had charge, and this beer he had to deliver in town, either against cash payment, or on credit against chits. Holm accounted for the business transacted by him during the day, in this manner, that he every evening, or at the latest on the next morning, delivered to the book-keeper of the brewery either the cash, or the chits given to him by those who had taken beer from him. The bookkeeper then gave Holm his discharge for the beer the latter had received in the morning. The money for what beer had been sold on credit was collected by the brewery, at the end of each month, according to the tenor of the chits. Holm has

1.—*a*—Sold to D. Mackenzie in the month of Aug. 1877, 10 gallons and two doz. quarts of beer, but charged the brewery as if he had sold 25 gallons, 7 doz. quarts and pints of beer, and appropriated to his own use the surplus of 15 gallons, 5 doz. quarts and 6 doz. pints: Further

b.—He has in a similar manner, in the month of August 1877, appropriated 5 gallons of beer by selling R. McCance only 1 doz. pints of beer, but charging the brewery as if he had sold 5 gallons and 1 doz. pints: again

c.—In the month of August 1877, 10 gallons of beer, by selling to C. Michel only 2 doz. pints, but charging the brewery as if he had sold 10 gallons besides: again

d.—In the month of August 1877,20 gallons of beer, which he charged the brewery as sold to D. Pierce, although he had not sold it: again

e.—In the month of August 1877, 5 gallons of beer, which Holm charged the brewery as if he had sold it to W. Andersen, although he had done no such thing.

2.—He has in the month of August collected the amount of of $180.67, due for beer sold by him to the several messes on board the man-of-war *Elizabeth*, but he has not accounted to the brewery for this money, but kept it for himself.

According to Sec. 246 in the penal code, whosoever unlawfully appropriates to himself another man's property, that has been entrusted to his keeping, is guilty of embezzlement. The acts of the accused amount to this crime. He has kept for himself part of the beer that was daily entrusted to him for sale, but charged the brewery with it as if it had been sold to customers, and thus manifested his criminal intention to appropriate it; in the same manner he has received the sum of $180.67, which his employers had ordered him to collect from H M.S. *Elisabeth*, and has proved his criminal intention by concealing the fact that he had received the money, and making his employers believe that he had not received it, when he had already spent it for his own purposes.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

The charges, mentioned under 1 *a* and *b* and 2, have been confessed by the accused, and are besides proved by the sworn evidence of Mackenzie, McCance, Eaton and Liedtke and by the receipts on file, which have been requisitioned from the Commander of H.M.S. *Elizabeth*. With regard to the charges mentioned under 1. *c*, *d*, and *e*, accused denies them, and contends that he has truly sold and delivered to Michel, Pierce and Andersen what beer he has charged the brewery. But the above persons have all testified on oath that they never received those quantities of beer which the accused alleges to have delivered, and their testimony is corroborated by the evidence of the Japanese *bettos* Rokusaburo and Kagoyama Sankichi, who state that the beer has not been delivered at the residences of the above-named persons, as alleged by the accused. The accused must, therefore, his denial notwithstanding, be considered as also convicted of these last named offences.

The charges brought against the accused have been considered as constituting two separate crimes of embezzlement. Those mentioned under 1—*a*—*e*, have been considered as being in close, mutual, and uninterrupted connexion with each other and consequently, according to the system of the penal code, as a single continuous offence; while the charge mentioned under 2 has the character of a separate offence, and ought therefore to be punished as such.

The crime of embezzlment of objects entrusted to the care of the embezzler is, according to Sec. 246 of the penal code, to be punished with imprisonment during a term not exceeding five years; wherein, however, is to be observed that, according to Sec. 74, when there is a concurrence of several punishable offences, the whole term of imprisonment shall be more than that awarded for the graver offence, and less than the collective amount of the several terms of imprisonment incurred respectively for each single offence.

In conformity with this legal provision, the accused has been sentenced to only six months' imprisonment on both charges, although he had made himself liable to four months' imprisonment for the offence of continued embezzlement, and to three months' imprisonment for the offence mentioned in *sub* 2.

Costs to be paid according to Sec. 178 in the Ordinance of 3rd January, 1819.

(Signed) ZAPPE

CARL ROHDE.

R. REIFF.

IN THE JOTO SAIBANSHO, TÔKIÔ.

Before Mr. ITÔ KENKICHI, *Hanji*.

Tuesday, October 9th, 1877.

N. P. KINGDON *vs.* GOTO SHOJIRO.

This case, which was heard on appeal from the Tôkiô Saibansho, was for a claim of $96,250.00, damages for alleged breach of contract.

Mikuri Nakasane, a resident of Tôkiô, appeared for plaintiff, and Shirai Masao, a *shizoku* of Hiogo *ken* and a resident of Tôkiô, for defendant.

Plaintiff's statement was to the following effect: At the request of defendant, plaintiff had consented to endeavour to raise a loan of $1,000,000 in Mexicans; he took the necessary steps, and when he, in May, 1876, had a fair prospect of obtaining the money, he requested defendant to hand him a sufficient power of attorney and the deed, but the documents, which he received from defendant, were perfectly useless. He therefore, after consultation with Takaya Chozo and others, drew up a power of attorney and a deed, and sent them to defendant with a letter dated the 5th June, 1876. On the 8th of the same month he received an answer from defendant, who said that he agreed to the first three articles in the deed, and promised to return the documents before the 16th June, when plaintiff was to set about procuring the loan. But on the 15th June, defendant sent word that he wanted to see plaintiff; as, however, plaintiff was sick at that time, he excused himself. At that time plaintiff had already become somewhat suspicious, and, when he recovered from his illness, he did not go directly to see defendant, but he went on the 18th June to the house of Miura Yasu in Tôkiô, to make enquiries about a second contract, which an entry in the pocketbook of Fakita Hisanori caused him to believe had been made on the 27th March between defendant and Messrs Jardine, Matheson and Co. Plaintiff could, however, get no trustworthy information on the subject, and when therefore Chosho, Hisanori and others came to his house on the 21st June, he asked them about that same contract and its contents. Chosho then promised to show it to him when they met again; at the same time Chosho had not brought the documents which plaintiff had sent to defendant, and plaintiff plainly stated to him, "that it was out of the question for him, plaintiff, to take any steps with regard to the loan so long as a second contract between defendant and Messrs. Jardine, Matheson and Co. was in existence, because this latter contract would prove an obstacle to the loan which plaintiff was to raise for defendant." On the 29th June defendant, Yasu, Hisanori, and Taisuke, with others, came to plaintiff's house, and the latter asked to see the second contract. But then Taisuke and the others refused plaintiff's request, saying that the second contact referred to quite another affair, and had no reference whatever to the business entrusted to plaintiff, and that it therefore was quite unnecessary to produce it for plaintiff's inspection. Plaintiff then plainly told defendant, that as he was denied a sight of the second contract, he believed that what he had heard of its contents was true, and that defendant had broken the contract between himself and plaintiff about procuring a loan of $1,000,000 in foreign silver, and rendering other services with regard to the coal mine. Although the power of attonery, dated the 23rd March, in 1876, has no great bearing on this case, it may be seen from its contents that the amount of the loan, which was originally intended to be only $600,000, was subsequently raised to $1,000,000. There is a letter, which shows that plaintiff was to procure defendant a loan of $1,000,000 and have the management of the produce of the Takashima coal mine. This letter, however, remains in defendant's hands, but plaintiff is able to produce a letter, dated the 12th February 1876, in which defendant requires plaintiff to hand the sum of $60,000 to Hisanori from the proceeds of the loan of $1,000,000. The necessary documents were not signed because the defendant broke the contract, and now plaintiff demands $96,250 damages for this breach of contract.

The answer of the defendant went to say: In the month of May, 1876, defendant sent a power of attorney to plaintiff, with which, however, plaintiff was not content, but forwarded the draught of a different one to defendant, with a letter, dated the 5th June, 1876. to which defendant replied on the 8th June, intimating his wish to have an interview with the plaintiff on the 15th, in order to consult further about the terms of the necessary documents. Plaintiff excused himself on account of illness, and when defendant, on the 21st June, together with Chosho and Hisanori, went to plaintiff's house, carrying with him the documents in question, then plaintiff unexpectedly brought forward that defendant had delayed beyond the day agreed between them, viz., the 16th June, and had thus broken the contract. The defendant could not bring plaintiff to enter upon any explanation whether the documents were in order or not, and had to return. On the 29th June, defendant, with Taisuke, Yasu and Hisanori, went again to see plaintiff, but the latter still insisted that defendant had broken the contract. Plaintiff has said that the contract between the defendant and Messrs. Jardine, Matheson & Co. was a proof of defendant's intention to dispense with plaintiff's services in raising the loan of $1,000,000 and otherwise in regard to the coal-mine; but plaintiff was perfectly cognizant of defendant having a contract with Messrs. Jardine, Matheson & Co., and as that contract had been already modified on the 1st July, 1875, there was no reason to suppose that it interfered with the contract between plaintiff and defendant. The reason why defendant delayed beyond the 16th June to come to a final arrangement with plaintiff, was that it was necessary that an interview should take place between the parties, and therefore defendant wrote and requested an interview on the 15th June. But the plaintiff's own conduct in the two meetings that occurred on the 21st and the 29th prevented any consultation between the two parties, and therefore it is not right to say that defendant broke the contract. Defendant asks that plaintiff be ordered to pay the expense of this appeal.

JUDGMENT.

In the documents, produced by plaintiff, it is stated that the loan is to be secured by a mortgage on the entire produce from the Takashima coal mine, but this same produce had already been mortgaged by defendant to Messrs. Jardine, Matheson & Co as security for another loan. Now, defendant has no right to mortgage the produce of his mine, even if there was no anterior contract to that between him and plaintiff. The contract with Messrs. Jardine, Matheson & Co. states that defendant has borrowed $110,000 from them, and as security for payment he mortgages the coals; the object of this contract was then merely to secure the re-payment of the money which defendant had borrowed, and did not influence the contract with plaintiff. Moreover, the amount of money, which the defendant borrowed from Messrs. Jardine, Matheson & Co., is less than the amount of the loan to be procured by plaintiff, and the deed, drawn up by plaintiff, says expressly that the loan is to be used for discharging existing liabilities and that, if these should not reach $1,000,000, then the balance of the money should be used &c., &., which proves that the defendant did not limit the amount of the loan to what was already due on the security of the coal mine. If, therefore, the amount due from defendant to Messrs Jardine, Matheson & Co. did not exceed $940,000, and plaintiff was authorised to raise a loan of $1,000,000 for defendant, then it cannot be said that defendant has in any way swerved from his contract with plaintiff, because with the loan, raised by plaintiff, defendant would have been able to pay off the debt due to Messrs Jardine, Matheson & Co., and thus cancel the contract with them, which then would have been no obstacle to the contract between defendant and plaintiff about the loan, and certain other services in connection with the coal mine.

The reason why the figure $940,000 is used here is, that defendant, in a letter, dated the 12th February, 1876, and produced by plaintiff, has asked plaintiff to hand Hisanori $60,000 out of the proceeds of the loan; and this amount, deducted from $1,000,000 leaves $940,000 as the amount which defendant would be able to pay Messrs Jardine, Matheson & Co.

In reply to the letter, dated the 5th June, 1876, with which plaintiff sent defendant drafts of a power of attorney and of the deed, with the request to have them returned with his signature, defendant wrote on the 8th of the same month to plaintiff, asking for an interview on the 15th June, in which the proper terms of the power of attorney and the mutual rights and obligations of the contracting parties could be discussed and finally settled. Defendant has stated that this was his object in asking for an interview, and this meets the purpose of plaintiff's letter to defendant, dated the 5th June. But the desired consultation did not take place, because the plaintiff excused himself from the interview, demanded by defendant on the 15th June. And when Chosho, Hisanori, and others went to plaintiff's house on the 21st June, and Sojiro, Taisuke and others, on the 29th June, 1876, then plaintiff immediately expressed his intention to have nothing further to do with the contract about the loan and other services connected with the coal mine. It is then not defendant's fault that there was a delay beyond the 16th June in handing over the necessary documents, because it was plaintiff who excused himself from the interview on

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

the 15th June, and in the interviews on the 21st and the 29th June defendant had no chance to show the documents, and consult with plaintiff about their contents, because plaintiff would not listen, but said that defendant had already broken the contract, although the contract between defendant and Messrs Jardine, Matheson & Co. did not at all interfere with the contract between defendant and plaintiff, about a loan and other services connected with the coal mine. Defendant must therefore be acquitted from the charge of having broken the contract through delay.

As to the verbal evidence, given both on the part of plaintiff and of defendant, as far as it is conflicting and uncorroborated by other evidence, it must be set aside and ignored.

For the above-mentioned reason the plaintiff's demand on appeal is hereby dismissed, and the decision of the lower Court upheld. Costs of appeal to be paid by plaintiff.

TÔKIÔ JÔTÔ SAIBANSHO.

REUTER'S TELEGRAMS.

LONDON, October 16th, 1877.

INTELLIGENCE FROM THE SEAT OF WAR.

Despatches report that Chefket Pasha has effected a junction with Osman Pasha, bringing up a fresh convoy of provisions and munitions of war.

Suleiman Pasha has established his head quarters at Rudikoi. (Query Kadikoi.)

The *Daily News* publishes the report, that rainy weather has converted the camp of the Czarewitch into lakes and mud roads, rendering the country impassable except at Biela and Rustchuk, also that the Russian forces are unprepared for the Winter season, and that they lost their great coats and tents during their retreat over the river Lom.

THE WAR IN ASIA.

LONDON, 8th October, 1877.

According to a Russian official despatch of 2nd October the left wing captured the entrenchments of Ahmed Mukhta Pasha after desperate fighting. On the 4th the Russians abandoned the conquered positions for want of water.

The Russian loss was 4,290 men and 63 officers. The Turkish loss was enormous.

Mehemed Pasha has been recalled from his position: Reouff Pasha has been appointed Commander-in-chief of the Turkish Army of the Balkans, and Suleiman Pasha has received the same appointment to the army of the Danube.

OBITUARY.

DOUBLE ACROSTIC.

A weeping mourner rooted to the spot,
My next runs laughing by and heeds her not.

1. Struggles for fancied right, full charged with wrong;
2. Flutter thy little day, thy flight is song.
3. Plant it elsewhere, a sage would shake the globe;
4. Such should be beauty's hair and beauty's robe.
5. A charming countess, quick to love and wed;
6. The odious partner in an unloved bed.

Answer to enigma of last week:—Water.
Correct answers received from "A cross stick," M, and J.

True benevolence is so seldom met with that when instances occur they should be recorded with the commendations they deserve. Very recently while strolling through the native town, we passed a small group of dogs—of the common order—two of which, in a sad mangy condition, were licking a third which in addition to a broken leg was very much more afflicted with the same malady. There seemed so much sympathy expressed in the care with which the two fellow sufferers tended their seedy looking friend that we were at once reminded of the homilies on Charity so often taught, so seldom practised.—*Rising Sun*

"Berkeley, Sept. 1869.—Gentlemen, I feel it a duty I owe to you to express my gratitude for the great benefit I have derived by taking 'Norton's Camomile Pills.' I applied to your agent, Mr. Bell, Berkeley, for the abovenamed Pills, for wind in the stomach, from which I suffered excruciating pain for a length of time, having tried nearly every remedy prescribed, but without deriving any benefit at all. After taking two bottles of your valuable Pills I was quite restored to my usual state of health. Please give this publicity for the benefit of those who may thus be afflicted.—I am, Sir, yours truly, HENRY ALLPASS.—To the Proprietors of NORTON'S CAMOMILE PILLS."

Reverse Twist 16-24	,,	—	

Woollens.—We have no change to report since our last, business in this staple having been very quiet. A fair demand continues for *Cloth* and *Blankets* at former quotations, whilst *Plain Mousselines de Laine* are dull again. Prices remain the same as last quoted.

Plain Orleans	40—42	yds.	32	in.		5 60 to 7.00	
Figured Orleans	29—30	yds.	31	in.		4.25 to 5.50	
Shimagoro	30	yds.	30	in.		3.75 to 5.25	
Italian Cloth	—30	yds.	32	in.		0.25 to 0.32	
Camlet Cords	29—30	yds.	32	in.		5.75 to 6.00	
Camlets Asstd.	56—58	yds.	31	in.		—	
Lastings, Japan	22—30	yds.	32	in.		12.00 to 13.00	
Plain Mousselines de Laine	—30	yds.	30	in.		0.16½ to 0.18	

Figured Mousselines de Laine	30	yds.	30	in.		0.25 to 0.28½	
Multicolored ,,	30	yds.	30	in.		0.28 to 0.37½	
Cloth, all wool plain or fancy	48	in. to	52	in.		0.80 to 1.20	
Presidents	54	in. to	56	in.		0.60 to 0.65	
Pilots	54	in. to	56	in.		0.45 to 0.55	
Union	54	in. to	56	in.		0.60 to 0.80	
Blankets, scarlet & green	6 to 8 lbs.				per lb	0.40 to 0.45	

Sugar.—Scarcely any busines has transpired during the past week. Rates are unchanged but the market closes weak.

Sugar:—Takao in bag	(nom.)				per picul	$4.65	
,, in basket					,,	$4.50	
Taiwanfoo in bag					,,	$4.55	
do. in basket					,,	$4.30	
China No. 1 Ping-fah					,,	None	
,, No. 2 Ching-pak					,,	$7.80 to $8.00	
,, No. 3 Ke-pak					,,	$7.30 to $7.70	

China No. 4 Kook-fah					per picul	$6.90 to $7.20	
,, No. 5 Kong-fun					,,	$6.20 to $6.80	
,, No. 6 K-pak					,,	$5.30 to $5.60	
Swatow Brown					,,	None.	
Daitong					,,	$8.60	
Japan Rice					,,	$1.80 to $2.30	
Kerosene Oil, nominal					,,	$3.40	

Kerosene Oil.—The market is much firmer, and sales have been made at $3.40.

EXPORTS.

Silk.—A very extensive business has lately been done. In consequence of telegraphic communications having been interrupted, small concessions were obtained in several cases at the end of last week; the demand, however, soon because more general, and prices have since been steady at quotations. Arrivals have been very considerable, and stocks are increased.

Settlements are 1,300 of Hanks, 125 bales of Oshius and Filatures, making a total of 1,425 bales.

Arrivals are 2,000 bales and stocks consist of 1,200 bales. The total export to date is 6,627 bales, against 14,389 bales for the same period last year.

		In London at 4s. 1d. per lb.	*In Lyons at f. 5.15 per kilo.*
Hanks,—Superior	$610 to 620	22/3 to 22/7	62.00 to 63.00
,, Best No. 1 & 2	$580 to 600	21/3 to 21/11	59.00 to 61.00
,, Good No. 2	$560 to 570	20/6 to 20/11	57.00 to 58.00
,, Good all round No. 2½	$540 to 550	19/10 to 20/2	55.00 to 56.00
,, Medium No. 3	$510 to 530	18/10 to 19/6	52.00 to 54.00
,, Common to inferior No. 4 & 5	$470 to 500	17/6 to 18/6	48.00 to 51.00
Oshius,—Extra	—	—	—
,, Best	$550 to 560	20/2 to 20/6	56.00 to 57.00
,, Good	$500 to 530	18/6 to 19/6	51.00 to 54.00
,, Medium			
Hamatski,—Good to Best	$460 to 480	17/2 to 17/10	47 00 to 49.00
,, Common to Medium	$430 to 450	16/1 to 16/9	44.00 to 46.00
Kakeda,—Extra	$600 to 620	21/11 to 22/7	61.00 to 62.00
,, Best	$570 to 590	20/11 to 21/7	58.00 to 60.00
,, Good	$540 to 560	19/10 to 20/6	55.00 to 57.00
Filatures	$630 to 750	22/11 to 27/0	63.00 to 75.00

Silk-worm's Eggs.—Arrivals to date are 1,500,000 cards, against 950,000 cards last year. Purchases have been made at gradually falling rates.—Total settlements are about 500,000 cards. Best cards are worth 35 to 45 cents; medium 10 to 25 cents, while low grades finding no buyers.

Tea.—During the past week but little change has taken place in the position of our Tea market, low grades being generally in most command, though good quality Teas have found buyers. Settlements amount to some 1,700 piculs, and arrivals still continuing very limited, stocks are further decreased. Prices remain unchanged, but low grades are rather firmer.

Common	$10.00 to $13.00	Fine	$23 00 to $27.00
Good Common	$14.00 to $16.00	Finest	$28.00 to $32.00
Medium	$16.00 to $18.00	Choice	$34.00 nominal
Good Medium	$19.00 to $22.00	Choicest	—

EXCHANGE AND BULLION.

Exchange.—Sterling rates have remained pretty steady throughout the past week, with fair business doing, principally in Private Paper.

Rates close as follows:—

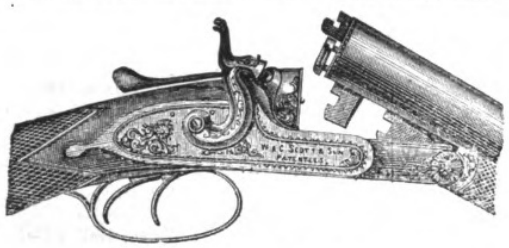
REPORTS.

The American barque *Willard Mudgett* reports:—Left Newcastle on the 25th of August. Had light and moderate variable winds throughout the passage until near the Bonin Islands on the 10th instant, when experienced a fresh gale from South to South-west with heavy southerly sea, continuing to the 12th instant. Had calm weather on 12th off Vries Island, arriving the next evening, making the passage in 49 days.

The British steamer *Benarty* reports:—Left Singapore on the 1st October. Had rough weather in the China sea and a gale on the 9th instant with all the indications of a typhoon, the wind from North to Nort-west and a mountainous southerly sea running causing the ship to labour heavily. Arrived in port on the 14th October.



The *Malacca* reports: Left Hongkong on the 7th of October at 11 a.m.; had a fresh N. E. monsoon to Turnabout; thence experienced a strong N. N. W. gale and heavy sea to port. Arrived 15th October at 10 a.m. In Latitude 31 N., Longitude 133 E. signalled a British barque bound northwards, with the numbers N. T. W. J. flying.

The *Kedar* reports: Left Newcastle August 25th. Had moderate S.E. trades to 4 degrees S.; crossed the Equator in 161.30 E. From 4 degrees S. to 15 degrees N. had very light variable winds with much rain and disagreeable weather; from 15 degrees N. to 25 degrees N. had moderate N.E. trades. After that date had chiefly westerly winds until arrival off Cape Sagami; made the passage in 49 days.

H. M. S. *Kestrel* left Kobe on the 15th instant, and experienced northerly winds and rainy weather during the passage. On the 16th she passed the barque *Kingdom of Sweden*, from London for this port, in latitude 33.40 North, longitude 136.39 E., all well.

MISCELLANEOUS.

W. & C. SCOTT & SON.

FIRST PRIZE MEDAL and DIPLOMA OF HONOUR awarded, CENTENNIAL EXHIBITION, Philadelphia, 1876. For excellence of Materials and Workmanship in their PREMIER QUALITY and medium grades. Their New PATENT TRIPLEX action and COMPENSATING LUMP.

The attention of Sportsmen is requested to the above new system of action. Its superior strength and solidity imparts greatly improved shooting powers. Hard hitting being the desideratum required is obtained by this powerful Gun.

Prices of the TRIPLEX: £22.10.0, £30.0.0, and £37.10.0. This latter is our highest quality and is marked "THE PREMIER QUALITY."

Excellent DOUBLE-GRIP BREECH-LOADERS at £8.10.0, £12.0.0, £16.0.0 and £20.0.0. Shooting guaranteed.

OUR PATENT TOP LEVER with PURDEY solid double bolt. Shooting guaranted. Sound plain finish £15/0/0. Well finished, good materials £21.0.0 Cases and implements £4, £6 and £8 extra.

In the New York International Gun Trial competition, 1873, the Committee awarded our guns the Diploma, being declared first for points of merit of action, materials, proportion and shooting qualities.

Extract from Forest and Stream, New York, December 26th, 1876. Contributed by one of the judges of awards of guns at the Centennial. "The crowning glory of the display was the case of W. & C. Scott & Son. This firm has sent more good guns to this country during the past few years than any other, and they especially commend themselves to American sportsmen from the fact that they furnish good guns, honestly made, and of high shooting powers at very moderate prices. Their TRIPLEX ACTION combines, in the highest degree, strength with simplicity, and it must rapidly secure the favor of all who test its merits."

OUR PATENT COMPENSATING LUMP strongly recommended; should be ordered on every gun (cost, 30 shillings extra). For the Sportsman abroad, this invention is invaluable, being secured against the joint becoming loose after several years wear.

CHOKE BORED GUNS.—Slight, Medium or Full.

BREECH LOADERS in all systems from lowest qualities.

SINGLE and DOUBLE MUZZLE LOADERS.

Makers of the NEW SWINBURN-HENRY Sporting Express and SWINBURN-HENRY RIFLES and Carbines taking Government Ammunition. This Rifle is a great improvement on the Martini.

SNIDERS Military and Sporting. MARTINI RIFLES.

DOUBLE EXPRESS RIFLES .450, .500, .577 Bore.

W. CRAWFORD & CO.,

75, CARTER LANE, SAINT PAUL'S,

LONDON, E.C.,

Beg to state that they are open for any Commercial Transactions, as to Consignments, for Granting Drafts, and Presenting Commercial Bills for Acceptance and Payment. For Buying English Goods at a very small Commission and Forwarding Goods to any place in England or the Continent.

WE beg to draw your attention to avery important English Invention we have on hand, viz.:

WOOLLEN BLANKETS

OR

COVERINGS,

OF ALL SIZES COMBINED WITH AN

AIR PILLOW.

It will be found most necessary and useful for Military Men, Travellers, Invalids, for use in the Hospitals, &c., &c., possessing amongst others the following advantages:—

It is the finest substitute for a Bed.

The Pillow can be raised or lowered at any time with the greatest ease.

It will pack up in a very small compass, and can be carried about without any inconvenience.

Price from 15s. to 35s. each.

When ordering the above article, please remit the amount of your order to

W. CRAWFORD & CO.

August 22, 1877. 6ms.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded.* This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omisson to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

Notes of the Week.

From all parts of the country we hear that the cholera epidemic is on the decrease, and the official returns of this *Ken* show a decided improvement, as there is a considerable diminution in the number of new cases and the daily death rate is extremely small. Indeed, the disease is almost entirely confined now to Matsukage-chô and the contiguous streets, which form part of the new swamp, or what is generally known as Karafto, and there is every reason to believe that the untiring efforts of the *Kencho* authorities to grapple with our dread visitor will before long be completely successful. The lower classes are, as might be expected, very much frightened at the disease, and in all probability many of them have fallen victims to their excessive fear of it. Through ignorance and superstition, this fear has, in many parts of the country, taken the shape of open opposition to all attempts on the part of the local authorities to provide hospital accommodation or medical assistance for those attacked by the disease, or refusal to observe the regulations for disinfection which were sought to be enforced. In one of the districts of the Kuantô, a relative of a person who had been attacked by the disease entirely misunderstood the Japanese doctor's remarks about the case requiring sharp remedies, construing such into a statement that potent drugs would be administered so that the man would certainly die. The people became greatly excited as the false report based on this mistake was industriously circulated, an unruly mob quickly gathered, and armed with agricultural implements threatened to destroy the hospital. The police were called out to quell the disturbance, in the course of which one constable was severely injured, but the leader of the rioters having been arrested the others were dispersed. From Okayama *Ken* a telegram was received last week, announcing that the farmers of Nawase-mura, in the district of Wake, in the province of Bizen, had endeavoured to forcibly prevent the completion of the hospital which was being built for the reception of cholera patients, the disease having developed itself rather virulently in that district. The police were in this case roughly handled by the mob, when they interfered to preserve the peace. At a village in the Osaka *Fu* where cholera had broken out, the proper method of using disinfectants was explained by the officials, but the inhabitants would not listen to them at all, declaring that the epidemic could only be driven away by prayer to their gods, so they made an image of straw which they called the god of cholera, and carried it in procession, but were apparently so noisy in their demonstrations of piety that the police had to put a stop to their proceedings. The Central Government has been very liberal in granting special allowances to various *Ken* to cover the expenses incurred in providing hospitals, etc. It was lately estimated by the Finance Department that the cost of the suppression of the epidemic throughout the country would be about 150,000 *yen*, but owing to the rapid spread of the disease, this estimate has now been raised to 200,000 *yen*.

The following extract concerning Free Trade in America, which we take from the *Nation*, seems to have just now a peculiar significance :—

Pursuant to a public call, a Free-trade Conference was held at Saratoga on Friday, which passed an excellent series of resolutions, and took steps to organize the sentiment of the country in accordance with them. From the moderation and good sense shown in the final result of this gathering, we infer that some who appeared to take a very prominent part, and who might be thought desirous to make themselves conspicuous, were practically overruled in the inner councils which prepared the work of the conference. It was resolved that the business depression heretofore prevailing has been due to erroneous financial and commercial legislation, which has prevented us from disposing of our surplus products by making it difficult or impossible for other countries to sell us theirs ; that taxation for other purposes than the revenue, and the restrictions put upon cheaply building and profitably buying ships, has virtually destroyed our mercantile navy ; that while the important interests that have grown up under our tariff system must be considered in any reform, it is clear from their prostrate condition that protection has done its utmost for them, and that they, like other interests, need a thorough revision of the tariff ; that existing commercial treaties should be overhauled and adapted to the altered times, and new ones negotiated where now wanting, as with France and Spain ; that reciprocity with Canada should be revived ; and that organization of all those who assent to these views should now be undertaken in order to disseminate them. To Messrs. D. A. Wells and Abraham L. Earle was entrusted the formation of a council to superintend and promote organization. The members selected are better fitted, we should say, for the task of recruiting than for the direction of the movement when its strength becomes known and a permanent organization will be necessary ; but, for the present, recruiting—that is, not making converts so much as enrolling the faithful—is the most pressing duty. The National Convention and National Association will follow in due time. The acceptance of a place in the Council by Mr W. L. Trenholm, of Charleston, shows that the Southern field is not to be neglected ; and even a protectionist might find some good in the creation of a general interest at the South in questions which neither slavery nor the war can any longer embitter or befog.

On the science of Political Economy the world has been divided for many years almost as completely as if Columbus had never lived, and a country like Japan, which has to decide *ab initio* on the principles which shall guide her commercial life, has also had to determine whether to cast in her lot with Europe or America, and whether to follow the course laid down by Adam Smith, John Stuart Mill, Professor Fawcett, Frédéric Bastiat, and Michael Chevalier. The one country whose resolute rejection of the light has shaken the faith of many who ought to have known better, seems at last to be moving towards repentance. The vast extent and resources of the American continent has enabled her people to bear up for a long time against the strain of protective exactions, but

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

there are limits even to American endurance, and the destruction of a mercantile navy, the prostration of commercial interests, the impossibility of disposing of surplus products, to say nothing of riotous railway strikes and vast increase of national poverty,—all these are stern teachers, and from them America is learning fast. We have no doubt of the final triumph which lies before the organization proposed by the Saratoga conference, for they will only have to put the alternatives fairly before the American public, and the keen common sense indigenous to the soil will be sure to do the rest. Let us endeavour to see what are the questions that the council will have to lay for decision before their countrymen.

It is most refreshing to note in the resolutions of the conference that the real issues have been clearly discriminated. Startling as the discovery may seem to economists of a certain class, it has nevertheless been made, and the members of the Saratoga conference have seen that money is useless except as a tool; that men cannot eat gold for food, nor burn it for fuel, nor wear it for clothes, nor make of it houses to shelter them from wind and weather. It has been seen at Saratoga that it is goods and not money for which goods are bought and sold. It has been resolved that "erroneous financial and commercial legislation has prevented us from disposing of our surplus products *by rendering it difficult or impossible for other countries to sell us theirs.*" It has thus been understood at Saratoga that money and the supply thereof is but the ripple on the surface of the ocean; trade in goods the vast bulk beneath. The first question then to be asked by the Saratoga conference of the American people will be, "Do you want goods or money?"

When this is answered and understood, Saratoga can proceed the next step. When America has been taught that in goods and goods alone lies the satisfaction of the material wants of humanity, she will have little difficulty in answering the next question, "Do you wish goods to be cheap or dear, of high or of low quality?" There are many people who will try to persuade Americans that high prices are a blessing, but paterfamilias with many little mouths and many little feet to look after, will prefer cheap bread and cheap shoes, and that the bread should be wholesome and nourishing, and the shoes water-tight and strong. And paterfamilias, reasoning by analogy, may even be made to see that if you want a ship it is most profitable to buy of that man who can most cheaply turn out the best article, no matter to what nation he belongs; and that "restrictions put upon cheaply building and profitably buying ships" are quite capable of "virtually destroying a mercantile navy." And when this has been perfectly mastered, paterfamilias may indulge in a little democratic political philosophy, in pursuance of which he may discover that taxes are, or should be, costs *imposed upon all* for the maintenance of an institution called Government, which exists *for the good of all.* Keeping this thread in hand he will not be long in discovering that "taxation for other purposes than the revenue" violates the first great canon of taxation, to wit that the burden to be borne shall be equally heavy upon all. We do not at all think that our paterfamilias will stop here, in this bare scientific exposition of a fact. His indignation will rise with the greater clearness of his vision, and he will be apt to denounce the protective tax in round terms, as being simply the legalized plunder of the many and the poor for the sake of the rich and the few.

By some such reasoning as this we hope the scales may fall from the eyes of the American nation. Wherever first principles are firmly clung to, and nothing accepted which will not square with them, Free Trade is certain ultimately to prevail. Begin with the small atom of helplessness, of men yclept a baby, and consider the supplying of all its little wants. Does it cry for hunger or for cold, the world is laid under contribution by the free trader to bring it the finest milk, the softest and the warmest wool. "Ah but," says the learned protectionist, "this will not do; great interests are at stake here; you must support the native manufacturer, and baby must be less finely fed and lie less softly warm, in the name of my magnificent theory of national independence." Excellent well, my learned professor, persuade its mother of that, and we shall be content.

But Saratoga can appeal to men in higher tones. For free trade has its exciting side and much to rouse enthusiasm. It is not good for man to dwell alone, and free trade is the greatest of all missionaries, carrying into every corner of all the lands its message of peace on earth, good will amongst men. Far into regions of deepest darkness it perpetuates the immortal decree, *Fiat lux.*

We are as sorry this week to note the intention of the P. & O. Company to rely upon the negligence of their servants as a defence in cases of damage to goods conveyed by them, as we were glad last week to suppose the contrary. If we were wrong in imagining that the defence of negligence was resorted to at the trial referred to, we were led into that error by the expressions of the judgment in the late case of Beato *v.* the Master of the *Atholl.* We can only apologise to Mr. Rickett for having cast upon his Company the imputation that they would not rely on the negligence of their servants as a defence to claims brought under their Bill of Lading.

As we predicted some month ago, the removal by the Government of the limit hitherto imposed on the number of silkworm's egg cards for exportation has led to a large over production, and about 2,000,000 cards are available to supply a market, the requirement of which are only 800,000, or at the very utmost 1,000,000 cards. The result has been an utter collapse, made more certain by the combined action of the *graineurs.* Soon after the opening of the market some cards from Akita of extra quality were brought at fancy prices, say $1.50, and small lots of ordinary cards were settled at from 40 to 80 cents, but quotations rapidly declined, and the bulk of purchases since made, viz., some 500,000 cards, were settled at from 20 to 30 cents for good, and 15 to 20 cents for medium quality. Inferior cards are altogether unsaleable, not being considered worth the cost of freight and charges, and so low a price as from 3 to 5 cents has been spoken of as their nominal value. As during the past few days good cards have been purchased at from 10 to 15 cents, the native holders have been compelled to recognise that buyers entirely command the situation, and when too late, endeavour to remedy the evils of an overstocked market by proposing, as usual, to destroy a large quantity of cards. For some days past this intention has been hinted at and discussed, and after much vacillation on the part of those interested, it has finally been resolved to throw 700,000 cards into the sea. Even the destruction of this number of cards will leave a larger quantity in the hands of native dealers than are necessary to meet the requirements of foreign buyers, so that after all a considerable surplus will remain unsold. This fact will probably prevent any advance taking place in prices for cards that have yet to be bought, as intending purchasers will be cautious in investing, knowing that it is quite possible that the Japanese, despite their unfortunate experience of former years, may make shipments to Europe on their own account, and as the cards in their possession are practically valueless, endeavour themselves to undersell the *graineurs* in the Italian markets. Purely speculative purchases are not likely to be made, as the *graineurs* have this season obtained the cards they required upon such favourable terms, and have such entire command of the home markets, that such speculation would in all probability result most disastrously.

The Silk market lately received a spurt which resulted in a large business being done, the exports during the present month having been upwards of 3,676 bales, at prices ruling $70 to $80 over the September quotations. But this improvement has only been a flash in the pan, and doubtless had its origin in a few speculative purchases at home, in anticipation of the probable result of the French elections, as the demand ceased immediately that result was actually known. Prices here have consequently fallen, and are already some $40 below the highest rates recently paid, and there is no doubt that further concessions must yet be made by holders before business can

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

be generally resumed again. There are still large quantities of last season's dearly bought Silk in first hands in London and Lyons, in which the principal brokers have a large interest, and it is therefore quite comprehensible that they will do all that lies in their power to advance the market to figures which would best suit them. Consequently, we have from time to time these rushes in our market. However, as long as consumption cannot keep pace with speculation we shall see no permanent improvement, and on all sides are received complaints from consumers of the raw material of the state of business, and advices of the extremely unsatisfactory nature of deliveries.

The *Chôya Shimbun* lately announced that the Government contemplated making some alteration in the shooting regulations. We shall welcome any improvements or concessions with pleasure, and can only suppose that pressure of business owing to the late the troubles in the South, has prevented this question being dealt with before the shooting season actually commenced.

On the 23rd instant we learnt by a Reuter's Telegram that the elections in France had resulted in a crushing defeat for President MacMahon, no other official or public intimation having since been received of what must be of considerable commercial interest to a great portion of this community. Private telegrams, so far as we can learn, do not afford more detailed information, but from their general tenor it may be inferred that the political situation as above mentioned has not acted beneficially on trade. This may in part arise from the fact, that those more immediately concerned have not had sufficient opportunity to form an opinion of its probable effect, and moreover, there may be a feeling that an overwhelming republican majority can only be obtained by a considerable influx of the ultra-radical element. In a few days we shall no doubt be in possession of intelligence which will enable us to more clearly understand the various political issues involved by these late events.

From all parts of the country most excellent accounts have been received of the harvest. In the vicinity of the capital the farmers have allowed themselves a well-deserved holiday in consequence, and for a brief time have given themselves up to pleasure and rejoicing.

It is probable that either a Japanese play in all its integrity is to be put on the Paris boards, or some French play introducing Japanese characters, as an order has been forwarded to a French firm here to purchase a number of the finest stage dresses that can be procured and other theatrical appointments, together with books of directions, and illustrations of the setting of a Japanese stage and the accessories required.

The *Mainichi Shimbun* of this morning contained the announcement that the Chinese Ambassador Ho-ye-Chang, and the Secretary of Legation Chang-si-Kwai, left Shanghai yesterday in a man-of-war *en route* for Nagasaki. A short stay will be made at that port and Kobe, but the arrival of the Embassy at the capital may be expected early next month.

At the Spring meeting of the Amateur Athlectic Association, Mr. A. T. Watson carried off the Champion Cup for the 440 yards race, which had to be won for two successive meetings before it could become the actual property of the winner. At this Autumn meeting its possession was to be challenged by Mr. F. Walker only, and such been the case, and also owing to the fact that Mr. Watson has rather over-trained himself and that further delay would dangerously interfere with his chances of retaining the prize, the race was arranged to take place this afternoon on the Association's running path at the Rifle Range, though the meeting itself has been postponed *sine die* owing to unavoidable causes. There was a good attendance on the ground to witness the event, and shortly after 3 o'clock, the hour appointed for the race, a good start was effected, Watson having drawn the inside place. Watson at once took the lead, which he increased to 10 yards on turning the second corner, but Walker closed up a little down the back stretch, and appeared to be gaining on his opponent till about 120 yards from home, when Watson put on a spurt and drew away from Walker altogether, finishing a capital race in the best time ever done here, viz., 56¼ secs., thus obtaining undisputed possession of the prize. Walker gave up twenty yards from the post. The best time in which this distance had previously been done was 55 secs. by J. J. Dare in the autumn of 1874, but he then had 12 yards start. Watson himself did the distance in 57¾ secs. in October last year, being until now the second best time recorded.

From the "Japan Mail Daily Advertiser."

Monday, 22nd.

The *Hiroshima Maru* was sent down to Nigishi yesterday afternoon, by orders of the *Kencho*, to be there placed in quarantine. While fully recognizing the energetic and generally commendable endeavours of the *Kencho* authorities to prevent the spread of cholera, we are quite at loss to understand their action in the present case. The *Hiroshima Mara* arrived in port on Friday forenoon, her passengers landed without let or hindrance, all her cargo has been discharged, there was always free communication between the vessel and shore, and it has not been conclusively shown that a case of cholera occurred on board, and yet, 50 hours after arrival, the steamer is sent down the bay to be disinfected.

From the *Nichi Nichi Shimbun.*

The rebels of Satsuma, and those of Yamaguchi, Fukuoka and Kumamoto *ken*, who have been sentenced to hard labour, are to be distributed in the following manner:—21 to Kiôto *fu*, 62 to Osaka, 62 to Kanagawa, 52 to Hiôgo, 50 to Sakai, 50 to Hiroshima, 73 to Shidzuoka, 33 to Shiga, 32 to Gifu, 33 to Aichi, 50 to Fukuoka, 50 to Miyagi, 50 to Yamagata, 50 to Ishikawa, 50 to Shimane, 50 to Iwate, 50 to Awomori, 50 to Akita, 43 to Ehime, 80 to Wakayama, 20 to Fukushima, 52 to Saitama, 52 to Gumma, 70 to Chiba, and 55 to Yamanashi *ken*.

It is rumoured that the Government officials of various departments are to the presented with a bonus amounting to ten per cent. of their respective salaries.

From the *Hôchi Shimbun.*

The Tôkiô chemists have decided that the Tamagawa river water should be used by those suffering from cholera, and not the water from the Kanda aqueduct.

From the *Akébono Shimbun.*

Some newspaper lately published a statement that trouble had arisen between Japan and Korea in regard to the treaty, but a letter that we have received from a friend at the port of Fusan proves that the above statement was untrue. The letter says that since the 7th instant the Japanese merchants have been planning the opening of an Exhibition, and that as to treaty affairs, Mr. Hanabusa arrived safely at Fusan in the *Takao Maru*, but as two of the crew were attacked by cholera, the vessel returned to Nagasaki.

Tuesday, 23rd.

The *Hôchi Shimbun* says that a telegram was received from Kagoshima so long ago as the 7th instant, (? 17th) stating that cholera had broken out in that town and that one hundred and fifty deaths had occurred in consequence. A hospital for the treatment of the disease had been established, but the accommodation afforded was not sufficient to meet requirements, and owing to the ruined state of the place there was no means of finding shelter for those attacked, so that some of the patients were to be forwarded to the Nagasaki hospital.

From the *Akébono Shimbun.*

It was expected that some grand ceremonial would take place on the return of the troops from the South, in commemoration of the success of the Government arms, but it is now understood that a review of the army will be the only demonstration made.

We hear that Lieut.-Generals Tani, Miura and Miyoshi, who returned to their respective garrison commands at the conclusion of the war, will shortly visit Tôkiô.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

From the *Hôchi Shimbun.*

It is said that fifty thousand *koku* of rice are to be sent by the *Okurasho* to Kagoshima to relieve the wants of the destitute there.

From the *Chôya Shimbun.*

A person who recently returned from Kôchi *ken* (Tosa) informs us that the young students in that *ken* are constantly singing a song, the burden of which is that, "If a constitutional Government is not constituted, are shall endeavour to enforce it by a recourse to bamboo spears."

From the *Nichi Nichi Shimbun.*

From the 8th to the 15th of this month 2,223 policemen of Tôkiô were promoted on account of courage displayed in face of the enemy, fifty of whom were advanced to the rank of sergeant.

From noon of the 18th to noon of the 21st instant, there were fifty-six persons attacked by cholera at Tôkiô, forty-three deaths and two recoveries.

From the *Osaka Nippo.*

It is rumoured that a division of the Hiroshima garrison will be stationed in Kôchi *ken.*

Up to the 17th instant 398 persons in all had been attacked by cholera in Osaka, some of whom belonged to the troops in garrison and others were citizens. Of the above number 13 recovered, 46 died, and 339 cases remained under treatment at the date named.

Wednesday, 24th.

The *Hiroshima Maru* returned to the anchorage from Nigishi about half-past five yesterday evening, after having undergone a thorough fumigation, and will leave for Shanghai to-morrow afternoon at 4 o'clock. The *Tokio Maru* left Kobe for this port yesterday at 6 p. m.

The P. & O. Co.'s steamer *Sunda*, with English mails on board to September 14th, left Hongkong yesterday, the 23rd instant, at noon.

In the Chess problem we published in the *Weekly Mail* on Saturday last, a white Knight has been omitted from K. R.'s 6th.

From the *Mainichi Shimbun.*

The *Wakaura Maru* arrived in the Bay the night before last with about a thousand troops from the south, but as some forty among them were suffering from cholera, the vessel was detained off Kanazawa. After medical examination, all those who were ill were sent to the hospital at Tomioka, while the rest of the troops were marched to Yokohama. The *Tôkai Maru* also arrived at Yokosuka, having on board four hundred troops, thirty-one of whom were suffering from cholera. These who were free from disease were landed at Kanazawa, to make their way by the road to Yokohama.

From the *Hôchi Shimbun.*

The *Môshun Kan* arrived at Kobe from Kagoshima on the 21st instant, the *Teibô Kan* having been despatched from Nagasaki on the 20th instant for duty at Kagoshima.

A detailed statement of the method in which the affairs of the *Naimusho* (Home Department) and its branches are administered, will be sent to the Paris Exhibition next year.

A person living in Tôkiô applied to a friend residing in Kiushiu to procure for him some of the Saigo *satsu*, which he desired to possess as curiosities, but was surprised to receive a reply to the effect that, worthless as such *satsu* are now as currency, still there is a great difficulty in procuring them, as the people of Kiushiu cherish them as relics.

From the *Akébono Shimbun.*

The water of all the wells and of the aqueduct at Tôkiô is being tested by chemists from the Tôkiô Dispensary, by order of the Tôkiô *Fu* authorities.

The annual expenditure of the Bureau of Police is to be reduced by the sum of five thousand *yen*, and the amount thus saved is to be added to the allowance for expenditure of the Home Department.

A fire broke out at Ushigome, Tôkiô, at 11.15 p.m. on the 22nd instant and destroyed seventy-three houses.

From the *Chôya Shimbun.*

Mr. Matsukata Masayoshi, the Vice-Minister of the Finance Department, has been appointed as Chief Commissioner of the Japanese Department at the Paris Exhibition next year.

A contractor in Osaka has undertaken to rebuild the Kagoshima *Kenchô* for $12,500 *yen.*

The *Saikai Shimbun* reports that some seven or eight days ago fire broke out again in the Takashima coal mine, but it is not yet known whether it has been extinguished or not.

From the *Osaka Nippô.*

On the 18th instant, 46 new cases of cholera, 8 recoveries and 51 deaths occurred at Osaka, leaving 326 cases under treatment.

Thursday, 25th.

A slight, but rather prolonged shock of earthquake took place yesterday evening at five minutes to eight.

The *Nichi Nichi Shimbun* says that owing to advices they have lately received from China, it is doubtful whether any credit can be attached to the statement published by the *Mainichi Shimbun*, that the Chinese Ambassador to Japan might be shortly expected in this country.

From the *Akébono Shimbun.*

The young Prince Také-no-Miya will be taken to the Imperial palace for the first time to-day, where some rank will be conferred on him, and he will receive presents from various Princes of the Imperial blood. He will also shortly be taken to visit the Empress and the Empress Dowager.

From the *Osaka Nippo.*

On the 19th instant 85 new cases of cholera, 13 recoveries, and 67 deaths occurred at Osaka, leaving 344 cases under treatment.

The Government has paid over to the Mitsu Bishi Company the sum of six millions of *yen* for the use of their vessels during the late war.

From the *Hôchi Shimbun.*

The *Asama Kan*, after undergoing repairs at Saganoseki which were necessitated by her having struck a rock off the coast of Hiuga in July last, has arrived at Nagasaki.

From the *Chôya Shimbun.*

A telegram received from the Special *Saibansho* of Kiushiu at Nagasaki, announces that 136 rebels have been sentenced to hard labour for periods varying from one to ten years.

From the *Nichi Nichi Shimbun.*

The troops belonging to the Sendai garrison started immediately for their destination on their arrival at Tôkiô from the South yesterday.

We hear that preparations are being made at the town of Kôchi in Tosa, to accommodate a division of the Osaka garrison which is to be stationed there.

From the *Mainichi Skimbun.*

The *Kumamoto Maru* has arrived at the anchorage from Shinagawa, with 12,000 bags of rice on board, which will in all probability be sent to Kiushiu for the relief of those who were rendered destitute by the war.

Friday, 26th.

The Committee of the Athletic Association have found it advisable to postpone the meeting which was to have taken place to-day, on account of the death from cholera of the wife of the momban at the running path. Owing to mail days and Races, there is some difficulty in fixing another date on which the sports can be held.

From the *Akébono Shimbun.*

It was stated in our issue of yesterday that the mode of administrating the affairs of the Home Departments of Japan would be sent to the Exhibition at Paris, but on further enquiry we have found that it is a statement of the method of administration in all the Government Departments that will be sent.

From the *Nichi Nichi Shimbun.*

Lieut.-General Ida started on the 25th instant for Nara-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

shino-hara, probably to make preparations for the grand review shortly to be held there, in honour of the success of the Imperial arms in the South.

Thirty thousand *yen* have been sent by the *Naimusho* to the Special Court at Nagasaki, to cover the expense of conveying the rebels who have been sentenced to hard labour to their various penal destinations.

From the *Hôchi Shimbun.*

It was thought that as at least one-half of the money required for the suppression of the Satsuma rebellion has been spent in Kiushiu, the people in that part of the country would have thereby received some corresponding advantage, but this seems not to have been the case, as all classes have severely felt the effects of distress caused by the late war.

Some disease has attacked the horses in Miyagi *ken*, and the local authorities have applied to the War Department for the assistance of veterinary surgeons to treat the malady.

The French Minister and suite were present at the review of the troops at Narashino-hara on the 24th instant.

A grand display of *Kiku-ningio*, or figures clothed with dresses made with the crysanthemum flowers, will take place at Dango-zaka, Tôkiô, at the commencement of the next month.

A Bank has been established by the *shizoku* of Gumma *ken.*

From the *Osaka Nippô.*

The Government has already sent the sum of 562,000 *yen* to Kagoshima *ken* for the relief of the destitute, but the Governor has applied for a further sum of 100,000 *yen* to cover the expenses so incurred.

Saturday, 27th.

The German man-of-war *Elisabeth* returned to port this morning, not from the Bonin Islands, but from Owari Bay, where she has been surveying.

The 440 yards race for the Champion Cup will take place at the Amateur Athletic Association's running path on the Rifle Range at 3 o'clock this afternoon, and will no doubt be a well contested race between A. T. Watson, the present holder of the Cup, and F. Walker.

From the *Nichi Nichi Shimbun.*

About the middle of next month further experiments with balloons will take place in the open space in the front of the Navy Department, Tsukiji, Tôkiô, in the presence of Their Majesties the Emperor and Empress, when two balloons will be tried, one to be filled with coal gas and the other with hydrogen gas.

From the *Chôya Shimbun.*

It was intended to have some troops of the Kumamoto garrison stationed at Kagoshima, but this being found inconvenient, they are to be garrisoned at Nobeoka in Hiuga, where barracks are now being prepared for their accommodation.

Saigo Kikujiro, the second son of the late rebel chief, has been acquitted of complicity in the rebellion.

The *Daijôkuan* have notified the *Kunsho-kioku* (Department of Decorations) that it will have to undertake the work of rewarding by presents those who fought against the rebels in Kiushiu.

There are between three and four thousand troops stationed at Kagoshima. The *Riujô Kan* and another man-of-war are lying in the harbour, together with five or six steamers belonging to the Mitsu Bishi Company, which were ordered there for transport duty.

A severe shock of earthquake was felt on the 6th instant in the province of Iwaki, which caused land-slips on the hills and greatly alarmed the inhabitants.

From the *Hôchi Shimbun.*

The *Okurasho* lately sent 387,655 silver *bus* to the Osaka Mint, of which 200,000 have already been converted into 1 *yen* coins, while the remainder are to be coined into 40, 20, 10, and 5 *sen* pieces, which will be returned to Tôkiô.

THE JAPANESE PENAL CODES.

Second Notice.

THE Second Chapter of the Code provides for the punishment of offences coming (upon what grounds it is, in some cases, hard to understand,) under what is termed Domestic Law. Thus remortgage of lands, refusal to reconvey upon tender of the mortgage debt, are classed under this head. It would, by the bye, be much more satisfactory if some proper system of Registration of Mortgages were provided by which mortgagees would be secured, not only against their debtors but against third parties as well. It is but small consolation for the victim of a second mortgage to see his debtor consigned to penal servitude for ten years, and thus find himself deprived of all chance of getting his claim paid.

Some of the offences enumerated in this chapter throw a curious light upon the structure of Japanese society. Discarding the son of a wife in favour of that of a concubine is punishable by 90 days penal servitude. The reason of this severity is doubtless to be found in the fact, that the eldest son *(sô riyô)*—the injured party referred to probably—inherits the whole of his father's property, real and personal. A son wasting the substance of his father, a younger brother that of his elder brother, etc., are punishable by imprisonment of from ten days to a hundred. The offence of absconding from the place of registration we do not quite understand, nor the increase of the punishment when the flight is to foreign countries. Anything like a rigorous administration of such a law as this would manifestly tend greatly to impede, what above all is desirable for the Japanese people, the freest possible intercourse among themselves and with foreign countries. Surely it would suffice if a passport were required. Turning a son-in-law out of doors and giving his wife to a second husband sounds an odd offence in western ears, but in Japan the parent guilty of such conduct may be visited with penal servitude for 90 days, though apparently the second marriage, even if the second husband be a party to the ejection, stands good. One would suppose the justice of the case would be best met by restoring his wife to the injured son-in-law. Non-observance of mourning for parents or husband is requited by a year's penal servitude; the husband, however, does not appear to be expected to mourn for his dead wife. There seem to be no laws governing matrimonial relations, and bigamy, therefore, is an offence unknown to the Japanese Codes. Adultery, however, exposes both offenders to penal servitude for a year, while a much worse crime meets with only 90 days.

Offences against property, treated of in the 3rd Chapter, are pretty severely punished. Robbery by armed men, if the crime is accomplished, is punishable by decapitation, if attempted only, by hanging. Common Robbery, for which Larceny were a better term, meets with penal servitude for life, irrespective of the amount stolen, a far too heavy punishment to apply to all cases, seeing that the judge has apparently no power of mitigating it even when extenuating circumstances are brought to his knowledge. Homicide accidentally occurring during the commission of a robbery, exposes the criminal to be sentenced to death by hanging. Some curious mitigations are permitted. Thus, in the case of theft from relations, one degree of mitigation is allowed for each degree of relationship beginning from the

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

fifth degree, but when there is violence, the mitigation is only conceded when the offender is the elder party. Common sense shows that justice requires the law to be the other way, if indeed the fact of relationship ought to be admitted as any ground at all for mitigation. Robbery, or rather Larceny, from relatives living under the same roof with the offender, is to be treated as a mere improper disposal of family property. Thus a son, apparently, living under his father's roof, might rob him of all he possessed and could only be awarded from ten to a hundred days' penal servitude, while if he took ten *yen* from his nearest neighbour or any stranger, he might be sentenced to penal servitude for life.

A test of a good penal code is the distinction of the various kinds of Homicide. Criminal jurists have tried their hand at this hitherto with no great success. The subject is a difficult—indeed a curiously difficult one. It seems almost impossible to frame a definition of murder, that will not on the one hand include cases of non-murderous homicide, or manslaughter, and that will on the other hand include all species of murder. The difficulty is due, in some degree, to the variety of modes in which, especially in these modern days, murder or homicide may be committed. According to the French code, wilful homicide is called *meurtre* (murder of the second degree) and premeditated *meurtre* is qualified as *assassinat* (murder in the first degree). *Meurtre* seems also to include what we should term criminal manslaughter. It is evident that the cursory treatment of so grave a matter as homicide in the French code is wholly insufficient. In the Indian penal code the subject is much more elaborately worked out, but not we think very successfully. Culpable homicide, for instance, is defined as doing an act with the knowledge that death is likely to be caused by such act. This definition is obviously too wide; performance, for example, of a desperate surgical operation might be brought under it. The definition of murder is open to precisely the same objection, and the mode of defining it, namely by negation, is in the highest degree unscientific. No doubt the sections in question are so interpreted as to prevent injustice being done, but we are merely considering them here from a juristic point of view. The definitions given in the 4th Chapter of the Penal Codes of the various kinds of homicide, compare favourably with those just cited. The Code enumerates three kinds, preconcerted and wilful murder, wilful but not preconcerted murder, and manslaughter. The first named species hardly requires any explanation. The punishments awarded for this crime, however, present some curious anomalies. In most cases the criminal is sentenced to decapitation or hanging. Where there is an attempt only but the victim dies from fright, hanging is the punishment. In cases of the murder of a grandparent, parent, paternal uncle or aunt, elder brother or sister, husband or father-in-law, the punishment of the principal, of the accessory who has assisted in the crime, and of the accessory who has not so assisted, is the heaviest known to Japanese law,—decapitation with exposure of the head. If the murder be only attempted, hanging is substituted for decapitation. Murder of a senior by a junior relative entails decapitation, but murder of a junior by a senior relative entails the punishment due to wilful but not preconcerted murder. A fact of some importance, which seems to show that the laws are not always strictly adhered to by the Japanese authorities, is mentioned by Mr LONGFORD in connection with this portion of his subject. It will be remembered that a few years ago a determined attempt was made to assassinate Mr. IWAKURA. The guilty parties, principal and accessory, were all sentenced to decapitation, although in accordance with the code, the crime not having been completed, the accessories were not punishable otherwise than by penal servitude.

Wilful murder is not well defined, the distinction between wilful and deliberate homicide, and homicide caused wilfully but not intended by the offender, not being clearly drawn. The distinction is one of great importance, for wilful and deliberate murder is a capital crime, while simple wilful murder is punishable by penal servitude for life. The term wilful murder seems to embrace crimes that we should designate as murder in the second degree. Manslaughter is stated to comprise cases of accidental killing only, and the offence in most cases may be atoned for by a money payment to the family of the person killed. Some particular kinds of homicide are specially provided against. Infanticide is very properly regarded as murder. Killing in self-defence is only excusable when absolutely necessary to preserve life against an actual attempt upon it. The slaying by a husband of an adulterous wife or concubine in *flagrante delicto*, together with her paramour, is no offence at all; but if a certain time has elapsed since the discovery of the adultery, the slaying of any of them is an offence, met, however, by a punishment far short of that awarded in cases of murder, and much less in the case of the wife or concubine than in that of the lover being slain. The wife or concubine is, in fact, hardly and unfairly treated throughout. Thus, if the paramour slay the husband *without* the wife's knowledge or participation, she is to be punished by penal servitude for life. Attempted suicide of lovers in punished by penal servitude for ten years, the extreme frequency of this practice apparently rendering so singular a special provision necessary.

Poisoning seems to be always treated as murder in the first degree, and rightly so, for poisoning, if wilful, must of necessity be both a deliberate and preconcerted assassination of the very worst kind.

The law of assaults is contained in the 5th Chapter, and these appear to be treated with considerable harshness. Thus a mere blow with the hand is punishable with 20 days penal servitude; if a lesion of any kind is caused the punishment is increased in a sort of rough and often not very logical proportion to its severity. An assault on an official of Imperial appointment, that is bearing the Emperor's commission, entails 5 years penal servitude; if an incised wound is inflicted the offender must be hanged. Assaults may be committed on other officials bearing commissions of the Government or of a Department at a much cheaper rate. These distinctions show how little inclined to democracy the rulers of Japan are, and how thoroughly the differences of rank are recognised. A husband may assault his wife or concubine as much as he pleases, so long as he avoids inflicting a cutting wound, and even in the latter case the public prosecutor can take no cognisance of the offence except at the request of the injured wife or concubine. A wife assaulting her husband, however, is very differently treated, as a common assault by her is punished by 100 days' penal

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

servitude, and aggravated assaults are punished far more severely when committed by a wife on her husband than in other cases. Stringent penalties protect parents against the violence of their children, and even accidental killing of a parent exposes the agent to penal servitude for at least one year, without the power of commutation by payment of a fine. Parents, on the other hand, may beat their children without risk of punishment, and even if the beating be so violent as to cause death, incur 2½ years penal servitude only. A senior relative is subject to no punishment for an assault on a junior relative, unless an incised wound is inflicted, in which case he will be punished, but the penalty will be mitigated in proportion to the nearness of the relationship. The theory of this strange indulgence is probably connected with a notion that the nearer the relationship is the more the position of a senior relative approaches that of a parent. The duty of *ada-uchi*, or vengeance, so often the theme of Japanese romance, is not upheld by the new code, and although the killing incontinent of a slayer of a parent is not visited with any punishment, the framing and carrying out of a scheme of revenge exposes the successful machinator to the penalty awarded in cases of preconcerted and wilful murder.

We have already seen that relatives are not bound to give information of each other's offences, and are allowed even to aid each other in escaping the consequences of them. But by the provisions of the 7th Chapter, relatives within certain specified degrees are even *punishable* if they mutually inform against each other, except in particular cases of murder. A parent, however, laying a false and malicious accusation against a child is not punished at all. Children guilty of disobedience to the commands—we suppose lawful commands—of a parent incur 100 days' penal servitude, but whether children doing an unlawful act at the command of their parents can plead such command in defence, the codes do not state. This singular jurisprudence shows how great is the *patria protestas* in Japan, how paramount the authority of the husband and how humble the position occupied by the wife.

Adultery is a punishable offence even when committed with a mere concubine. Trafficking in opium is forbidden on pain of decapitation, and inciting to the use of the drug by hanging. Gambling, unless the stakes consist of something to eat or drink, is punished by penal servitude for 80 days or more. Contraventions against police regulations, etc., etc., expose the offender to penal servitude for 100, 40 or 20 days (commutable, however, by payment of fines). Some of the regulations are curious; against tattooing, against insolent language by chair coolies, including, probably, *jinriki-sha* men, against women cutting their hair short without any particular reason for doing so. Wrong conduct not specifically provided against in the codes is termed an impropriety, and may be punished by penal servitude for from 30 to 70 days. Among serious improprieties are mentioned; the breaking of idols, the dissemination of false and malicious or alarming reports, the publication of written matter that causes difficulties in the administration of government, etc., the last being an offence of such limitless application, as to allow of any amount of tyrannical interference by the Government with thought, speech and conduct.

The system of criminal procedure is in the highest degree unsatisfactory. It consists merely of a series of examinations of the accused and the witnesses, at which the public are not allowed to be present, and during which the accused is not permitted to have the assistance either of experts or of his friends. It does not appear that he can even interrogate the witnesses called against him, and there is no provision by which he is enabled to procure the attendance of witnesses unwilling from any cause to come at his mere request. In fact, there is no trial whatever, merely an investigation of the case by a magisterial officer, repeated by the Court of the *Ken* when the offence charged is of a serious nature. There seems to be considerable doubt whether torture is still resorted to or not, but according to Mr. LONGFORD its use has not been formally abolished, and is, indeed, sanctioned by the Codes, which not only provide for the punishment of officers who may torture persons under 15 or over 70 years of age, or mained or deformed, but in the preliminary chapter give a description, and, we believe, an engraving of the instrument of torture, called by the significant name of the 'Investigation Whip,' and prescribed to be made of three strips of bamboo bound with hemp, to be half an inch thick and three feet in length. The necessity or propriety of its application appears to be left entirely to the discretion of the judges, who, when they resort to it, do so, as a rule, only after they have convinced themselves of the guilt of the accused who persists in asserting his innocence. It is evident that such a system of procedure we have described is unjust, barbarous and absurd. The prosecutor (always an official) sits on the same bench with the judge or judges, who are professionally inclined to consider an accused person as a guilty one and themselves as baffled investigators if their examination does not induce him to confess. There is no publicity allowed to the proceedings, and the harsh or unjust judge has only to fear the censure of his own colleagues. Nor is the prisoner, however dull, ignorant or incapable of clear expression he may be, afforded or allowed any assistance whatever to meet the arts of a practised adversary.

Reviewing these Codes (apart from the procedure) as a whole, we cannot but be struck by their immense superiority to the old criminal law. In them, indeed, are contained the germs of an admirable system of criminal law, and there are not wanting in them traces of a truly philosophical comprehension of the essentials of criminal legislation. But the execution of what seems to have been, on the whole, well conceived, is bad, while the draftsmanship is execrable.

The minuteness with which punishments are sought to be made proportionate to offences is, of course, unscientific, as well as the extent to which commutation by payments of money is permitted. Both these features are eminently characteristic of archaic criminal codes, and the formal recognition of them in the nineteenth century is a singular and interesting proof of the extraordinary perdurability of social ideas once firmly fixed in the minds of men. Our space forbids us from further treatment of the subject, but we cannot take leave of it without an expression of hearty thanks to Mr. LONGFORD for the admirable manner in which he has executed a most laborious task. We trust he may be induced to prepare a complete translation of the Codes, and if to this should be added a

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

version of such portions of the Chinese Codes as may be necessary for purposes of comparison, and a glossary of technical terms and expressions, the work would not only be of great service to scholars, to legal practitioners and to the public generally, but would entitle the author to high consideration as an original investigator in an entirely novel and most interesting field of research.

SPIRIT OF THE JAPANESE PRESS,

Centralization.

("Akébono Shimbun," 24th October.)

The Government has already reduced the land-tax to 2½ per cent. on the actual value of the land, at the same time ordering that the local rate on it shall in no case exceed one-fifth of the above tax. We now hear that the Government is considering whether it should not be left to the option of those on whom this tax is levied, to pay it in money or in kind as they find most convenient, and it is more than probable that this concession will soon take effect. This proves the consideration the Emperor has for the agricultural classes, as expressed in the Imperial decree issued in January of this year, it being an act of pure benevolence on the part of His Majesty towards a large section of his subjects.

But the question arises, will such concession be sufficient to improve the condition of the agricultural classes, who have of late years been so impoverished. We think that there is yet another important question which should be considered, and that is the repeal of the system of centralization.

The many agrarian riots which have lately taken place have been brought about by the hardship entailed on the farmers by reason of their having to pay their taxes in cash, but when they are permitted the option of payment in cash or in kind as best suits them, such grievance will be done away with.

We are led to enquire, how it is that the farmers find a difficultly in paying their taxes in money, which at first view would appear to be the simplest method, and that it is now necessary to repeal the law so ordering the tax to be paid, in order to avoid distressing the people.

A variety of circumstances have, no doubt, combined to impoverish the country, many of which were perhaps unavoidable. The Government is doubtless alive to the difficulties to be contended with, but is it aware that no measures it has taken have sufficed to materially improve the condition of the lower classes?

We have been examining the Finance Minister's estimates of revenue and expenditure for the financial year commencing July 1st, 1876, and ending June 30th, 1877, and noted in Part 4 that the estimated expenditure for *In*, *Sho*, *Shi* and *Kioku** was 28,005,672 *yen*, and in Part 5 that the expenditure for *Fu* and *Ken* was estimated at 4,162,500 *yen*. Again, in Part 6 we observed that the estimated expenditure of the police force throughout the Empire was 1,945,000 *yen*, of which amount 1,195,000 *yen* were appropriated to the Bureau of Police at Tôkiô, leaving only a balance of 750,000 *yen* for the other two *Fu* and the thirty-five *Ken*. This clearly shows that the greater part of the national expenditure is centralized in the capital.

The Kaitakushi, it is true, spends some 1,905,660 *yen*, which cannot be said to belong to the Central Government, nor can the appropriations for garrisons and normal schools in the provinces, though the latter are under the Educational Department and the former the War Department, be considered as appertaining to the Central Government. Again, the cost of keeping up the various Custom Houses, which are under the Finance Department, and the *Saibansho* which are under the Judicial Department, are borne by the Central Government, though the establishments themselves are provincial. And yet again, the official department for the promotion of agriculture and manufactories sends money into the provinces to aid in the development of such works. But even with the exceptions thus named, at least four-fifths of the whole revenue is expended by the Central Government, so that the capital only is flourishing, while the provinces are becoming more impoverished day by day. To this must be ascribed the wretched condition of the country people, their inability to pay the taxes imposed upon them, and their consequent frequent risings against the Government.

Most of the duties undertaken by the Central Government can as readily, we imagine, be performed by the local authorities, and such should be committed to them. A decrease in the number of officials employed by the Central Government could thus be made, and a great saving be thereby effected, which would directly tend to benefit the provinces. We have before fully discussed the question whether the local Governments are fitted to perform the duties we would have entrusted to them, and have so fully proved that they are able to undertake them, that further repetition is needless.

Should the Government follow the advice we have given, as well as grant the farmers the option of paying their taxes in money or kind as it pleases them, it would confer undoubted benefits on the people of this country.

* All these are Government Departments in Tôkiô.

The Nobles' School.

(Choya Shimbun, 21st October.)

The *Kuazoku*, who are considered the supporters of the Imperial Court, and who are looked up to as a model the people should imitate, have combined to establish a school for their class at Nishiki-chô, Tôkiô. The building itself is an imposing one, it is well tiled and finely finished with plaster, so that it appears worthy in every respect to be an establishment where the children of the aristocracy of Japan are to be educated. Their Majesties the Emperor and Empress presided over the opening ceremony, and the school received from the Mikado the denomination of the *Gakushiu-In*, all of which was no doubt intended to stimulate the *Kuazoku* in their laudable endeavours to diffuse useful knowledge. We feel convinced that their efforts to this end will not cease with the mere erection of an imposing looking building. Men belonging to the lower classes, such as ourselves, are not permitted to enquire closely into the working of such a school, but we feel convinced that the many shortcomings which have been apparent in the national schools will be avoided in the Nobles' School, and no doubt the best European, Chinese and Japanese teachers will be employed by them, to the decided advancement of knowledge in this country.

There is, however, one thing to be considered. If the youths brought up in this school are only intended to acquire mere book knowledge, then nothing more need be said. But if it is intended they should subsequently take part in the administration of the country, hold responsible positions in the Imperial Court, or become models to the people, something more is required, for it frequently happens that very learned men are quite unable to manage their own domestic affairs, and it is therefore requisite that some practical knowledge of the condition of the country should be acquired, rather than the youths in question should become nothing but book-worms. The *Kuazoku* have not failed so much in learning as in their knowledge of the world.

The *Kuazoku* have lived all their lives in palaces, they have been brought up by women and always surrounded by luxuries, while they have been kept in ignorance of the toil ordinary men have to undergo in order to make their way in the world. Although *heimin* are allowed to attend this school, they can never associate with the scions of nobility, so we are therefore inclined to think that the school will be filled only by the children of the nobles and the higher officials. Dressed in fine clothes we can imagine what the result will be. They will acquire the learning of the East and West, but no practical knowledge of the world, and will so be behind the times in which they live.

The Government wishes the *Kuazoku* to form a House of Lords as in England, and they themselves think they are fitted for the purpose, but their utter ignorance of the affairs of the world makes them but a laughing stock, and on all sides they are considered as mere puppets.

Now a gem cannot be polished with a gem, and we think it quite useless that the children of the *Kuazoku* should only exclusively associate together. It would be far better to send them to the country schools, where they might turn out promising youths. But now, if great care is not exercised, they will acquire the ideas and habits of the *Daimios* of former days and so become pitiable and useless creatures.

The Troubles of a *Kuazoku*.

("Chôya Shimbun" 21st October.)

The bright blossoms of the 'monkey slipper' *(Largerstræmia Indica)* have withered and fallen on the beds of the precious *omoto*, while silence reigns throughout the mansion and even the chattering parrot in the golden cage is overcome with drowsiness, while the master of all, the imbecile *Kuazoku*, seems utterly weary of his leisure as he watches the smoke of the cigar which he lazily puffs through his nostrils. His favourite wife looked into the foolish countenance of his lordship, which betokened anxiety, and said,

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

"Has your lordship's favourite *geisha* said anything to annoy you, or has your lordship's pet fowl ceased to lay eggs. Is it the spread of cholera which causes you anxiety, or have I done anything to displease you. Kindly tell me what it is that causes this cloud on your lordship's countenance." The imbecile *Kuazoku*, heaving a sigh, and shaking his empty head in despair, replied, "There is but one thing on earth that displeases me, and that is the recent opening of the Noble's School. I am naturally no admirer of anything appertaining to letters. When I take up a pen my brain becomes confused, and whenever I open a book my head aches terribly, and whether I attempt to read a novel or a newspaper, the result is the same—a feeling of nausea. Now that the School has been opened, I must perchance attend there, though I shall only be vexed by the study of English, French, mathematics, perhaps even Japanese or something of that sort. What have I done that I should be compelled to undergo such misery. Daily will my brain be confused, my head ache or nausea trouble me, to such an extent that my death will be hastened. And never more shall I enjoy the pleasure of attending the festival of the opening of the Sumida-gawa, with you in the boat to whom I may sing and play to my heart's content."

His wife was astonished at this lament, her face betrayed the sympathy she felt, and grief for a time made her dumb. When she recovered herself, she earnestly said to him, "How would it do to ask Kihachi the carpenter, and Kumakitchi the coolie, to destroy the School some night?" His imbecile lordship replied, "That will never do. The School is built of stone and brick, and can never be destroyed by two persons in one night." Then his wife said to him in a most determined manner, "I shall follow the example of O-shichi and set fire to the School, and so dispel your highness' anxieties." But the imbecile noble was much frightened at this, and hastily said, "No, no, you must not do that. If discovered you would be burnt to death as O-shichi was, and what should I do then?" The wife asked, "Has my lord any plans?" The imbecile replied, "Indeed I have none, and for this reason have I no appetite to enjoy my daily food, and my rest at night is disturbed." His wife began to cry at this, whereupon his lordship cried also, so did the noble parrot in his cage.

At this stage Mr Flatterer, the attendant of the imbecile nobleman, entered the room, and being asked his business, said that he had brought a notification concerning the Nobles' School, which required his lordship's signature.

"Oh, the School is it?" said his lordship, "no matter what it relates to, sign my name and send the circular on to the next place."

Your lordship seems to dislike the School very much," said Mr. Flatterer, "but it is, after all, only a recreation place for young people."

"You are mistaken," replied his imbecile lordship, "the new School is anything but a place of recreation, and causes me much anxiety. I want to go to some country where there is no school, so please go and find out for me where such can be found."

Mr. Flatterer replied, "Your humble servant is ignorant, and consequently knows nothing about geography, but next door to my house there lives a teacher of foreign sciences, so that I will go and make the necessary enquiries of him."

His imbecile lordship approved of this suggestion and desired Mr. Flatterer to lose no time in doing so. Mr Flatterer accordingly called on the teacher and preferred his request for the desired information, but was astonished when the teacher laughingly replied, "In the five great divisions of the world there are countries where there are no nobles, but it would be difficult to find a country where there are no schools. Such being the case, advise his lordship, that instead of seeking for countries where there are no schools, he had better remain in a country where there are schools, but give up his rank of *kuazoku*."

Mr. Flatterer retired, but as he wended his way home, came to the conclusion that nothing reasonable could be done with an imbecile nobleman.

Modern Buildings.

("Osaka Nippô," 19th October.)

The following has been forwarded to us by a Mr. Yuasa, and although as a literary production it shows no merit, yet it deals with an important question, and we therefore publish it.

"To develop the improvements and discoveries of the age is an important matter to all countries, and particularly so to Japan, as she is now making her way along the paths of civilisation. Numerous and extensive undertakings of this nature have been carried on since the Restoration, so that it becomes impossible to enumerate them, among which the construction of railways and telegraphs, the making of roads and canals, and the erection of fine Government offices are most conspicuous. Nearly all these have been undertaken by the Government, but some have been effected by the people, having become a necessity as the progress of the country has been assured, for as they themselves become more enlightened they appreciate the value of time, and institute improvements which will effect a saving of labour.

Now when the Government undertakes any great public work, it is necessary that a special office shall be established to carry it out. In the meantime, no improvement is made in the condition of our peasants, artizans and merchants, nor are the products of the country increased. But the demand for materials of all sorts for projected innovations increases day by day, and we are obliged to import them from foreign countries, which causes a constant drain on our resources, so that day by day the nation has becomes poorer, and the people have a difficulty in supplying their bare necessities. All this arises from the fact that the wealth of Japan has not increased while we have become more lavish in our expenditure, and hence our present impoverishment. When such is the condition of the country, it were better that official business should be transacted in a hut.

Let me draw your attention to the branch office of the Kobe *Saibansho* which has lately been erected in the Okayama *Ken*. Such buildings as were already standing were not deemed convenient for the business of this office, so they were pulled down and a pretentious building in foreign style erected on the site, which rivals even the Osaka Superior Court. Countrymen like myself were surprised to see so magnificent an edifice, but yet we could not but suppose that our careful officials had found it requisite, and had built it as cheaply as possible, and therefore no reflections can be cast on them. But as the cost to the country entailed by the late war in Kiushiu has been enormous, and the Government besides has engaged in expensive works in the three *Fu* and in other *Ken*, I was indeed surprised that such costly magnificence should be displayed in so insignificant a *Ken* as the one I live in.

The *Hôchi Shimbun* once praised (!) the governor of Osaka for having raised a splendid and expensive stand on which to affix the ordinary public notifications, but at the same time urged that some stop should be put to the further erection of unnecessary buildings. So do I now praise our worthy officials for having enabled us to contemplate, through such fine buildings, the progress of Japan in the paths of civilisation, but yet request them not to indulge in the expense of erecting any more.

Although this fine building may greatly facilitate judicial matters, the cost of the Kiushiu expedition has yet to be settled and will not prove agreeable to the people, so that I hope care will be taken to avoid spending any more money on buildings. For the future let us have less of this outer civilisation.

I do not say that all such buildings are absolutely useless, but if the cost of their erection was only undertaken in proportion to the advancement of the people in civilisation, the country would undoubtedly benefit thereby.

We notice that a paragraph has been inserted more than once in the *Osaka Nippo* calling attention to the kindness of the Government in allowing editors of newspapers, who are at present having a little holiday in prison, to be regularly furnished with newspapers to read and lamps to read them by. Charles Dickens once told—or wrote—we forget where or when—a very funny story of a waiter, who, having a holiday for twenty-four hours, went over to another hotel and helped a friend of his; but even the great humorist, with all his almost unrivalled powers of bringing the improbable and fantastic within the realms of the possible, never ventured to assert, so far as we known, that while in enforced idleness the editor of a newspaper would voluntarily read one. But then Charles Dickens did not know Japan. What we call civilisation is but young here yet.—*Hiogo News*.

Although there are still cases of cholera we believe of daily occurrence in the native town, there are undoubtedly much fewer since the last heavy storm of rain and wind; Akunora and Inasa have not been exempt from the disease, while we hear of instances in Shimabara and Amakusa; and at Kagoshima from late accounts there have been a good many cases among the troops there, at one time averaging as high as eighteen per day, the death rate being 1 in 3. The heavy rain which fell here on the 10th inst., followed by the two succeeding days of high wind, was pretty general to the north as far as Yokohama, and we trust that the atmosphere has been purged of much of the germs of the malady which can only be eradicated thoroughly by means at the disposal of the same providence which in the first instance sees fit to remind us of our frailty and weakness by these occasional terrible visitations.—*Nagasaki Rising Sun*.

SOME OTHER CHAPTERS OF JAPANESE HISTORY.

YUI-NO-SHÔSETSU.

(Continued.)

Fuden had many years before lost his wife, who had left him with an only a child, a daughter named Koman, who was now sixteen years old and a girl of great beauty and who, in accordance with a wish expressed by her mother, was betrothed to her cousin Wada Mondo, a nephew of her mother.

Now Shôsetsu increased daily in favour with the *Daimios* and in the families wherein he taught, and being made much of by all people of rank and wealth, he permitted himself to be carried away by the evil spirit of ambition, and pondered how he should succeeded to the position of his master Fuden and become the owner of a family inheritance of extreme value. Day by day the idea took possession of him, until at last he determined to carry it out even though any crime might be necessary to its fulfilment. Not that he desired to possess himself of the wealth of his master's family or to become the husband of the beautiful Koman, as might well have been supposed. His sole wish was to have absolute control over the whole military school, and, to obtain possession of two objects which were guarded in the family with the greatest care, and which were the original copies of Imperial decrees issued by the Emperor Godaigo Tennô and his son Prince Otô-no-Miya*, which had come down to Fuden through many generation from the hands of his ancestor Kusunoki Masashige. For Shôsetsu, who never for a moment lost sight of the great object of his life, the rivalling of the deeds of the hero Toyotomi Hideyoshi, knew full well that if he could induce people really to believe that he was an actual descendant of the noble ancestor of Fuden, he would stand a greater chance of accomplishing his wishes, and of commanding the services of a powerful and influential body of men in his pupils. He saw that he must have recourse to treachery to obtain what he desired, and thus did he set about gaining his ambitious ends.

In Fuden's house there dwelt at this time a young *samurai* who had fallen deeply in love with his master's pretty daughter, but he managed thus far so successfully to conceal his passion that no one but she whom he loved —and loved in vain—suspected its existence. Shôsetsu, however, keen sighted and cunning as he was, soon saw and understood all. One day he took the young fellow, Kuroyémon by name, aside, and told him in the most serious manner that he had something of the greatest importance to disclose to him, and that although the matter was of an extremely delicate nature, he trusted that their long intimacy might excuse his speaking about it. Kuroyémon, greatly astonished, begged that he would speak unreservedly and tell him what had happened. Shôsetsu then proceeded to tell him that their master Fuden had discovered that his daughter Koman, who was engaged to another man, was in love with some one in the house with whom she had been carrying on an intrigue, and that as he considered it a disgrace that his daughter should be in love with some one who was no better than a servant, he had determined to slay the man, and save the honour of his family. Shôsetsu, then asked if it was he, Kuroyémon, who was in love with Koman, who replied that it was true, but he knew not if his love were returned, as although he had written to her no answer had been vouchsafed to his letter. Shôsetsu immediately remarked that it must have been the letter which had betrayed the secret, and that he had little doubt that Koman returned his passion, but that she had not dared to send a reply to his letter, from fear of her father discovering that she was in love with one of his retainers. Kuroyémon said that in that case he would use every effort to obtain her in marriage, and Shôsetsu, having thus worked on the poor fellow's feelings, told him that he would do everything to aid him in carrying out his wishes, but that he must promise to act as he should suggest. Kuroyémon willingly gave his promise, and Shôsetsu then said that the first thing to be done was to get rid of Fuden and Mondo, the girl's betrothed. Kuroyémon, entirely blinded by his passion, and believing that Shôsetsu was swayed by no other motive than a desire to aid him through feelings of friendship, replied that he would permit nothing to stand in the way of obtaining Koman.

After much consideration Shôsetsu told Kuroyémon to go and tell Mondo that Fuden had said that although his daughter was engaged to him, Mondo, he had no intention that the engagement should be carried out, for Mondo showed no attention to him or his daughter, but was a man of weak mind, spending his time solely in idleness and debauchery. He had therefore determined to marry his daughter to Shôsetsu, who should inherit all his estates. At the same time, as the engagement could not well be broken off, he could only see one way out of it, which was to get rid of Mondo, and he had therefore determined upon his death. Kuroyémon did exactly as he was told, and repeated the whole story to Mondo, who was utterly confounded, but whose rage was, as Shôsetsu had desired, directed entirely against the innocent Fuden, who had not even known that any thing had passed between his daughter and one of his retainers.

On the 11th day of the 10th month of the 9th year of Kanyei (1632) Fuden said to Shôsetsu, "To-morrow, is "the day on which I usually call all my friends to drink "tea with me *(cha-o-takeru)*, but as I am called away and "shall not return until late in the evening, postpone the "party until the 13th." Shôsetsu promised that he would do so, and immediately seeking Kuroyémon, told him to go at once to the residence of Mondo and tell him that the gathering had been postponed until the 13th, on which occasion Fuden had determined to poison him. He was also to hint that Fuden would probably pass a lonely spot at a certain hour, and that as he had made up his mind to Mondo's destruction, the latter would do well to be beforehand, and lying in wait there, to kill him as he passed. When Mondo heard this, he said to himself, "There can be no wrong in my slaying the man who is treacherously seeking to take my life", and he determined to act upon the hint thrown out to him.

At about ten o'clock, Fuden, in utter ignorance of the treacherous plot laid for his destruction, was returning accompaniedly the trusted Shôsetsu, when as they approached the fatal spot, Shôsetsu stopped under pretence of adjusting his sandal. Just as Fuden was turning a corner, he was assailed by Mondo, and before he could defend himself fell pierced to death by a spear. Shôsetsu, drawing his sword, ran forward, and crying "What coward dares assail my master?" with one cut laid Mondo dead at his feet. Then running to the house he told how the dastardly Mondo had attacked and slain his revered master, and that in his rage he had cut the fellow down and killed him on the spot. At this announcement the whole household was overwhelmed with grief for the loss of the master that had all loved so well, and loud were the praises showered on Shôsetsu for his courage in taking such a swift revenge.

Now as Fuden and Mondo, who was to have been his successor, were both dead, the question arose as to who should inherit the estates. The relatives and principal pupils having consulted together, concluded that Shôsetsu was the only one who could fitly carried on the school which had been founded and conducted with such ability by the late master, so on the 16th of the month he was installed in the place of Fuden. But the poor girl Koman was so shocked by the terrible fate of her father and lover, that she refused all comfort, and becoming a priestess, retired to the nunnery of Kamakura to spend the rest of her life in works of devotion.

Shôsetsu told Kuroyémon that he had done all in his power to aid him, even to sacrificing both his beloved teacher and the unfortunate Mondo, but that Koman was so overcome by these misfortunes that it was impossible to induce her to listen to any proposal of marriage, and thus the scheme had failed. He warned him, however, that if the tale should ever leak out he would be punished as one of the principals, and then presenting him with a small estate at Kôjimachi, part of his ill gotten spoils, and the sum of a thousand *riyôs*, told him to settle down upon

* Godaigo Tennô is the Emperor whom Kusunoki and other loyal nobles restored to power by overthrowing the House of Hôjô, thus making Kiôto not only the nominal but the actual centre of the Government. He was destroyed, however, by Ashikaga Takauji, who slew the brave and promising Ôtô-no-Miya at Kamakura, and placed on the throne one of his relatives.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

it and to hold his peace with regard to the whole proceeding.

Shôsetsu was now the actual master of Fuden's school, whose numbers had increased greatly since he first joined Fuden in its management, and was also the possessor of the coveted manuscripts, so that now no one could doubt that he was the actual descendant of the great warrior Kusunoki Masashige. Not forgetful of his promises, he called to him the *rônin* and the band of highwaymen with whom he had met during his travels. Kanai Hambei, Katô Ichiyémon, Kumagai Saburobei, one and all responded to his invitation and with all their followers came to his residence at Yedo.

Shôsetsu, however, found that he could not keep all these men at his own house, and at his own expense. Moreover he feared that the presence of such a powerful and reckless body of followers might arouse suspicion, and bring him into discredit with the authorities. He therefore used the influence which he had acquired with the various *Daimios* and families of the aristocracy to get them engaged as teachers, and his patrons, feeling sure that Shôsetsu would recommend no one who did not possess the necessary ability, were eager to engage their services, and thus he obtained employment for nearly the whole of them. Neither did he forget his uncle Shôbei who had befriended him in former days, but establishing an iron worker's shop in connection with his school, put him in charge of it. He also set up an armourer's shop, at the head of which he placed the son of a famous armourer, who had been sent away from his home for misconduct, and who had applied for and obtained the protection of Shôsetsu. In these shops he found employment for a number of pupils and followers. In acting thus he had a two-fold object, to keep his men constantly at work so that no feeling of discontent might be allowed to arise among them, and also that when he should find it convenient to cause a disturbance, he might have a body of followers perfectly skilled in the making of every warlike necessity and appliance. So that no suspicion of his intention might be aroused, he opened a number of small shops in the neighbourhood of the school for the sale of firearms, spears, swords, armour and such like, and calling the attention of the various *Daimios* to the excellence of the various articles manufactured under his own superintendence, requested that they would honour him by purchasing from him whenever they required supplies. In consequence he received from them large orders, and so extensive did his trade become, and so judiciously was it conducted, that in the space of three years he found that he had amassed between twenty and thirty thousand *riyos* from the profits of his trade alone.

Now there was a certain young man named Marubashi Chiuya, a son of the *Daimio* of Tosa, who had turned *rônin* in consequence of his father having been deprived of all his estates after his defeat by Tokugawa Iyeyasu. He was but a child when his father was ruined, and had fled with his mother to Yamagata in the northern province of Dewa, where he was brought up. He was now a full-grown, powerful young fellow, well skilled in the use of the sword, and having heard of the fame of Shôsetsu, came to Yedo with a friend named Okumura, an archer of renown, and together they called upon the famous master. Shôsetsu, willing to see what skill they really possessed, allowed them a trial, but found that they were no match for him in either the use of the sword or bow. Burning to avenge his father's wrongs, Chiuya remained in Yedo awaiting a favourable opportunity to take part in a rising against the Shôgun's Government, but of his designs he had hitherto said nothing to Shôsetsu. One day, when the latter was on a visit to him, in the course of conversation he asked Shôsetsu about his family, and learned that he was a descendant of Kusunoki Masashige, Chiuya then told him who he was and of the sad fate of his father and the loss of his estates, and they were thus led on to speak of their designs. They mutually agreed that no time must be lost, but that they would at once arrange some plan of action, and each bound himself by a solemn pledge to assist the other. From this time forth they held frequent consultations, at which a friend of Chiuya, named Shibata of Yamagata, a man of great bodily strength, was invited to assist, but their plans were never made known to Okumura, whom they knew to be loyal to the government.

One day in the 15th year of Kanyei (1638) Shôsetsu said in the presence of a large number of his pupils, that he had had a wonderful dream the previous night, in which it seemed that a warrior in court dress had appeared to him, and addressing him, said, "You are my lineal "descendant, and if you require a proof of this, dig at the "root of the great pine tree behind the temple of Hachi-"man at Tsuboi in Kawachi." Shôsetsu, however, laughingly remarked, that although the dream was so vivid as to have caused a deep impression, he looked upon all dreams as foolishness, Some of the pupils said, however, that the dream might have some meaning, and offered to go and see if what had been told to Shôsetsu could possibly be true. Accordingly they went to the place spoken of, and there to their astonishment they found an old box, evidently buried in the ground many years before, which contained the flag of the mighty warrior and the pedigree of the house of Kusunoki. Not in the least suspecting that Shôsetsu could in any way be concerned in its having been placed in the spot where it was found, they returned in great haste with the precious emblems, and announced in what miraculous manner the revelation of their existence had been made. By this scheme the fame of Shôsetsu was greatly enhanced, and he obtaining increased influence over his followers. From this time he commenced to take a few of his most trusted pupils into his confidence, and to make known to them his secret designs. At the same time he set about his preparations for the outbreak that should decide his fate.

He had now arrived at the age of thirty-six, but would entertain no idea of marriage, for he well knew the risk that he was running and the uncertainty of his future, and wished to leave behind no family who might be disgraced by his failure.

* * * * *

It is now necessary to go back a year or two in the narrative, to the commencement of the summer of the 13th year of Kanyei (1636). At this time Yomosaku, an industrious, simple minded farmer, who made his living by his daily toil in cultivating the small portion of land that he owned, was hard at work with his two daughters Miyagino and Shinobu, the eldest of whom was about thirteen years old, weeding the newly sown rice fields close to their dwelling in the village of Sakato in Oshiu. Along the road that passed the field where they were at work was coming a *samurai* named Shiga Danshichi, a man of about twenty-seven, a powerful fellow, and one of the most noted fencers among the retainers of Katakuru Kojurô, a vassal of *Daimio* of the Sendai, whose estate at the castle town of Shiraishi was not far distant. Little Shinobu having her back turned toward the road, and not suspecting that anyone was passing, happened to throw behind her some weeds she had just pulled up, which as ill luck would have it, struck the *hakama* of the *samurai*. The fellow enraged at what he chose to consider the insult of having dirt thrown at him by a peasant, threatened to kill the girl. The terrified father prostrated himself before the *samurai* praying that his child's life might be spared, but the bulley's anger was not appeased, and with one stroke of his sword he severed the peasant's head from his body, leaving the two poor children to mourn over the corpse of their murdered parent. Returning home they told their dreadful tale to their mother, who was lying seriously ill, and who on hearing of the murder of her husband was so horrified that she died in a few hours. The orphans were accordingly taken to the house of their aunt, who offered to adopt them, but after a few days the girls requested that they might be permitted to go in search of some employment, as they did not wish to be dependent on their relative. At first the aunt refused, but as the girls persisted in their request, she at last gave an unwilling consent. Accordingly, collecting together a few clothes and taking the little money that their parents had saved, they left their aunt's house and went out alone into the world. It was not, however, employment that they were going to seek but revenge. Young as they were they could appreciate the shameful wrong they had suffered by their father's murder, and were determined to seek redress. Thus by many a weary

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

day's journey, sustained ever by their determination, they at last reached Yedo.

The first thing these two friendless children did was to set about finding out who was the most famous master of the sword and spear in the capital. With this intention they frequented the most crowded places, such as Riogaku and Asakusa, and there listened attentively to the conversation of the *samurai* and students who resorted there. The man whose praises seemed in everyone's mouth was some one called Shôsetsu, who appeared to be the greatest teacher and best fencer in the city. Finding out where he lived, they mustered up courage to call on him at his residence at Ushigome, and being kindly received related to him the whole of their sad story. How they had seen their father murdered, and how their mother had died of grief, and that though young in years they had determined on revenge; that they were entirely ignorant of the use of weapons; but strengthened by their filial love, they had ventured to call on him, the greatest master in the country, and entreat him to instruct them. Shôsetsu was greatly moved by their story, and not only promised to teach them, but said that he would take them entirely under his protection. He took them into his house for a term of three years, and placed them under the special care of his mistress. They were instructed in the case of the sword, spear, sickle* and *shuriken*,† and followed out the leadings of Shôsetsu, who took them entirely under his own care, in the most diligent manner. The term of three years having expired, Shôsetsu told them to continue their studies one year longer, and when at the expiration of that time Shôsetsu matched them against his ordinary pupils, the girls in most instances came off victorious, beating even those who had practised many years. Shôsetsu was delighted at their admirable progress, and told them that they might now go back to their native province and seek their revenge with a certainty of obtaining it if skill could avail.

YOKOHAMA RACING ASSOCIATION.

The following are the entries for the forthcoming Autumn Meeting:—

First Day.—Tuesday, 20th November.

1. Negishi Cup.—Value $. For China Ponies that have never won a race. Weight for inches. Entrance $5. One mile.

Mongolian Wolf, Mongolian Beglerbeg (late Dusty Miller), The Consul, The Dwarf, Sport, Bravo, Bébé, Quasimodo.

2. The Griffins' Plate.—A Sweepstake of $10 each (with $50 added) for Japan Ponies being *bonâ fide* Griffins. Weight for inches. Five furlongs.

Mameluck, Moustique.

3. Value $. For all Ponies. Weight as per scale. Entrance $5. Three quarters of a mile.

Mohstotz, Mongolian Chief, Chief Mongolian, Mongolian Wolf, Mongolian Beglerbeg, Vandal, Dick Swiveler, Skedaddle, The Consul, The Sheik, Dibs, Favori, Chance.

4. Value $. For Japan Ponies. Winner of No. 2 and of two races at any meeting excluded. Weight for inches. Entrance $5. Half a mile.

Monarque, Mameluck, The Moor, Oyama, Doctor, Exile, Professional.

5. Value $. For China Ponies. Winners of three races in Japan excluded. Winners of two races anywhere, and winners at this meeting 7lbs. extra. Weight for inches. Entrance $5. One mile and a half.

Mongolian Chief, Mongolian Wolf, Mongolian Brave, Skedaddle, The Raven, The Dwarf, Sport, Bravo, Favori, Bébé, Quasimodo.

6. Value $. For Japan Ponies. Weight for inches. Entrance $5. Three quarters of a mile.

Mohstotz, Lodi, Mameluck, The Convert (late Jim Hills), Board of Health (late Sandboy), Kickapoo, Oyama.

7. Value $. For China Ponies that ran as Griffins in Japan last Spring. Winners at this meeting excluded. Weight 11st. for 13 hands, to give or take 5lbs. for each inch above or below. Entrance $5. One mile and a quarter.

Mongolian Wolf, Mongolian Beglerbeg, Vandal, Skedaddle, The Dwarf, The Sheik, Telephone, Sport, Chance, Bravo, The Boojum, Satisfaction.

8. Value $. For Japan Ponies. Winners of two races at any meeting 12lbs. extra; other winners 7lbs. extra. Weight for inches. Entrance $5 Five furlongs.

Mohstotz, Lodi, Mameluck, Monarque, The Moor, The Convert, Board of Health, Oyama, Kickapoo, Exile.

9. Value $. For China Ponies, being *bonâ fide* Griffins at date of meeting. Winners excluded. Weight for inches. Entrance $5. Half a mile. (Six entries or no race.)

Second Day.—Wednesday, 21st November.

1. Value $. For all Ponies. China Ponies winners of four races in Japan excluded, or winners of three races anywhere 10 lbs. extra. Weight as per scale. Entrance $5. One mile.

Mohstotz, Mongolian Chief, Mongolian Wolf, Vandal, Skedaddle, The Sheik, The Raven, The Consul, The Dwarf, Kickapoo, Telephone, Chance, Sport, Favori, Bébé, Quasimodo.

2. Value $. For Japan Ponies that have never won a race. Weight for inches. Entrance $5. Half a mile.

Kuazoku, Moustique, Mameluck, Luck's All, Professional, Exile.

3. The Mitsu Bishi Challenge Cup.—Presented—Value $200. For China Ponies. To be won at two consecutive meetings by a Pony or Ponies, the *bonâ fide* property of the same owner or owners; to be held by the last winner at each meeting until finally won. Weight for inches. Entrance $5. One mile and three quarters.

Mongolian Chief, Mongolian Brave, Skedaddle, The Dwarf, The Raven, Dibs.

4. Value $. For all Ponies China Ponies winners of four races in Japan excluded. Weight as per scale. Entrance $5. Half a mile.

Mohstotz, Lodi, Mongolian Wolf, Mongolian Beglerbeg, Monarque, Mameluck, Skedaddle, The Convert, The Consul, The Sheik, Favori, Chance, Raethia, The Snark.

5. Value $. For Japan Ponies. Winners of one race of a mile, or over, 11st. Other, Ponies, weight for inches. Entrance $5. One mile

Mohstotz, Mameluck, The Moor, The Convert, Oyama. Kickapoo, Doctor, Exile.

6. Value $. For China Ponies. Winners of four races excluded. Winners in 1877 of three races 12st.; of two races 11st. 5 lbs.; of one race 7lbs. extra; and non-competitors at this meeting 7 lbs. extra. Penalties accumulative. Weight for inches. Entrance $5. One mile and a quarter.

Mongolian Chief, Mongolian Brave, Mongolian Wolf, The Dwarf, The Consul, The Sheik, The Raven, Telephone, Favori, Sport, Bravo, Quasimodo, Satisfaction.

7. Value $. For Japan Ponies. Non-competitors and winners at this meeting excluded. Weight for inches. Entrance $5. Three quarters of a mile.

Mohstotz, Lodi, Monarque, Moustique, Mameluck, Luck's All, The Moor, The Convert, Board of Health, Oyama, Kickapoo, Doctor.

8. Value $. For China Ponies. Winners in 1877 and non-competitors at this meeting excluded. Weight for inches. Entrance $5. Three quarters of a mile.

Mongolian Wolf, Mongolian Beglerbeg, Mongolian Brave, Dick Swiveler, The Dwarf, The Consul, Favori, Sport, Bravo, Raethia, The Snark, The Boojum.

9. Value $. For China Ponies that ran as Griffins in Japan at the last Spring meetings and for all beaten China Ponies at those meetings; 5lbs. extra for every race won in Japan in 1877. Penalties accumulative. Weight for inches. Entrance $5. One mile and a half.

* These sickles resembled very much in size and shape those used for ordinary field purposes, with the exception of having a chain hanging from the handle, about six feet in length, at the end of which was a sexagonal piece of iron which could be whirled round so as to entangle the sword arm of an opponent.

† This was a flat piece of steel, about six inches long, pointed and sharpened at one end, which was thrown at an opponent so as to injure him in some vital part.

Mongolian Wolf, Vandal, Skedaddle, The Dwarf, The Consul, The Sheik, The Raven, Telephone, Favori, Sport, Bravo, Chance, Bébé, Satisfaction.

THIRD DAY.—THURSDAY, 22ND NOVEMBER.

1. THE HURDLE RACE.—Value $. For all Ponies. Over six (6) hurdles. Weight as per scale. Entrance $5. One mile and a distance.

Moustique, The Raven, Oyama, Dibs, Tennessee, Doctor, Liddesdale, Satisfaction.

2. .—Value $. For all Ponies. Weight as per scale. Entrance $5. Three furlongs.

Mohstotz, Lodi, Chief Mongolian Mongolian Wolf, Mongolian Beglerbeg, Monarque, Dick Swiveler, Skedaddle, The Moor, The Minister, Favori, The Snark.

3. .—Value $. For all China Griffins imported in 1877. Winners of one race 6lbs. extra; of two races 10lbs. extra; and of more than two races 3lbs. extra for every race won. Penalties accumulative. Ponies that have run in two races and not been placed 5lbs. allowance. Non-competitors at this meeting excluded. Weight for inches. Entrance $5. One mile.

Mongolian Wolf, Mongolian Beglerbeg, Vandal, Skedaddle, The Dwarf, The Consul, The Sheik, Telephone, Sport, Bravo, Chance, Bébé, Quasimodo, Satisfaction.

4. .—Value $. For all Ponies, being *bonâ fide* Hacks and that have never won a flat or hack race. Ponies entered are disqualified from entering any other race, except No. 1 this day. Weight 12st. To be ridden by Jockeys who have not had a winning mount at this meeting. Entrance $5. Three quarters of a mile.

Rebel.

5. .—For Japan Ponies. Compulsory on winners on 1st and 2nd days at this meeting. A Sweepstake of $10, with $5 extra for every race won. Open also to Ponies placed second, at an entrance fee of $5, to go to the fund. Entries to be made on the Course at the close of the second day's racing. 1st Pony to receive 75 per cent.; 2nd Pony 25 per cent. Weight for inches. One mile.

6. .—For China Ponies. Compulsory on winners on 1st and 2nd days at this meeting. A Sweepstake of $10, with $5 extra for every race won. Open also to Ponies placed second, at an entrance fee of $5, to go to the fund. Entries to be made on the Course at the close of the second day's racing. 1st Pony to receive 75 per cent.; 2nd Pony 25 per cent. Weight for inches. One mile and a quarter.

7 .—Value $. For Japan Ponies beaten at this meeting. Weight for inches. Entrance $5. Five furlongs.

Mohstotz, Lodi, Monarque, Moustique, Mameluck, The Moor, The Convert, Board of Health, Oyama, Kickapoo, Doctor, Exile, Professional.

8. .—Value $. For China Ponies beaten at this meeting, being non-winners of three Races. Weight for inches. Entrance $5. Once round.

Mongolian Chief, Mongolian Wolf, Mongolian Brave, Mongolian Beglerbeg, Vandal, Skedaddle, The Dwarf, The Consul, The Sheik, The Raven, Chance, Bravo, Sport, Favori, Bébé, Raethia, Quasimodo, Satisfaction.

9. .—Value $. A Handicap for all Ponies that have run at the meeting. To be handicapped by the Stewards at the close of the second day's racing: entries to be made on the Course before the last race. Winners of Nos. 5 and 6 this day excluded, and winners of any other race after the publication of the Handicap 5lbs. extra. Entrance $10. 2nd Pony to save entrance fee. One mile.

IMPERIAL GOVERNMENT RAILWAYS.

YOKOHAMA STATION.

Statement of Traffic Receipts, for the week ending Sunday, 21st October, 1877.

TRAINING NOTES.

TO THE EDITOR OF THE "JAPAN WEEKLY MAIL."

Yokohama, 23rd October, 1877.

I am commencing my Notes rather early this week, but your readers need not imagine that on that account I am—as is currently reported—going to "pitch into" the Association and its belongings. I believe that the "Associationists" think they have reduced racing in Yokohama to a *science*. This I think some of the racing members will find to their cost is the case. Now, without intending in any way to uphold the scheme of the Race *Club*, or to condemn the Secessionists, I must say that the position of the Y.R.A. brings up reminiscences of the original "split." One of the numerous reasons assigned by more than one member of the Y. R. A. for seceding from the original Race Club was that there was no fun, or sport, in racing while the majority of races fell to one stable. This is not the principle of true sport. The obvious answer to such an objection is that some proper effort should be made to bring forward ponies *fit* to compete against a strong and worthy antagonist. Instead, however, of doing this, the division among racing men will only cause at the Y. R. A. meeting the very fault they pretend to deplore as having existed at former meetings of the Club.

Some steps have been attempted towards an amalgamation, though of such a nature, that there was no option for those members of the Club, who are actively interested in the coming meeting, but to reject them. Any such attempts, if genuinely intended to succeed, should have been made before the entries closed for the Race Club meeting, and also the Y. R. A. should be prepared to deposit an equal fund with the Y. R. C., or *vice versâ*. If this can be done, the questions of 'Ballot' and 'Declaration' which were, I understand, the two sticking points, could easily be got over.

Into the Y. R. A. programme there appear to have crept many similar errors to those I pointed out in that of the Y. R. C., especially so far as regards short races for China ponies. No. 3 of the first day is almost a certainty for *Dibs*, and I should hardly think that any of the new China ponies would care to try their luck against him at scale weights. All the other races are long distances (comparatively) and No. 9 actually calls for *six griffins*.

On the second day, race No. 4 appears specially to have been made for the Nicolasian stable. Why should China winners of four races be excluded and not Japan winners? There are very few China ponies here that have won four races at this distance, but both *Lodi* and *Mohstotz* have for three years had their unlimited swing at these short distances, and the stewards need not have overlooked this fact. "By other's faults wise men correct their own," and from the free and universal manner in which the programme of the Race Club was condemned, I think the stewards of the Y. R. A. might have laid before their constituents a more tempting bill of fare than that now before me. Mind, I am writing this on Tuesday morning (the usual day for trotting matches against time) and not even the most voluminous entries will make me alter my opinion of the programme, or the motives of the "powers that be," either in the Y. R. C. or Y. R. A. Both are greatly to blame. If matters had been properly handled after last spring races, we should have had but one meeting this autumn and some good sport. In a word, it is simply ridiculous in a small community like this, that for the gratification of a personal spite or grievance, existing—or supposed to have once existed—between one or two members, we should all be condemned to the misery of witnessing such wretched failures as doubtless the coming autumn meetings will be.

Although racing men generally pretend to deplore the division which exists among them, there seems to be no *real* desire on their part to heal this wretched quarrel, and a total absence of the friendly feeling which existed in the old days, when all worked together to promote harmony and good sport. Think, O former photographer of so many pleasant scenes, what a nice looking group you might make at the course now, compared with four or five years ago! "*Hon-toni toké nga matchi-gatta, yappari*

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

mina 'sto ish' oné matchi-gai-mashta." Readers, search your Latin Grammar and find the double of this proverb.

25th October, 1877.

Now, for the promised remarks on the stables:—

The entries published last night for the meeting of the Y. R. A. are certainly better than those of the Race Club, but I see there are one or two races that will fall through; in fact No. 9 on the First Day has been quietly ignored and is not even mentioned in the list now before me, which has been published in the papers. The entries have, however, been made by *some* stables with a liberality which shews a true sporting spirit; on the other hand, some owners have evidently only entered where they think their chance of winning is certain. This is a "penny wise and pound foolish" error. I have often seen instances where an owner, by grudging the extra $5 for entrance fee of a second pony, has lost a "win" for his stable.

But now to make my *resumé* of the belongings of the various stables. I commence with the most deserving, which of course your readers all know is the "Mystery," under the hands of our friend The Baron. *Dibs* is rather too light to be able to run in his old form, and showed a slight indication of weakness the other morning after a short spin. An extra measure of oats per day would do him no harm. *Sport* and *Bravo* are two good serviceable animals, and with their associate *Chance* should be the winning representatives of this stable in the China line. *Favori* and *Tennessee* may be useful to cut out the pace. In the Japan line *Oyama* is, in my opinion, by far the best pony on the course at any distance over three quarters of a mile. *Kickapoo* is being trained in this stable, but does not appear in as good form as at last meeting. I have not been able to get any *time* of these ponies, as the Baron has grown somewhat artful in his old age, and starts off his ponies at the most impossible points. It is not desirable to see all the races fall into one person's hands, but with judicious management, this stable should be able to win any and every event the ponies go for.

Mr. Fairplay's *Mongolians* of course deserve some notice, but I may be excused if I differ most decidedly with their mode of training. It is an old argument that ponies will run better if trained with a very light weight. This may answer as regards English horses and thoroughbreds, but certainly not as regards Japan or China ponies, and in support of this I may point to the great successes of Mr. Morrison in the "Tartan" stable. Both *Mongolian Chief* and *Chief Mongolian* are in very good fettle, but I think the remainder of the stud might be quietly retired, especially *Mongolian Brave*. *Kuazoku*, the Japanese griffin appertaining to this stable might turn out a good pony next autumn. He shews good signs of speed, has a pretty action, and probably might last out a five furlong race and make it "rather hot" for his competitors, but then his future career would be spoilt, and everyone is desirous to see what these *Arabia-Japonica* animals can do.

Mr. Nicolas has a large string of Japanese ponies. *Mohstotz*, *Lodi* and *Monarque* are all that are worth the trouble of training, but doubtless with the assistance of a few *very high officers* this stable will be more successful than present appea.ances would lead one to predict.

Mr. Hah-Dikesan's *Dick Swiveller* appeared on the course on Tuesday morning, piloted by the ghost of our late fellow resident Fitz H——. Evidently both the owner and trainer have other things to attend to, so poor *Dick* was doomed to do all his training in one morning, and has not since been seen on the velvet sward.

Mr. Riyoshi enters *Quasimodo*, *The Snark*, *The Boojum* and *Doctor*. The two former have been carefully handled during the training and are in as good condition as any ponies on the course. *The Snark*, however, has no heart, and unless he can sustain a lead from start to finish will never win a race. *The Boojum* is not training on the course, and *Doctor* looks more fit for a dray than for racing purposes.

Mr. —— ——'s *Bébé* is a pony that must not by any means be overlooked, and I think for a long distance can see anything that is entered for the Association Meeting. *Raethia*, however, is *au contraire* neither good to look at nor to go. From Tôkiô *Skedaddle* and *Luck's All* have been entered, the latter for the Maiden Stakes. I am under the impression that *Luck's All* won a race last meeting, which might perhaps disqualify him for the Maidens.

I must now conclude with the numerical stable of the L. S. and G. T. Company. *The Moor* and *The Sheik* fairly represent the probable successful performers of this stud. *The Dwarf* would be a very pretty pony for a light trap, *The Raven* is rather too old, and unfortunately the other representatives have not the gift of speed. *Jim Hills* has been converted into a moderate third class pony, and has certainly lost all the *entrain* he had formerly under the management of Mr. Marlborough.

I have avoided giving any trial times, principally because nothing of note has been done even by the cracks. In my next I will simply predict the probable results of the Y. R. C. meeting.

Your faithful friend,

TRITON.

(N.B.—Latest rule by the D. A. A. Clerk of the Course:—"The momban is not to serve up Tea, etc., before 6 a.m." It is somewhat hard to fall into Mexican ways thus quickly.)

To the Editor of the "Japan Weekly Mail."

P. & O. S. N. Company,

Yokohama, 25th October, 1877.

Dear Sir,—In last Saturday's issue of the *Weekly Mail* you made some remarks on my letter of the 16th instant which clearly shows how entirely you have misunderstood me, and I beg therefore to state that my remarks refer solely to the case "Beato *vs.* The P. & O. S. N. Co.," and are not to be taken in a general sense.

You imply that I deny that the Company would resort to a defence on the negligence clause. Now it is not to be supposed for a single moment that should occasion arise for doing so it would hesitate to rely on that, any more than on any of the other clauses in its Bills of Lading, but I fail to see how you can make out that the Company did set up that defence *in the above case*, as the *first* mention of negligence was by the Judge, at the termination of the trial, and *after* the verdict had been given.

You will see, on reference to the report on the case, that the Counsel for the defendants made no allusion to the clause in his address to the Jury, but had of course, to refer to it in the answer to the appeal to meet the arguments of the apellants.

As my motive in writing to you before was merely to set right a slight inaccuracy in the statement you made in the *Weekly Mail* of the 13th instant, and not from any wish to attach any importance to the matter at issue, namely whether the real defence in that particular case was or was not negligence, I am sorry that your subsequent remarks have obliged me again to address you on the subject, and, apologising for doing so,

I am, Dear Sir,
Yours faithfully,

J. RICKETT, Jr.,
Agent.

To the Editor of the "Japan Weekly Mail."

Tôkiô, 25th October, 1877.

Sir,—I am glad to observe from Mr. Rickett's letter which appeared in your last issue that it is not the intention of the Peninsular and Oriental Steam Navigation Company to relieve themselves from responsibility for damage caused by the negligence of their servants, by pleading that very fact in bar of compensation. From my own experience, however, I can state that the Company sometimes disclaims responsibility on grounds almost as peculiar.

On my voyage out here a case of blankets, etc., belonging to me, was allowed to fall overboard at Galle in course of transshipment from one of the Company's ships to another, I having a through Bill of Lading. I called the attention of the Company's agent here to the fact immediately on my arrival, and requested him to have the case

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

examined, at the same time furnishing him with the name of one of the Company's own Cap ains who would give full particulars.

The goods were not examined, and the only satisfaction I got here was that my letter would be forwarded to the head office in London. At the head office my agent was informed that I ought to have got a certificate as to the accident from the Company's agent at Galle at the time it occurred, the truth being that I did not hear of it until some time after we had put out to sea. I saw at once from the nature of the defence, that without an action at law there was no hope of redress from the Company, and as the pecuniary loss was not very heavy I immediately instructed my agent to let the matter drop.

The goods were fully insured, but the Insurance Company refused to give compensation on the ground that the damage was caused by the carelessness of the P. & O. Company.

I had no intention of making such a trifling occurrence public, and but for Mr. Rickett's letter would not have done so. It is, however, for the interest of the public and possibly even of the Company that such facts should be known. If the Company knew their own interests they would, it seems to me, shew themselves anxious to meet and not to evade any claim for damage caused by their servants. I enclose my card, which you can communicate to Mr. Rickett if he requests it.

Your truly,

LEUMAS.

[We insert this letter, but the arguments of the writer are deprived of all force by Mr. Rickett's letter above.—Ed. *J. W. M.*]

Law Reports.

IN H. B. M.'s COURT, KANAGAWA.

Before H. S. Wilkinson, Esq., Acting Law Secretary.

Wednesday, October 24th, 1877.

John Bradfield *vs.* John North.

The plaintiff claimed that the defendant entered into a contract with him to pay the sum of $3,000 in satisfaction of a promissory note given by Mr John Thompson (a partner in defendant's business) to the plaintiff for moneys had by Mr Thompson, and used in the business of defendant, the advances to Mr Thompson being secured by a bill of sale deemed by the parties to be enforceable against the property of Mr Thompson.

The defendant pleaded non-indebtedness.

Mr Lowder appeared for the plaintiff, Mr Dickins for the defendant.

(Continued from the 20th inst.)

Mr Dickins said that he had a few questions to put to the last witness.

Mr North: My firm was in 1876 greatly embarrassed in consequence of the acts of Mr Bradfield. At the suggestion of Mr Talbot, I wrote a note to Mr Talbot in the month of June, asking him whether he could procure me a loan. (Letter-copy book produced and letter read, dated the 24th June, to the effect that the firm wanted a loan of $8,000, with mortgage on their stock and fixtures.) The $8,000 were to cover acceptances, and besides there was a debt of about $3,000 to Mr Gardiner. After the 24th June I mentioned to Mr Talbot that I should still be glad to have $3,000 if he could procure them; I wanted those $3,000 to take over Mr Thompson's share and discharge the bill of sale, which I understood hung over the business. Otherwise I never intended to take over Mr Thompson's debt. If the bill of sale was a burden on the business, I was willing to take it over. I do not think I ever said so to anybody. I saw Mr Talbot frequently about the month of September when he was making up our accounts. He sometimes referred to Mr Bradfield's money, and I told him I should be very glad to settle that, if I could get $3,000. I had an account from Mr Bradfield, but I did not accept of it, although I said nothing about it to Mr Bradfield.

Cross-examined by Mr Lowder: My cash-book is not here in court, but I can send for it if you wise. (Cash book sent for.) This is my invoice book. (Produced.) I did not go the hatoba myself in April, 1874, to ascertain whether there were any goods there. For all I know, there may have been goods of the old firm, "Thompson & Co.," taken over by the new firm, but nothing was said to me about it. In the invoice book there is an invoice of goods originally shipped for the old firm. There is a note on it of the day of arrival, the 28th May, 1874, made in my writing. I recognise that there is an entry in the journal of £76 corresponding with the above invoice. Dr Dalliston died in January, 1875. I was indebted to him in $5,000. Mr Kirby was his executor; he asked me to settle that debt, although he never actually pressed me about it. I do not remember writing a letter to Mr Bradfield on the 16th February, 1876, stating that Mr Kirby was pressing me. (Letter produced.) This is my handwriting. (Letter read to the effect that Mr Kirby has placed the matter in the hands of Mr Dickins, whom the writer knows well will show him no mercy; if the matter comes to a push, the writer will telegraph, "Dickins is coming") When I said that Mr Kirby was not pressing me, I meant that he did not bring me into court. (Another letter produced.) This is also my handwriting. (Letter, dated 8th March, 1876, read, to the effect that Mr Dickins had declared himself willing to accept of a mortgage on the firm, but that all the partners of the firm must sign the bond). (A third letter produced.) This is my hand-writing. (Letter, dated the 27th May, 1876, read, to the effect stating that the writer had been sick and was advised to take a trip home, further that the affairs of the firm were very straightened on account of the large orders made by Mr Bradfield, and that the writer hoped to raise a loan from a friend to clear off liabilities.) I do not remember who the friend was, from whom I expected the money. It may have been Mr Dickins.

His Honour here told Mr Dickins that he thought his interruption of the cross-examination demanded explanation.

Mr Dickins said that he thought it was a waste of time of his learned friend to press a question, to which the witness had already answered, that he could not remember.

Cross-examination continued: I can give no other name than that of Mr Dickins. I had given Dr Dallision a bill of sale on my share in the firm of North, Thompson & Co., but it was not registered. I think I have signed three bills of sale, but I do not pretend to any more knowledge of bills of sale than an ordinary person. I have sufficient sense to know that a bill of sale on chattels that had been destroyed at one set of premises could not hold good on goods on another set of premises. Until lately I did not take legal advice as to the validity of the bill of sale, now in Court. By lately I mean this year. I cannot say in what month; I have seen Mr Dickins very often and cannot say in what consultation it was. I went to the registry of this Court in the latter end of the year 1876 to look at the bill of sale, because it occurred to me that Mr Thompson could not legally give a bill of sale on his share in Messrs North, Thompson & Co., and if this bill of sale was in existence it must refer to the firm of Thompson. & Co. Together with Mr Brewer I took Mr Litchfield's advice on the question. I think it was in summer, this year. At the time I searched the register I was still being asked by Mr Dickins to pay my debt to Dr Dalliston. Mr Dickins demanded payment from me up till lately, until I signed a bill of sale to Mr Dickins. There is a bill of sale in this registry, dated the 2nd April, 1877, signed by me to Mr Dickins. I suppose I had a letter once a month from Mr Dickins asking for payment to Dr Dalliston's estate. I endeavoured to sell my share in the firm, in order to pay that debt among other things. It was Mr Court, to whom I endeavoured to sell my share towards the end of 1876. I did not inform Mr Watson that I was endeavouring to sell my share. Mr Watson was afterwards annoyed that I did not tell him. I told Mr Thompson of it. In the latter end of 1876 Mr Court asked me if I had anything to do with Mr Thompson's business. I told Mr Thompson in the middle of December, 1876, that I had proposed to Mr Court to buy my share, Mr Court had told me that he was in negotiations with Mr Thompson to buy his business. I did not sell to Mr Court because he did not find the money. Mr Court looked through our books. He came upon the arrangement by which Mr Thompson had transferred to us his share in June, 1876. He said he would like to have the matter settled, I told him there was no cause for alarm, as I had ascertained that the bill of sale had nothing to do with my firm. The negotiations with Mr Court extended into January, 1877. I do not remember having mentioned to Mr Thompson that Mr Court had raised objections with regard to his bill of sale. (Paper handed) This is our account with Mr Thompson, dated 30th June, 1877. I sent him accounts regularly every quarter. I do not think I ever before had credited him with $3,000. The reason why I had not before credited Mr Thompson with these $3,000 was that I did not wish to mix the two accounts up. The $3,000 were mentioned in the account of the 30th June, because he owed us money for supplies and I owed him money for his share. Before I supplied Mr Thompson in Tôkiô, I had already established business quarters there myself, and had been to some expense. With these expenses I debited Mr Thompson. On the 31st May, 1876, the value of Mr Thompson's share in my firm must at the outside have been $4,000. I do not remember that there was any account made by Mr Talbot, setting forth that value. I agreed to buy his share for $3,000. According to the account rendered on the 31st December, 1876, Mr Thompson was then indebted to us $2,000. I charge Mr Thompson 50 per cent. on the cost price of the goods, with which I supply him. (Paper handed). These are accounts between my firm and Mr Thompson. The item "$269.00 being cash account before purchase," is cash supplied to him before the purchase of the supplies. The latter were supplied to him on condition that he had a right to return them within six months. That is to say, it was at my option at the end of six months to take the goods back, if Mr Thompson did not pay me according to agreement every month a quarter of his receipts. The words in the account produced: "before purchase" refer to "before purchase of supplies," not to "before purchase of share." In the account current dated 31st January, 1877, I have not credited Mr Thompson with $3,000 because, as stated above, I did not wish the two accounts mixed up. I can give no further explanation of what I mean by "accounts mixed up." By looking over my cash book I may be able to account for the $260 cash debited to Mr Thompson.

Mr Lowder here called for the I.O.U's., which were mentioned the other day by Mr. Dickins, and on having received them produced them.

Adjourned until 2 p.m.

The Court resumed its sitting at 2 p.m.

Cross-examination of Mr North continued: I am not able to account for the $276 cash. In making up the invoices, I found the

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

amount in Mr Talbot's private ledger to be larger, and presuming Mr Talbot's account correct, I thought that the difference must have been in cash that had not been put down. That is the only explanation I can give. Mr Thompson has never objected to the amount as incorrect. I am not prepared to point out the two accounts, the difference between which is $296. I have, during the recess this noon, looked over my cash-book. From my cash-book I cannot account for these $296. (Papers handed.) I have seen these I.O.Us. Three of them are dated, and three are not. The handwriting is Mr Thompson's, with exception of the dates "23rd May, 1876" and "5th June, 1876" which were written in pencil by me at the time. The corresponding amounts will be found in the rough cash-book (entries in cash-book pointed out). I can only find two more of the I. O. Us. entered in the cash-book. I can recall no particular reason for dating two I. O. Us. out of the six. It was done at the time when they were signed and I have not seen them since; they were put aside in an envelope. I produced them on Friday last in order to contradict a statement of Mr Thompson. I had no recollection that two of the notes were dated in my own hand-writing. I cannot say that I took an I. O. U. for every cash advance to Mr Thompson. The dates, "the 23rd May" and "5th June" do not recall to me the circumstances under which I wrote them. (Paper handed). This letter was written by me in rely to Mr Talbot's letter to me dated the 23rd August, 1876. When it says that Mr Bradfield will have to wait some time for his money, it refers to Mr Llewellyn's money. (Paper handed). This latter, dated the 7th June 1876, is in my handwriting. There is no mention in it of any purchase of Mr Thompson's share. (The letter, which was one to Mr Bradfield, was partially read and contained the following phrase: "This will reduce the amount of the money I have to pay you for the purchase of Mr Thompson's share.") I only meant, in case I was to purchase Mr Thompson's share. In January, 1877, I did not tell Mr Thompson the value of his share. The last balance sheet had been made up in September 1876, and and that I did not acknowledge. Mr Thompson's transfer was from the date of the 1st October 1875. That was the date of the balance sheet. It was done so, simply to save the expense of making up the books. The transfer was to North, Thompson & Co., not to myself. The previous transfer in June, which, however, was not a clean transfer, was in my own name. After the 23rd May, 1876, Mr Thompson was never consulted with regard to the affairs of the partnership. The answer to plaintiff's petition was drawn up by counsel under my instructions; it states in its Sec. 4 that the transfer in May, 1876, was made to me, but it should have been to "the firm." I am acquainted with the prices of medicines. Quinine is an article of which the price sometimes varies from day to day. I must correct my former statement that Mr Bradfield bought 2,000 ozs.; it should have been 1,000 ozs. I mentioned quinine as an instance that Mr Bradfield overcharged us. I am still under that impression. At that time, 1875, the price of quinine was firm. Mr Bradfield was cognizant of my bill of sale to Dr. Dalliston. I can prove that Mr Bradfield abstracted all our cash from the Bank.

Mr Lowder said: You made a lot of accusations against my client; it is my duty to him to give you a chance either to withdraw or substantiate them.

Cross-examination continued: In December, 1875, Mr Bradfield withdrew from the Bank $1,256, $219, and $100. When Mr Bradfield left the business there was only $1,100 to his credit; as his share was $4,000, he must have abstracted the difference. I was saving to pay a certain creditor at the end of the year, but when Mr Bradfield gave over the management, I only found $29.00 to our credit in the Bank. What I complain of is that Mr Bradfield withdrew his capital before he sold his share.

Re-examined by Mr Dickins: Mr Bradfield never mentioned to me to take ever any liability towards him. I expected that Mr Talbot would act for me just as well as he was acting for Mr Bradfield and Mr Thompson.

To the Court: No promissory note was ever mentioned to me until Mr Bradfield's return from England in September 1876. Afterwards no promissory note was mentioned unless in the negotiations for his share. Until I saw it in this Court I knew of only the promissory note for $3,000. I read Mr Talbot's letter dated 1st June, 1876, which mentions a promissory note for $3,340. The difference between that and the note for $3,000 I thought was the interest. The letter specially mentions interest besides the $3,340; I do not think that I took particular notice of that letter, as it differed from our agreement and I never answered it. Mr Talbot stated the value of the share at $4,000 and some hundred. I offered $3,000 because I did not think the share worth more. The reason that I advertised in the *Gazette* that Mr Thompson was out of the firm, was partly that I wanted to get rid of Mr Thompson, partly on account of some verbal agreement between Mr Thompson and myself in which I had agreed to supply him with goods. In fact, I was under the impression that Mr Thompson was shortly going out. I was then labouring under the impression that the bill of sale held good over my firm, and I was anxious to get hold of Mr Thompson's share to release my business of that liability, and furthermore I really thought at that time that I could easily raise $3,000. From the 1st June and until Mr Thompson signed the transfer, I cannot say that I treated Mr Thompson as a partner of the firm. After I had found out in December that the bill of sale was not good, I did not mention anything about it to Mr Talbot.

Mr Talbot was called and said in reply to Mr North: I remember we had an interview at the commencement of this year. I want to give my own version of what took place. Mr North came to me in January this year, in reference to the sale of his half share to Mr Court. He said that he was in a great stress for money, that he had lately been pressed for the money due to Dr. Dalliston, and that he was afraid proceedings should be taken under the bill of sale. I said that the other bill of sale being registered, would stop such proceedings. He then said he did not think that latter bill of sale a good one. I said I did not know what made him think so. He then laughed, and said that he was too sharp to be put out with a piece of waste paper.

Mr North to the Court: Mr Talbot said, "You refer to the bill of sale; we have had the best counsels' advice in England on that, and they all say that the bill of sale still holds good." Between January and June this year I saw very little of Mr Talbot. He may have asked me in the interval about the bill of sale, but I do not remember my answer. I did not see the necessity of telling Mr Talbot of my negotiations with Mr Thompson in January 1877. I was displeased with Mr Talbot withholding from me all information about the bill of sale before the agreement in May 1876.

Mr Dickins then addressed the Court on behalf of the defendant, saying; There never was an agreement between plaintiff and defendant of such a nature as a Court of law can act upon. The strongest evidence is that no written instrument was ever asked from Mr North, even by such a wary man as accountant Mr Talbot. No doubt there was a verbal agreement between Mr North and Mr Thompson, on the 23rd May, 1876, but to that agreement Mr Talbot was no party. Besides that agreement was never carried out; the $250 were never demanded or paid, and Mr Thompson afterwards borrowed amounts of money from Mr North, for which he gave his I.O.U., which he scarcely would have done if $250 were due to him by Mr North. The agreement, if one, ought undoubtedly to have been in writing, as comprising transfer of a share in business and in a lease. The agreement, although not carried out, hung fire, and Mr Thompson was on the 1st June in anticipation advertised out of the firm, but Mr Thompson treated himself as a member of the firm, as he afterwards transferred his share to Mr North. The next documents, on which the plaintiff relies, are the letters of the 27th May and of the 1st June 1876; these two letters must be read together. The letter of the 27th May says, "I think I shall be safe in offering $3,000 for Mr Thompson's share," and the letter of the 1st June accepts the letter of the 27th May but adds certain conditions, among them, that the $3,000 should be paid within 30 days, which of course meant that if the money was not paid within that time the agreement fell through. But the rest of the wording of the letter of the 1st June is in contradiction with its commencement, and speaks of the transfer not of the share, but of the promissory note, and the two letters read in unison, lead to the absurd result that Mr North, by paying $3,000, would obtain not only Mr Thompson's share in the business, free from the liability of the bill of sale, but also get endorsed to himself Mr Thompson's note for $3,340 with interest, on which he would afterwards be able to sue Mr Thompson, that is to say, he would obtain the share for nothing. It should be remembered that Mr Talbot acted for Mr Thompson and for Mr Bradfield, and was accountant for Mr North. But Mr Talbot does not seem to have acted with equal indulgence to all the parties, but rather to have inclined towards Mr Bradfield, and he has not hesitated to make use in this case of material, of which he had become possessed in his confidential capacity. Now, to establish a valid consent to the letter of the 1st June, there ought to have been a written acceptance on the part of Mr North, which there is not. Nor was there, according to Mr Talbot's own evidence, a distinct verbal agreement. Mr North undoubtedly admits a liability to Mr Bradfield, to wit in virtue of the bill of sale hanging over his business, but that is quite another kind of liability than the one which Mr Talbot wants to fix upon Mr North. The learned gentleman felt himself compelled to refer to the inaccuracies in Mr Talbot's evidence. In his chief examination he distinctly says: Mr North wanted to purchase Mr Thompson's share; but then in his cross-examination he says Mr North did not want to buy Mr Thompson's share. Then he says, he had no power to sell Mr Thompson's share. But he sold Mr Bradfield's share and had evidently also power to sell Mr Thompson's share. Further he states that the quantity of the goods saved from the fire were transferred to the new firm, but next day he contradicts himself by saying that no goods were saved. Again, he says that at the very time of the fire there were goods on the hatoba belonging to the old firm, which were transferred to the new firm; but it has been proved that no such goods arrived until the month of April. He says distinctly that he bases his claim on the verbal agreement of the 23rd May, and the two letters and on nothing further, but after the recess, when he has been better advised, he recants. His monstrous assumption of the value of the bill of sale is beyond argument. He is of opinion that the private encumbrances of members of the firm need not be stated in an account, although the encumbrance is on the property of the firm. Much stress has been laid upon Mr North having said "all right," when he was asked by Mr Talbot if he had received the letter of the 1st June.

As it was now 5 p.m. and Mr Dickins despaired of finishing his address to-night, the case was adjourned until to-morrow at 10 a.m.

Thurday, October 25th. 1877.

Mr Dickins continued his address on behalf of the defendant. The letter of 27th May and 1st June read together formed but a conditional acceptance of a conditional offer thus doubly removed from a certain agreement. It was if anything at all bilateral yet how could we insist on its performance by Mr Bradfield. Parole acceptance of a written proposal only turned the proposal into an agreement according to the case of Reuss *cs.* Pilser, when the proposal was signed by the party sought to be made liable. Here the signed proposal (letter of 1st June) was that of the party plaintiff not at all that of the party defendant. Let us now see

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

what agreements can by any possibility be got out of these two letters. There are three; 1st, a discounting of the promissory note; 2nd, an agreement to buy an extinction of Thompson's liability; 3rd, a guarantee. As to the first it is absurd to suppose North ever meant merely to discount the promissory note. No motive is shown for such a step and North expressly denies it. The note as a note was commercially a valueless bit of paper. Besides it never was endorsed to North, Talbot kept it, pressed Thompson to pay it and threatened him with legal proceedings. Nor could the agreement be one to extinguish Thompson's liability. This certainly was not North's intention nor was it Talbot's, for Talbot looked on the note as valid against Thompson to the end and for the whole amount. Besides the letter of June 1st expressly tells us what liabilities were looked on by Talbot himself as those to be taken over. They were "all demands now held and owing to Mr Bradfield *and secured* upon the interest in your business belonging to Mr John Thompson." Is it possible to state more clearly that the liabilities forming the object of North's offer were not *all* Thompson's liabilities but just such of them as stuck to the business under the bill of sale and none other. Besides what consideration was there to induce North to take over Thompson's note other than the relief of Thompson's share in the stock held by North from the supposed bill of sale. Thirdly, the two letters may be looked upon as a sale of Thompson's share upon North's guaranteeing him the amount of $3,000. But the letter 1st June makes it a condition that Thompson is to transfer his share "in consideration of this payment and of any *other considerations that may be agreed upon between you*. Hence if North paid the $3,000 he was no nearer to attaining his object than before. Thompson might want "*other considerations*" and ask an additional $10,000 before he would transfer. He was no party to letters of 27th May and June 1st and says he never knew of their existence. It is evident therefore that the contemplated transaction was a transfer by Talbot of Thompson's share, that is of Thompson's share in the stock —the only valuable portion of his share, which could be transferred to North and to North only. If not this it was a guarantee of which all the necessary elements were present, creditor, principal debtor, surety, and containing liability of debtor. Even if surety had a direct interest in the matter it was still (see S. R. exch.) a guarantee.

It was hardly necessary to repeat that whether a transfer of share or a guarantee, the agreement ought to be wholly in writing, which it admittedly was not.

Next, however perfect an agreement there might have been, it fell to the ground became the inducement to it was a mistake of law or fact, or both, and a mutual mistake too. It is evident and indeed is admitted by Talbot, that but for the bill of sale the contract he relies upon would never have been entered into by North. It is clear that the latter's object throughout was, so far as his transactions with Talbot were concerned, simply to get rid of the supposed incumbrance upon the stock in trade. The pretensions of Talbot as to the validity of the bill of sale are ridiculous. The bill of sale was given to secure an advance to Thompson long before the firm of North, Thompson & Co. came into existence. It was over property of Thompson & Co. being in or coming to the Medical Hall which was burnt in March 1874. How could it possibly be upon stock of North, Thompson & Co.? How could it possibly be in respect of any advance to Thompson not mentioned or provided for in the bill of sale itself? When the new business commenced the balance due by Thompson in the old business was about $500, and Talbot endeavoured to make out that at the time of the fire there were goods of Thompson & Co. on the hatoba which ought to be included in the bill of sale, and which were transfered to North, Thompson & Co. The evidence and the books kept by Talbot himself showed clearly the incorrectness of this statement. Besides, if any part of the stock handed to North, Thompson & Co. in part payment of Bradfield and Thompson's capital was under mortgage, that fact ought to have been communicated to North, and it never was communicated to him. If the bill of sale had that validity, then Bradfield's payments on account of his share of capital were less than they ought to have been by the amount due under the bill of sale.

Hence there was a mistake. (Passages were here cited from Kerr on Fraud and Mistake, showing that in cases of mistake of law or fact in a material inducement, especially where mutual, the agreement became null and void.) There was evidently a mistake too about the promissory note. The one mentioned in the letter June 1st was not the one shown to Mr North by Mr Bradfield, which was for $3,000, had not the amount in sterling, had no stamp and was in a different handwriting. It is impossible to suppose that Mr North has invented all these matters. (Here Kerr was again cited to show that even an unilateral mistake when due to act of person in a confidental relation to the person making the mistake avoided an agreement).

I have already shown there was no consideration for the alleged agreement, *whatever* that may have been—no transfer of note—no transfer of share. It will be urged that Mr North was to get for $3,000 what was worth $4,000. But the share even if worth $4,000 to an outsider was not worth more than $3,000 in fact, because it could only be sold to Mr North himself unless with his consent. The business besides was in that condition that it was not a property but a liability. Besides the share was not transferred in consequence of alleged agreement, nor even now had the leasehold interest been transferred. This is not a case either where specific performance can be asked, and an action on the alleged contract must show not merely a willingness on the part of the plaintiff but actual accomplished facts. If a guarantee, it has not been shown that Mr Thompson refused to pay the note, nor even that the note has not been paid and for ought I know it may have been paid. I must now refer to certain points in the evidence. Mr North never saw the promissory note till in this Court. He might, it is true, have inferred its existence had he attentively considered the letter 1st June, but as he never accepted that letter as binding upon him he did not examine it attentively and imagined that the only promissory note in the affair was the one for $3,000 shown him by Mr Bradfield, and secured as he supposed by the bill of sale. Mr North knew nothing about the bill of sale until May or June 1876, and then he was not shown it nor informed of its true purport. He was informed by Talbot, whom he supposed to be acting for him as well as for Bradfield that, in the words of the letter June 1st the bill of sale was a security "upon the share belonging to Mr Thompson." North was never told that Bradfield advanced $2850 to Thompson. Bradfield did not come into the matter with clean hands, he brought the business out an embarrassment which caused North to write the letter of June 24 asking Talbot to procure him a loan to meet liabilities, which did not include any liability to Bradfield. This letter is a strong proof that North was under no liability to Bradfield other than such liability as he has always admitted and still admits, namely what attaches to the stock in value of the bill of sale, if a valid one, in respect of the same. Watson's evidence shows that the intention was to purchase the share not the promissory note, distinctly contradicts Talbot's evidence and by showing Talbot's readiness to sell to him proves absence of any idea on Talbot's part that any binding agreement existed upon North. The evidence of North and Watson show that the transfer of January 2nd 1877, was perfectly regular and proper, and that no fraudulent persuasion had been used with Thompson as urged by other side. Thompson's evidence throughout was of no value except so far as in our favour. The polite invitation to tiffin had evidently softened him towards the plaintiff, and shows how Yedo witnesses ought to be treated by Yokohama lawyers.

As to North's position in the whole affair: I need not refer again to the verbal arrangement with Thompson, except that the advertising out was justified by it and by the circumstances. The mere advertising out was not equivalent to a transfer. After it Thompson was just as much a partner as before, though under an equitable liability to make the transfer if the verbal agreement was insisted upon, which it was not. There was no necessity under any circumstances for Bradfield's consent to Thompson's retirement. In any event, Bradfield retained whatever hold he had on Thompson's share in the stock. Besides Bradfield was not a partner on 1st June as shown by evidence and by the position occupied by Mr Brewer in the firm in March, April and May. North's negotiations with Talbot never came to anything settled and certain. The letter 27th May was a conditional offer and was conditionally accepted, upon the condition of payment being made in 30 days. This is tantamount to, I will take $3,000 if you pay it in 30 days, if you don't I am no longer bound. Letter of 1st June is not a fresh proposal but simply at most a statement of terms upon which North's offer was accepted. It did not and could not bind North. Where do we find anything tantamount to a declaration by North that he bound himself to take over liability and pay $3,000 in 30 days. After June and up to December 1876, North no doubt verbally and in writing recognised a liability, but what liability? Evidently the liability attaching to the stock under the supposed bill of sale, and which he would have been glad at any time before December 1876 to satisfy. He was never pressed to satisfy it, and up to December certainly, up to the present day indeed, no attempt to act upon the bill of sale had been made. How was this, seeing that Bradfield was always in want of money and the putting in force the bill of sale would, if it were valid, have immediately and cheaply enforced payment, of what is now sued for. Talbot himself apparently has no belief in the bill of sale. There is only one thing against North, he is neither a clear headed man of business nor gifted with the faculty of expressing himself clearly. But the Court will take care he does not suffer through this incapacity, and reading between the lines will see that no injustice is done him.

North was not cross-examined at all with respect to the negotiations, in May and June 1876, with respect to the promissory note, with respect to his admission of liability, with respect to the request for a loan, Brewer's partnership, or his interviews with Talbot. In short, not upon any one of the main issues. This absence of cross examination on such principal points is tantamount to an admission of the truth of his statements concerning them. And why is he not to be taken as as a veracious an individual as Talbot. Finally the whole of the pother raised by the other side, what did it show? An alleged contract which on the face of it was no contract; a contract which even if one, on the face of it was never accepted by North and even if accepted was founded upon a false inducement and unsupported by any consideration.

Mr Dickins concluded by demanding judgment in his client's favour on the counter claim with interest and costs, and also upon the principal claim with costs.

Adjourned until 2 p.m.

On the Court resuming its sitting at 2 p.m.,

Mr Dickins did not appear.

Mr Lowder summed up on behalf of the plaintiff. He said that he had fully expected that his learned friend would, at the conclusion of the cross-examination of Mr North, have thrown up his brief, so desperate did his case look. This expectation had, however, not been fulfilled. When Mr Talbot called upon Mr North either on the same or on the following day the letter of the 1st of the June, 1876, was written, and asked whether Mr North had received his letter, the latter said, "Yes, all right," and agreeably to that letter Mr North then advertised Mr Thompson as being out of the firm. This proves that Mr Talbot's letter and condition of the 1st June had been accepted by Mr North. It is unnecessary to say anything about the aspersions cast upon the character of Mr Bradfield, as Mr North, when called upon to substantiate them, utterly broke down. The reason why Mr Talbot refrained from pressing Mr North between June and December

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

last year was that Mr Talbot was cognizant of the straiteued circumstances of Mr North. Until the month of June this year Mr North never expressly repudiated his liability. By purchasing Mr Thompson's share, Mr North not only obtained for $3,000 a share that was worth over $4,000, but also got rid of Mr Thompson as a partner, caused Mr Thompson to take over the expenses he had incurred himself on an establishment in Tôkiô, and finally he disposed of $2,000 worth of goods to Mr Thompson at a profit of 50 per cent. At the same time he was trying to dispose of his share in North, Thompson & Co. to Mr Court, in order to pay off his liability to Dr Dalliston's estate. Mr Thompson has said that he signed the transfer of his share in January, 1877, to oblige Mr North who wanted to make use of that document in his own transactions with Mr Court. Mr North denies that he used any persuasion, but Mr Watson's and Mr North's evidence of what took place at the interview with Mr Thompson differ materially. Mr Thompson knew very well that he had parted with his share in June, 1876, and without some persuasion having been used he had no motive for signing the transfer in January, 1877. Mr North says that Mr Bradfield flourished a paper before his eye, and he, Mr North, discovered in that single moment that it was a promissory note for clean $3,000, in Mr Bradfield's writing, without any mention of sterling and without a stamp. It is a physical impossibility that he should have seen all these things in a single moment. The bill of sale, whether in reality valid or not, was by both parties to the agreement of the 1st June, 1876, considered to be a valid one, and if that be so, the agreement stands good, and the discharge of that bill of sale was a sufficient consideration, even if there was no other consideration, for $3,000. That the contract should have fallen to the ground because Mr North did not comply with the condition to take up the note within 30 days, is tantamount to say that Mr North's own *laches* release him from his obligation. As to Mr Talbot's conduct in this affair, which has been impugned by Mr Dickins, it should be remembered that Mr Talbot held a power of attorney for Mr Bradfield, but held none for Mr North, and had repudiated that of Mr Thompson, and nevertheless the one person, who suffers by the action of Mr Talbot, is Mr Bradfield, and the gainers are Mr Thompson and Mr North.

Judgment reserved.

IN H. B. M.'s PROVINCIAL COURT, KANAGAWA.

Before H. S. WILKINSON, Esq., Acting Law Secretary.

Wednesday, October 24, 1877.

COPELAND and WIEGAND *vs.* LEWIS.

This was a judgment summons for $20.

Defendant, sworn: The money has not been paid. The judgment was for $40.00; it was given against me in chambers; I objected at that time to the amount of beer that was charged to my account. The case was heard by Mr Russell Robertson in the presence of Mr Bishop and Mr White. The plaintiffs' beerseller has been found guilty in court of signing other publicans' names or filling in their chits; that is my reason for not having paid the full amount. I have paid $23.00.

His Honour told defendant that he had given no valid excuse whatever for not paying his debt, and it was competent for him to send defendant to jail. He would, however, give defendant a chance, and adjourn the case until 4 p.m. If the money was not paid within that time, defendant must take the consequences.

Friday, October 26, 1877.

James Malcom was charged with being drunk and incapable.

Wm. Haxell, police constable, was sworn, and said: Yesterday evening, at half-past five, as I was on duty in Otamachi in the native town, prisoner was there, drunk and incapable, and I took him to the police station.

Prisoner had nothing to say.

The police constable said that prisoner was a discharged sailor from the *Eme*, and now stopping at the Sailors' Home.

The prisoner was let off with a warning.

N. J. STONE *vs.* R. JAFFRAY.

This was a claim for $60.50, arising out of a dissolved partnership in ponies.

Mr Montague Kirkwood appeared for the plaintiff.

Defendant appeared personally.

Mr Kirkwood stated that in this year plaintiff and defendant entered into partnership with regard to racing. Defendant was in plaintiff's employ and was dismissed in July. When the property of the partnership was to be shared, defendant claimed to be sole owner of the best pony and contended that plaintiff was sole owner of the worst pony. When plaintiff put the matter in his counsel's hands, defendant removed all the ponies to his brother's livery stable, and in answer to Mr Kirkwood he wrote a letter in which he declined to entertain any proposals on Mr Kirkwood's part. Proceedings were then opened in this Court and a receiver was appointed, to receive proceeds of sale of ponies. Mr Ness on behalf of defendant, surrendered his claim to the sole proprietorship of the best pony, and a sale of the ponies was resolved upon. An advertisement appeared in the newspapers that the ponies would be sold at public auction by Mr Bourne. On the 3rd October, the day after the auction, Mr Kirkwood wrote to Mr Ness to send him a cheque for half of the proceeds of the sale, less $25.00 for livery expenses, and he withdrew his petition from this Court. Mr Ness then sent an account current, which Mr Kirkwood could not accept, as it did not satisfy his demand to pay over to plaintiff half of the proceeds of the sale less $25.00 for livery and other expenses.

Defendant said that he had only to-day learnt that his counsel, Mr Ness, could not be here, but nevertheless he was willing to go on with the case. He admitted the petition and likewise the correspondence between Mr Kirkwood on behalf of the plaintiff and Mr Ness on behalf of himself; he further admitted that Mr Ness had instructed Mr Bourne to sell the ponies at public auction, which took place on the 2nd October, and that the net proceeds, $284.27, had been handed to Mr Ness. He had never before seen the document, by which Mr Kirkwood communicated to Mr Ness on the 4th October his withdrawal of his petition, and to which Mr Ness had affixed his consent; he was not prepared to admit that document

Defendant then read his version of the case. He said that he and plaintiff were in partnership with regard to two racing ponies; each of them bought a China pony besides for his own special account. Defendant was at that time in plaintiff's employ, but was discharged in July this year, and the partnership in ponies was then to be dissolved. Plaintiff then contended that they were in joint partnership with regard to all the four ponies, and although this was not so, but the best of all the ponies was defendant's sole property, he did not insist on his right, but, fearing that plaintiff might act detrimentally to his interests, he had all the ponies removed to a livery stable. To avoid litigation, he consented to the sale of the ponies, the proceeds of the sale to be shared between plaintiff and him. At the auction sale plaintiff bought in the ponies, but he has refused to refund half of the expenses defendant had on the ponies, with the exception of $25.00, which by no means cover plaintiff's half share.

Mr Kirkwood then entered the witness box, was duly sworn, and said: On the 3rd October I wrote to Mr Ness. (Paper shown.) This is the letter. On the 4th October, in the afternoon, I forwarded to Mr Ness the motion now produced (for withdrawal of petition), and received the same returned by bearer with his consent written thereon. Late in the evening on the same day I received the letter now produced (account current not accepted).

Mr Kirkwood left the witness box, and said: The next day, the 5th October, I received another letter, saying that there was a mistake in the account current. I replied on the same day by a letter, in which I objected altogether to the account current. Again I recived a letter from Mr Ness containing another amended account and enclosing a cheque for $56.63. I admit the proceeds of the sale, $284.27, and what is claimed now is the difference between half of that amount and the $56.63, less $25.00 for livery expenses. What I rely on is that defendant's counsel, by ordering a public sale of the ponies in virtue of my letter to him of the 28th September, and by consenting to my subsequent motion for a withdrawal of my petition in this Court, has agreed to settle the matter between the parties on the conditions set forth in my letter of the 28th September. If we had admitted defendant's special claims, we should have brought forward on our part perhaps more special disbursements on our part.

VERDICT.

I think the admissions and evidence before the Court show an agreement to compromise the original action on the basis of the plaintiff receiving the half of the net proceeds, less $25.00 as his share of the livery expenses. The original action has been settled on that basis, and the agreement must be upheld. There will therefore be a verdict for the plaintiff in the sum claimed, $60.50 with $25 costs, payable as usual within ten days.

IN H. B. M.'s CONSULAR COURT, KANAGAWA

Before RUSSELL ROBERTSON, Esq., Consul.

Friday, Oct. 26, 1877.

G. J. William, master of the British barque *Naworth*, was charged with assaulting a seaman named William Taylor.

Wm. Taylor, sworn, said that on the 24th inst. the accused called him bad names and struck him.

Captain William stated that as they were entering the harbour on that day, the pilot wanted some more chain. The boatswain was sick and the hands were moving slowly. He may have used some strong expression; the complainant spoke disrespectfully and accused struck him.

Fined $1,00 and costs.

G. J. Williams, master of the *Naworth*, was charged with assaulting Arthur Bell.

Arthur Bell was sworn, and said: On the 13th August I had been at the wheel in the morning. I went below to look for some canvas, and I heard a noise as if some cases were adrift. The ship was before the wind, and rolling heavily, and when I heard the noise I went directly to look for the case. I found an oblong case standing on its head, and I went on deck and told the boatswain that the cargo was broke, and that I had been below looking for some canvas. At 2 p.m. I was asked by the accused what I had being doing down the after hatch. He then struck me between the eyes, and knocked me about the deck.

Robert White, sworn: I saw the accused strike the complainant on the 13th August in the face and the side. The blow made Bell's nose bleed and he got a black eye.

The accused stated that his reason for striking the complainant was that he thought that the latter had been trying to broach the cargo.

Fined $2.00 and costs.

G. J. Williams was next charged with assaulting Robert White, boatswain of the *Naworth*.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

The accused denied the charge and as there was not sufficient evidence, His Honour dismissed the case.

Two more charges of assault were brought against Captain Williams, respectively by Willian Bell and Robert White, but as they were denied by the accused and not proven, they were dismissed.

Jose Grosso, a sailor on board the steam-ship *Malacca*, was charged with refusal of duty.

William Coyle, chief officer of the *Malacca*, was sworn and said: Accused was shipped at Hongkong as able seamen. Yesterday morning he refused to do duty as an able seamen unless he did quartermaster's work. I brought him before the captain, to whom he gave the same answer. In the afternoon at 5.30 he was again asked to turn to, and refused; likewise this morning.

Ship's articles were exhibited proving that accused had shipped at Hongkong as an A. B.

Accused said he had only engaged to do quartermaster's work.

Sentenced to one week's imprisonment, to be replaced on board should the ship leave before expiry of term of imprisonment.

IN THE FRENCH CONSULAR COURT.

Before H. PIERRET, Esq., Consul.

Messrs. J. CHAPSAL and A. HARMAND, Assessors.

Saturday, October 20, 1877.

DENIAUD *vs.* CAILLENS.

Plaintiff claimed $30.00, the value of some furniture belonging to him, which had been sold by defendant, who had hired from plaintiff the property No. 187, Settlement, called "L'Hotel de l'Univers." He further claimed $20.00 damages for being deprived of the use of said furniture.

Mr Degron appeared for the plaintiff; the defendant appeared personally.

Defendant admitted having disposed of the furniture in question, which he thought had been transferred to him together with the lease of the property. Made aware of his error, he had offered to indemnify plaintiff, but had not been able to come to an agreement with regard to the amount; he had, however, paid $4 00 on account.

The Court heard the evidence of several witnesses with regard to the value of the furniture, and having satisfied itself that the claim proffered by plaintiff was reasonable, ordered defendant to pay to plaintiff with 24 hours the sum of $30.00, less the $4.00 already paid, or $26.00. Defendant was also ordered to pay costs. Plaintiff's claim for damages was dismissed.

Messrs. A. HARMAND and E. LUBIN, Assessors.

Tuesday, October 23, 1877.

L. KNIFFLER & Co. *vs.* LES MESSAGERIES MARITIMES CIE.

This was a claim of $296.43 damages on account of goods, consigned to plaintiff in the Company's steamer *Tanais*, having arrived in a damaged condition.

Plaintiffs stated that on the 11th ultimo they received by the *Tanais* an invoice of broadcloth; some bales were found to have been damaged, and at a survey held over them, Mr Francke, appointed as expert by the German Consulate, declared the damage to have been caused by fresh water.

A correspondence between plaintiffs and defendants, dated the 20th and 21st ultimo, was produced, in which the agent of the Messageries Maritimes had rejected all responsibility on the part of the Company. Further was produced a survey report by Mr Francke, who expressed it as his opinion that the damage was of recent date and caused by rain water.

Mr H. Reddelien appeared for the plaintiffs, Mr Dickins for defendants.

In reply to the Court, Mr Reddelien said that he had nothing further to say.

Mr Dickins, on behalf of defendants, argued that there was no proof that the damage had been caused by fresh water, and if it had, that fresh water might have leaked into the ship's hold, while the ship was lying in the river at Saigon, and in that case the damage was clearly an insurance affair. Plaintiffs have insinuated that the damage may have taken place at Hongkong; the necessities of quick trans-shipment at that place may sometimes expose goods, but the company is by an express clause in the bill of lading guarded against any claims arising out of the risks of such trans shipment. It is an established anxiom that the bill of lading is law between the owner of the ship and the owner of the goods. Further, the second clause in the bill of lading exempts the Company from all responsibility for damage caused by negligence of the captain or other servants of the Company. However, the plaintiffs have not alleged negligence on the part of the captain or other servants. The damage comes clearly under the class of "accidents by sea," and is as such chargeable to the insurance. The onus of proof that the damage has not been caused by "accident by sea," rests with the plaintiffs. In short, the Company is not responsible for negligence of captain or other servants, nor for the risks of trans-shipment, nor has any negligence been proved or even alleged. The presumption is in cases of average always in favour of "accident by sea." He demanded that plaintiff's claim be dismissed.

Mr Reddelien replied that he saw the damaged bales and examined them; they were wet, but their appearance was not such as would have been the case if they had been wet from salt water. When he spoke to the agent of the Company, that gentleman told him that even if the damage had been caused by rain-water, the Company was not responsible. As he was himself agent for the Insurance Company in which the goods were insured, he took the bales to his godown and did his utmost to reduce the damage as much as possible by having the goods dried by the sun. He only claimed damages for six pieces out of three bales, and the price which those bales may bring at auction will of course have to go as a set-off against his claim of $296.00.

The members of the Court retired to consider their verdict, and on their return His Honour read the following:—

JUDGMENT.

Having heard the pleadings of the parties, and consulted together in conformity with the law, the Court decides:

Considering that defendants have not alleged any proven facts, but rely entirely on their own *ex parte* statements:

Considering that the survey, quoted by them, has not been made in conformity with existing rules, because as the claim was against a French Company, the demand for a survey ought to have been made in proper time, and the survey ought to have been ordered by the French Consulate: For these reasons the Court dismisses the claim of the plaintiffs, and orders them to pay costs.

Messrs. A. CONIL and A. DEVEZE, Assessors.

Wednesday, October 24, 1877.

HYVER *vs.* M. LABASTIE and TEISSIER.

(Adjourned from the 16th instant.)

Plaintiff claimed that defendant, Miss M. Labastie, be ordered to make restitution to him of the property No. 42A, Nagasaki, called "the Oriental Hotel," and that defendant Mr Teissier be duly punished for having assaulted him with insulting language and violence.

Defendants demanded that the case be dismissed.

Mr C. Michel appeared as counsel for plaintiff, Mr Montagu Kirkwood for the defendant Labastie, and Mr Houseal for the defendant Teissier.

In this case was to-day rendered the following:—

JUDGMENT.

The Consular Court in Japan, having heard the parties and duly consulted together, decrees as follows—

With regard to the plaintiff, Mr Hyver:

Considering that Miss Labastie pretends that Mr Hyver has, by an instrument dated the 4th January, 1876, made her a gift of two houses in Nagasaki, situated No. 42A, Sagarimatsu, which she afterwards has made over to Mr Teissier;

Considering that the instrument of the 4th January, 1876, is only a mere transfer, and had not been preceded by any act constituting such gift as Miss Labastie pretends, and that at all events the above mentioned instrument cannot be considered as in itself a deed of gift;

That, according to articles 931 and 932 in the Civil Code, a deed of gift ought to be made before a notary under the ordinary forms of a contract, and that it is especially requisite that the gift should be expressly accepted in authentic terms;

Considering that the instrument dated the 4th January, 1876, has none of the legal characteristics of a deed of gift;

Considering that the transfer made by Miss Labastie to Mr Teissier is vitiated by the same irregularities, to which must be added the incompetency of Miss Labastie, who neither could nor ought to dispose of an object that did not belong to her;

That furthermore deeds of gift, in order to be valid against a third party, ought to be registered when they concern landed property, that is to say property liable to hypothecation (art. 939 of the Civil Code);

Considering that the document, dated the 24th October, 1876, by which Miss Labastie transferred the property No. 24A to Mr Tiessier, is null and void for the same reasons as the instrument of the 4th January:

With regard to the damages, which Mr Hyver claims from the defendants;

Considering that it has been proved that Mr Hyver, before his departure for Vladivostock, and during his absence from Nagasaki, had voluntarily and unconditionally left the entire control of his property and of his hotel in the hands of Miss Labastie;

That Mr Hyver, on resuming, on his return from Vladivostock, the control of his establishment, has tacitly approved the management of Miss Labastie, inasmuch as he has made no complaint before any competent authority;

Considering that he has not been able to prove that Miss Labastie has unlawfully retained any effects or goods belonging to him; that on the contrary, it has been proved by the evidence of the British Consular constable in Nagasaki that Mr Hyver, when he left the hotel, took with him whatever belonged to him:

With regard to the claims made by Miss Labastie;

Considering that this defendant who during a certain period, had the entire control of the "Oriental Hotel" and of the property No. 42A, without rendering any account to the lawful proprietor, ought of course to defray the expenses of the establishment, of which she has had the profits;

Considering that it is a well established rule that damages ought always to be in proportion to the injury or loss caused;

That, if Mr Hyver during the time of his cohabitation with Miss Labastie has not paid her any regular wages—which he was not obliged to do as there existed no contract between them for that purpose—it is nevertheless sufficiently proved that during the whole of that time he has never ceased to supply all her wants;

That without entering into an examination of every item which Mr Hyver pretends to have paid on behalf of Miss Labastie, who does not admit all the items, it is proved that Mr

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Hyver has among other items paid the passage of the defendant, and in 1874 given her a house, No. 28B in Nagasaki, a gift that was also irregular, but the validity of which the plaintiff has acknowledged before the Court, that it had always been his intention to make Miss Labastie a present of that property, of which declaration the Court has taken note;

That even if the opposite statements of the two parties could be admitted by the Court, these statements are in themselves not sufficient;

Considering that the Court is in possession of sufficient information to form its own opinion in these respects.

With regard to Mr Teissier: Putting aside the question of insults, threats and assault, with which the Court has nothing to do, as this affair has already been adjudged in Nagasaki.

Considering that the same causes, which vitiate the transfer made by Mr Hyver to Miss Labastie, *a fortiori* make null and void the transfer made on the 24th October, 1876, of the property No. 42A, Sagarimatsu, by Miss Labastie to Mr Teissier.

For these reasons,

The Court declares that the transfer of the property No. 42A, Sagarimatsu, made by Mr Hyver to Miss Labastie the 4th January, 1876, and registered the same day in the British Consulate in Nagasaki, is null and void;

That the transfer of the same property by Miss Labastie to Mr Teissier, made in the same manner the 24th October, 1876, is equally null and void;

Orders the said property together with the furniture belonging to the hotel and the title deeds of the property to be immediately restored to Mr Hyver.

Dismisses the claim of Mr Hyver against Miss Labastie for rent of the said property, and other charges, such as profits realised by her and for retention of the furniture.

Dismisses the claim of Miss Labastie against Mr Hyver for damages.

Dismisses likewise Mr Teissier's claims against Mr Hyver.

Orders the immediate and provisional execution of the present judgment, notwithstanding appeal, and without security.

Condemns the parties to pay costs *in solidum*, each one-third.

IN THE IMPERIAL GERMAN CONSULAR COURT.

Before E. ZAPPE, Esq., Consul.

Messrs. E. SCHMID and WM. PARDUN, Assessors.

Saturday, October 20, 1877.

NISHIMURA KIMBEI *vs.* BUSCH, SCHRAUB & Co.

This was a claim of $1,804.97, balance of account.

Plaintiff stated in his petition that he, in January 1875, made a contract with the defendants, in virtue of which plaintiff lent defendants $2,000 until the 18th February next, and received as security 500 boiler tubes, 206 bars angle iron, and 42 iron plates; defendants, when the money fell due, asked for time, which plaintiff granted on the condition that he should be paid interest and his expenses. Since the 15th March, 1875, plaintiff has at four different times received in interest and for his expenses $336.50, and part of the hypothecated goods were sold at public auction in July, 1875, by defendants, who delivered the proceeds of the sale as payment on account to plaintiff, and likewise surrendered the goods. There still remained 500 boiler tubes as security, from which plaintiff, on demand, delivered one to the defendants. Plaintiff afterwards asked repeatedly for payment, and was repeatedly requested to wait, but when he again demanded payment on the 20th of June last, defendants told him that they owed him nothing, as the debt had been cancelled already in 1875 by the delivery of the boiler tubes. Plaintiff now demanded that defendants be ordered to pay him $1,804 97 and take back the hypothecated goods. Plaintiff produced an account current, in which he charged defendants with 1½ per cent. monthly interest, and ¼ per cent for insurance premium and godown rent.

The defendant denied all indebtedness. They said, in their answer to the petition, that the evidence of the merchants, Mr Alfred Schunk in Berlin and Tokmatsu Toyosuke in Osaka, would prove the correctnes of their assertion. Plaintiff had in the year 1873 requested defendants to order an invoice of boiler plates, boiler tubes and angle iron from England, according to measure. When the goods, which were of the value of $3,800, arrived at Yokohama in September, plaintiff asked for time to pay. About a year afterwards, defendants were informed by plaintiff that he was able to dispose of 500 boiler tubes to a Japanese man-of-war, if defendants would make a reduction in the price. This they agreed to do, but plaintiff did not fetch the tubes. In January 1875 the defendants made an arrangement with the plaintiff, in virtue of which the latter advanced them $2,000 on the goods. He had to borrow the money from a third party, and defendants agreed to pay him interest and other expenses. In the meantime, Mr Busch, a partner of the firm of defendants, died, and the firm went into liquidation; the executor of Mr Busch's estate, Mr Alfred Schunck in Berlin, refused to continue to pay the above interest, and it was decided to surrender the hypothecated goods to plaintiff, and thus finish this transaction. It was consequently agreed with plaintiff to try a public auction, and in the month of June, 1875, the angle iron and the iron plates were sold at public auction, and the proceeds $1,009.43 paid over to plaintiff. In satisfaction of the remaining $894.95, the 500 boiler tubes, which were worth $1,590.00 were passed to plaintiff, and the whole transaction thus closed, although at a considerable loss to defendants. Plaintiff has since the year of 1875 never asked either for principal and interest and has continued in friendly commercial relations with defendants.

Plaintiff appeared by counsel, Mr Inosuke Shimidzu; Mr Schraub for defendants.

His Honour tried to bring about an amicable arrangement between the parties, but without success.

Plaintiff produced a letter from defendants, dated the 25th February, 1875, in which they have agreed to pay him $25.00 monthly for expenses, besides the interest He further produced the original contract between him and defendants with regard to the loan and the hypothecation. He said that as defendants, in their answer to his petition, have stated that they, on the 31st March, 1876, wrote him a letter, in which they told him that they had ceded him 500 boiler tubes in satisfaction of any claim for capital in connection with his advance of $3,000,—he was compelled to declare that he never saw that letter.

Defendant, Mr Schraub, replied that he had himself handed the above letter to plaintiff personally in his (Schraub's) office, and entered it in his letter copy book, which he produced. When the transaction between defendants and plaintiff had been brought to a close in June, 1875, he demanded from plaintiff the return of the contract Plaintiff said that the document was in the hands of a third party, but that he would bring it. This promise he repeated whenever he was asked for the contract, and at last defendant forgot to ask any more about it Plaintiff has never since June 1875 until now, made any demand for either principal or interest.

The Court decided that the issue is; whether, after the goods, consisting of 500 iron tubes, 206 bars angle iron and 42 iron plates, which were mortgaged by the firm of Busch, Schraub & Co. to the Japanese Nishimura Kimbei, as security for a loan of $1,009.43 handed to plaintiff as payment on account,—the balance of his claim has been liquidated by ceding to him 500 boiler tubes, that remained in his possession, and whether the plaintiff accepted of such cession?" To elucidate this point, it will be necessary that the evidence of Mr Alfred Schunck, merchant, in Berlin, and of the Japanese Tokimatsu Toyosuke in Osaka and Horiye Kijiro in Yokohama be taken.

The case adjourned *sine die*.

THE MEETING OF THE BRITISH ASSOCIATION AT PLYMOUTH.

(Nature.)

SECTION D.—BIOLOGY.

Department of Anthropology.

ADDRESS BY FRANCIS GALTON, F.R.S.

I propose to speak of the study of those groups of men who are sufficiently similar in their mental characters or in their physiognomy, or in both, to admit of classification; and I especially desire to show that many methods exist of pursuing the inquiry in a strictly scientific manner, although it has hitherto been too often conducted with extreme laxity.

The types of character of which I speak are such as those described by Theophrastus, La Bruyére, and others, or such as may be read of in ordinary literature and are universally recognised as being exceedingly true to nature. There are no worthier professors of this branch of anthropology than the writers of the higher works of fiction, who are ever on the watch to discriminate varieties of character, and who have the art of describing them. It would, I think, be a valuable service to anthropology if some person well versed in literature were to compile a volume of extracts from novels and plays that should illustrate the prevalent types of human character and temperament. What, however, I especially wish to point out is, that it has of late years become possible to pursue an inquiry into certain fundamental qualities of the mind by the aid of exact measurements. Most of you are aware of the recent progress of what has been termed psycho-physics, or the science of subjecting mental processes to physical measurements and to physical laws. I do not now propose to speak of the laws that have been deduced such as that which is known by the name of Fechner, and its numerous offshoots, including the law of fatigue, but I will briefly allude to a few instances of measurement of mental processes, merely to recall them to your memory. They will show what I desire to lay stress upon, that the very foundations of the differences between the mental qualities of man and man admit of being gauged by a scale of inches and a clock.

Take, for example, the rate at which a sensation or a volition travels along the nerves, which has been the subject of numerous beautiful experiments. We now know that it is far from instantaneous, having indeed no higher velocity than that of a railway express train. This slowness of pace, speaking relatively to the requirements that the nerves have to fulfil, is quite sufficient to account for the fact that very small animals are quicker than very large ones in evading rapid blows, and for the other fact that the eye and the ear are situated in almost all animals in the head, in order that as little time as possible should be lost on the road, in transmitting their impressions to the brain. Now the velocity of the complete process of to and fro nerve transmission in persons of different temperaments has not been yet ascertained with the desired precision. Such difference as there may be is obviously a fundamental characteristic and one that well deserves careful examination. I may take this opportunity of suggesting a simple inquiry that would throw much light on the degree in which its velocity varies in different persons, and how far it is correlated with temperament and external physical characteristics. Before I describe the inquiry I suggest, and

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

towards which I have already collected a few data, it is necessary that I should explain the meaning of a term in common use among astronomers, namely, "personal equation" It is a well known fact that different observers make different estimates of the exact moment of the occurrence of any event. There is a common astronomical observation, in which the moment has to be recorded at which a star that is travelling athwart the field of view of a fixed telescope, crosses the fine vertical wire by which that field of view is intersected. In making this observation it is found that some observers are over-sanguine and anticipate the event, while others are sluggish and allow the event to pass by before they succeed in noting it. This is by no means the effect of inexperience or maladroitness, but it is a persistent characteristic of each individual, however practised in the art of making observations or however attentive he may be. The difference between the time of a man's noting the event and that of its actual occurrence is called his personal equation. It remains curiously constant in every case for successive years, it is carefully ascertained for every assistant in every observatory, it is published along with his observations, and is applied to them just as a correction would be applied to measurements made by a footrule that was known to be too long or too short by some definite amount. Therefore the magnitude of a man's personal equation indicates a very fundamental peculiarity of his constitution; and the inquiry I would suggest, is to make a comparison of the age, height, colour of hair and eyes, and temperament (so far as it may admit of definition) in each observer in the various observatories at home and abroad, with the amount of his personal equation. We should thus learn how far the more obvious physical characteristics may be correlated with certain mental ones, and we should perhaps obtain a more precise scale of temperaments than we have at present.

Another subject of exact measurement is the time occupied in forming an elementary judgment. If a simple signal be suddenly shown, and if the observer passes a stop as quickly as he can when he sees it, some little time will certainly be lost, owing to delay in nerve transmision and to the sluggishness of the mechanical apparatus. In making experiments on the rate of judgment, the amount of this interval is first ascertained. Then the observer prepares himself for the exhibition of a signal that may be either black or white, but he is left ignorant which of the two it will be. He is to press a stop with his right hand in the first event, and another stop with his left hand in the second one. The trial is then made, and a much longer interval is found to have elapsed between the exhibition of the alternative signal, and the record of it, than had elapsed when a simple signal was used. There has been hesitation and delay: in short, the simplest act of judgment is found to consume a definite time. It is obvious that here, again, we have means of ascertaining differences in the rapidity of forming elementary judgments and of classifying individuals accordingly.

It would be easy to pursue the subject of the measurement of mental qualities to considerable length, by describing other kinds of experiments, for they are numerous and varied. Among these is the plan of Prof. Jevons, of suddenly exhibiting an unknown number of beans in a box, and requiring an estimate of their number to be immediately called out. A comparison of the estimate with the fact, in a large number of trials, brought out a very interesting scale of the accuracy of such estimates, which would of course vary in different individuals, and might be used as a means of classification. I can imagine few greater services to anthropology than the collection of the various experiments that have been imagined to reduce the faculities of the mind to exact measurement. They have engaged the attention of the highest philosophers, but have never, so far as I am aware, been brought compendiously together, and have certainly not been introduced, as they deserve, to general notice.

The principal experiments by which the mental faculities may be measured require, unfortunately for us, rather costly and delicate apparatus, and until physiological laboratories are more numerous than at present, we can hardly expect that they will be pursued by many persons.

Let us now suppose that, by one or more of the methods I have described to allude to, we have succeeded in obtaining a group of persons resembling one another in some mental quality, and that we desire to determine the external physical characteristics and features most commonly associated with it. I have nothing new to say as regards the usual anthropometric measurements, but I wish to speak of the great convenience of photographs in conveying those subtle but clearly visible peculiarities of outline which almost elude measurement. It is strange that no use is made of photography to obtain careful studies of the head and features. No single view can possibly exhibit the whole of a solid, but we require for that purpose views to be taken from three points at right angles to one another. Just as the architect requires to know the elavation, side view, and plan of a house, so the anthropologist ought to have the full face, profile, and view of the head from above of the individual whose features he is studying.

It might be a great convenience, when numerous portraits have to be rapidly and inexpensively taken for the purpose of anthropological studies, to arrange a solid framework supporting three mirrors, that shall afford the views of which I have been speaking, by reflection, at the same moment that the direct picture of the sitter is taken. He would present a three-quarter face to the camera for the direct picture, one adjacent mirror would reflect his profile towards it, another on the opposite side would reflect his full face, and a third sloping over him would reflect head as seen from above. All the reflected images would lie at the same optical distance from the camera, and would, therefore, be on the same scale, but they would be on a somewhat smaller scale than the picture taken directly. The result would be an ordinary photographic picture of the sitter surrounded by three different views of his head. Scales of inches attached to the framework would appear in the picture and give the means of exact measurement.

Having obtained drawings or photographs of several persons alike in most respects, but differing in minor details, what sure method is there of extracting the typical characteristics from them? I may mention a plan which had occurred both to Mr. Herbert Spencer and myself, the principle of which is to superimpose optically the various drawings and to accept the aggregate result. Mr. Spencer suggested to me in conversation that the drawings reduced to the same scale might be traced on separate pieces of transparent paper and secured one upon another, and then held between the eye and the light. I have attempted this with some success. My own idea was to throw faint images of the several portraits in succession, upon the same sensitised photographic plate. I may add that it is perfectly easy to superimpose optically two portraits by means of a stereoscope, and that a person who is used to handle instruments will find a common double eye-glass fitted with stereoscopic lenses to be almost as effectual and far handier than the boxes sold in shops.

In illustration of what I have said about photographic portraits, I will allude to some recent experiences of my own in a subject that I have still under consideration. In previous publications I have treated of men who have been the glory of mankind. I would now call your attention to those who are its disgrace. The particular group of men I have in view are the criminals of England, who have been condemned to long terms of penal servitude for various heinous offencee.

It is needless to enlarge on the obvious fact that many persons have become convicts who, if they had been afforded the average chances of doing well, would have lived up to a fair standard of virtue. Neither need I enlarge on the other equally obvious fact that a very large number of men escape criminal punishment, who in reality deserve it quite as much as an average convict. Making every allowance for these two elements of uncertainty, no reasonable man can entertain a doubt that the convict class includes a large proportion of consummate scoundrels, and that we are entitled to expect to find in any large body of convicts a prevalence of the truly criminal charactistics, whatever these may be.

Criminality, though not very various in its development, is extremely complex in its origin: nevertheless, certain general conclusions are arrived at by the best writers on the subject, among whom I would certainly rank Prosper Despine. The ideal criminal has three peculiarities of character; his conscience is almost deficient, his instincts are vicious, and his power of self-control is very weak. As a consequence of all this, he usually detests continuous labour. This statement applies to the criminal classes generally, the special conditions that determine the description of crime being the character of the instincts; and the fact of the absence of self-control being due to ungovernable temper, or to passion, or to mere imbecility.

The deficiency of conscience in criminals, as shown by the absence of genuine remorse for their guilt, appears to astonish all who first become familiar with the details of prison life. Scenes of heart-rending despair are hardly ever witnessed among prisoners; their sleep is broken by no uneasy dreams—on the contrary, it is easy and sound; they have also excellent appetites. But hypocrisy is a very common vice; and all my information agrees in one particular, as to the utter untruthfulness of criminals, however plausible their statements may appear to be.

The subject of vicious instincts is a very large one; we must guard ourselves against looking upon them as perversions, inasmuch as they may be strictly in accordance with the healthy nature of the man, and, being transmissible by inheritance, may become the normal characteristics of a healthy race, just as the sheep-dog, the rettiever, the pointer, and the bull-dog have their several instincts. There can be no greater popular error than the supposition that natural instinct is a perfectly trustworthy guide, for there are striking contradictions to such an opinion in individuals of every description of animal. All that we are entitled to say is, that the prevalent instincts of each race are trustworthy, not those of every individual. A man who is counted as an atrocious criminal by society, and is punished as such by the law, may nevertheless have acted in strict accordance with his instincts. The ideal criminal is deficient in qualities that oppose his vicious instincts; he has neither the natural regard for others which lies at the base of conscience, nor has he sufficient self control to enable him to consider his own selfish interests in the long run. He cannot be preserved from criminal misadventure, either by altruistic or by intelligently egoistic sentiments.

It becomes an interesting question to know how far these peculiarities may be correlated with physical characteristics and features. Through the cordial and ready assistance of Sir Edmund Du Cane, the Surveyor-General of Prisons, who has himself contributed a valuable memoir to the Social Science Congress on the subject, I was enabled to examine the many thousand photographs of criminals that are preserved for purposes of identification at the Home Office, to visit prisons and confer with the authorities, and lastly to procure for my own private statistical inquiries a large number of copies of photographs of heinous criminals. I may as well say, that I begged that the photographs should be furnished me without any names attached to them, but simply classified in three groups according to the nature of the crime. The first group included murder, manslaughter, and burglary; the second group included felony and forgery; and the third group referred to sexual crimes. The photographs were of criminals who had been sentenced to long terms of penal servitude.

By familiarising myself with the collection, and continually sorting the photographs in tentative ways, certain natural classes began to appear, some of which are exceedingly well marked. It was also very evident that the three groups of criminals contributed in very different proportions to the different physiognomic classes.

This is not the place to go further into details: indeed my inquiry is far from complete. I merely quote my experiences in order to show the way in which questions of character, physiognomy, and temperament admit of being scientifically approached, and to give an

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

instance of the helpfulness of photography. If I had had the profiles and the shape of the head as seen from above, my results would have been much more instructive. Thus, to take a single instance, I have seen many pencil studies in outline of selected criminal faces drawn by Dr. Clarke, the accomplished and zealous medical officer of Pentonville Prison; and in these sketches a certain very characteristic profile seemed to me conspicuously prevalent. I should have been very glad of photographs to corroborate this. So, again if I had had photographic views of the head taken from above, I could have tested, among other matters, the truth of Prof. Benedict's assertion about the abnormally small size of the back of the head in criminals.

I have thus far spoken of the characters and physiognomy of well-marked varieties of men: the anthropologist has next to consider the life history of those varieties, and especially their tendency to perpetuate themselves, whether to displace other varieties and to spread, or else to die out. In illustration of this, I will proceed with what appears to be the history of the criminal class. Its perpetuation by heredity is a question that deserves more careful investigation than it has received, but it is on many accounts more difficult to grapple with than it may at first sight appear to be. The vagrant habits of the criminal classes, their illegitimate unions and extreme untruthfulness, are among the difficulties. It is, however, easy to show that the criminal nature tends to be inherited while, on the other hand, it is impossible that women who spend a large portion of the best years of their lives in prison can contribute many children to the population. The true state of the case appears to be that the criminal population receives steady accessions from classes who, without having strongly marked criminal natures, do nevertheless belong to a type of humanity that is exceedingly ill-suited to play a respectable part in our modern civilisation, though they are well-suited to flourish under half-savage conditions, being naturally both healthy and prolific. These persons are apt to go to the bad; their daughters consort with criminals and become the parents of criminals. An extraordinary example of this is given by the history of the infamous Jukes family in America, whose pedigree has been made out with extraordinary care, during no less than seven generations, and is the subject of an elaborate memoir printed in the thirty-first annual report of the Prison Association of New York, 1876. It includes no less than 540 individuals of Jukes blood, among whom the number of persons who degraded into criminality, pauperism, or disease, is frightful to contemplate.

It is difficult to summarise the results in a few plain figures, but I will state those respecting the fifth generation, through the eldest of the five prolific daughters of the man who is the common ancestor of the race. The total number of these was 103, of whom thirty-eight came through an illegitimate granddaughter, and eighty-five through legitimate grandchildren. Out of the thirty-eight, sixteen have been in gaol, six of them for heinous offences, one of these having been commited no less than nine times; eleven others were paupers or led openly disreputable lives; four were notoriously intemperate; the history of three had not been traced, and only four were known to have done well. The great majority of the woman consorted with criminals. As to the 85 legitimate descendants, they were less flagrantly bad, for only five of them had been in gaol and only thirteen others had been paupers. Now the ancestor of all this mischief, who was born about the year 1730, is described as having been a hunter and a fisher, a jolly companionable man, averse to steady labour, working hard and idling by turns, and who had numerous illegitimate children, whose issue has not been traced He was, in fact, a somewhat good specimen of a half-savage, without any seriously criminal instincts The girls were apparently attractive, marrying early and sometimes not badly; but the gipsy-like character of the race was unsuited to success in a civilised country. So the descendants went to the bad, and the hereditary moral weaknesses they may have had rose to the surface and worked their mischief without a check. Cohabiting with criminals and being extremely prolific, the result was the production of a stock exceeding 500 in number, of a prevalent criminal type. Through disease and intemperance the breed is now rapidly diminishing; the infant mortality has of late been horrible among them, but fortunately the women of the present generation bear usually but few children, and many of them are altogether childless.

This is not the place to go further into details. I have alluded to the Jukes family in order to show what extremely important topics lie open to inquiry in a single branch of anthropological research and to stimulate others to follow it out. There can be no more interesting subject to us than the quality of the stock of our countrymen and of the human race generally, and there can be no more worthy inquiry than that which leads to an explanation of the conditions under which it deteriorates or improves.

RAILWAY ACCIDENTS.

(The Times.)

On Friday there was issued Mr. Calcraft's general report to the Board of Trade upon the accidents which occurred on the railways of the United Kingdom during the year 1876. The total number of persons returned to the Board of Trade as having been killed on all the railways during the year was 1 245, and the number of injured was 4,724. Of these 139 persons killed and 1 833 injured were passengers. Of the remainder, 673 killed and 2,600 injured were officers or servants of the railway companies or contractors; and 433 killed and 241 injured were trespassers, or suicides, or others who had met with accidents at level crossings, or from miscellaneous causes. Of the passengers, according to the returns made to the Board of Trade, 38 were killed and 1 297 were injured from causes beyond their own control.

The total number of passenger journeys, exclusive of journeys by season-ticket holders, was 538,287,295, or about 31,000,000 more than in the previous year. Calculating on this estimate, the proportions of passengers killed and injured in 1876 from all causes were in round numbers one in 3,872 570 killed and one in 285,867 injured. In 1875 the proportions were one in 3,783,600 killed and one in 280,800 injured.

The officers and servants of railway companies according to Lord Aberdeen's return presented to Parliament in the autumn of 1874, amounted at the end of 1873 to 274,535. Assuming them to amount now to 280,000, there have, during the past year, in proportion to the total numbers employed, been killed from all causes about one in 416 and killed or injured one in 86.

The proportions of passengers returned as killed and injured from causes beyond their own control were, in 1876, one in 14,165,453 killed (or, including the journeys of season-tickets holders, one in 17 000 000), and one in 488 908 injured. In 1875, the proportions were one in 29,823,500 killed, and one in 5,556,284 killed and one in 296,243 injured. Thus the proportion of passengers killed from causes beyond their own control during 1876 shows an increase, when compared with that of the year 1875, but a decrease when compared with that of the year 1874.

The number of train accidents officially inquired into in 1876 was 149 against 164 in the previous year. The most serious were those on the Great Northern Railway at Abbott's Ripton, by which 13 passengers were killed; at the Foxcote signal cabin, between Radstock and Wellow, on the Somerset and Dorset Railway, by which 12 passengers were killed; at the Arlesley Siding Station on the Great Northern Railway, by which four passengers were killed; and at Brierfield near Burnley, on the Lancashire and Yorkshire Railway, by which three passengers were killed In each of two other accidents one passenger lost his life

Mr Calcraft says:—

"The results of the past three years are more satisfactory on the whole than those of the two years immediately preceding them, and in the past year there were fewer investigated accidents than in each of the preceding five years. It is but reasonable to suppose that the improvements so much required, which, in consequence of public attention having been drawn to the subject, are being, more or less, rapidly introduced, have already borne some fruit. In the face of an increase of traffic, there has been a marked diminution in these three years, as compared with 1872 and 1873, in the number of accidents under most of the above classes; the least satisfactory classes in the past year being accidents from engines or vehicles meeting with or leaving the rails in connexion with defects or obstructions on the permanent way, and accidents of facing points. Of the above 149 train accidents for 1876, 74, or about one half, or 50 per cent., were cases of collision under different classes, in addition to certain collisions which occurred on inclines or in connexion with facing points; while 32, or 21 per cent. were from passenger trains being wrongly turned into sidings, or otherwise through facing points; 23, or 15 per cent., were from engines or vehicles meeting with or leaving the rails in connexion with defects of or obstructions on the permanent way; 12, or 8 per cent., were from boiler explosions, or failures of axles or tires, from other defects of rolling-stock; and five, or 3 per cent, were on inclines."

Summing up, the statistics specifying the causes of accidents, Mr Calcraft says:—

"These figures are not satisfactory, either as to actual result or by comparsion with former years. They indicate that much is still required, in addition to what has been done, to provide for safety in working, more or less, on different systems of railway, and the point to the special departments in which improvement should be effected. The highest figure, 101, represents, as usual, the number of cases in which negligence or mistakes of officers or servants entered into these 149 train accidents; and the four figures, 48, 25, 29, and 23, represent, respectively, means by which that negligence may in a great degree be prevented—namely, 1, by better arrangements of signals or points or interlocking; 2, by a better system for securing intervals between trains; 3, by improvemnt of regulations or discipline; 4, by on adequate provision of lines and sidings for conducting the traffic. Then again 27 represents the number of cases of defective maintenance in roads, works, or rollingstock; 8, the number of cases of important one than appears from the figure 21, because there are always numerous other instances in which collisions might be prevented, or their serious consequences might be averted, if engine drivers and guards had in their own hands the power of readily stopping their trains, or if the brake acted of itself at once on the happening of an accident.

"There is it would seem no improvement which would do more to prevent accidents, or to mitigate their serious consequences, than the use of continuous brakes; and the time has now come when it is incumbent upon the railway companies to agree among themselves as to which of the various systems of continuous brakes which have been brought forward is best adapted for general adoption. It is for the companies to consider the various conditions which such brakes should fulfil, and to decide upon the system of brake which best complies with those conditions. As instructive example has been set by the Belgian Government, who have recently, in the report of a Commission specially appointed for the purpose, adopted a continuous brake for the Belgian State railways: and it is much to be regretted that the railway companies of this country have not combined for a similar object.

"The progress made during the past year in the interlocking of signal and point levers, and in extension of the block system of working has no doubt contributed materially to safety in railway working. From the return just presented to Parliament the progress in the United Kingdom in the interlocking of signal and point levers is represented by a percentage increase of 6 per cent., and the

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

progress in the appliction of the absolute blocksystem to a further proportion of 7 per cent. of the length of railways open for passenger traffic.

"I cannot conclude this report" (writes Mr. Calcraft) "without calling attention to the serious loss the Department has sustained by the resignation of Captain (now Sir Henry) Tyler. He invariably performed the duties appertaining to his office with such marked zeal and conspicuous ability as to gain not only the confidence and respect of the Department, but also that of the public and railway world, and the severance of Sir Henry Tyler's connexion with the Board of Trade must be long felt by all those with whom he has been associated during the last 24 years."

REUTER'S TELEGRAMS.

LONDON, October 22nd, 1877.

INTELLIGENCE FROM THE SEAT OF WAR.

Despatches report that Ahmed Mukhtar Pasha has retreated with a portion of his forces to Kars, having been defeated by the Russians owing to their superiority in artillery and the powerful reinforcements they received.

LONDON, 20th October, 1877.

INTELLIGENCE FROM THE SEAT OF WAR IN TURKEY IN ASIA.

According to a Russian official despatch, the Russian Forces gained on the 15th instant a complete victory over those of Ahmed Mukhtar Pasha, capturing thirty-two guns, and an immense quantity of war material. Seven Pashas were also taken prisoners.

Ahmed Mukhtar Pasha fled to Kars.

The above is also confirmed by a Turkish official despatch.

LONDON, 19th October, 1877.

According to information furnished by the *Times* newspaper the prospects of the Turkish Forces in Asia Minor are of the gloomiest nature.

RESULT OF THE ELECTIONS IN FRANCE.

The Elections in France have resulted in a crushing defeat for President MacMahon.

London, 11th October, 1877.

The Chinese Minister, replying to the Quakers, laid great stress upon opium smoking, and not the lekin duties (which were moderate), being the cause of the impoverishment of the Chinese, and preventing their purchasing foreign goods. He stated that the Chinese Government intended to adopt prohibitive measures, and that it was desirable to dissuade the Shanghai Chamber of Commerce from opposing the promulgation of the Chefoo Convention.

THE WAR.

The Empress of Russia is expected to proceed to Bucharest.

According to Russian official despatch, Ahmed Mukhtar Pasha has abandoned his positions, including Kaziltepe. The Russian Troops actively pursued, and have taken up advanced positions.

London, 10th October, 1877.

Hilarious is the winner of the Cesarewitch. *Macaroon* second. *Belphoebe* third.

THE WAR ON THE DANUBE.

The bridges at Sistova and Nicopolis are impassable for vehicles for the past two days through stormy weather.

FRANCE.

The Repressive measures adopted by the French Ministry are increasing.

London, 9th October, 1877.

Suleiman Pacha is at Shumla.

The Russian head quarters have been transferred to Sistova.

The Emperor of Russia will winter at Bucharest.

The general assault of Plevna is not expected to take place for three weeks.

"Berkeley, Sept. 1869.—Gentlemen, I feel it a duty I owe to you to express my gratitude for the great benefit I have derived by taking 'Norton's Camomile Pills.' I applied to your agent, Mr. Bell, Berkeley, for the abovenamed Pills, for wind in the stomach, from which I suffered excruciating pain for a length of time, having tried nearly every remedy prescribed, but without deriving any benefit at all. After taking two bottles of your valuable Pills I was quite restored to my usual state of health. Please give this publicity for the benefit of those who may thus be afflicted.—I am, Sir, yours truly, HENRY ALLPASS.—To the Proprietors of NORTON'S CAMOMILE PILLS."

January 13, 1877. 13ius.

LOGOGRIPH.

Sweet is the music of my whole upon a Sabbath morn,
When dewdrops glisten on the rose, and gem the rising corn,
But, if beheaded now, a change remarkable you see;
No longer full of melody, a measure I shall be.
Put on another head, repeat the process o'er again,
And in succession you will see a very varied train:
A home for hermits, or for monks; a place for keeping thieves;
A pleasant woodland valley, bright with summer flowers and leaves;
The coat of some dead animal that certain traders sell;
A place of horror, where the bad in misery will dwell;
A little lady, famed by "Boz," who perished over-young;
The hero of a foreign land, by many poets sung;
A place where some have told us that the goddess Truth is found;
A wild, unearthly, fearful, harsh, and miserable sound.

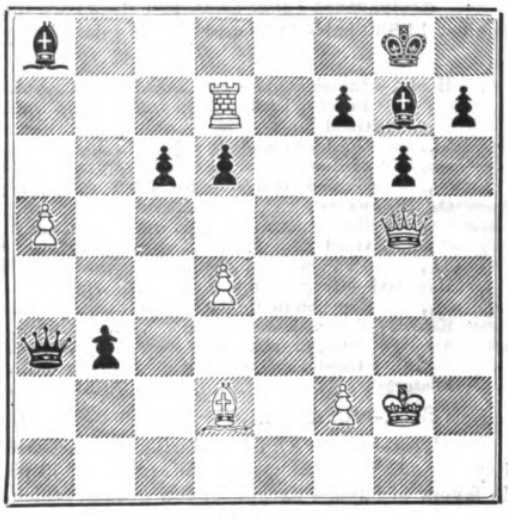
ANSWER TO DOUBLE ACROSTIC OF 20TH OCTOBER.

WILLOW. STREAM.

1. W ar S
2. I nsec T
3. L eve R
4. L oos E
5. O livi A
6. W or M

Correct answers have been received from Fujiyama, and F.S., and we have been favoured with the following solution:—

The *Willow* sadly watches the bright gleam
Made by the sparkling, gaily rushing *Stream*.



1.—We hope that soon these cruel *wars* will cease,
And all the struggling nations then have peace.
2.—In fair Japan, each tree and field is rife
With noisy, gay, and brilliant *insect* life.
3.—"Had I a fulcrum," Archimedes cried,
"I'd, with my *lever*, move the earth in pride."
4.—Dishevelled hair, with *loose* and careless dress
We call—not beauty—but untidiness.
5.—The graceful countess, she of love-sick fame,
Is known by all, *Olivia* is her name
6.—In years to come, when death has made his call,
The *worm* shall feed on you, and me, and all.

L. T.

PROBLEM,

by MR. EDNEY.

BLACK.

WHITE.

White to play and mate in 4 moves.

SOLUTION OF S. LOYD'S PROBLEM OF LAST WEEK.

White.	Black.
1.—K. to Q. Kt.'s 3rd.	1.—The two Knights can give check to the white King in four places.
2.—Q. takes in any move the black Kt. and mates.	
	1.—Q. to Q.'s 6th, check, or Q. any move.
2.—Kt. takes Q. and mates, or according to the moves of black Queen, Kt. mates on Q.'s 3rd, or K.'s B. 3rd.	
	1.—R. any move.
2.—Kt. to K. B.'s 7th, mate.	

Correct answers received from W.H.S., and W.B.M., Tôkiô; Q., and C.B., Yokohama.

,, No. 3 Ke-pak		,, ...		$7.40 to $7.90	Kerosene Oil, nominal	,,	...$3.80 to $3.40

Kerosene Oil.—Dealers are holding off and trying to "bear" the market for settlement of October accounts. Stocks are very much reduced.

EXPORTS.

Silk.—Settlements have again been very large during the past week, but latterly advices from European markets have been very discouraging, and consequently the demand has fallen off and prices receded. Arrivals having, in addition to this, been very important, dealers are anxious sellers.

The quotations given below are those nominally quoted, but at the close concessions can be obtained even on these.

Settlements are 950 bales of Hanks, 100 bales of Oshius and 40 bales Filatures.

Arrivals are 1,950 bales, and stocks are increased to 2,000 bales. The total export to date is 8,070 bales, against 14,880 bales to a corresponding date last year.

		In London at 4s. 0½d. per lb.	*In Lyons at f. 5.10 per kilo.*
Hanks,—Superior	$580 to 590	21/0 to 21/4	58.00 to 59.00
,, Best No. 1 & 2	$560 to 570	20/4 to 20/8	56.00 to 57.00

Kakeda,—Extra	$600 to 620	21/8 to 22/4	60.00 to 62.00
,, Best	$570 to 590	20/8 to 21/4	57.00 to 59.00
,, Good	$540 to 560	19/8 to 20/4	54.00 to 56.00
Filatures	$580 to 750	21/0 to 26/8	58.00 to 74.00

Silk-worm's Eggs.—The market has collapsed, and hardly anything has been done during the week.

Tea.—Native holders during the past week have shown more willinguess to meet the views of foreign buyers, and a fair amount of business, say 2,450 piculs, has been transacted since our last issue. Prices are rather in favour of buyers, except for low grades, which are in small supply and pretty firmly held.

Quotations for grades from *Medium* upwards are about $1 per picul easier, and close as under, holders being willing to accept offers.

Common	$10.00 to $13.00	Fine	$22 00 to $27.00
Good Common	$14.00 to $15.00	Finest	$28.00 to $32.00
Medium	$16.00 to $18.00	Choice	$34.00 nominal
Good Medium	$19.00 to $21.00	Choicest	—

EXCHANGE AND BULLION.

Exchange.—The business of the past week has been limited, with scarcely any fluctuation in rates.

Rates close as follows:—

REPORTS.

The German schooner *Friedrich* reports: Left Hakodate on the 17th instant. Had fresh Northwesterly winds to Sendai, thence Easterly winds and thick rainy weather to port. Arrived at 10 a.m. on the 20th October.

The *Hiogo Maru* reports:—Left Kagoshima on the 17th instant with 13 cabin and 71 steerage passengers. Had light South-easterly winds to Cape Murodona, thence N.N.E. winds and fine weather to Mississippi Bay, where she anchored at 10 o'clock on Friday evening, leaving for Yokoska on Saturday morning. Having obtained pratique she came up to the anchorage, arriving at 11.30 a.m. on 20th. All well on board.

The German schooner *Auguste Reimers* reports: Left Takao on the 11th September and proceeded to Amoy, where the Captain who was sick was landed, the vessel meanwhile anchoring outside the bar. The chief officer taking charge, she left on the 27th September for this port, but meeting with strong northerly winds in the Formosa channel was obliged to go south about. She had calm weather to the 10th Oct., them met with a severe gale from N. E. lasting 36 hours, afterwards variable winds and fine weather to port. One of the crew a Javanese sailor, died on the 11th instant from an internal abscess.

W. & C. SCOTT & SON.

FIRST PRIZE MEDAL and DIPLOMA OF HONOUR awarded, CENTENNIAL EXHIBITION, Philadelphia, 1876. For excellence of Materials and Workmanship in their PREMIER QUALITY and medium grades. Their New PATENT TRIPLEX action and COMPENSATING LUMP.

CHOKE BORES ON GAME.

WE have received numerous letters testifying to the excellence of our Guns. The following are a few extracts.

The W. & C. SCOTT & SON No. 10 choke bore "is all its name implies." I have killed stone dead grouse flying at 92 yards, and at 50 and 60 yards it will kill every time. At duck shooting it is perfection.
Brainherd, Minnesota. T. P. C.

I have just returned from North Carolina (Currituck Sound). I cannot say too much in praise of my choke bore. I have killed ducks at 60 yards, dropping dead out of the bunches at that distance. I consider I have an extraordinary gun, and deem it my duty to speak in the highest praise of guns of your manufacture. Wishing you all the success you deserve.
Red Bank, N.J., 1877. G. A. W.

From Captain BOGARDUS, Champion Shot of the World.—The Breech-loader you furnished me with is the best *proportioned* and most *effective* gun I ever owned or used. Its shooting is perfect, and I have won every contest since receiving it including my late English matches. I fully recommend the Scott as the gun.

I have carried guns of your make from Nova Scotia to Florida, and from the Adirondacks to the Pacific, and find them all I could wish for.
Cazenova, N.Y. L. W. L.

The guns for myself and friends have safely arrived. I have now great pleasure in acquainting you that I am extremely glad in possessing them. I have tried them and they give me great satisfaction. My friends are also very pleased too.
Yedo, Japan, March, 1876. V. E. B.

I have just received the Two fine guns ordered for me by Mr. B. F. Stevens, London, and desire to express my entire satisfaction of them. Such fine weapons which while they do credit to a reputation already so well known as to need no establishing, deserve from me some expression of my appreciation of the manner you carried out my wishes. A more substantial evidence of my estimation of the gun is to be seen in the fact that I have this day directed Mr. Stevens to order another for me.
G. R. W.
Paymaster U. S. Navy.
United States Flag Ship *Omaha*.
Callao, Peru, 14th June, 1877.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded.* This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omisson to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

Notes of the Week.

The present occasion of the birthday of the Mikado is the first time we believe that the anniversary has been acknowledged by the resident foreigners in any open manner. When the birthdays of Foreign Sovereigns are always duly observed and made the occasions of rejoicing, it is but the simplest mark of respect that the birthday of the Ruler of the country where we reside should be fittingly acknowledged, and doubtless from the present time the 3rd of November will be kept by foreigners, as by natives, as a general holiday. To-day the Banks are closed, and advantage of a rest taken by the daily papers. At an early hour the native town was gaily decorated with flags, the ships in harbour were dressed and at noon a Royal salute fired by the Kanagawa Fort and all the men-of-war in port. The Governor of Kanagawa receives all the Foreign Consuls at dinner at the Machigaisho this evening, and in honour of the day a grand display of both day and night fireworks is being made in the Public Gardens on the Swamp, which commenced at 3.30 p.m. and will extend until midnight. The usual official entertainments will be given at the capital and in the provinces, and it is interesting to notice that for the first time the position of the native press has been officially recognized in Japan, as we learn from the *Hôchi Shimbun* that the respective editors of the *Nichi Nichi*, *Chôya* and *Hôchi Shimbun* have received an invitation to be present at the grand banquet to be given at Hamagoten this evening, at which the higher officials and members of the *Corps Diplomatique* will be present.

The troops have been returning day by day from the South, and as they have arrived, some have been disbanded and others despatched without delay to the various garrisons to which they properly belong. A review of the troops of the Tôkiô garrison lately returned from Kiushiu, who will be commanded by Lieut.-General Nodzu, took place yesterday in presence of the Mikado, and His Majesty has appointed special officers to convey his thanks to the troops of the other garrisons in the Empire for their bravery in face of the enemy, the privations they have had to undergo for the Imperial cause, and the valuable services they have rendered in restoring peace to the country. Lieut. General Tani, who was in command of the castle of Kumamoto when it was besieged by Saigo at the commencement of the outbreak, and who offered so gallant a resistance to the enemy, has returned to Tôkiô together with Lieut.-Generals Miura and Miyoshi, who also did good service in the South, and were received in audience by the Mikado on Thursday, when His Majesty graciously expressed his thanks for the great services they had rendered to the country in so gallantly and effectually aiding in the suppression of the rebellion.

A paragraph lately appeared in the *Akébono Shimbun* to the effect that the mystery which has hitherto enshrouded the murder of Hirasawa, *Sangi*, which took place some years ago, has been revealed by the confession of a person lately arrested in the Kochi *ken*. Hirosawa was a noble holding office next to that of *Karô* (minister) to the Prince of Chôsiu, of which province he was a native. Previous to the restoration of the Mikado to the Imperial power he exerted all his influence to bring about the overthrow of the Shôgunate. When the downfall of the Bakufu was finally effected, two offices were established by the Mikado, called *Giyô* (or Vice President of the Cabinet) and *Sanyo* (who were members of the Cabinet and held similar rank with the present *Sanji*). The former post could be only filled by an *ex-Daimio*, while to the latter office were appointed prominent *samurai*, and in the *Sanyo*, though lower in rank, the real power of administration was vested. To this office was Hirosawa appointed and took an active part in all important matters relating to the affairs of the country. When the office of *Sangi* was established, Hirasawa was at once advanced to the position, and distinguished himself by the zeal and clear-sightedness with which he performed his duties, showing, however, far greater talent for the management of civil than of military affairs. He was assassinated at his house at Kudan, Tôkiô, in 1870, at the age of fifty, and up to the present time the perpetrators of the murder or the causes which led thereto have remained undiscovered. Many persons have at various times been arrested on suspicion of having been implicated in the crime, but have none of them proved to be the actual culprits. According to the *Akébono Shimbun* the mystery will now be cleared up.

We venture to suggest in the interest of ourselves—as sufferers—and in the general interest of the community who are likely to follow in our unhappy footsteps, that one, or, if the Government of the *ken* can afford the extra outlay, two lanterns might with great advantage be employed on the Camp Hill to point out to the belated wayfarer sundry heaps of mud or gravel which have been placed there, we presume for road repairs. In case our suggestion cannot be carried out, it would be well for pedestrians to provide themselves with lanterns, thus saving themselves much bodily discomfort and mental vexation.

The *Akebono* also states that the intended reforms to be made in the press laws have been drawn up, but that they have yet to be laid before the *Genro-In* for consideration. It is expected that the new laws will come into force about March next.

Original from UNIVERSITY OF CALIFORNIA

According to the *Choya* some malignant epidemic has broken out amongst the dogs at Omori which causes their death in a few hours. If the visitation would only extend to Yokohama and its environs and carry off those four legged tormentors of our peace which make night hideous with their howlings and day wretched with the sight of their manginess, how calmly should we all resign ourselves to the calamity.

The storm of the 11th October seems to have been the most severe and extensive in its course than has visited the China and Japan Seas for some years. According to the following account, which has been kindly furnished to us by a passenger who was on board the steamer *Strathairly* when on her passage from this port to Kobe, shows that that vessel was in serious danger, and at one time was actually given up for lost by all on board :—

We left Yokohama October 10th at 11 a.m.for Kobe. When off Vries Island passed the *Glenearn* and at 7 p.m. the *Thabor*, [illegible] inward bound, the weather then being perfectly fine. At daylight next day passed the barque *Awajishima Maru*. At 8 p.m. on Wednesday, rounded Oosima Light, and expected to make the run from Yokohama to Kobe in about 32 hours. At 6 p.m. we were well up the Kii channel, a fresh breeze blowing at the time, and the weather setting in thick. At 6.30 p.m. there was much rain and fog, and it was blowing hard, the barometer also falling fast. The ship's head was put to the southward, the engines going dead slow, everything having been made snug in anticipation of a fresh gale. At midnight the gale was still increasing, with a mountainous sea running, the barometer being 29.40 and still falling. At 5 a.m. it was blowing a perfect hurricane, the ship labouring very heavily, and even rolling her rails under water. At 8 a.m. the ship was on her beam ends, the barometer still falling, and there being every indication that the ship was working into the centre of a typhoon. Those on the bridge could not see the forepart of the vessel for spray. The wind was hauling to the southward, and the sea making a clean sweep over the ship. At this time the cargo broke loose, and there seemed little chance of saving the vessel, as the barometer continued falling, being then 29.15. The boat covers were blown to pieces and one boat smashed. All this time a fearful sea was running, so much so as to be quite indescribable, the barometer being 29.12, and still falling. The Captain and officers had to be lashed to the bridge, as the sea was making a clean breach over the vessel. At noon the barometer was steady, but the sea as dangerously high as before. At 1 p.m. the centre of the storm passed over the vessel, and the opportunity of a lull was seized to head the steamer to the northward, which put her on the port tack, the cargo thereby being righted. The barometer now commenced to rise, the lowest reading having been 29.10. At 3 p.m. the force of the wind had greatly decreased though the sea still ran high, but all danger was fortunately passed. This state of affairs continued until midnight, and at 4 a.m. on Friday, the 12th instant, we shaped a course again for the Kii Channel. By observations taken at noon that day, the ship was found to be 210 miles from Osima Lighthouse, so that it was estimated that the centre of the typhoon passed about 250 miles from the land. At 4 p.m. on Saturday, the 13th instant, we arrived in Kobe, having come out safely from one of the severest typhoons which has ever visited this coast. Captain Cassap declared that during forty years experience he had never met worse weather.

The *Nichi Nichi Shimbun* states that the Head Office of the Telegraph Department at Kobikicho, Tôkiô, was completed on the 31st ultimo. The building, which is large, is constructed of brick and cost ten thousand *yen*.

The same paper also states that when Sir Harry Parkes reached Niigata in H. M. S. *Modeste* on the 25th ultimo but, it was impossible to effect a landing on account of the wind. After waiting for two days and still being unable to land, the vessel left for the South.

In Shinshiu and the neighbouring districts winter has apparently thoroughly set in, though it has commenced unusually early. At Matsumoto snow has fallen, and among the hills the cold at the end of October was very bitter, the snow lying deep on the mountains and well down into the higher valleys. The chain of peaks which borders Shinshiu and Hida, which is very bold and striking in outline, is almost Alpine in snow-clad grandeur when seen from the Zenkôji-Kaidô. In travelling through this section of the country one is much struck by the goodness of the roads, and by the evident care which has been taken in constructing them and the pains still being bestowed to bring them into thorough order. If some of the bridges were widened and the more dangerous portions of the roads securely guarded, there is no reason why carriages might not pass over any of them. It is to the making of roads of this kind throughout the country that the Japanese Government should devote its attention. They are the arteries by which the life blood of civilization will be carried into the country. As yet it is surprising to mark how even a very few miles from the capital there is an absolute ignorance and apathy as to all that relates to the outside world. The discomfort in which the people live seems not to be so much the result of poverty (for of absolute want or wretchedness as we understand the terms there is little trace), as of ignorance of anything better, and consequent absence of desire for increased comforts. In the principal towns there are a few shops where some of the more common of foreign goods are kept, but their use must be confined almost exclusively to the inhabitants of those towns, for away from them one finds scarcely ever a trace of foreign commodities. Of what is going on in their own country it is rare to find in the villages anyone who has more than the faintest knowledge, or who cares to learn of what does not immediately concern himself or his immediate neighbourhood. Let any foreigner who believes that ill-fitting dress clothes and cheap sentiment finding its expression in bad English, are to be taken as signs that Japan has emerged into the full light of civilization, and is to be entrusted with the handling of that most delicate and dangerous toy, ex-territoriality, travel a few miles beyond the boundaries assigned by treaty, and he will surely at once renounce his errors, and confess that things are not what he in his blind admiration would have his countrymen believe. Space forbids us to enter upon these matters at present at any length, but we shall sieze an early occasion to return to the subject.

On the 21st instant, the native journals report, a terrible storm took place in the neighbourhood of Awomori in Oshiu. Much damage occurred to the rice crop which had been cut but not yet stored. In the town the water stood two feet deep on the floors of many of the houses.

The *Hochi Shimbun* reports that Mr. Iwamura, the Governor of Kagoshima *Ken*, has issued a notification to the effect that all the *Kuchos* and *Kochos* of that *Ken* will in future be elected by the people.

Their Excellencies the Peruvian and Dutch Ministers, with their suites, left on the 1st instant for Narashino-hara, to be present at the review which was to be held at that place yesterday in the presence of the Emperor.

We have to acknowledge the receipt of the First Annual Report of the Sapporo Agricultural College. The subjects of which it treats are of too great importance to be dismissed in a short paragraph, but we are compelled, from want of space, to reserve our remarks thereon until our next issue.

The *Akébono Shimbun* records a curious disturbance which broke out among the prisoners in the Osaka jail on the 26th instant. Some discontent was caused by the substitution by the officials of blankets for the native *futons* which had been previously in use for the prisoners' bedding, which at last increased to such an extent that all authority was set at defiance. The prisoners demanded that their cells should be furnished with mats, and that they should be supplied with tobacco, *saké* and other

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

luxuries. This was naturally refused, whereupon some hundred and eighty of the prisoners made a combined attempt to break out of jail. The alarm was given, and a force of five hundred policemen hastened to the assistance of the keepers, but even then were unable to put a stop to the disturbance until they had resorted to the extreme measure of pumping boiling water on the rioters, which had the effect, as might have been expected, of repressing the turbulence of the rioters and restoring peace and order.

From the "Japan Mail Daily Advertiser."

Monday, 29th.

The American ship *Messenger* left Hakodate on the 24th instant. Experienced lights baffling winds and calms during the passage, arriving yesterday afternoon. She left the *Meiji Maru* in port, that vessel having arrived from Sado on the 23rd. The *Meiji Maru* will tow down the old light ship, which has been replaced by a new one.

The steamer *Radnorshire* left Singapore for Hongkong on the 11th instant. The *Glenfinlas* arrived at the latter port on the 16th.

From the *Osaka Nippô.*

We hear that a great festival is being prepared at the shrines at Ise on behalf of those who fell in the civil war of the Restoration, and also during the recent rebellion.

From the *Nichi Nichi Shimbun.*

Short sketches of the career of those who fell while fighting for the Imperial cause during the war of the Restoration, and in all subsequent wars, are to be compiled for the use of His Majesty the Mikado.

Several officials of the Army Department have been appointed to draw up a detailed account of the recent rebellion.

On the 25th police sergeant Hagiwara, at the head of nine hundred policemen, set out from Hiuga for Shinagawa. Police sergeant Nakagawa and six hundred police officers and men have received orders to return, and a transport will be despatched to convey them to Tôkiô.

An office is to be established within the *Genrô-In* to take charge of affairs relating to the Kiushiu Special *Saibansho.*

The amount spent by the Navy Department in the suppression of the Kiushiu rebellion was less than half a million of *yen.* The Army Department spent from five hundred thousand to one million of *yen* on every *riotan* (army corps), of which there were ten engaged.

From the *Hôchi Shimbun.*

His Excellency Kuroda has not attended his office since the 20th, on account of illness.

Tuesday, 30th.

The *Mainichi Shimbun* announces that the exhibitors at the the Uyéno Exhibition have applied to the authorities to admit the public to the Exhibition free of cost on the evening of the 3rd November, that being the anniversary of the Mikado's birthday. If this request is acceded to, we presume the buildings will be specially lighted for the occasion.

The *Nichi Nichi Shimbun* says that official returns show that 7,403 persons throughout the Empire were attacked by cholera from the 5th September to the 30th October, of whom 3,731 died.

The *London & China Express* contains a paragraph announcing the visit of "Prince Tokugawa" to Glasgow, and erroneously styles this youth His Royal Highness.

From the *Hôchi Shimbun.*

Early next month a special service will be held at Kudan, Tôkiô, in commemoration of those who fell in the late Southern war.

Lieut.-General Miura, the Commander of the Hiroshima garrison, has arrived at Kobe, where he waits for Lieut.-Generals Tani and Miyoshi, whom he will accompany to Tôkiô.

From the *Mainichi Shimbun.*

H.I.H. Fushimi-no-Miya has taken out a shooting license, and will go in pursuit of game in the Kanagawa *ken* during the current shooting season.

From the *Nichi Nichi Shimbun.*

Most of the troops lately engaged in the South are returning at once to their various garrisons. In a few days His Majesty the Mikado will review those belonging to Tôkiô, and transmit to the troops of other garrisons an expression of his thanks for, and approval of, the services they have rendered in the suppression of the recent rebellion.

SECOND NATIONAL BANK.

(Dai-Ni Koku-ritsu Ginko.)

Statement for the week ending 27th October, 1877 :—

Total Amount of notes (dollars) received by us from the *Shihei-rio*		1,200,000
On hand	698,165	
In circulation	501,885	
	1,200,000	
Reserve Fund		501,885
In Foreign money :—		
In dollars	369,419.82	"
In Bank notes and cheques	2,915.68	
Deposited with Foreign Banks	50,000.00	
	422,335.00	
Do. in native currency	79,500.00	
	501,835.00	

Wednesday, 31st.

An enterprising pryrotechnist, Hirayama Jinta, has been granted the use of the Public Gardens on the Swamp, for the purpose of making a display of fireworks on Saturday next, the 3rd proximo, in honour of the Mikado's birthday. There will be a most varied display of both day and night fireworks, as the advertisement shows, the first three of which will be let off very early in the morning, as a signal that the weather promises to be favourable enough to carry out the programme in its entirety, so that it will be understood, that should this signal not be given, there will be such a change made in the programme as the state of the weather may necessitate. With fine weather the real display will commence at half-past three o'clock. Accommodation will be provided for spectators in the Public Gardens, but we are authorized to state that the Cricket Ground will be opened to Ladies, and the members of the various Clubs. No charge is made by the pyrotechnist, who apparently wishes to bring himself to the notice of foreigners with a view to employment on future occasions.

A committee meeting of the Amateur Athletic Association was held at No. 70 on Monday, when the following arrangements were made to hold the Autumn Meeting :—

Taking into consideration the impossibility of finding two days for the Athletic Sports until the end of November, owing to Mail days and Autumn Races, it was decided to hold a one day meeting on Tuesday, 13th November. Post Entries to be received till Tuesday, 6th November, present handicaps to remain and *no withdrawals* allowed.

PROGRAMME.

1.—100 Yards Race	12.30	12.—Hop, Step & Jump	2.40
2.—Throwing at Wicket	12.40	13.—Final 150 Yards Race	2.55
3.—150 Yards Race	12.55	14.—Throwing Cricket Ball	3.05
4.—Griffins' Race	1.05	15.—Ladies' Purse Race	3.20
5.—1st Heat Boys' Race	1.15	16.—High Jump	3.30
6.—Quarter Mile Race	1.25	17.—Visitors' Race	3.45
7.—Throwing Hammer	1.35	18.—Mile ,,	3.55
8.—Hurdle Race	1.50	19.—Final Heat, Boys' Race	4.00
9.—Long Jump	2.00	20.—Pole Jump	4.15
10.—Half Mile Race	2.15	21.—Consolation	4.30
11.—Final 100 Yards Race.	2.30	22.—Steeple Chase	4.40

A short advertisement to be inserted in the *Japan Herald* or other paper, advising date of meeting, date of post entries closing, and entries closing for Quarter Mile Handicap, and that Programme will be issued in due course, say on Saturday, 10th November. If the programme should be already printed, then slips must be issued with post entries, order of meeting, and entries for the Quarter Mile.

Tôkiô men to be advised that the Committee will endeavour to arrange in the event of their absence by unavoidable circumstances, some means by which they can compete by special heat or otherwise in 100 and 150 yards races, which are run early in the day.

Boys' Race to be run in heats under 9 ; 9 to 10; 10 to 11, and 11 to 12 years old without handicaps ; the winners to be handicapped 3 yards a year in final heat.

From the *Osaka Nippô.*

The silver mines at Ikuno, in the province of Tajima, have

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

been worked by a French Mining Engineer, and a vein of gold has been discovered there.

From the *Nichi Nichi Shimbun.*

The Mikado will shortly pay a visit to the paper manufactory at Ôji.

The amount spent upon the Kiushiu rebellion from its outbreak to the 27th of this month, was 44,638,098 *yen.*

The sum of 27,000 *yen* is to be spent by the Owake *ken* in forwarding the rebels who have been sentenced to hard labour to their various destinations.

From the *Hôchi Shimbun.*

The Government is to make known to the Kanagawa *Kencho* the ceremony to be observed in receiving the Chinese Minister on his arrival at Yokohama.

Policemen are now being recruited for distribution in Osaka, Kiôto and the five treaty ports.

As very many people pay visits to the tomb of Saigo, his wife is about to order the erection of a place of refreshment close by the grave, for public convenience.

From the *Akébono Shimbun.*

His Excellency Sanjô, the Prime Minister, has for the past few days been unable to attend his office on account of ill health.

About 5 p.m. on the 28th instant some fifty soldiers of the Tôkiô garrison came into collision with the police at Yotsuya, Tôkiô, which resulted in two of the latter being wounded. The cause of the disturbance is not stated.

From the *Chôya Shimbun.*

On the 3rd proximo the officials of Government appointment and all the foreigners in the employment of the Government, will be entertained at a banquet at Hamagoten, in commemoration of the birthday of H. M. the Mikado.

The commander of the rebels of Kumamoto, Ikebe Kichijurô, and Sadaoki, another rebel commander, were sentenced to death by the Special Court at Nagasaki, and decapitated on the 26th instant.

Thursday, 1st.

The *Mainichi Shimbun* reports that all is quiet in Kochi *ken* (Tosa), in a great measure owing to the influence the Governor, Mr. Koike, has over the people.

A Court of Inquiry was held at Hongkong on the 23rd ultimo, into the circumstances attending the loss of the British barque *Merse,* which vessel was abandoned after having struck on the Pratas Shoal on the 11th October. The Court found that the Captain acted imprudently in trying to pass to windward of a well known dangerous part in the China Sea, and was also of opinion that although for nine days the Captain did his best to get the ship afloat again without success, and even though there was no prospect of getting the vessel off the reef, yet it would have been better if he had remained by the ship until she had sustained such damage as would have put it beyond doubt that she could not have been floated again. While finding the master guilty of an error of judgment, the Court did not think it sufficient to necessitate the suspension of his certificate.

The festival which is to take place at Kudan, Tôkiô, early next month, in commemoration of those who fell during the late war, promises to be an important one. His Majesty the Mikado will himself visit the temple on the occasion, a display of fireworks will be made and horse races held. In addition, an exhibition of wrestling will take place, the principal wrestlers of Japan having been summoned by telegraph from various parts of the country to take part in the sports.

From the *Nichi Nichi Shimbun.*

On the 28th instant the officers and men of the Osaka garrison celebrated the success of the Imperial arms in the South, *saké* and *saka-a* having been provided for the troops, as well as for the families of those who fell during the war.

Maichida Heijirô, the son of the ex-*Daimiô* of Sadowara who commanded a force of the rebels in the recent war, has been captured by the Kumamoto police.

From the *Chôya Shimbun.*

The Foreign Ministers are to be entertained by His Majesty the Mikado at a banquet at Hamagoten on the 3rd of November, the anniversary of His Majesty's birthday. During the evening a display of fireworks will take place.

The uniforms of the police throughout the Empire will, for the future, be made of a kind of native cotton cloth, called *kokura.*

From the *Akébono Shimbun.*

The Government has decided that the capital of any bank which may be established in the future shall not exceed one million of *yen.*

The *Naimusho* and *Okurasho* have suggested to the *Daijô-kuan* the desirability of reducing the number of the keepers of the Shintô Shrines.

From the *Hôchi Shimbun.*

A coal mine has been discovered in Iwate *ken,* and will shortly be worked.

From the *Osaka Nippô.*

Mr. Shiwoda, who accompanied Mr. Hanabusa to Korea, has written to say that the latter will shortly return to Japan on official business.

Friday, 2nd.

The barque *Cremona* sailed for New York direct yesterday, with a cargo of 325,500 lbs. of Tea.

It is reported that Shimadzu Saburo may shortly be expected at the capital, one of his *Karei,* or household managers, having arrived on the 29th ultimo at the Shimadzu *Yashiki,* Kakigara-chô, in order to make preparations for the reception of his lord.

From the *Nichi Nichi Shimbun.*

It is rumoured that a notification will shortly be issued, ordering the adoption of foreign style of clothing by all officials of Imperial or Government appointment in the *Daijô-kuan* and Department of the Imperial Household. It is likely that this order will also be extended to all Government Departments.

It is reported that the principal officers of the Navy and Army who were engaged in the Southern war, will receive decorations in a few days.

Snow has already fallen in Oshiu. At Matsumoto in Shinshiu, also, a snow-fall occurred on the 26th ultimo.

From the *Chôya Shimbun.*

His Majesty the Mikado will review the troops at the drill grounds, Hibiya, Tôkiô, on the 2nd instant. On that occasion they will be under the command of Lieut. General Nodzu.

Major General Torio, and Lieut. Generals Miura, Miyoshi and Tani arrived here yesterday morning by the *Saikio Maru* from Kobe, and soon afterwerds left by train for Tôkiô.

THE FINANCES OF JAPAN.*

IT will readily be admitted that no more important subject can engage the attention of the publicist who shall busy himself with the examination of the position and prospects of a civilised country, than the condition and administration of its Finances.

Nor is the study of such a subject as dry, or the results of such a study as unattractive as is commonly supposed. On the contrary, the clear statement of the actual condition and probable future of the Finances of any country of which the affairs are administered by a settled Government, is no less interesting than instructive. Such a a statement is in great measure a description in figures—the most exact and often the most telling means of narration—of the ordinary and special disadvantages, physical and social, of the state with which it is concerned, reflecting with peculiar accuracy many of the leading features of its popular life, and affording the surest basis for an outlook into its future. The recent extraordinary changes which have taken place in this country invest all subjects connected with it with a special interest both for the politician and for the philosopher, and no better test of the solidity and durability of the progress it has made within the last decade can be imagined, than the degree in which it has been able to organise its financial system upon an European model. Mr. MOUNSEY'S able report shows exactly to what extent this assimilation has been accomplished, and while it gives as exhaustive an account as the materials at his command enabled him to furnish, of the actual resources of the Empire, it affords a most valuable summary of the financial history of the country, and of the important charges that have taken place during the past eight or nine years in the establishment and administration of its revenue.

Although the Financial Statements from time to time published by the Government are made up, not of real, but of estimated items of revenue and expenditure,—a system that cannot be too soon abolished—we see no reason to doubt the general accuracy of the more recent figures of the Minister of Finance, and we shall, accordingly, for the most part use them as if they represented actual receipts and disbursements. Out of the total revenue of—in round numbers—63 millions for the financial year 1876-77, 46½ millions were produced by the land-tax, which thus furnishes more than five-sevenths of the annual income. The land, therefore, in Japan, as in India and most Eastern countries, forms the main source of national revenue, while in European countries the reverse is the case. The taxation of land seems, indeed, to be more and more abandoned by modern European finance as a means of raising the necessary supplies, and even the indirect taxation involved in customs, excise and stamp duties will be given up as soon as a satisfactory mode of imposing and collecting an income tax shall have been discovered. So far as the land-tax is concerned, a similar tendency exists to some extent in Japan, for as soon as certain other taxes shall produce an annual income of 2 millions, it is to be reduced from 2½ per cent. to 1 per cent. on the value. Even then, however, it will form the most considerable item in the revenue, and the tax, accordingly, with justice occupies the first place in the attention of the economist who deals with the finances of this country. In the interesting history of this tax, which Mr. MOUNSEY embodies in his Report, we are informed that previously to the 12th century the whole land of the country was regarded as the property of the Mikado, and was divided into squares which were again measured out into nine equal portions, eight of which were assigned to as many of his subjects free of rent, but upon the condition that they cultivated the ninth portion for the sole benefit of their Imperial landlord. Such a system could never have lasted for any length of time, or been in force over a wide area, and probably the tradition represents rather some theoretical explanation of a mode of assessment than a tenure that even actually existed.

During what the Japanese are fond of calling the middle ages, the lordship of the land was vested in the Shôguns and the Daimios, and while only four-tenths of the annual produce was taken by the former, six-tenths or more were exacted by the latter. This, however, in all probability was all the taxation the peasant was subjected to, and remission in times of scarcity must have been allowed. In 1868 the Daimios voluntarily surrendered their territories to the Mikado, acknowledging him as lord of the soil, and confessing that of their own selves they could not hold a foot of land. The real meaning of this unexampled abdication has yet to be discovered. It may have been motived by animosity to the Shôgun; or it may have been brought about through the ascendancy politic retainers had gained over their effete masters, or lastly the Daimios, most of whom were overwhelmed with debts, may have found it a relief to get rid of their liabilities by cession of their lands. It certainly was not a mere act of disinterestedness, for there can be little doubt but that the Daimios expected to benefit by the change, and to recover under the milder sway of the MIKADO the power they had lost under the rigorous domination and close surveillance of the Eastern Court.

A couple of years more and the Daimiates were wholly abolished. In 1872 it was announced that the land tax which had hitherto been paid in produce might be paid in coin, and in 1873 payment in coin was made compulsory, while the mode of assessment was changed, the value of the land, not the amount of its annual produce, being made the basis of the new system. Up to the beginning of the present year the tax was 3 per cent. on the value, but the opposition which the new arrangement met with from the farmers, induced the Government to purchase tranquillity by reducing the tax to 2½ per cent. from the 4th January, and at the same time to promise a further reduction to 1 per cent. as soon as certain taxes on produce should provide an annual income of not less than two millions. This reduction to 2½ per cent. will diminish the revenue by about eight millions, and in making their late demands upon the treaty powers to increase the import duties, the Government have, probably, been to some extent actuated by a desire to recoup the deficiency.

Whatever the remote future of Japan may be, it is clear that for a very long time to come she will remain an agricultural country. Her great want at the present moment is capital, capital of her own possesssion and accumulation, and nothing more surely stops the growth of capital than taxation burdensome in amount or wrong in imposition. The land tax, regarded as rent, does not, it may be,

* Report on the Finances of Japan by A. H. Mounsey, Esq., Secretary to H. B. M.'s Legation.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

enter into the cost of production, for the price of the produce of the best land is of course regulated by that of the produce of the worst land under cultivation, and this necessarily pays no rent. But it does tend to prevent or restrict the accumulation of capital by the peasant farmer, and in a mainly agricultural country no considerable increase of capital can result except from the accumulation by the peasantry of their more or less hardly-won savings. A land-tax or rent, again, involves the proprietorship of the land by the Government, a state of things highly favourable to the continuance of a despotic system, and condemned, we believe, by all schools of political economy.

We trust therefore that the efforts of Japanese statesmen will be directed towards bringing about such a reduction of this tax, obnoxious, if for no other reason, upon the ground of its costliness as a tax laid practically upon raw produce long before consumption is possible, as to prevent it from being, what it now must be, a serious obstacle to the accumulation of agricultural capital, without which no great development of the productive resources of the country is likely to be attained. After the land-tax, but at a great interval, the most important items of revenue are the Customs' and other duties levied in the treaty ports, amounting in all in 1876-7 to 1¾ millions, the taxes on allowances to nobles and samurai 2½ millions, the duties on fermented liquors 2⅓ millions, and the mineral produce 1¼ million. The remainder of the revenue, some ten millions in round numbers, is made up of various items; the returns (not profits) from Government manufactories, from Railways and Telegraphs, from the Post Office and Mint, and the produce of licenses, stamps, and a crowd of miscellaneous taxes. Most of these miscellaneous taxes ought no doubt to be abolished. The ingenuity of Japanese financiers has hardly left a product of the country, or a profession, trade or calling exercised within its limits untaxed. From most of these petty taxes only a small revenue is raised, and the expense of collection must be considerable, while the harm done by the irritation they cause and by the discouragement a number of small trades suffer through them, must be out of all proportion to their returns. There are taxes on junks, on fishing boats and on each fishing net, on vehicles of every kind down to *jinrikishas* and hand-carts, on almost all kinds of produce, on trading corporations, and, in fact, on everything on which a tax can by any ingenuity be levied. Nor are these light, the tax on *jinrikishas*, for instance, is a good week's gross return, and the taxes levied by the Colonization Department on Yezo produce afford a sufficient explanation of the utter failure of the attempts made, at such vast outlay, to develop the resources of that Island. In lieu of most of these petty dues, an income tax might, after a little time, be imposed without too greatly shocking the prejudices of the people. It were well, perhaps, to precede it by a house tax based upon the rent or rent-value of each inhabited house. In Japan, as elsewhere,—though doubtless to a less extent in Japan than in European countries—the kind of house a man lives in is a fair index of his income and the tax is one especially recommended by the ease and cheapness of its assessment and collection. No dwelling, we think, should entirely escape payment of such a tax, but this should be, not a fixed proportion, but one based upon a sliding scale varying between certain limits according to the rent or rent-value assessed. The ward and village system indigenous to the country affords the requisite machinery both for assessment and collection, and, if necessary, means of appeal against the assessment of the local authorities might easily be provided. It may be taken as an axiomatic principle of the science of taxation that taxation of raw produce (or of land, which amounts to the same thing, at all events in a country like Japan where the holders are also the cultivators of the soil) and of labour should be avoided as much as possible, and economists are almost unanimous in preferring direct to indirect contribution, as the fairer and cheaper mode of procuring the necessary revenue. In Japan most of the objections that exist in European countries to direct taxation find no place, and the only exception that could be taken to the mode of making every citizen bear his part of the public burden would be its novelty.

Our further remarks on the topics suggested by Mr. MOUNSEY'S Report must be deferred to a future issue.

SPIRIT OF THE JAPANESE PRESS.

FREEDOM OF THE PRESS.

(Akébono Shimbun, 29th October.)

The Kiushiu rebellion having been supressed, we are led to ask if this is not now the time when freedom of speech can be granted? Any one who replies in the negative can be no better than a blind man, ignorant of the events of the times in which we live, and nothing more than an obstructor to the progress of the nation.

Of course, stifling the popular voice cannot by any means be looked upon as a desirable proceeding, but yet at times circumstances may necessitate some curb being put on the free expression of opinion by the press. Even in Europe, the most civilized portion of the globe, it cannot be said that universal freedom of speech is allowed; but to place heavy restraints on any expression of opinion at the very time when everything points to the necessity of perfect freedom of opinion being allowed, is the very worst course that can be taken.

Since the *Han* were abolished and the country partitioned into *Ken*, each of which is ruled by an official appointed by the Central Government, the military and civil duties of the *samurai* fell into abeyance. Furthermore, so vital a change was made in their position by the changes made with regard to their incomes, that they not only found their occupation gone, but that it was difficult for them to obtain a bare livelihood. So poor and discontented did they become, that they longed for some outbreak in which they could take part. There were tens of thousands of men in this condition. When such men as Saigo and Etô Shimpei resigned their appointments because they disagreed with the Government's action on the question of the Korean Expedition, etc., this discontent was greatly increased. This feeling brought about civil war, and although the outbreak of Etô at Saga was suppressed at once, Saigo retired quietly to Satsuma, and like a tiger in his lair lay watching his opportunity. There were, besides, many more such men, living in the southern part of Nippon or in Kiushiu, who were ready to rise against the Government when occasion offered.

At this time some public writers openly denounced the faults committed by the Government, which was all very well, but there were others who maliciously attacked every action of the Government from a spirit of opposition, and their writings were calculated to incite the people to hostility against the Government. To provide against such attacks, the Government promulgated the Press Laws, which, considering the state of the country, and the reckless licence of which many public writers were guilty, were absolutely necessary to preserve order. It does not follow that the Government wished to prevent all freedom of expression on the part of the Press, but only to check unbridled abuse of the privilege on the part of the few, and so prevent them from misleading the people by their mischievous writings.

It is apparent that the condition of the country was then very different to what it is now. Last year the *Jimpu* party broke into rebellion at Kumamoto, and their example was quickly followed by the rising at Akidzuki, and subsequently by the rebellion of Mayebara in Yamaguchi *Ken*. To suppress all these outbreaks,

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

however, took but a short time, and by the Government success the country was rid of many discontented men.

At the commencement of this year Saigo rose against the Government in Kiushiu, and it was greatly feared that disturbances would break out at the same time at Saga, Kurumé and Yanagawa, but such, fortunately, was not the case. Unimportant outbreaks occurred at Fukuoka and Hagi, but were suppressed with little difficulty.

But now, not only have the Satsuma *samurai* been completely overcome, but the rebellious people of Kumamoto, Obi, Nobeoka and Takanabe have either been slain or have given in their submission, and we may fairly conclude, that with the suppression of the Satsuma rebellion, all the discontented *samurai* in the country have been annihilated.

Such being the present state of Japan, we think that even if all restrictions were removed from the Press no harm could be done, nor would reckless writers have it in their power to incite the people to oppose the Government. Whatever arguments such might use they would never be able to induce men to follow the example set by Saigo.

Great as the influence of Saigo was with the people, when he marched at the head of fifteen thousand picked men of Satsuma into Kumamoto *Ken*, he obtained only a few adherents from Hiuga, Osumi, Higo and Bungo, while of the great number who lived in other parts of the Empire none made any move whatever. This clearly shows that it is not in the power of any writer, no matter how opposed he may be to the Government, to endanger the peace of the country by inciting the people to rebellion.

But we are far from saying that though perfect freedom of expression is granted, that deliberate attempts to provoke a breach of the peace should be allowed to go unpunished.

The restraint placed on free discussion of public events, hinders on the one hand reforms in the construction of the Government and the checking of official corruption, while on the other hand it prevents any improvement being made in the conditions of society and tends to encourage a feeling of discontent in the minds of the people, forming on the whole a great obstruction to any real advancement on the part of our country.

On some future occasion we hope to deal more minutely with this question.

SOME OTHER CHAPTERS OF JAPANESE HISTORY.

YUI-NO-SHÔSETSU.

(Concluded.)

Of the two sisters who had thus given such extraordinary evidence of their prowess, the elder was most skilled in the use of the sickle and *shuriken*, while the younger could better wield the *naginata*, or curved spear. Shôsetsu therefore presented them with these weapons when they were about to leave his house, as a means by which they might revenge the murder of their father. He also furnished them with the clothes they would require for their journey, and ordered three of his stalwart followers, Matsuda, Shibata and Tsubonai to escort them on their road. The last named of these men had been one of that body of highwaymen who attacked Shôsetsu years before in the mountain pass in Echigo.

The five travellers being fully equipped, started on the road towards the famous town of Sendai. On their arrival at Shiraishi, they petitioned Katakura Kojurô, the vassal of the *Daimio* of Sendai, that the two girls, Miyagino and Shinobu, might be allowed to challenge to mortal combat his retainer Shiga Danshichi, for the dastardly murder of their father four years before. Katakura referred the request to Date Masamuné, the *Daimio* of Sendai, and on receiving a favourable reply granted the required permission.

Preparations were made for the combat to take place in public, and a space of two hundred feet square was fenced off with bamboo for the purpose. On the day appointed Masamuné, attended by Katakura Kojurô and seventy of his chief vassals, appeared on the scene to witness the fight, and from far and near so large a number of people flocked in, that the services of three hundred *ashigaru* were required to keep the ground. Punctually to the hour named, Danshichi entered the lists at one end, and with his drawn sword in his hand advanced to meet the little Shinobu, who had entered at the opposite end, and who was armed only with the spear *(naginata)* which Shôsetsu had given her. An officer whose duty it was to see that the combatants were properly accoutred, discovered that Danshichi had taken the cowardly precaution of wearing chain armour under his clothes, and as this was directly in contravention of the rules of a duel *à outrance*, it was stripped off him by command of Masamuné amidst the expressions of scorn and contempt to which the spectators were provoked by his treachery.

The combatants were then placed opposite each other and the signal given to begin the fight. Cautiously they commenced, and for a time neither obtained any advantage. The lookers-on turned pale and hardly trusted themselves to draw breath as Shinobu lost ground, but relief was felt as she put forth all the energy she was capable of, and dexterously managing her weapon, forced her foe to retreat before her and so recovered the advantage she had previously lost. An interval for rest was then called, when it was discovered that both combatants were slightly wounded. When time was up, Shinobu's place was taken by her elder sister Miyagino, who was armed with the sickle and a few *shuriken*. A desperate fight ensued, and at last Miyagino succeeded in planting *shuriken* in both eyes of her opponent. Blinded by this, Danshishi struck wildly in every direction with his sword, until Miyagino entangled his right arm with the chain attached to her sickle, and then with one blow cut off both his arms. Calling Shinobu to her she directed her sister to sever the head of their foe from his body, which was at once done, to the admiration of all present Thus was the girls' long sought for revenge accomplished.

Both the girls were sought in marriage by members of high families in the neighbourhood, and received numerous offers of adoption, but declined all, saying that though they had accomplished their cherished purpose it had necessitated the shedding of blood, which only a life of retirement and devotion could expiate. They therefore retired at once to Kamakura where they took the vows of nuns. This event occurred in the 17th year of Kanyei (A.D. 1640) and caused the name of Shôsetsu to ring throughout the land. Everywhere his kindness was extolled, as being equal to his well known wisdom and prowess.

About this time Shôsetsu commenced active steps towards carrying out his deep laid plans. First of all he made a close imitation of the seal of the wealthy *Daimio* of Kii, by the use of which he was enabled to collect large sums of money, but he took a precaution of making this imitation differ from the real seal in some minor particulars which would escape casual observation, for reasons which will appear later on.

Shôsetsu then called together the principal men among his party, and a consultation was held as to the course to be pursued, when the following steps were decided upon. One Aritaké was to undermine the powder magazines within the Shôgun's castle at Yedo, working from without the moat. A train thus laid would be fired at a given signal and the magazines blown up, while some of his accomplices were to set fire at the same time to other parts of the city. During the confusion which would ensue, Shibata, at the head of three hundred men disguised in dresses bearing the Tokugawa crest of the *awoi*, would enter the castle in a body, as though they desired to render assistance or secure the safety of the Shôgun, and taking advantage of the opportunity which would thus offer, seize the person of the Shôgun and bear him off at once to Nikkô. To secure a safe retreat Marubashi Chiuya, at the head of one thousand men, was to follow Shibata to Nikkô, and after crossing the Kuribashi river, break down the embankments and flood the country, so as to prevent pursuit by the Shôgun's party. Katô Ichiyémon and Kumagai Saburobei were to proceed to Kiôto at the head of large force, and on hearing that Yedo and Sumpu in Suruga were in flames, were to immediately attack the Imperial palace, seize the person of the Mikado, confine him in a temple on Hiyeizan, and there compel him to issue a decree for the chastisement and deposition of the Shôgun. Kannai Hambei and Yoshida Katsuyémon were to proceed to Osaka and there incite the *rônin* to join their enterprize, and be ready to render assistance to their fellow conspirators at Kiôto if necessary. In the meantime Shôsetsu at the head of his remaining followers

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

was to advance to Suruga, capture the castle of Sumpu, and having taken up a strong position on Kanô-zan, be prepared to support the forces at either Kiôto or Osaka. Nikkô was decided upon for their head-quarters.

In the first year of Keian (A.D. 1648) some business or another took Chiuya over the Benkei-bashi, where he could not help stopping to examine well the castle and the moat, while he pondered how best he would be able to cross the latter in making an attack on the castle. While so occupied, Matsudaira Idzu-no-Kami, who had been appointed Regent during the illness of the Shôgun, passed by and noticed Chiuya's fixed attention. Calling to him an official of the Bakufu named Amano Yagoro, who also happened to be passing at the time, he demanded if he knew who the man was who was so attentively scanning the castle. Amano replied that the man in question was Marubashi Chiuya, the noted fencer. On hearing this Idzu-no-Kami ordered Chiuya to approach him, and addressed him as follows:—"You have the "appearance of a man who is plotting some mischief. I "will not order your arrest now, but remember, if ever "an outbreak occurs you will be the first whose arrest I "shall secure." Idzu-no-Kami then proceeded on his way, telling Chiuya, in addition, that he had heard of his great skill in the use of the spear, and that in consequence he would receive him at his residence whenever he chose to call upon him.

In the 4th month of the 4th year of Keian (A.D. 1651) the third Shôgun of the Tokugawa line, Iyemitsu, died. Shôsetsu and Chiuya decided that the time had now arrived for carrying their plans into execution, so called a meeting of the leaders of their party on the 25th at Dôkan-yama, a noted place of entertainment between Uyéno and Asŭkayama, in Yedo, in order that a discussion might take place as to what steps the conspirators should take. It was then decided that those who were to proceed to Kiôto and Osaka should set out for their destinations at once, and that Shôsetsu could secretly supply them with funds. So the day following, Katô Ichiyemon, and Kumagai Saburobei left for Kiôto and Kanai Hambei and Yoshida Katsuyemon for Osaka, the men under their command getting out of Yedo so that they avoided observation, and in an equally cautious manner taking up their quarters in the neighbourhood of the cities of Kiôto and Osaka. Shôsetsu provided them with money as he had promised, and these bands, as they quietly waited until the time for action arrived gradually increased their force by persuading large numbers of *rônin* in the neighbourhood to join them.

Shôsetsu had handed to Chiuya the sum of five thousand *riyo*, but the latter, however, deemed it insufficient to cover the expenses of his party at Yedo, and being averse to apply to Shôsetsu for further assistance, set about trying to collect more money on his own account. From an arrow maker named Tôhirô he borrowed two hundred *riyo*, telling him that he would make repayment on the 13th day of the 7th month.

So far matters progressed favourably, but it was not long before events occurred which delayed the plans of action which had been agreed upon. News arrived from Kiôto that Kumagai Saburobei, the chief of that band of robbers who attacked Shôsetsu among the mountains of Echigo years before, and who was now appointed to a command in the conspiracy, had been led into such extravagant expenditure at Kiôto, that shame at the consequences of his imprudence had caused him to desert. Then Chiuya was taken ill with fever, and was in danger of discovering the plot, for becoming delirious, he imagined he was leading on an attacked, and called out in a loud voice, "Shibata, take the Shôgun to Nikkô. Set the city on fire," and so on, so that Shôsetsu had hard work to keep him quiet.

When Chiuya had fully recovered and Shôsetsu's preparations were considerably advanced, he called another meeting of his party on the night of the 18th of the 7th month at Dôkan-yama. Two thousand, eight hundred of his followers then mustered, and it was resolved that a simultaneous attack should be made on the castles of Yedo and Sumpu on the 26th of that month, and that as soon as the news of these attacks should be received at Kiôto and Osaka, their partizans there should put into immediate operation the plans which had been already agreed upon.

All being thus arranged, Shôsetsu left Yedo on the 21st of the 7th month, the one thousand men who were to act immediately under his command having left the city small bodies so as not to attract attention, and shortly afterwards assembling at the rendezvous in the neighbourhood of Sumpu as agreed upon. To cover his expenses, Shôsetsu had continued to raise considerable sums of money by means of the forged seal of the *Daimio* of Kii.

Immediately after the departure of Shôsetsu, Shibata commenced his operations of undermining the powder magazine in the castle, and laying plans whereby the city could be fired in numerous quarters at a given signal. As to Marubashi Chiuya, he still considered it requisite to raise additional funds, not with the intention of betraying or thwarting Shôsetsu's plans, but because he felt convinced that the more money he could obtain, the more effectually could be carry his plans into execution. Imbued with this notion, he set off on the evening of the 23rd day of the 7th month to the house of a wealthy merchant named Matabei, with whom he had become slightly acquainted, and tried to borrow of him five hundred *riyo*, stating as his reason for asking such a sum, that he had taken service with the *Daimio* of Kaga, and required the money for his travelling expenses. He added that his appointment would enable him to replay the sum he desired to borrow in a very short time. This tale had no effect on the merchant, who declined to lend the money on such security. At last Chiuya, thinking that an admission of the real purposes for which the money was required would secure it being supplied, thus addressed the merchant:—"Now to tell you the truth, the reason why I wish you "to lend me the money is this. I am about to engage "in a plot, the plans for which, having been laid for years, "are now in course of being carried out at Sumpu, Kiôto, "Osaka and Yedo. At the present moment there is no ob-"stacle to success but the want of money, so I therefore beg "you to lend me the sum I require, and when success has "crowned our attempt, I will return you ten times the "amount I now wish to borrow from you." Matabei was greatly alarmed at what he heard, though he did not allow his face to betray his apprehension, but promised that by the next day he would place three thousand *riyo* at Chiuya's disposal.

As soon, however, as Chiuya retired, Matabei hastened to impart the information he had thus obtained to a mutual friend named Okumura. This Okumura accompanied Chiuya from Yamagata to Yedo when they first visited the capital, but being himself loyal, had not been invited to join the conspiracy.

Okumura decided that the *Bakufu* should without loss of time be made acquainted with the whole affair, and accompanied Matabei at once to the residence of the Regent, Matsudaira Idzu-no-Kami, to whom they related the circumstances of Chiuya's confession.

Now ever since the meeting on the Benkei-bashi, Idzu-no-Kami had had doubts about Chiuya. On hearing the report of the imformants, he at once suspected that some dangerous plot was about to be put into execution. His suspicions were confirmed when the arrow-maker soon after appeared, and with fear and trembling informed him that Chiuya had shortly before borrowed money from him, which was to have been repaid on the 13th of that month, but that on application to Chiuya, not only was the money not forthcoming, but that he (the arrow-maker) had been forced to pledge himself that he would join the conspiracy in which Chiuya was engaged.

Idzu-no-Kami was now convinced that a great danger threatened the state, and that prompt steps must be taken to meet it, so at once went to the *Bakufu*, and giving out that the Shôgun was dangerously ill, summoned the *Daimios* of Mito and Owari to present themselves in council without delay. On their arrival a consultation was held, and orders at once issued to all the *Daimios* in Yedo to place the city under the strictest guard of their retainers, while messengers were immediately despatched to the Governors of Sumpu, Kiôto and Osaka, informing them of the discovery of a plot, and advising them to take prompt measures to prevent its outbreak.

Idzu-no-Kami next ordered Ishiya Shôgen, the Gover-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

nor of Yedo, to despatch twenty *yoriki* and fifty *dôshin* to the residence of Marubashi Chiuya, and there arrest him at once.

By the morning of the 24th day of the 7th month every part of the city was closely guarded by the retainers of the different *Daimios*. When the *Bakufu's* officers arrived at Chiuya's house, he was in bed, sleeping off the effects of an over-indulgence in *saké*, yet as soon as one of the officers incautiously approached too near him, he sprang up in his bed, seized his sword, and made the poor wretch feel the full force of that strength for which he was so notorious. A second officer similarly paid with his life for his temerity, and a concerted attack by two others was easily repelled. A rush was then made by all the officers on Chiuya, and one after another a victim fell, but their numbers in the long run proved too much for Chiuya, who, seeing that further resistance was vain, attempted to commit suicide, but was prevented, seized, bound and carried off, together with his wife and children, for examination before the Governor. A large sum of money that was discovered in his house, was also taken possession of. Shibata escaped to Suruga, but upwards of three hundred and seventy arrests were made that day in Yedo. Barrels of gunpowder were discovered in various parts of the city, with trains ready laid, so that at a given signal the city would have burst into flames in numerous quarters.

When the *Bakufu's* order to arrest Shôsetsu reached Okubo Gemba-no-Kami, the commandant of the Castle of Sumpu, he immediately collected a force of one hundred and fifty warriors, and then summoned Shôsetsu to appear before him. Shôsetsu's followers urged their leader to appeal to arms, as no other alternative was left him, but Shôsetsu dissuaded them from such rashness, saying, "If "there was any chance that the desire I have for so many "years cherished could be attained and my faithful and "beloved followers rewarded for their devotion, I would "not hesitate to lead you to battle, but I forsee that any "such attempt would now end in failure. It would be but "the means of unnecessary bloodshed, and would also entail "undeserved misery and hardship on many. It is better, "therefore, that I should die, and cause as little suffering "as possible to others." These words concluded, he committed *seppuku*, and his example was immediately followed by his principal officers.

On the 29th day of the 7th month, Itakura Suô-no-Kami, and Kuki Hizen-no-Kami, the Governors of Kiôto, sent seventy detectives and three hundred *yoriki* to arrest the conspirators there, and after desperate fighting Katô Ichiyemon and others were captured, and put to death after they had been subjected to cruel torture in order to induce them, but without avail, to confess. A strict search was made for Kumagai Saburobei, who had previously deserted from Katô's party, but his whereabouts could never be discovered, and it is not known even to this day what became of him.

Now at Osaka both Hambei and Yoshida Katsuyémon were in a great state of anxiety when they heard that Saburobei had deserted from Katô, and receiving no good news from the north, Yoshida set off in that direction in order to see if he could pick up any information on the road. At Yamazaki he encountered Hori Nizayémon, the Governor of Arima, at the head of one hundred men, who had been despatched to capture the Osaka conspirators. By them he was arrested, and eventually put to death. On receipt of this sad news Kanai Hambei made his escape, but committed suicide on the 3rd day of the 8th month.

To return once more to Yedo. Marubashi Chiuya was subjected to the most cruel torture by stone, fire and water, but would not confess one iota, declaring that he would not utter a word to implicate others even if boiled in oil. His wife and two children were then brought into his presence, and he was informed that they would be made to undergo the same torture that had been applied to him if he still refused to confess. Strong minded as he was, Chiuya was not proof against this abominable cruelty, and made a confession that Shibata was implicated in the plot. Beyond this he would say nothing, and on the 19th day of the 8th month was crucified, together with his two little innocent boys, aged respectively five and twelve years. Of the others arrested, thirty of the most prominent suffered a similar shameful death at Sudzuga-mori.*

On hearing of the wretched fate which had befallen their generous benefactor, the two women Miyagino and Shinobu, left Kamakura and hastened to Suruga. On arrival at the city of Sumpu they ascertained that the head of their former master, Yui-no-Shôsetsu, was subjected to the disgrace of public exposure, together with the heads of eleven of his followers. An application to the authorities to be allowed to take the head away was refused, on the grounds that it was to remain exposed for seven days, but that the body would be given up to them if they so desired. These bold and brave women, who had not forgotten their master's past kindness, determined to stealthily abstract from its disgraceful position the head which was more precious to them than anything else in the world, and bury it decently. They succeeded in their design that very night, and reverently interred the head of their benefactor at Abekawa, one *ri* south of Sumpu, or Shidzuoka as the town is now called. Together they took up their residence at Murokuji-chô in the former place, so that they could conveniently watch, for the rest of their lives, over the grave which contained what was so dear to them.

The *Daimio* of Kii has at first under suspicion of complicity in the plot, on account of the use Shôsetsu had made of his forged seal, but one of the conspirators declaring that Shôsetsu had purposely made an alteration in one of the characters of the seal, by which the innocence of the *Daimio* could be established, the impression of the two seals were closely compared, when the truth of this confession was confirmed and the loyalty of the *Daimio* of Kii established.

In reward for the energy and promptness which Idzu-no-Kami had shown in discovering and overthrowing the most extensive plot even known in Japan, he was rewarded with an estate producing five thousand *koku* of rice per annum. The merchant Matabei and Okumura were each rewarded with an annual pension of three hundred *koku* of rice, nor was the service rendered by the arrow-maker in giving information of what he knew overlooked, for he also was rewarded with a pension.

REVIEW OF THE INTRODUCTION OF CHRISTIANITY INTO CHINA AND JAPAN.

By JOHN H GUBBINS, Esq.

Read before the Asiatic Society of Japan, on the 27th October, 1877.

I.

For a long time it was generally believed that Christianity was first introduced into China in the middle of the 13th century, and this belief holds its ground in spite of vague rumours of missionaries having penetrated to Central Asia and China at a time anterior to that of the Crusades, and in spite of the mention made of Nestorian missionaries by Marco Polo. And there was much to support this belief, for the missionaries of the 13th century and those who followed two centuries later, sought long in vain for any traces of the previous existence of Christianity in the country; and it was only in the year 1625 that a discovery was made which shewed conclusively not only that Christianity had been introduced into China in ancient times, but that successive introductions had taken place, these earlier efforts being due to Nestorian missionaries.

Nearly all writers who have examined the subject have agreed in conceding the authenticity of the Stone at Signanfu, to the inscription on which we are indebted for so much information. From this inscription—a facsimile of which is given in an old book on China written by a missionary named Kirchere,—we learn that in the 6th, 7th and 8th centuries missionaries were successively sent to China by the Nestorian Church in Armenia, and that their efforts towards the conversion of the Chinese were attended with considerable success. Christian communi-

* The execution ground during the time of the Bakufu, situate between Shinagawa and Omori.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

ties were founded in numerous places with ramifications extending throughout the Empire. The Nestorians appear to have carried on their operations uninterruptedly, until they met with a fierce persecution at the hands of Genghis Khan, from which time they dwindled away in numbers rapidly and disappeared with the downfall of the Mongol Dynasty in A.D. 1369.

During the last century of their residence in China, the Nestorians were joined by missionaries of the Roman Catholic Church. In 1246 Carpina was sent on a mission to the Tartars of Mongolia by Pope Innocent IV, and he was followed a few years later by another papal legate named Rubruk, who was sent on a similar special mission. The first Roman Catholic missionary to settle in China was Jean de Corvin, a monk of the order of Minorites. Owing to the jealousy and opposition of the Nestorians, who according to one authority cited by Le Huc numbered about 30,000, some years elapsed before he succeeded in establishing any footing in the country. At length in 1307 he succeeded so far as to be appointed Archbishop by Pope Clement V, who detached several other monks to assist him in his mission. According to Le Huc, Corvin, at his death in 1330, left behind him a flourishing Christian community. Be this as it may, its vitality was small, for forty years later no trace of it was left. Williams, in his History of China, is of opinion that the Roman Catholic missionaries, like the Nestorians, were concentrated chiefly round the Mongol Court, on which they relied for protection, and that they shared the fate of their patrons on the overthrow of that dynasty.

Nothing daunted by previous failure, two centuries late, the Roman Catholic Church made a second effort to introduce Christianty into China, and the close of the 16th century saw the Jesuits in the Chinese Empire. It may be that the previous failure is connected with the fact that they had no convenient basis from which to direct their efforts. Since then, however, the colony of Macao had been formed. In 1517 D'Andrada, envoy from the Viceroyalty of Goa, obtained from the Chinese Government the concession of a narrow strip of land close to Canton, and here the energy of the Portuguese soon established a settlement which in the course of half a century had attained to a flourishing condition, and served as a natural *point d'appui* for the Jesuit Mission. The seminaries and convents of Macao were the schools in which were trained the men who afterwards went through such hardships in the propagation of their faith in China and Japan, and have left such numerous records of their courage and perseverance, and here, as each successive wave of persecution swept over the country and drove them to take refuge elsewhere, they were enabled to rally their forces, and when occasion served to recommence their work with fresh vigour.

In this second introduction the difficulties which the missionaries encountered were perhaps greater than before. They first entered China by way of Canton in 1581, but they were forced to return to Macao, and it was not till the year 1583, after three successive failures, that they finally gained a footing in that town, where by the favour of the Viceroy the were allowed to work unmolested.

The four who thus led the way were Ricci, Roggiero, Paceio, and Duarte, and they at once set themselves to the task of acquiring the language. That this proved their greatest obstacle at the outset can well be imagined, and Semedo, who followed later on, in his history of China says as much. The words in which he modestly speaks of the difficulty experienced by his brother missionaries and himself might be said equally well of those pioneers in the Japanese language, to whom after-students owe so much.

"The language," says Semedo, "seemeth more difficult "than any in the world, being curt and equivocal, and in this "difficulty the Fathers were without any master to teach "them, without any interpreter to explain what was said "to them; so that they neither understood others nor "others them; but by force of diligence and unwearied "pains they went on conquering and gaining; and al- "though they never arrived at any perfection in the lan- "guage or good accent in pronouncing it; yet they dis- "covered the mysteries of that tongue and set them down "in so plain a form that they made it much more easy for "those who came after them."

The missionaries at first donned the garb of Buddhist priests, but afterwards finding that the dress of the *literati*, or learned class, commanded more respect, they changed it for the latter.

Ricci soon proved himself the most able of the four. In 1594 he succeeded in forming a community in Soochow, the capital of Kiang-Si, and four years later he was enabled to do the same at Nanking, where he acquired considerable reputation by his lectures on the exact sciences. In 1601 he had so far ingratiated himself with the authorities that we find him settled at the Court of Peking, where he was joined by other missionaries and gained many converts, some of these being men of distinction in in the Empire. Le Huc gives an amusing account of the delight shewn by the Emperor and the Court generally with the worderful clock which was among the presents given by Ricci. The story runs that the Empress-mother, hearing of the clock, expressed a desire to see it. The Emperor unwilling to incur the charge of filial disobedience, and at the same time fearing lest the precious object of curiosity should be kept from him altogether, took the precaution of sending the clock unwound. The Empress-mother soon tired of the toy when in that state, and restored it to its anxious owner.

Ricci continued to reside at the court until his death in the year 1610, and up to that time and until the year 1617, when the first edict of expulsion was issued, the missionaries in the North of China appear to have enjoyed the constant protection of the Government. Even then, so strong was the influence they had at Peking, that they were able to brave the fiat of explusion; and disregarding that decree they busied themselves at the capital in the intervals of their preaching with translating and publishing various works in the Chinese language.

There is a discrepancy in the various accounts on this point, some writers stating that the Jesuits at the capital shared the general fate of the missonaries, while others favour the view that an exception was made in the case of those at Peking. The latter view is probably correct, as it is borne out by what happened during a subsequent banishment of the missionaries; or it may be that some only of the missionaries at Peking were allowed to remain, the rest sharing in the general expulsion.

Meanwhile the position of the missionaries in the Provinces had been very variable, and they had been subjected to several persecutions. Nanking was the place where they met with the greatest hostility. Driven out of that city in 1613, on their re-establishment there in 1616 they were arrested by the Head Official of the Local Branch of the Lipu department, and were treated with such hardship and severity that two of their number died in confinement. After a lengthened imprisonment they were brought to trial at the time that the edict of the following year (1617) was issued, and sentenced to banishment, their goods and houses being confiscated. The way in which the order was carried out is thus described by Semedo, who was treated more leniently than the others on account of his sick condition.

"They were thrust into narrow cages of wood (such as "are used in China to transport criminals condemned to "death from one place to another), iron chains were hung "round their necks, manacles were fastened to their "wrists; their hair was allowed to hang straight down, "and their gowns put upon them in a strange uncouth "manner that they might look like the people of a "savage and barbarous country. In this way they were "brought out on the 30th April, their cages were sealed "with the Imperial seal, orders being given to the guard "to allow them out only at such times as were neces- "sary for eating and sleeping; three tablets were "carried before them on which their sentence was "inscribed and also a notice forbidding any one to have "any communication with them. Arrived at Canton "they were taken out and sent back to Macao along with "the fathers who had left Peking."

Imitating the careless bravery of their bretheren in Japan, the banished missionaries soon contrived to re-enter the country, and for some time until their prospects improved they dispersed and remained secreted in various parts of the Empire. Nor had they long to wait. In 1628 Schaal, who had succeeded Ricci in the leadership of the Jesuits, was installed in his predecessor's position

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

of Astronomer to the Court, and by that time the missionaries had recovered their former status, and their preaching, in the Central Provinces especially, was favoured with marked success. By the year 1632 there were flourishing Christian communities in the Provinces of Kiang-Si, Honan, and Szechuen, with headquarters at Peking, Hancheu, Shensi, and Nanking.

We can sympathize with Semedo's feeling of gratification when he says:—"To this state and condition is the "Church of China arrived after the continual labor and "pains of the Fathers during 58 years;—and truly so "happy and prosperous a success could never have been "expected from such difficult beginning and such weak "means."

"On their return to Peking," says the same writer, "the Fathers lost no time in placing themselves under "the protection of the Lipu department lest they should "be called upon by the War Office to lend their services "in warding off the Tartar invasions, and having repaired "their Church they established themselves in their old "quarters. And there," the old chronicler proceeds to state with quaint satisfaction," they do yet inhabit to this "very day (1638), meddling only with such things as "belong to their profession without ever being spoken to "concerning wars, Tartars or arms."

About this time the Jesuits were joined by the *réligieux* of other orders, Dominicans, Lazarists and Franciscans.

The Manchu invasion and the disorder which followed in the years between 1630-60, were naturally unfavourable to the progress of Christianity, but the position of the missionaries at Court remained unaltered. The new dynasty extended its protection to the Jesuits, and Schaal being engaged to reform the calendar, was honoured with a high rank and received permission to introduce other members of his order. During the reign of Shunchi the missionaries continued in favour, but on his death in 1665 an edict was issued against them, and many were sent out of the country, while others, among whom was Verbiest, were imprisoned. Schaal's death at this time is attributed to grief and mortification at the disastrous state to which the mission was reduced.

It is said, and with some appearance of truth, that the strifes which began to arise amongst the members of various orders about this time, was one of the causes which led to this second persecution. Considerable dissatisfaction had already been caused in the Jesuit body by the policy which Ricci had instituted, and the adoption of which he had enjoined on his followers, in regard to the Ancestral Rites practised by the Chinese. The less liberal of the fraternity argued that this was a concession to Paganism which should never have been made. (Ricci's motives in giving it are of course apparent. His missionary experience had soon shewn him that the relinquishment of this ancient practice was one of the greatest obstacles in the way of conversion.) On the arrival of other *réligieux* the supporters of Ricci's policy found themselves outnumbered, and the contentions on this and other points—amongst which were the meanings of the terms *Tien* and *Shang-ti*—grew at last to such a pitch that in 1645 the Vatican thought fit to interfere, and a Bull of Pope Innocent X decided against Ricci's adherents and the Jesuits generally. This decision was reversed in 1656 by a Bull of Pope Alexander VIII, to which the body of the missionaries submitted; but the question was again raised in 1693, when an ultimate decree was pronounced by Pope Clement XI, by which the practice by converts of the Ancestral and other Rites was disallowed.

Williams, in his notice of Christianity, enters at length into this question, and says that the Emperor Kang-hi was opposed to the views of the Vatican, and that this latter Bull was resisted *ri et armis* by the Jesuits.

Though scattered and dispersed by the edict of 1665, the missionaries did not remain long under a cloud, and six years afterwards, on the accession of the Emperor Kang-hi, they were restored to their former favour, Verbiest being appointed Astronomer Royal.

In 1687 the French missions were established, their object, so Le Huc says, being as much to gain information for the French academy as to propagate Christianity.

* The first eighteen years of the 18th century saw Christianity at its greatest height of prosperity in China. It is stated that at this time there were in two of the provinces alone upwards of a hundred churches, and more than a hundred thousand converts. It was at this time that a survey of the Empire was carried out under the direction of the Jesuits.

In 1718 Kang-hi, either resenting the action of the Vatican or yielding to the persuasion of the circle of Jesuits round him, issued an edict forbidding the residence in China of all missionaries who did not subscribe to the rules affecting ancestral worship laid down by Ricci, and before his death it is said that he even went so far as to countenance the persecution of Christian converts.

On Kanghi's death in 1723 Christianity suffered a third persecution, from the effects of which it has never recovered. In 1732 one of the French missionaries wrote home, "What we have been dreading for so many years has at "length come to pass, our religion is entirely proscribed "in China, and all the missionaries except those at "Peking (who were employed at Court as mathematicians under the tittle of *artists* and *learned men*) have "been driven from the Empire."

During the whole of Yung-tching's reign persecution continued, and though under the administration of his successor, Kien-lung, the missionaries recovered to some extent their credit at Court, the tide of persecution in the provinces never entirely stopped. The suppression of the religious orders and the political commotions which convulsed Europe towards the end of the 18th century, exercised a baneful effect upon the cause of Christianity, and missionaries and converts alike unsupported by aid from without, and harassed by local persecutions, gradually decreased in numbers and influence.

Notwithstanding that within the last thirty years a slight re-action has set it, owing to the altered conditions under which the operations of the missionaries are necessarily conducted, the progress has been slow; and there seems little probability of the missionaries regaining the position which they occupied in the days of Ricci, Adam Schaal and Verbiest.

II.

It is to Portuguese enterprise that Christianity owes its introduction into Japan in the XVI century. As early as 1542 Portuguese trading vessels began to visit Japan, where they exchanged western commodities for the then little known products of the Japanese Islands; and seven years afterwards three Portuguese missionaries, Xavier Torres, and Fernandez, took passage in one of these merchant ships and landed at Kagoshima.

The leading spirit of the three, it need scarcely be said, was Xavier, who had already acquired considerable reputation by his missionary labours in India. After a short residence the missionaries were forced to leave Satsuma, and after as short a stay in the island of Hirado, which appears to have been then the rendezvous of trade between the Portuguese merchants and the Japanese, they crossed over to the mainland and settled down in Yamaguchi in Nagato, the chief town of the territories of the Prince of Chôshiu. After a visit to the capital which was productive of no result owing to the disturbed state of the country, Xavier left Japan with the intention of founding a Jesuit mission in China, but died on his way in the island of Sancian.

In 1553 fresh missionaries arrived, some of whom remained in Bungo, where Xavier had made a favourable impression before his departure, while others joined their fellow-missionaries in Yamaguchi. After having been driven from the latter place by the outbreak of disturbances, and having failed to establish a footing in Hizen, we find the missionaries in 1567 collected in Bungo, and this province appears to have become their headquarters from that time. In the course of the next year Vilela, the chief of the mission, made a visit to Kioto, Sakai, and other places, in the course of which he is said to have gained a convert in the person of the *daimio* of the small principality of Omura, who displayed an imprudent excess of religious zeal in the destruction of idols and other extreme measures, which could only tend to provoke the hostility of the Buddhist priesthood. The conversion of this prince was followed by that of Arima no Kami (mistakenly called the Prince of Arima by the Jesuits).

* "The Chinese Empire," by Williams.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Other missionaries arriving in 1560, the circle of operations was extended, but shortly afterwards the revolution headed by Mori compelled Viléla to leave Kiôto where he had settled, and a simultaneous outbreak in Omura necessitated the withdrawal of the missionaries stationed there. Mori of Chôshiu was perhaps the most powerful noble of his day, possessing no fewer than ten provinces, and as he was throughout an open enemy to Christianity, his influence was exercised against it with much ill-result.

On Viléla's return to Kiôto from Sakai, where a branch mission had been established, he succeeded in gaining several distinguished converts. Amongst these were Takayama, a leading general of the time, and his nephew. He did not, however, remain long in the capital; the recurrence of troubles in 1568 made it necessary for him to withdraw, and he then proceeded to Nagasaki, where he met with considerable success. In this same year we come across Valegnan preaching in the Goto Isles, and Torres in the island of Seki, where he died. Almeida, too, about this time founded a Christian community at Shimabara, afterwards notorious as the scene of the revolt and massacre of the Christians.

Hitherto we find little mention of Christianity in Japanese books. This may partly be explained by the fact that the labours of the missionaries were chiefly confined to the southern provinces, Christianity having as yet made little progress at Kiôto, the seat of literature. But the scarcity of Japanese records can scarcely be wondered at in the face of the edict issued later in the next century, which interdicted not only books on the subject of Christianity, but any book in which even the name of *Christian* or the word *Foreign* should be mentioned.

Short notices occur in several native works of the arrival in Kiôto at this date of the Jesuit missionary Organtin, and some curious details are furnished respecting the progress of Christianity in the capital and the attitude of Nobunaga in regard to it.

The "*Saikoku Kirisutan Barteren Jitsu Roku*", or "True Record of Christian Padres in Kiushiu", gives a minute account of the appearance and dress of Organtin, and goes on to say:—"He was asked his name and why "he had come to Japan, and replied that he was the "Padre Organtin and had come to spread his religion. "He was told that he could not be allowed at once to "preach his religion but would be informed later "on. Nobunaga accordingly took counsel with his "retainers as to whether he should allow Christianity "to be preached or not. One of these strongly "advised him not to do so, on the ground that there "were already enough religions in the country. But No- "bunaga replied that Buddhism had been introduced from "abroad and had done good in the country, and he there- "fore did not see why Christianity should not be granted "a trial. Organtin was consequently allowed to erect a "church and to send for others of his order, who when "they came were found to be like him in appearance. "Their plan of action was to tend the sick and relieve "the poor, and so prepare the way for the reception of "Christianity, and then to convert everyone and make the "sixty-six provinces of Japan subject to Portugal."

The "*Ibuki Mogusa*" gives further details of this subject and says that the Jesuits called their church *Yeirokuji* after the name of the period in which it was built, but that Nobunaga changed the name to "*Nambanji*" or "Temple of the Southern Savages." The word *Namban* was term usually applied to the Portuguese and Spaniards.

During the next ten years Organtin and other missionaries worked with considerable success in Kiôto under Nobunaga's immediate protection. This period is also remarkable for the conversion of the Prince of Bungo, who made open profession of Christianity and retired into private life, and for the rapid progress which the new doctrine made amongst the subjects of Arima-no-Kami. This good fortune was again counterbalanced by the course of events in the Goto Islands, where Christianity lost much ground owing to a change of rulers.

Ten years thus passed away, when the Christian communities sustained a great loss in the disgrace of Takayama, who was banished to Kaga for taking part in an unsuccessful intrigue against Nobunaga which was headed by the Prince of Chôshiu. Takayama's nephew, Ukon, however, declared for Nobunaga, and the latter gave a further proof of his friendly feeling towards Christianity by establishing a church in Adzuchi-no-shiro, the castle town which he had built for himself in his native province of Omi.

In 1582 a mission was sent to the Papal See on the part of the Princes of Bungo and Omura, and Arima-no-Kami. This mission was accompanied by Valégnan, and reached Rome in 1585, returning five years later to Japan.

In the following year Nobunaga died, and Hidéyoshi, who succeeded him in the chief power, was content for the first three or four years of his administration to follow in the line of policy marked out by his predecessor. Christianity, therefore, progressed in spite of the drawbacks caused by the frequent feuds between the southern *daimios*, and seminaries were established under Hidéyoshi's auspices at Osaka and Sakai. During this period Martinez arrived in the capacity of bishop; he was charged with costly presents from the Viceroy of Goa to Hidéyoshi, and received a favorable audience.

Hidéyoshi's attitude towards Christianity at this time is easily explained. The powerful southern barons were not willing to accept him as Nobunaga's successor without a struggle, and there were other reasons against the adoption of too hasty measures. Two of his generals, Kondera, and Konishi Setsu-no-Kami,—who afterwards commanded the 2nd division of the army sent against Corea,—the Governor of Osaka and numerous other officers of state and nobles of rank and influence had embraced Christianity, and the Christians were therefore not without influential supporters. Hidèyoshi's first act was to secure his position. For this purpose he marched into Kiushiu at the head of a large force and was everywhere victorious. This done he threw off the mask he had been wearing up to this time, and in 1587 took the first step in his new course of action by ordering the destruction of the Christian church at Kiôto,—which had been in existence for a period of eighteen years—and the expulsion of the missionaries from the capital.

It will be seen by the following extract from the *Ibuki Mogusa* that Nobunaga at one time entertained designs for the destruction of Nambanji.

"Nobunaga", we read, "now began to reject his previ- "ous policy in permitting the introduction of Christianity. "He accordingly assembled his retainers and said to "them:—'The conduct of these missionaries in persuading "'people to join them by giving money does not please me. "'It must be, I think, that they harbour the design of seiz- "'ing the country. How would it be, think you, if we were "'to demolish Nambanji.' To this Mayéda Tokuzeniu "replied:—'It is now too late to demolish the temple of "'Nambanji. To endeavour to arrest the power of this "'religion now is like trying to arrest the current of the "'ocean. Nobles both great and small have become "'adherents of it. If you would exterminate this religion "'now there is fear lest disturbances be created even "'amongst your own retainers. I am therefore of opinion "'that you should abandon your intention of destroying "'Nambanji.' Nobunaga in consequence regretted ex- "ceedingly his previous action with regard to the Chris- "tian religion, and set about thinking how he could root "it out."

The Jesuit writers attribute Hidéyoshi's sudden change of attitude to three different causes, which are given in detail in Charlesvoix's book, but it is clear that Hidéyoshi was never favourable to Christianity and that he only waited for his power to be secure before taking decided measures of hostility. His real feeling in regard to the Christians and their teachers is explained in the "Life of Hidéyoshi", from which work we learn that even before his accession to power he had ventured to remonstrate with Nobunaga for his policy towards Christianity.

Hidéyoshi's next act was to banish Tokugawa Ukon to Kaga where his uncle already was, and he then in 1588 issued a decree ordering the missionaries to assemble at Hirado and prepare to leave Japan. They did so, but finding that measures were not pushed to extremity they dispersed and placed themselves under the protection of various nobles who had embraced Christianity. The territories of these Princes offered safe asylums, and in these scattered districts the work of Christianity progressed secretly while openly interdicted.

In 1591 Valegnan had a favourable audience of Hidé-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

yoshi, but he was received entirely in an official capacity, namely in the character of envoy of the Viceroy of Goa.

Christianity was at its most flourishing stage during the first few years of Hideyoshi's administration. We can discern the existence at this date of a strong Christian party in the country, though the turning point had been reached, and the tide of progress was on the ebb. It is to this influence probably, coupled with the fact that his many warlike expeditions left him little leisure to devote to religious questions, that we must attribute the slight relaxation observable in his policy towards Christianity at this time.

"Up to this date," says Charlevoix, "Hidéyoshi had not "evinced any special bitterness against Christianity, and "had not proceeded to rigorous measures in regard to "Christians. The condition of Christianity was re-assur-"ing.* Rodriguez was well in favor at Court, and Or-"gantin had returned to Kiôto along with several other "missionaries, and found means to render as much as-"sistance to the Christians in that part of the country as "he had been able to do before the issue of the edict "against Christianity by Hidéyoshi."

The inference which it is intended should be drawn from these remarks, taken with the context, is clear,—namely that had the Jesuits been left alone to prosecute the work of evangelizing Japan, the ultimate result might have been very different. However, this was not to be.

Hitherto for a period of 44 years the Jesuits had it all their own way in Japan by virtue of a Bull issued by Pope Gregory XIII, in 1585 (the date of the appointment of the 1st Bishop and of the arrival at Rome of the Japanese Mission), and subsequently confirmed by the Bull of Clement III in 1600—by which the *réligieux* of other orders were excluded from missionary work in Japan. The object of these Papal decrees was, it seems, to ensure the propagation of Christianity on an uniform system. They were, however, disregarded when the time came, and therefore for a new influence which was brought to bear upon Christianity at this date—not altogether for its good, if the Jesuit accounts may be credited—we must look to the arrival of an embassy from the Governor of the Phillippines, whose Ambassador was accompanied by four Franciscan priests.

These new arrivals when confronted by the Jesuits with the Papal Bull declared that they had not transgressed it, and defended their action on the ground that they had come attached to an embassy and not in the character of missionaries; but they argued at the same time with a casuistry only equalled by their opponents, that having once arrived in Japan there was nothing to hinder them from exercising their calling as preachers of Christianity.

The embassy was successful, and Baptiste who appears to have conducted the negotiations in place of the real envoy, obtained Hidéyoshi's consent to his shrewd proposal that pending the reference to Manila of Hidéyoshi's claim to the sovereignty of the Phillippines he and his brother-missionaries should remain as hostages. Hidéyoshi, while consenting, made their residence conditional on their not preaching Christianity—a condition which it is needless to say was never observed.

Thus at one and the same time the Spaniards, who had long been watching with jealous eyes the exclusive right of trade enjoyed by the Portuguese, obtained an opening for commerce, and the Franciscans a footing for their religious mission.

It was not long before the newly arrived missionaries were called upon to prove their devotion to their cause. In 1593, in consequence, says Charlevoix, of the indiscreet statements of the pilot of a Spanish galleon, which being driven by stress of weather into a port of Tosa was seized by Hidéyoshi, nine missionaries, namely six Franciscans and three Jesuits, were arrested in Kiôto and Osaka, and having been taken to Nagasaki were there burnt. This was the first execution carried out by the Government.

Hidéyoshi died in the following year (1524), and the civil troubles which preceeded the succession of Iyeyasu to the post of Administrator, in which the Christians lost their chief supporter Konishi who took part against Iyeyasu, favoured the progress of Christianity, in so far as diverting attention from it to matters of more pressing moment.

Iyeyasu's policy towards Christianity was a repetition of his predecessor's. Occupied entirely with military campaigns against those who refused to acknowledge his supremacy, he permitted the Jesuits, who now numbered one hundred, to establish themselves in force at Kiôto, Osaka, and Nagasaki. But as soon as tranquillity was restored, and he felt himself secure in the seat of power, he at once gave proof of the policy he intended to follow by the issue of a decree of expulsion against the missionaries. This was in 1600. The Jesuit writers affirm that he was induced to withdraw his edict in consequence of the threatening attitude adopted by certain Christian nobles who had espoused his cause in the late civil war, but no mention is made of this in the Japanese accounts.

So varying, and indeed altogether unintelligible was the action of the different nobles throughout Kiushiu in regard to Christianity during the next few years, that we see one who was not a Christian offering an asylum in his dominions to several hundred native converts who were expelled from a neighbouring province; another who had systematically opposed the introduction of Christianity actually sending a mission to the Phillippines to ask for missionaries; while a third who had hitherto made himself conspicuous by his almost fanatical zeal in the Christain cause, suddenly abandoned his new faith, and from having been one of its most ardent supporters, became one of its most bitter foes.

The year 1602 is remarkable for the despatch of an embassy by Iyeyasu to the Phillippines, and for the large number of *réligieux* of all orders who flocked to Japan.

Affairs remained *in statu quo* for the next two or three years, during which the Christian cause was weakened by the death of two men which it could ill afford to lose. One of these was a noble called Kondera by Charlevoix, but whose name we have been unable to trace in Japanese records. The other was Organtin, who had deservedly the reputation of being the most energetic member of the Jesuit body.

The number of Christians at this time in Japan is stated to have been 1,800,000. The number of missionaries was of course proportionally large, and was increased by the issue in 1608 of a new Bull by Pope Paul V, allowing to *réligieux* of all orders free access to Japan.

The year 1610 is remarkable for the arrival of the Dutch, who settled in Hirado, and for the destruction in the harbor of Nagasaki of the annual Portuguese galleon sent by the traders of Macao. In this latter affair, which arose out of a dispute between the natives and the people of the ship, Arima-no-Kami was concerned, and his alliance with the missionaries was thus terminated.

In 1611 no less than three embassies arrived in Japan from the Dutch, Spanish and Portuguese respectively, and in 1613 Saris succeeded in founding an English Factory in Hirado, where the Dutch had already established themselves. It was in this same year that Christianity was finally proscribed by Iyeyasu. The decree of expulsion directed against the missionaries was followed by a fierce outbreak of persecution in all the provinces in which Christians were to be found, which was conducted with systematic and relentless severity.

The Jesuit accounts attribute this resolution on the part of Iyeyasu to the intrigues of the English and Dutch traders. Two stories, by one of which it was sought to fix the blame on the former, and by the other on the latter, were circulated, and will be found at length in Charlevoix's History.

We have no wish to enter upon a defence either of our countrymen or of the Dutch, and fully admit the possibility of such intrigues having occurred. Indeed, considering in what relations both Spaniards and Portuguese stood at that time with both of the other nations, and how high religious feeling ran in the seventeeth century, it would be strange if some intriguing had not taken place. Still we should like to point out that there were, we think, causes other than those to which the Jesuit writers confine themselves, quite sufficient in themselves to account for the extreme measures taken against Christianity at this date.

There was the predetermination against Christianity already shewn by Iyeyasu; there were the new avenues

* Rodriguez seems to have been to the Jesuit Mission in Japan in a smaller degree what Ricci was to that in China.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

of trade opened up by the arrival of the English and Dutch; there was the increased activity displayed by the missionaries at a time when Christianity was in a weak state, and lastly there was the influence of the Buddhist priesthood.

That this edict of expulsion issued by Iyéyasu was the effect of no sudden caprice on his part, is clear from the general view which we have of his whole policy, which was similar to that of his predecessor. His early tolerance of Christianity is susceptible of the same explanation as that shewn by Hidéyoshi. His mind was evidently made up and he was only biding his time.

It is also highly probable that the new facilities for trade offered by the advent of the Dutch and English may have had some influence upon the action of Iyeyasu. It is impossible that he can have been altogether blind to the fact that the teaching of Christianity had not been unattended with certain evils, dangerous, to say the least, to the tranquillity of the country, and it cannot have escaped his notice, that whereas the respective admissions of Portuguese and Spaniards had been followed by the introduction of Christian missionaries, who in numbers far exceeded the traders, the same feature was not a part of the policy of the two other nations whose proceedings had no connection whatsoever with religion. Possibly, too, reports may have reached his ears of the growing supremacy of the Dutch in the East, and have induced him to transfer his favour from the Portuguese and Spaniards to the new arrivals.

As regards the condition of Christianity at this time, the Jesuit accounts supply as with facts which shew that numerically speaking the Christian cause was never so strong as at this period. There were some two millions of converts whose spiritual concerns were administered by no fewer than 200 missionaries, three-fourths of whom were Jesuits. According to the "*Kirisutan Tokuki*" a native work, there were Christian Churches in every province of Kiushiu except Hiuga and Osumi, and also at Kiôto, Osaka, Sendai, Kanagawa and Kaga; and it was only in eight provinces of Japan that Christianity had gained no footing. And an increased activity in the operations of the missionaries is discernible about this time. The Dominicans in Satsuma, the Franciscans in Yedo, and the Jesuits in the Capital and Southern Provinces seem to have been vying with each other which should gain most converts; and the circuit made by Cerqueyva in which he visited all the Jesuit establishments throughout the country was probably not without effect in exciting fresh enthusiasm among the converts everywhere, which again would naturally draw attention to the progress of Christianity. But strong as the position of the Christians was numerically, we must not judge of the strength of their cause merely by the number of converts, or by the number of missionaries resident in Japan. If we consider the facts before us we find that Christianity lacked the best of all strength,—influence in the state. All its principal supporters amongst the aristocracy were either dead, had renounced their new faith, or were in exile; and here we have the real weakness of the Christian cause. Whilst therefore circumstances combined to draw attention to its progress, it was in a state which could ill resist any renewed activity of persecution which might be the result of the increased interest which it excited. Without influence at the Court and without influence in the country, beyond what slight influence the mass of common people scattered through various provinces, who were Christians, might be said to possess, Christianity presented itself assailable with impunity.

The last cause we have mentioned as being probably connected with the decisive measures adopted by Iyeyasu is the influence of the Buddhist priesthood. Japanese history mentions the great power attained by the priesthood prior to Nobunaga's administration. Although that power was broken by Nobunaga, Hidéyoshi did not inherit the former's animosity towards the priests, and Iyeyasu from the first came forward as their patron.

And again we must not lose sight of the fact that a deep-rooted suspicion of foreigners was ever present in the minds of the Japanese Government; a suspicion, which the course of events in China,—of which we may presume the Japanese were not altogether ignorant—the jealousy of the native priests, the control of their converts exercised by the missionaries which doubtless extended to secular matters, the connection of Christianity with trade, and the astounding progress made by it in the space of half a century,—all tended to confirm.

Enough has been said, we think, to show that we need not go so far as the intrigues, real or imaginary, of the English and Dutch, to look for causes for the renewed stimulus given at this date to the measures against Christianity.

In the following year (1614) the edict was carried into effect, and the missionaries, accompanied by the Japanese princes who had been in exile in Kaga, and a number of native Christians, were made to embark from Nagasaki.

Several missionaries remained concealed in the country, and in subsequent years not a few contrived to elude the vigilance of the authorities and to re-enter Japan. But they were all detected sooner or later, and suffered for their temerity by their deaths.

Persecution did not stop with the expulsion of the missionaries, nor at the death of Iyéyasu was any respite given to the native Christians. And this brings us to the closing scene of this history—the tragedy of Shimabara. In the autumn of 1637 the peasantry of a convert district in Hizen, driven past endurance by the fierce ferocity of the persecution, assembled to the number of 30,000, and fortifying the castle of Shimabara declared open defiance to the Government. Their opposition was soon overborne; troops were sent against them, and after a short but desperate resistance all the Christians were put to the sword. With the rising of Shimabara and its sanguinary suppression by the Government, the curtain falls on the early history of Christianity in Japan.

(To be continued.)

ASIATIC SOCIETY OF JAPAN.

A general meeting of the Society was held in the Tôkiô Dai Gaku on Saturday, 27th October, Dr. Murray, Vice-President, in the chair.

The minutes of the Annual Meeting held in Tôkiô, on 27th June, and those of the meeting held in Yokohama, 13th October, were taken as read.

In the absence of the Treasurer, the Recording Secretary read the report on the financial condition of the Society.

Treasurer's Report.

In the Annual Report for this year the balance to the credit of the Society is given as $342.33. At the time of the presentation of the report it was considered that nearly all the subscriptions that were forthcoming had been collected; but I expressed a hope—a hope, however, which I am afraid was regarded as rather visionary at the time—that a considerable sum could in addition be collected. I am now happy to state that I have been able to add $264.82 to the balance, making with some $15 that I am daily expecting, a total sum of over $633. All the subscriptions for this year that it is possible to obtain have, I think, now been collected; as well as some for 1876 and 1875 that I have been able to gather in.

The expenditure since the Annual Meeting has been $147.40, the principal items being for printing notices during the preceding twelve months, for lithographs and the purchase of Mr. Brunton's map for the Society's Library. Some $510 are now due for expenses incurred in the publication of the current number of the transactions and of Mr. Longford's paper, on payment of which the cash balance would show a small deficit of some $20. On the other hand, some twenty copies of the Transactions for this year have already been sold, so that this deficit is reduced to practically nought. Now there exist over 950 copies of the Transactions not due to Members and therefore available for sale, and judging from the announcement made by the Council in the last report that nearly all the copies of Volume II and Volume III, Part I, had already been sold, and that they would therefore be willing to buy back copies of these numbers so as to be able to make up complete sets, we may fairly expect that all the 950 copies will eventually be disposed of; so that the funds of the Society cannot be said to be at all at a low ebb, although there is no cash balance. Of the 950 mentioned above over 300 are already in

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

the hands of our Agents in London, New York, Shanghai, and Yokohama, and 136 more have just left Japan, and I am sorry that the non-receipt of the accounts of the sales prevents my entering these sums in the cash account.

Compared with last year the funds may be considered to be in quite a flourishing state, first because our stock of Transactions for sale is considerably increased by the current numbers, secondly because we are not in debt as we were this time last year, although the cost of publishing during this year Volume V. Part 1 and Volume V. Part 2 has been nearly double the amount spent in any previous session for publication.

W. R. AYRTON,
Treasurer.

At the last Council Meeting it was resolved to recommend to the next General Meeting that an Entrance Fee of $5 be imposed upon future members. Prof. R. H. Smith read the following report of the Committee appointed to confer with the Council on the above subject.

REPORT OF COMMITTEE.

The Committee appointed at the Meeting of the Asiatic Society held on the 13th instant to confer with the Council of the Society as to the desirability of charging an Entrance Fee to new members, has the honour to report that the following members of the Committee, Mr. Robert H. Smith, Mr. W. G. Dixon and Mr. H. S. Wilkinson, attended by invitation a meeting of the Council held at the British Legation on the 20th instant, and, having conferred with the Council upon the subject referred to them, unanimously resolved to recommend to the Society the adoption of a rule charging to new members an Entrance Fee of Five Dollars.

H. S. WILKINSON.
ROBERT H. SMITH.
WILLIAM GRAY DIXON.

23rd October, 1877.

The question was then put by the Chairman and unanimously carried.

Professor W. E. Ayrton then proposed in writing an amendment to Rule 5, having previously given notice to the Council, that in Rule 5, for the words "previous to the latter half of the year," the words "during the first nine months of the year," be substituted.

In accordance with the rule relating to such questions, Dr. Syle proposed, and Mr. Satow seconded, the appointment of Messrs. McClatchie, Dodds and Parson, as a Committee to confer with the Council on the subject. This was put by the Chairman and carried unanimously.

The election of the following gentlemen as new members was then announced:—Professor D. Kikuchi, Mr. T. W. Hellyer, Rev. C. T. Blanchet, Professor F. F. Jewett, Mr. Peyton Jaudon.

The Library Committee announced the receipt of the following books and periodicals:—

The Bhagavad Sita; Translation.
Russia in Asia. (In Russian)
Waifs and Strays from the Far East.
Journey through the Caucasus and the Interior of Persia.
Brunton's Map of Japan.
Bulletin de Géographie.
Bulletin d' Acclimatation.
Celestial Empire.
China Review.
Proceedings of the Royal Geographical Society.
Boletin de Madrid.
Monatsschrift für den Orient.
Proceedings of the Royal Asiatic Society.—North China Branch.

Dr. Faulds in presenting a branch of a tree said: The branch which I now lay before the Society was on a tree in my own garden. It is studded with small somewhat cowry shaped whitish waxy bodies, tinted delicately with pink, and reminding one of the ice ornaments which are fixed on the edges of bride's cakes. They are sometimes found singly and at other times grouped, the larger ones being often squeezed tightly together as if by their gradual enlargement. They present indentations in which the pink hue is more marked. In all of them there is a well marked hook like portion composed of the same whitish material. This does not enlarge apparently, but is of the same size in the smallest ones as in the largest. On the surface attached to the wood there are generally four white lines, sometimes more, bending over from the outer surface and tending to converge to the centre of the attached portion. When the substance is removed, traces of these white lines are left on the wood The attached surface shews a brownish red central, oval portion, with delicate raised bands of the same colour, like the belly of certain aphides. The waxy material can be removed and leaves an oval brownish-red, cyst-like body, with a minute dark coloured stem shaped like a beak, containing a yellowish glaizy fluid with faint streaks of dull red. The white covering contains much water, which leaves a pinkish waxy substance on evaporation. This dissolves completely in turpentine, and forms a semi-transparent glycerine like substance with caustic potash. The wall of the capsule is tough, but crisp to the feel, loses its brown colour and assumes a faint lemon yellow but transparent appearance with acetic acid. It shows with $\frac{1}{4}$ inch miscroscopic power a series of parallel rows of papules which contain pores, from which the white waxy envelope seems to exude. From near some of these hairs spring. These elevated pores partly retain their colouring even with acetic acid. The contents are cells of all sizes, round or oval in shape, from which fact they don't seem to have been subjected to any pressure.

The largest of them by micrometric measurement are $\frac{1}{70}$ of a millimetre in diameter, but by far the greatest proproportion are not larger than facteria. These smallest ones are for the most part grouped together. Between the largest cells are groups of minute red coloured ones, forming in their arrangement a net like appearance, and in some parts these seem to be contained in delicate transparent vessels of irregular calibre.

My own conclusion is that the organism is the undeveloped female of an aphis of which I have as yet been unable to find any description. In Van Benedens quite recent work on animal parasities it is not mentioned. It has resemblances to the woolly aphis or American blight (A. lanigera; Eriosoma mali of Leach), from the pores of which exude a 'cotton-like wool' or cottony excretion. I have not seen the male, but believe it has been seen in Tôkiô. When found it will of course be winged.

The corresponding Secretary then announced the receipt of "An analysis of certain articles of Japanese food" by Mr. B. W. Dwars, which, on his motion. was taken as read, and recommended to be printed.

"A Review of the Introduction of Christianity in China and Japan" by Mr. J. H. Gubbins, was then read by the Secretary.

Professor Syle said that he would only add a few facts by way of supplement to the information contained in the paper. Père Verbiest had been required to superientend the casting of cannon; and it was laid upon the R. C. Missionaries to make a trigonometrical survey of the Empire, which they did. Mathew Ricci was eminent for his ability and success: it was claimed that, at his death, he left between 300 and 400 organized Churches in China. About 30 years ago might be seen at Shanghai, the raised terrace, surrounded by a handsome stone balustrade, which had been constructed for the purpose of making his astronomical observations. To assist in his mathematical calculations he took a promising youth from the Zie family and instructed him, leaving behind a mathematical book which is found in use at the present day. Young Zie was instructed in religion also, and became a zealous convert, composing an Apology for Christianity, which has been compared with that of Justin Martyr. He rose to the highest rank as a Mandarin, being made finally a *Tsen-Siang*, or Prime Minister. He retired in his old age to Shanghai, where his own influence, and that of his grand-daughter Candida, was such as to increase the number of converts; and permanency was given to the effect of their labors by the gift of their homestead to the missionaries. On that property has been built an extensive ecclesiastical establishment, now known as the *Ze-ka-wei*, where the meteorological observations were made which are found in the last volume of the Shanghai Asiatic Society. Prof. Syle also remarked that, in regard

to the absence of any permanent impression made by the efforts of the R. C. Missionaries, it was to be observed that there were many benevolent institutions in Kiang Nan, the Province in which are found Shanghai, Sung-Kiang and Soochow; and no inquiries, continued through a number of years, had enabled him to trace their origin back farther than 200 years. There are Foundling Hospitals, Dispensaries, Poor-houses, Strangers' Homes; Funds for Bridge-building, Burials, Widows' Pensions, Life-saving, Fire extinction, etc., etc., and the Roman Catholics claim that these all arose in imitation of the Orphan Asylums, etc. which they had been the first to establish —a claim which there is nothing to discredit, as far as now known. There were certain phrases in the paper which Professor Syle did not admire, such as "the Buddhist *Church*," "the Buddhist *Clergy*, etc.,"—but these were partly matters of taste, for which the Society was not responsible, and which therefore need not occupy their time and attention.

Mr. Satow then made some observations upon the causes which led to the downfall of the Christian Mission in Japan, which want of space necessitates our keeping over until next week, when they will appear *in extenso*.

The Rev. J. Soper remarked that traces of the influence of the early fathers had been found in the neighbourhood of Nagasaki, where a number of adherents still existed amongst the humbler classes. This was proved by the retention of such words as Crucifix, Maria, Santa, Padre. This was accidentally discovered by observing a boy making the sign of the Cross, and on further enquiries being made, resulted in the discovery of the existence of such words as those above mentioned.

The Chairman, after proposing that the thanks of the Meeting be given to the author for his interesting paper, which was carried by acclamation, declared the meeting adjourned.

Law Reports.

IN H. B. M.'s CONSULAR COURT, KANAGAWA.

Before RUSSELL ROBERTSON, Esq, Consul.

Saturday, October 27, 1877.

RATS ALI HASSAL *vs.* WILLIAM EIDMON.

This was a charge of assault.

Plaintiff stated that he was in the engine room of the steamship *Malacca* yesterday when he was directed by the 4th engineer to do some work. He refused to do so, and the 4th engineer told it to the 2nd engineer, defendant, who then struck plaintiff.

Defendant said that there was some noise in the engine-room yesterday, and he sent the 4th engineer to see what it was. The 4th engineer came back and complained of plaintiff, and when defendant remonstrated with plaintiff, the latter was impudent in his answer, which caused defendant to slap plaintiff's face.

The 4th engineer deposed that he had to report plaintiff to defendant for not doing as he was ordered to do, and as plaintiff was impertinent, the defendant gave him a slap.

His Honour cautioned defendant to be more patient in future.

Monday, October 29, 1877.

Arthur Bell, Nadal Dubin, Robert White, William Taylor, Robert Edmunds, and Ake Ridderhjelke, seamen belonging to the British barque *Naworth*, were charged with absence without leave.

On the 25th inst., the prisoners came ashore to lodge a complaint against the Captain, and have not been on board since.

The prisoners admitted the charge, and were sentenced to one week's imprisonment.

Joseph William Graham, master of the British barque *Clifton*, was charged by the shipping master, J. J. Enslie, with contravening section 149, par. 2 of the Merchant Shipping Act of 1854 and also contravening section 166 of the same Act.
